The enclosed editorial will perhaps throw a little light on the problem. Facts on the Jap civilians were taken from G–2 reports. The facts on the *Admiral Benson* were ascertained from conversation with an officer of that ship, and about the overflowing conditions at disposition centers on Leyte and at Manila from correspondence with friends who waited at those places for more than a month for transportation home.

My thanks for your consideration.

Very truly yours.

EDITORIALS

Today is November 1. Today thousands upon thousands of men serving in the Army of the United States became eligible for return to the United States from overseas duty, and for discharge. News releases blazon the fact: "All 60-point men will be discharged by November 30."

When do we go home?

Newscasts from the United States state that men are being discharged from the armed forces at prodigious rates. According to Stars and Stripes, quoting General Marshall on Wednesday, October 31, the United States is demobilizing too fast.

But when do we go home?

Less than a week ago, the Forty-first Infantry Division, which sailed overseas in February and March of 1942, sent home some 250 men who came overseas with the division. These men had served only 43 and 44 months overseas in the first and worst of the jungle fighting. More than 2 months have passed since the War Department authorized the release of men over 38 years of age. But these men are just leaving their units.

According to news releases and War Department statements, all men with down to 60 points will be discharged by November 30. But on November 1 the Forty-first Infantry Division, only one of many, has more than 2,000 men still on the morning reports who have over 70 points, some with over 90.

When do we go home?

One of the reasons advanced for the delay is that the harbor at Nagoya is still filled with mines and sunken ships, and only one ship at a time can enter the harbor. The Forty-first has been at Kure and Hiroshima for nearly a month, and since that time many men have gone from here to Osaka and Nagoya on official business—by rail. The harbor here at Kure is open, and is a large one. Large enough to hold enough ships at one time to haul all the noneligible home. And the same rail line which carries men from here to Nagoya could certainly carry the men here from other places. And living accommodations were here, ready for occupancy when we came in. Why not for a separation center?

When do we go home?

On October 23, the U. S. S. *John Hanson*, an APA, arrived in Kure Harbor laden with 1,382 Japanese civilians, 15 Japanese Army personnel and 5 Japanese nurses brought here from Manila. Didn't MacArthur refuse American shipping to the Japanese? Again, on October 27, two Liberty ships, the U. S. S. *Silcox* and the U. S. S. *Joseph K. Toole* arrived from Davao, Mindanao, in the Philippines with 2,935 Japanese civilians. At that time separation centers at Leyte and Manila were overflowing with homeward bound troops awaiting transportation.

Supposedly Libertys aren't fitted to carry troops. But a hell of a lot of them came from Stateside on Libertys. And I've ridden on stinking Aussie ships, filthy and unsanitary. I—and thousands of others—would gladly ride these Libertys back to the States. Let the Japs get their own soldiers and civilians home.

On October 25, the U. S. S. *Admiral Benson*, a United States Army troop transport, dropped anchor in Kure Bay. Aboard the transport were 1,800 sailors fresh from the United States. This ship had sailed first to Okinawa to unload the sailors and pick up troops to be returned to the States. But at Okinawa, no one wanted the sailors. (Ships are crying for replacements too.) So the men upped anchor and sailed for Sasebo, Japan. But again they were not allowed to unload their men. Once again this huge transport pulled out, starting for Nagasaki, but was sidetracked before reaching there. At that place, the sailors weren't wanted. So the ship then stopped at the port near Matsuyama, but still no go. In desperation, the *Admiral Benson* came to Kure. Again it was turned away. Where did it go from here? No one knows. But still there is no transportation available.

When do we go home?

The people at home can get us home if they want us. Every person who has a loved one in the armed forces should write their Congressman and Senator the facts they learn from the men overseas. Every newspaper should publish these easily obtained facts. Then enough pressure would be placed squarely on the heads of those at fault—the War Department—and the men would be brought home.

We've won the war. Please get us home where we can win peace and happiness for ourselves.

## GI Bill of Rights

EXTENSION OF REMARKS
OF
**HON. EDWARD A. KELLY**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by me on the GI bill of rights, given over Station WIND, November 3, 1945, Chicago, Ill., on program Congress Reports:

There are many controversial questions being raised by veterans, who are constantly being released from the armed service, seeking aid to rehabilitate themselves to the normalcy of life. They naturally look to the act of 1944, which may be cited as the Servicemen's Readjustment Act, or otherwise known as the GI bill of rights.

Solution of the veterans' problems does not—cannot—proceed alone. During the period when our soldiers and sailors will be shedding their uniforms, six to eight million workers in strictly war industries will be shifting jobs or homes. The ultimate goal of any veterans' program must be to restore the returning soldier and sailor to the community—socially, economically, and humanly. This cannot be accomplished except as part of the larger program embracing the whole of human demobilization. Our terrible danger of failure may be to set the veteran off from the rest of the Nation, cherishing the grievance of having been wronged, at odds with fellow-Americans, his feelings an explosive fuel, ready to be ignited by future demagogues.

The very first need in the present situation is to end neglect of the human problems of the change-over from war to peace.

In the report of recent date submitted by Bernard M. Baruch to Gen. Omar N. Bradley, he urged General Bradley to set up three different committees: One, to make an impartial study and public report, aiming at the complete transformation of the veterans' medical service; second, to make a similar study of nonmedical matters of the Veterans' Administration, to simplify and decentralize its procedures; and third, to work with Congress in making an intensive review of all existing GI legislation in need of amending.

I have recently received a letter from a veteran still in camp, who states:

"As my Representative, I bring to your attention a discrepancy which you can help to correct.

"I am certain my complaint has your consideration already.

"Soon I will become an ex-serviceman, and will therefore be eligible under the GI bill of rights for a few benefits.

"I am interested mainly in becoming an educated, worth-while citizen. Therefore, I am interested in the educational clause of this bill.

"Mr. KELLY, why has Congress put school within the veteran's reach, yet only allowed a coolie subsistence

"Is it possible for a married man to live on a $75 monthly budget? Indeed, it is not.

"Try to amend this unjust subsistence."

This letter is one of many received each day in our offices showing the desire on the part of these boys to complete their education.

Considering the present living costs, it seems that some reconsideration should be given to the question of training pay or subsistence allowance while pursuing vocational rehabilitation or education or training. The Veterans' Administration recommended a change in the rates of increased pension for the former and the House bill raises the latter $10 per month. The Bureau of the Budget suggested that, instead, consideration be given to a flat rate for veterans without dependents, with increased amount for veterans with dependents, and that the amounts be the same under both acts but with provisions that the veteran may, notwithstanding such allowances, continue to receive whatever pension, retirement pay, or compensation he may otherwise be entitled to receive. Adoption of such flat rate would solve many administrative difficulties now inherent in the provisions of the two acts and would go far to prevent attempts to switch back and forth as between vocational rehabilitation training under Public Law 16 and education or training under Public Law 346.

The age factor has caused much criticism, possibly through lack of understanding of the exact intent and purpose thereof. The education provisions of the Readjustment Act were intended as a benefit to those whose education or training was prevented or interrupted by active service. A proviso was added to the effect that anyone under 25 years of age at the time of entrance into active service would be presumed or deemed to have had his education or training interrupted. This was merely a rule of evidence in favor of the younger veterans. However, the older veterans feel that it places an undue burden of proof upon them to show eligibility for education or training other than a refresher or retraining course limited to 1 year. While it is believed that there will not be a great number of older veterans desiring to take advantage of these educational opportunities, it is realized that the mere existence of purpose or intent is difficult of proof. The Veterans' Administration has been very liberal in applying this provision but it has nevertheless created a great deal of dissatisfaction and charges of discrimination. It is believed the Congress may well desire to reexamine this subject and possibly also the question of more adequately defining the extent of courses of education or training.

However, with regard to the age factor, I am glad to note that a Senate Finance subcommittee voted yesterday to remove all restrictions on veterans' education under the GI bill of rights.

Experience would indicate need for some leeway in paying for short, intensive courses. Under the formula prescribed in the act, it is necessary to prorate the maximum amount of $500 over the period constituting an ordinary school year. It is believed that veterans who desire only such short courses should be permitted to have them with all expenses paid within the limitation of the $500 maximum. However, in order to provide adequate protection to both the veterans and the Government, it is felt that the Administration should have the authority to enter into contracts respecting rates. It would still be required that the institutions be approved by the appropriate State agencies.

Similar recommendation is made with respect to the use of correspondence courses and correspondence schools. It seems only appropriate that there should exist authority to protect against overselling of such courses.

Perhaps it is safe to say that the greatest amount of interest has been evidenced in, and the greatest amount of controversy has arisen over, the loan-guaranty provisions of title III of the act. The financial journals and the public press generally have displayed prominently criticisms and suggestions concerning such provisions. These range all of the way from minor modifications with a view to expedition of administrative procedures, to the entire elimination of the provision or the transfer of the functions to other governmental agencies. Particular emphasis has been placed by some upon the transfer of the home-loan functions to the Federal Housing Administration. No recommendations with respect to this matter have been made for the reason it is felt to be the duty of the Veterans' Administration to perform to the best of its ability those functions and responsibilities placed upon it by the Congress. Concededly, from the standpoint of purely functional operations, all responsibilities of the Veterans' Administration could be transferred to other agencies. It is believed, however, that it has been and will continue to be the view of the Congress that all veterans' benefits as such should be administered by one agency rather than being scattered among a number of agencies.

Great misunderstanding has existed from the very beginning with respect to the loan features of the act. In some way, the impression was broadcasted, even to the most far-flung battle fronts, that all the discharged veteran had to do was to take his honorable discharge certificate to some place and be handed out $2,000. Consequently, disappointment is expressed when he finds out that he has to go through the ordinary procedures with respect to getting a loan. It should be kept in mind, too, that the act was intended, as the name implies, as a readjustment measure. Literally, the guaranty provision was intended to provide what ordinarily is required as a down payment in connection with purchasing a home, farm, business, or whatever he may desire.

This provision of the GI bill should be overhauled. Congress is quite alert to the need for such changes, and I believe swift corrective action can be had with good executive ability to bring together the best thought of the executive branch on these matters with that of the Congress.

As an example of how loosely drawn some features of the GI law are, under the act each enlisted veteran is authorized to borrow for either the purchase of a home or farm or to go into business, but this must be done in 2 years. The Government will guarantee $2,000 of such loans. Let us say, the unguaranteed portion is another $2,000, or $4,000 in all. If one-half the 10,000,000 eligible veterans take advantage of it, that means $20,000,000,000 of borrowings. Think of that pressure going into the market for homes, farms, or businesses in 2 years. What a harvest high-pressure salesmen will reap unless the time is extended.

Spread over 10 years, the GI loans can serve as a stabilizing force, humanly as well as economically. Many veterans may prefer attending school before buying a home, farm, or business. Others, who plan on going into business, will have a better chance to succeed if they first gain experience by taking a job in their particular line.

Some recommendations are being considered. Many suggestions are being made over the feature of the loan provision of this act.

The greatest obstacle encountered to date is the reasonable normal value provision of the law. This requirement has made it almost impossible for lenders to make loans on existing properties. The demand for existing properties in most of the larger cities, due to wartime congestion and swollen incomes, has made it practically impossible to buy existing properties at prices equivalent to reproduction costs less depreciation. Generally speaking, and putting it in the briefest possible language, that is about what is meant by reasonable normal value.

The Veterans' Administration cannot insure under the present law any loan, no matter how small or how good it may look to the lender, if the GI is paying a price higher than the reasonable normal value. This is true even though the GI is ready, willing, and able to pay out of his own funds the difference between the mortgage loan (100 percent of reasonable normal value) and the purchase price.

The time element required in processing these home loans is unworkable. Admitting that whenever any new system is first set up it takes longer to process than it does later on, if everybody connected with the transaction becomes familiar with the procedure, still the present rules and regulations are unnecessarily detailed and cumbersome. I know that the Veterans' Administration, of course, were trying to throw all of the safeguards they possibly could around the transaction to protect the veteran, but they have done it so well and so completely that the average employee in a bank, mortgage house, or other qualified lending institution just cannot comprehend all of the details, and as a result his attitude in the first place discourages the veterans, not because the lending institution he represents doesn't want to cooperate, but it is simply the whole human factor that whenever anything gets too complicated nobody wants to have anything to do with it.

## Compulsory Military Training

EXTENSION OF REMARKS

OF

### HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article which appeared in the Washington Post, today, November 15, 1945, entitled,

"Bishops Back Army Training in United States Manner":

BISHOPS BACK ARMY TRAINING IN UNITED STATES MANNER

If this Nation must have compulsory military training, it should be in keeping with American tradition, the Catholic bishops of America declared here yesterday.

In a resolution drafted at the opening session of the annual 3-day meeting of the bishops at Catholic University, it was suggested that our Government explore the possibility of having military conscription abolished in all countries.

CARDINAL PRESIDES

The meeting, presided over by His Eminence Dennis Cardinal Dougherty, archbishop of Philadelphia and America's only cardinal, brought together approximately 100 bishops and archbishops from all parts of the country.

In their resolution, the bishops said:

"We recognize the imperative need for preparedness for the adequate defense of our country in all circumstances.

"In determining what constitutes national defense in our present circumstances, our Government, we feel, should explore the possibility of having military conscription abolished in all countries, and, to that end, might well consider how our control of economic assistance to other countries may be used to lend weight to our plea for such abolition."

WANTS TRADITION UPHELD

"If a wide extension of military training is found necessary for present adequate defense of our Nation, we feel that such training should be in keeping with American tradition, and that, specifically:

"1. Voluntary enlistments in the armed forces should be stimulated as much as possible, to provide our first line of defense;

"2. Any period of enforced training should be integrated with normal school life; and,

"3. The War and Navy Departments should work with recognized moral leadership to correct certain policies and attitudes which have wrought grave moral damage to great numbers of young people in the armed services during the last 5 years.

"The bishops are much concerned with regard to the situation in Europe and are much in favor of American relief aid to Germany, Austria, and Hungary."

## Has Civil Service Any Meaning Under the New Deal?

EXTENSION OF REMARKS
OF
### HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, the following letter from a constituent, I have personally known for a quarter of a century, confirms many of the observations I have made of civil service under the present administration:

WASHINGTON, D. C., *November 14, 1945.*
Hon. REID F. MURRAY,
*House Office Building,*
*Washington, D. C.*

MY DEAR CONGRESSMAN: This letter may serve as a revelation to those of you who are unaware of what is happening in our so-called civil-service system. I will relate a personal experience which I had today in order that you may know that I have first evidence of what I am about to tell you.

First of all, I am a permanent civil-service employee, having become such by virtue of an examination which I passed in Wisconsin, back in 1934. I have had 10 years unbroken service, am a widow of a veteran of the First World War, have a permanent status and all the other requirements which are necessary to maintain my position with the Government.

Since 1942 I have been employed in one or two war agencies; it happens that the second agency employed me because I was unwilling to move out of the city with the first agency by which I was employed.

Since the war has ended the present agency — Foreign Economic Administration—has or is being liquidated. According to the rules and regulations announced, my qualifications have put me on the "A" list for retention; however, we have been taken over by the State Department and were called into a mass meeting and told that by April 1946 there would only be 400 employees left.

This fact caused me some little apprehension, due to the fact that I have no assurance that I will be one to be retained. Therefore, I filled out my Form 57 application blank, and because of the fact that General Accounting Office is in need of employees went there for an interview.

My salary is CAF-5, and due to two automatic raises it is now $2,540, including our basic pay raise. As you know, I am a fiscal account clerk.

I was told when I had my interview in General Accounting Office that my salary was too high, that the only grade 5 position available at this time was in St. Louis, Mo. Was likewise told that if I were hired by the General Accounting Office I would lose my permanent status, would have to work there 1 year on probation, and likely as not if they decided to cut the force would be the first to go because I would be hired as a war appointee. The gentleman suggested that I leave my application and call him from time to time in case something might turn up.

I was accompanied by a friend of mine, really a war appointee, having been in the Government only 3 years, but also a grade CAF-5 without automatic raises as she has not had her CAF-5 12 months, which is the required time for an automatic raise, but with the basic pay raise her salary is approximately $2,320.

This friend of mine was called for an interview after I was; incidentally she is a native of one of the Southern States, and her application bore the name of a relative, namely a southern ——.

Understand me now, she has had 3 years in the Government, is a war appointee with no civil-service status.

Her grade CAF-5 was remarked upon but, after considerable conversation it was practically decided that she was to have a position, would be rated as a grade 4, but would retain her same salary which is one of the steps in grade 4, meaning the top salary of grade 4 is $2,560. The gentleman is to call her, after which she will go there as an employee.

When she came back where I was waiting and told me, I calmly walked up to the interviewer and requested my application, telling the gentleman that I had reconsidered and did not wish to be connected with any agency which discriminated against a permanent civil-service employee, a veterans' widow, one with a permanent status, and 10 years' unbroken service, qualifications which had put me in the A bracket. I told him there was no mention made of giving me a position at grade 4 and still retaining my $2,540 which is included in that grade, therefore, I felt I had been unfairly treated and would thank him for my application back.

The gentleman asked me to have a seat, said he was not there to apologize for anything but that our cases were different. He said she was a war appointee and I had a status and that he thought it would be unwise for me to be hired as a war appointee. He said, "She might be let out anyway where she is." I wanted to tell him that she would never be let out of anywhere regardless of her being a war appointee, with that name on her application, but the lady is a friend of mine and felt it might be disloyal. He said that he had not promised her a position and I told him I had not said that he had, but that she as good as had it.

When he said, "Of course, I am not here to apologize to anyone, I do not have to," I said I realized that, but that America was a free country and that he could do as he wished and I would demand the same privilege; so wanted him to know I was no longer interested; I also told him that I guessed this would be the last position I would try for, even though I was a widow, as it rather went against my principles to shove myself ahead of the many veterans of this war who were sitting there, patiently waiting for a chance to find a position.

I was prompted to make this remark by the fact that the lady being discussed has a husband making in the neighborhood of $300 per month. She is only one of hundreds of women war appointees who are being given preference over those who have to work and who have all the qualifications necessary, together with a permanent status.

Thought some of you legislators would like to know what is going on in this so-called merit system, and wish you would find out for me if one has to be born south of the Mason-Dixon line to hold a position with the Government during this administration which is maintained by the taxes paid by all regardless of any line.

Sincerely,
A DISILLUSIONED CIVIL-SERVICE EMPLOYEE.

Mr. Speaker, we have read about the 41-point football player released from the Army. We have known New Deal job holders in Wisconsin who never made $1,800 a year before joining the New Deal forces and have seen them blossom forth with a $4,400 a year job although they had never had the background to qualify for the job in the first place.

This type of procedure may be good politics and we can expect more of it as the Pendergastian approach is added, but it does not make for good government regardless of what administration is in power.

## A Great Leader

EXTENSION OF REMARKS
OF
### HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. DOLLIVER. Mr. Speaker, under leave to revise and extend my remarks, I include a tribute to a great agricultural leader, Ralph K. Bliss, Iowa director of agricultural extension work, made by Paul A. Johnson, Crawford County extension director, Denison, Iowa.

Let me say that I heartily concur in all the praise given Director Bliss by my friend Johnson. For many years a great degree of the agricultural progress, education, and information in Iowa may be attributed to Dr. Bliss and his coworkers. His service during the war has been outstanding in inspiring and leading our Iowa farmers to even greater production of food for war.

A GREAT LEADER

Iowa rural folks astounded the Nation by their record production of food for victory. Five years of war saw Iowa leading the Nation, not alone in the amount of meat, butter, milk, and eggs, but also in the percent increase over the three highest prewar years. Hard work, planning, cooperation, and informed rural leadership did the job. A divine providence kept off drouth and helped the farmer by giving good growing weather.

A great leader, who more than anyone else inspired Iowa farm folk to have an understanding of the need for food and who devised a system of community leaders to aid in spreading knowledge of how best to produce it, was Iowa's director of agricultural extension work, Ralph K. Bliss.

Director Bliss has spent a lifetime in the service of the rural folks of Iowa. He early learned to know them, to understand them, to work with them. Before the United States entered the war he was planning and working to carry the message that "Food will win the war and write the peace" to every family in Iowa. Food was vital for victory. The more quickly victory could be won the less would be the loss in lives and in destruction of property. Our allies must be fed so that they could carry on. It could be no halfway effort. Three sons in the armed service were an inspiration to Director Bliss.

With a shortage of labor and of farm machinery—that could not be replaced by new equipment—Iowa farm folks on the home front backed up their sons and daughters on the fighting front by an all-out effort that got results.

The clear vision, the driving purpose, the inspired leadership of R. K. Bliss was one of the prime factors in uniting Iowa farm folk to do the job. The director has a right to feel proud of this record and the part agriculture extension played in it. Iowa has a right to be proud of the record. Iowa went over the top every victory drive, in feed, and in industrial production. Iowa's sons and daughters wrote their names on the records of the armed forces of the Nation.

"A great task now lies ahead," said Director Bliss at a recent extension conference. "Peace has harder problems to solve than the war. There was no division of opinion as to the need of victory in war. There is a great need now for a common purpose and a united front to solve the problems of winning the peace or we will lose the victory won on the battlefield.

"A hungry world must be fed. Starving people cannot live in peace. Desperate people will follow dictators. America must develop peace or all the victory will be lost. Rural folk must study these problems and knowing the facts must see that our leaders choose the roads to world unity; to keep the peace and outlaw war."

Iowa rural people must keep informed. That is the big job extension has to do.

## More Support From California and Michigan for H. R. 3939 To Eradicate Cancer and Polio

EXTENSION OF REMARKS

OF

### HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I desire to set forth two letters: one from the secretary of Western Yolo Grange, of Brooks, Calif., enclosing copy of a resolution passed by Western Yolo Grange, No. 423, in support of my bill, H. R. 3939, to appropriate funds for research into the causes and cure of cancer and infantile paralysis; the other, a letter from Birmingham, Mich., commending my bill:

BROOKS, CALIF., *October 23, 1945.*

Hon. WILLIAM H. STEVENSON,
*House of Representatives,*
*Washington, D. C.*

DEAR SIR: Enclosed is a copy of four resolutions recently passed by Western Yolo Grange, the fourth of which is in support of your measure on cancer and polio.

We have written our Congressman asking his support of the measure.

Yours very truly,

HELEN PIEZZI,
*Secretary.*

* * * * *

"4. CANCER AND INFANTILE PARALYSIS

"*Resolved*, That Western Yolo Grange, No. 423, recommends that Congress appropriate up to $2,000,000,000 for research by Government and private agencies into the cause and cure of cancer and poliomyelitis."

The above four resolutions passed by Western Yolo Grange October 17, 1945.

HELEN PIEZZI,
*Secretary.*

---

BIRMINGHAM, MICH., *October 31, 1945.*

Representative WILLIAM H. STEVENSON,
*House Office Building,*
*Washington, D. C.*

DEAR REPRESENTATIVE STEVENSON: I have just read of your proposed bill for an appropriation for research for the cause and cure of cancer and poliomyelitis.

You can justly be proud of your bill, for it is something not only for the good and benefit of your country, but of all humanity.

It is one thing to spend money, although possibly necessary, for destruction, but entirely another for the good of mankind.

Millions of people in our country have lost relatives and friends through these causes and are anxiously awaiting the passage of this bill.

Respectfully yours,

B. F. HORN.

## Former Congressman Nichols Killed in Army Plane Crash When Curtiss-Wright Motor Failed

EXTENSION OF REMARKS

OF

### HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. DE LACY. Mr. Speaker, under leave to extend my remarks, I would like to include main passages of an interesting statement sent me by Mr. Joseph Leib, past vice commander, Costello Post, No. 15.

Mr. Leib is known to many of us as having interested himself actively in the causes of airplane accidents.

His statement follows:

FORMER CONGRESSMAN NICHOLS KILLED IN ARMY PLANE CRASH WHEN CURTISS-WRIGHT MOTOR FAILED

(By Joseph Leib)

On November 8, 1945, the Washington Daily News carried a banner headline announcing the tragic death of Jack Nichols, former Member of Congress from Oklahoma. Nichols and seven other passengers and crewmen lost their lives in a B-25 shortly after the ill-fated plane took off from Addis Ababa, Ethiopia, airport.

Why Nichols was riding around in an Army plane promoting the interest of Transcontinental & Western Air, Inc., has become a $64 question. Is it not about time that the American people be informed about what is going on and how their money is being spent, not only here in the United States, but throughout the world, to build private airfields with service personnel that should be sent home, and in the purchase of defective planes.

The Congress may well deliberate the following facts in the hope of sparing human lives in the future. We all must agree that certain air accidents are inevitable. On the other hand, however, it is of public record that a number of crashes could have been avoided had proper action been taken by the Government.

Jack Nichols prior to his resignation from Congress was chairman of a House select committee to investigate air accidents. He issued a number of stinging reports and then suddenly the committee was dissolved. Soon after Nichols became vice president of the Transcontinental & Western Air, Inc.

During this same period I was extremely interested in service crashes. I had discussed this matter with Mr. Nichols on numerous occasions with the hope that he would probe conditions within a number of our aircraft plants. These efforts I regret to say were in vain.

Now it is tragic to read that Mr. Nichols died in a plane manufactured by a company that was under severe criticism for assembling defective aircraft.

On two separate occasions the Senate War Investigating Committee lashed out at the Curtiss-Wright Corp.—once on July 10, 1943 (S. Rept. No. 10), and again on July 26, 1945 (S. Rept. No. 110). The history and background of these reports are too well known to repeat at this time. Curtiss-Wright produced the engines, one of which failed, that ended the life of Jack Nichols. Why this engine failed we may never know. Perhaps Curtiss-Wright is not to be censured for this tragedy—who knows. Yet the Nichols plane was powered by C-W, engines.

Along these same lines, however, it should be pointed out that the B-25's are made by the North American Aviation Corp. Without further comment, I quote a story that appeared in the St. Louis Post Dispatch on January 22, 1943. It was an Associated Press dispatch from Kansas City, Mo., and it reads:

"Practices at war plants in this area which tolerate, encourage, or overlook defective products or assembly in war materials were condemned by a Federal grand jury here. The report was made in the case of a foreman of the North American bomber plant, who was arrested by Government agents and charged with concealing a defect on an engine part with chewing gum so it could pass inspection."

In addition to this Verne T. Irons, of Irving, Tex., who worked for the Transcontinental & Western Airlines for 10 years and then became a chief test pilot for the North American Aviation plant at Dallas, Tex., resigned from that aircraft plant in disgust early in 1944 after he had registered vigorous protests that the company was pushing out defective planes.

Said Mr. Irons in a sworn affidavit: "I feel sure that the priceless lives of young aviators have already been lost due to such defects and surely more will be sacrificed if these planes are to continue in production under the slogan 'Push 'em out and deliver 'em regardless of condition.'"

Won't we ever learn?

## Address to the Vermont Society of the District of Columbia by William D. Hassett, Secretary to President Truman. Memorial to Charles A. Webb, 1880–1945

EXTENSION OF REMARKS
OF
**HON. CHARLES A. PLUMLEY**
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. PLUMLEY. Mr. Speaker, consent having heretofore been granted, I am extending my remarks and including a tribute to the late Charles A. Webb, long-time congressional secretary, prepared for delivery to the Vermont Society of the District of Columbia, on the evening of November 10, by William D. Hassett, secretary to President Truman. Because of the enforced absence of Mr. Hassett on official business, at his request I read the address, which follows:

CHARLES A. WEBB, 1880–1945

Between the "sugar" party which closed last year's season and this, our first meeting of the autumn, Charles Webb left us. He had been for so long an intimate part of this society of which he had been the head—and for so many years such an active force in our Vermont community in Washington—that we are lost tonight without his presence.

To collect one's thoughts to pay tribute to him before a Vermont gathering is not easy. The sense of relief at his release from the burdens of the flesh does not lessen the sense of grief in the hearts of the countless friends that he made in Washington.

So much of him went into this society, whether in the period when he was its moderator or during all the rest of the more than 30 years of his active life in Washington, that it is hard to realize he has left us. We shall miss him through long years to come. But there should come nevertheless to all of us relief in reflection on the character and the career of a man who in all of the great emergencies of life was never doubted nor found inadequate.

It is fitting, therefore, that some one of us in the name of all should say a word to this society in tribute to the departed friend. Perhaps this task has fallen to me because my friendship with Charlie Webb began in our slate-and-pencil days back in the primary grade of the Northfield school and I need hardly add: that was a long time ago. By another happy coincidence we arrived in Washington the same year and resumed an association that grew closer with every passing year and which I count among the blessings of my life. As I speak these words, inadequate though they be, I like to think also that in a measure I am speaking for those friends of his and of ours of other days no longer with us. There come to mind the names of two particularly stanch friends of his—Walter Husband and George Wales, to mention only two members of the Vermont Society. Who, that ever heard their priceless stories or was privileged with their friendship, could ever forget Walter Husband or George Wales?

Then there were Mr. Webb's Vermont newspaper friends. Good friends of mine, too, and of many of those here tonight who are graying a little at the temples. First, there comes out of past years the towering figure of Arthur Ropes. When Mr. Webb and I were in short pants, Arthur Ropes was editor of the old Vermont Watchman—the Walter's paper that afterward became the Montpelier Daily Journal. Arthur Ropes, under whom he received his first newspaper training, was among Charles' heroes to the end of his days. It was a happy circumstance that he finally succeeded Mr. Ropes as editor of the paper. Farther up Main Street in Montpelier, C. A. G. Jackson presided over the destinies of the Montpelier Daily Argus, successor to Hiram Atkins' Argus and Patriot. In the neighboring city of Barre, Frank Langley was editing the Barre Times, whose editor of a later day, Dean Perry, was best man at Mr. Webb's wedding.

Then there were Mason Green and Howard Hindley of the Rutland Herald; John Southwick and Walter Gates of the Burlington Free Press, whose editor in chief was a great victorian—Mr. G. G. Benedict; Joseph Auld of the Burlington News; Harry Whitehill of the Waterbury Record; Joe Sault of the Ludlow Tribune; Fred Whitney of the Northfield News, my own early guide, counselor, and friend; Arthur Stone of the St. Johnsbury Caledonian; Charlie Walters of the St. Johnsbury Republican; L. P. Thayer, newspaper publisher at large, probably owner of more papers than any other man in the history of Vermont journalism; one-time partner of Lynn Hays in the publication of the Burlington Suburban List at Essex Junction; Jack Harris of the Hardwick Gazette; Harry Parker of the Bradford Opinion; Frank Greene of the St. Albans Messenger, Senator and editor, too. There were some memorable reporters in those days, always familiar figures about the State House: Jim Healy of the Argus; C. V. Poulin of the old Rutland News; Ed Nutt of the Montpelier Journal; P. C. Dodge, newspapersman-at-large; Colby Stoddard of Barton; Jack Norton of the St. Albans Messenger. I remember, also, Miss Georgia White, the first woman columnist in Vermont. She received an opportunity to exercise her superb talents through the enterprise and sagacity of Luther Johnson, of the Randolph Herald and News, dean of Vermont editors, still going strong. Good Vermonters and competent workers, all of them, and all good friends of the friend who has so lately left us. Charles Webb was at heart a newspaperman all his life and found zest to the last in his work as Washington correspondent of the Burlington Free Press and the Rutland Herald. On that account I like to mention these old friends and coworkers.

Down the bypath of memory they come, a procession out of the spirit land. In retrospect we see them again in all their old activities: their humor, their foibles, their whims, their fights, and their hobbies, their successes, and their failures. You could always find them at the State House during the sessions of the legislature; at the political conventions whether in Burlington, Montpelier, White River Junction, or Rutland; at pow-wows at the Pavilion in Montpelier or the Van Ness House in Burlington; at the annual outings of the Vermont Fish and Game League, at the Bluff Point Hotel on the New York side of Lake Champlain. And by the way what has become of the Vermont Fish and Game League, whose concern in the days I speak about was so largely with political fish and political game? In their work and in their play these men whose names I have mentioned sum up Vermont newspaperdom at the turn of the century. This gathering of Vermonters brings them back to us tonight like friendly spirits visiting momentarily the scenes of their labors. Well, all I can say is that if they get out newspapers in the Great Beyond, Charlie Webb and his old cronies are having a wonderful time.

After his early schooling in Northfield, Mr. Webb went on to the old Vermont Methodist Seminary at Montpelier and thence to Dartmouth College. That famous seat of learning at Hanover never sent forth a more loyal son nor one who exemplified in more striking terms what Dartmouth men call the Dartmouth spirit.

It was soon after he left Dartmouth that Mr. Webb went to work on the Montpelier Daily Journal, there to begin his association with Walter Husband, ever after one of his closest friends. He was editor of this paper when he came to Washington as secretary to Senator William P. Dillingham. Subsequently he became secretary to Representative—afterward Senator—Gibson and then served in like capacity with Senator Austin until failing health forced him to retire.

Through his Washington secretarial work exceeding 30 years in the aggregate, he not only gave faithful and efficient service to his chiefs but rendered a singularly valuable service to the people of the State of Vermont. No one knew better than Mr. Webb the workings of the various departments and agencies of government in Washington. Tactful, courteous, he made friends easily and because of this had a genius for getting things done. One thing deserves special mention. Since his death, one of his colleagues of the old days in Senator Dillingham's office, Mr. Pierce, of the National Life, has emphasized it. No one in Washington had a more detailed knowledge of soldier-benefits legislation and its administration than he. The last days of many a Vermont veteran and his widow were made easier because Mr. Webb knew what their rights were and worked unceasingly until he had obtained the financial aid that the Congress had authorized.

How often in word and work and deed he exemplified what the poet calls—

> "That best portion of a good man's life—
> His little nameless, unremembered acts
> Of kindness and of love."

Charles Webb was born in a Vermont Methodist parsonage in Irasburg. His youth was nurtured in a home of plain living and high thinking. From his English-born father, Rev. Alfred H. Webb, one of the most eminent of Vermont Methodist divines, he inherited many of those characteristics that in England are summed up in the designation "the nonconformist conscience." His dominant trait was an ardent sense of justice, and nothing could dissuade him from a cause or a conviction once he made up his mind as to what was just and right and true. Conscience was ever his guide; and if he knew that righteousness was on his side, he cared not for the consequences.

Hospitable and generous to the point of prodigality, he was blessed with an ideally happy home life. It was his privilege to have had as mother, wife, daughter, and sister what the ancient Book of Proverbs calls valiant women. In the great relationships of son, husband, father, brother, and friend, he carried himself with the honor of a noble chivalry and the love of a mighty heart.

Since all men must die, it is well if they can die grandly with a record of work well done and duty faithfully performed. Tonight, as we recall our departed friend, it is inevitable that "pleasant thoughts bring sad thoughts to the mind," but because of all the sacred memories which he has left—for him and for us—death has no sting.

On the peaceful slopes of Green Mount Cemetery in Montpelier he was laid to rest. His lifelong friend, Dr. Hewitt, of Northfield, friend also and successor to Mr. Webb's father in the pastorate of the Methodist Church in Northfield, performed the last sad offices. For him the evening had come—the busy world was hushed. In the mercy of God he had found "a safe lodging, a holy rest, and peace at the last."

As I think of Charles Webb's passing on that quiet August morning when all the world was waiting for the surrender of the Japanese, there comes to mind a grand old English classic as well known in Vermont a hundred years ago as the Bible itself. I mean, of course, the Pilgrim's Progress. Here and now I want to say to this Vermont

audience that if you do not know the Pilgrim's Progress you are not as wise as your forebears.

In this great work John Bunyan always speaks cheerfully of death, and Mr. Webb's own passing is not unlike that of Mr. Valiant-for-Truth's. You will remember that the author tells us that Mr. Valiant-for-Truth was taken with a summons and had as a token that the summons was true—that his pitcher had been broken at the fountain. When he understood it he called for his friends and told them of it. Then, said he:

"I am going to my Father's; and though with great difficulty I am got hither, yet now I do not repent me of all the trouble I have been at to arrive where I am. My sword I give to him that shall succeed me in my pilgrimage, and my courage and skill to him that can get it. My marks and scars I carry with me to be a witness for me that I have fought His battles who now will be my Rewarder."

So Valiant-for-Truth "passed over and all the trumpets sounded for him on the other side."

## The Ruins of Berlin

EXTENSION OF REMARKS

OF

### HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. LUDLOW. Mr. Speaker, one of the most interesting of the many interesting human documents that has come in the aftermath of war is a letter describing the ruins of Berlin written by Pfc Elliott Goodman, of Indianapolis, to his parents, Mr. and Mrs. L. L. Goodman. This young man is a keen observer and a brilliant writer and no one can read his description of the Berlin of today without a harrowing sense of the tragedies of war.

The letter follows:

DEAR FOLKS: Greetings from the ruins of Berlin. Though Berlin and the state of the Germans has been replaced in the public eye by the spectacular happenings in the East, the atom bomb, Russia's entry into the Pacific war, Japanese capitulation—that, unfortunately, does not in the slightest change the basic problems that exist, and will continue to exist, over here.

The smashed buildings will remain smashed; the hungry populace will, if anything, approach closer to starvation as winter comes on; the coal supply will only dwindle, and then there will be no more coal; the fantastic black market, despite all attempts to the contrary, will continue to be fantastic.

Berlin, this winter, will not be a pleasant place for Germans to live—nor I suppose, will the rest of Germany—but Berlin is expected to be the worst of all, as they have some 2,785,000 people here and adequate facilities for probably about half that number. The war completely disrupted the transportation system so that, even if coal and food were available in sufficient quantities, they couldn't get it to the right place at the right time.

But that is the least of the difficulties, for almost no one is left on the farms to produce food or in the mines to mine coal, and it is an established policy to give a good portion of what production will be available to the liberated countries, like France, Belgium, etc., first. As a result, there will be no coal for any German homes this winter, and it will not be surprising if there are frequent food riots in store for us, nor would I be surprised if Berliners died of starvation this winter.

It's not hard to figure out, then, why such a black market flourishes. Most of the Germans have a lot of money made from war industries, but saved because there was little to buy, and they are all hungry. The one English word every German knows is "hunger," which they generally pronounce "oongur."

The first day I got here I saw a GI sell the little can of ham and eggs from a C ration box for $15. But that is only an example—a rather poor one at that.

Now, if only the Germans and the Americans were involved in the black market, it would be relatively simple. But there are also the British, French, and the Russians, and it is the Russians that really liven things up. First of all, because, believe it or not, most of them have not been paid in 5 years and then they got it all at once here in Berlin, and, secondly, because they are not allowed to take any more than $75 back to the Soviet Union with them, and therefore they must spend it all here in Berlin.

So, while the Germans want food, the Russians want watches, cameras, radios, jewelry, etc. I doubt if the Russians have ever seen much of this sort of thing because they practically tramp all over you and outbid each other to get it. The bigger the watch, the better the Russians like it. A fine ladies' watch would sell for practically nothing—a mere $200 or $300. But, believe it or not, I saw a Russian buy a watch which looked more like an alarm clock on a wrist band for $750. Personally, I wouldn't be seen with a thing like that in a dark alley at midnight. I asked the GI who sold it where he got it. He said he took it off a dead German.

Now the market is pretty well shot because new troops coming in here have heard reports and knew what to bring with them. Lots of them come in wearing watches up to their elbows, but only for a day or so. Then they join in asking Berlin's standing joke, namely, "What time is it?"

But the boys who came up on the advance parties and brought the trading materials with them were the ones who really cleaned up. Then, when the market was just opening up, one fellow I know got two Leica cameras for a pound of coffee.

Lots of them sent home as much as $15,000 in a couple weeks' time. So, when the Army learned that the 33,000 Yanks in Berlin sent home over $4,000,000 in July alone, they decided to limit the amount you could send home to your salary plus 10 percent. Now everyone goes around with big rolls of money in their pockets.

Cigarettes are acceptable as money among all the five major nationalities—preferred oftentimes. One pack plus a candy bar and you pay for your week's laundry. The standard price, if you want to sell cigarettes, is $10 a pack—but if you are really avaricious and press the deal, you could get $15—and I've still got my watch. Every time a Russian approaches me I explain that it was given to me by my parents and I don't want to sell it, and, anyway, I want to know what time it is.

When our advance party first came to Berlin they couldn't find any decent living quarters and they didn't have the use of public utilities or any sort of convenience because there just weren't any. But by the time I came up on the third movement (and they are still coming up little by little) they had most of the public utilities under control and solved our housing problem very simply. They found a whole area of two-story apartments in the suburb of the United States section. They had hardly been touched, and, what was more remarkable, they still had all the furnishings in them because the Germans had continued to live there and kept everything pretty well intact. Only here and there can you see any bomb damage and even a great percentage of the glass is still in the windows.

So the Army told all these Germans one fine rainy morning (Berlin has bad weather constantly; it has rained every day for 3 weeks now) that they could politely move out, and pronto. The story goes that they thought they were moving out temporarily for the Potsdam Conference, and after they got out they discovered it was for good. I don't know if that is true or not, but I do know that, except for valuables, they left everything behind.

So now some 3,000 of us are nicely settled in these apartments. I have a very nice, cozy room to myself and a cute porch and garden immediately outside.

The room had double storm windows, and only the outside ones are broken, so it will still be O. K. for the winter. As yet they haven't repaired the gas mains so we have no hot water, and the water is still polluted so we have no drinking water (but who wants to drink water, anyhow), and the swamps and debris have cultivated a fine bunch of mosquitoes sometimes confused with P-38's. So we have some difficulty sleeping at night. These mosquitoes are the most conscientious I've ever encountered; they just keep coming at you, and sound like a dive bomber with motor trouble. With cold weather coming on, they won't be so bad though.

But we do have electricity, and garbage disposal, and every part of the Metro is working. Our offices, the former Luftwaffe headquarters, are just one Metro stop from the billets, so every morning several thousand GI's, mess gear or German crockery in hand, ride the Metro to work. We eat near the offices, and that's why we ride the subway with our plates and cups. However, they are going to furnish them at the mess soon so we won't have to do that much longer.

The offices are not attractive. I have not seen one building built by the Nazis that I could call attractive. They all look hard and ugly. They are plain, not with the simple dignity of a New England house, but with simple proportions that have no charm or grace.

Little by little the building is getting fixed up. Most of the windows were out, so they are putting new ones in. Parts of the buildings were burned or hit by bombs or even small arms fire, so they are repairing that. All the building needs paint, so they are painting. In the midst of painters, plasterers, and window fitters, we do our work.

We had to bring our own furniture from Frankfurt because most everything in the building was looted and smashed. First, the nearby Germans looted it, then the Russians looted it and if anything was left the first Yankees in Berlin probably finished off the job. That is the pattern that most all buildings, especially public buildings, have undergone here.

Berlin itself is not flat. That is a popular misconception. On the other hand, I can only count a dozen spots which are absolutely intact, all of them in the suburbs. Except for the inner city, in which every single building without exception was bombed, burned or hit with artillery fire, there does not seem to be any pattern of destruction in Berlin.

This apparently planless destruction stood out clearly in my first view of the city which was from the window of an airplane. As we circled over blocks and blocks of apartment houses in preparation for the landing at Tempelhoff, you could see a row of buildings that looked almost perfect, and for a block on either side of it, you would see remains of similar apartments now almost leveled to the ground.

However, once on the ground, I found my first impressions somewhat deceiving. For

the buildings that looked good from the air, I found were often gutted by fire, and many of them were nothing but empty shells. The outside walls would be standing, but there would be nothing in between. Apparently, a lot of incendiary bombs were dropped here, as a tremendous number of houses and apartments are in this condition. The latest estimate I've seen reports that over 900,000 Berlin homes were destroyed and damaged. This report also stated that of Berlin's 125 important bridges, 111 are destroyed.

The first day I got here, I hitched a ride downtown. The first vehicle that stopped happened to be a Russian truck carrying five Red Army soldiers in the back. Like all the Russian trucks and cars I've seen, this one was at least a 1929 model and plenty beat up. Of course, the Russians are driving a number of the German de luxe cars, too, but even those don't stand up very well under their Russian drivers, who dash down the street at 60 miles per hour, blowing their horns.

These five soldiers were all obviously Mongolians of some sort as their features were typically Asiatic. However, they spoke good Moscow Russian and were exceptionally friendly as most all Russian soldiers are. After offering me part of his seat—looked like it might have been an orange crate once—one of them went through the usual routine of asking me where I learned Russian, how much I wanted for my watch, and asking if it is true that every American is a millionaire.

They told me that they had fought their way to Berlin from Stalingrad and showed me all the medals on their tunics, which indicated the various battles and awards for valor. The Russians don't wear the ribbons of the medals above the left breast pocket as the Americans, but wear the medals and all on both sides of their tunic from practically their belts to their collars.

As we moved through the city, I noticed more and more Russian graves on street corners, in parks, in front yards—you can expect to see them any place. Apparently, the Red Army didn't have the transportation available to collect the corpses and bury them in one big cemetery—so they just buried them where they fell. Most of the graves are crude, and on the tombstone—generally a piece of wood—is written something like "Pvt. So & So, Red Army, died of wounds received in the battle of Berlin, such and such a day 1945."

I rode from Zehlendorf to Alexander Platz, a distance of some 10 or 12 miles, and got a good look at the destruction throughout the city. At first it was not too bad, but as we approached the center, the devastation suddenly became much worse. We rode through blocks and blocks and blocks where bulldozers had pushed a path, but that's about all there was. Labor gangs of women and old men were stacking up the good bricks and casting the unusable rubble away. At this point, the Russian next to me began to grin broadly and kept repeating, "Berlin kaputt, Berlin kaputt."

When we arrived at Alexander Platz, one of the famous centers of downtown Berlin, we were greeted by the remains of modern, exclusive stores and a huge picture of Stalin. Underneath the picture, the slogan seen everywhere "Hitlers come and go, but the German people remain."

This does not mean that Stalin forgives the German people for everything. The Russians have been ruthless in their treatment of proven Nazis, especially those holding office of any sort. This statement is simply to give the German people some hope that they may earn their way back to decent government in time.

I got off the truck and started hitching again to get to the Brandenburg Gate. It so happened the first vehicle that stopped was a British armored reconnaissance car driven by a British captain. He said, "Hop in," and I said "Where?" The only place I could see where I could "hop in" was the turretway up on top. So I climbed up the side of the armor and stood on a little platform in the turret. Standing there not unlike General LeClerc making his triumphal entrance into Paris, I rode down the Champs Elysees of Berlin, the famous Unter den Linden.

I assure you Unter den Linden today is not a pretty sight. Every building on either side of the street is damaged—some almost totally destroyed, others with no more than a huge "nick" out here and there. But everything is a monotonous dreary gray—it seemed a once great street which is today without hope, without any suggestion of gaiety or joy.

I got out at the gate, thanked the captain and began walking around. This was indeed quite a sight. The gate marks the boundary between the Russian and British zones, with Russian signs on one side and British on the other. It is still substantially intact, although every pillar has various size pock marks in it from shrapnel, artillery and small arms fire, and the statue on top is sort of beaten up too, with a few stray legs and arms sticking out from nowhere.

To one side of the gate is the Reichstag, bombed and burned but still standing, and all around it and through the big square, thousands of people form in little groups of 10 or 12.

This is one of the better market places in town. Here some of Berlin's fantastic trading goes on. A German woman trading her wedding ring to a Russian for some American C rations and canned goods, a Russian buying a pair of woman's shoes—why no one seems to know, but a group of people crowd around anyway to watch.

Signs in four languages say it is illegal to trade in the black market, but no one pays any attention to the signs. The police raid the place regularly, but the effect is only momentary. If the police really get nasty about it, the market will find a new place, but it will not go out of existence.

The other day a fellow from my office was down there selling a few watches when the police suddenly closed in and threw some tear gas bombs. This fellow ran for the first American car he saw and jumped in. He looked at the person sitting next to him in the car and realized it was a two-star general. Immediately he apologized and started to get out when the general told him to relax, and that he would give him a ride back to the office if he wanted.

Then the general asked this fellow how much he got for his watch. He told him only $400. The general said, "Yes, the market is really shot to hell, isn't it—I hope my orderly gets more than that for mine." Officers of field grade and above don't have too much trouble getting money home, and believe me, I personally know a dozen who have already sent home a good sized fortune.

By the way, the only immediate effect of this raid seemed to be that the price of cigarettes jumped from $10 to $20 a pack.

From the Reichstag, I walked over to the Reich's Chancellory, Hitler's executive offices. It, too, is still standing, though there are huge gaping holes in the ceilings and floors where bombs were dropped. The inside of the chancellory was very beautiful once, for among the piles of trash and rubble strewn throughout it, you can still see beautiful marble pillars, wall paintings and the remains of real museum piece furniture.

Much of the damage done here was not from bombs, but from the bayonets and hands of Russian soldiers, who upon seeing such splendor, willfully looted and destroyed for the sheer pleasure they got from such destruction. I asked one Russian guard why they had done this instead of saving what they could for an official war museum of some sort. He said that after fighting their way back almost yard by yard over 2,000 miles of territory, which was practically completely devastated, they were simply enraged to find anything like this in Berlin. Hence, each one personally wanted to tear up the furniture of the Reich Chancellory—which, I might add, they did rather successfully.

The Russians had dug out all sorts of stuff from the rubble heaps—among them large collections of Fascist medals. Several of the Russian guards set up sort of concession stands in various corners of the building and were selling the medals for cigarettes. Fortunately, I had one pack with me, so I traded it for 18 different kinds of medals which I have since mailed to you.

Most of them are campaign medals, but one which says "Fur Reich Mutter" was awarded for any German woman bearing five children for the state. I understand they had a really fancy one of gold for eight children, but I didn't see that one.

People of all nationalties were milling through the place looking for souvenirs. A Polish lieutenant stopped me and offered to trade me his Polish cap insignia for something American. I didn't quite know what to do, but I hunted through my pockets to see what I could find. The only thing outside of my dog tags which had anything about America on it was my voting registration card from Marion County, so I gave him that. He seemed very impressed.

For an hour or so I walked around looking over the other government buildings in the same area. But it was the same story with each one—bombed, burned, looted and ugly. I had walked through and walked over so much rubble, I had seen so much unrelieved disorder and destruction, and I had smelled so much rotting debris that I began to feel completely unreal—as if I were walking about in a nightmare. I had a sudden urge to see a straight, clear street with no bomb-crater in it, a row of houses which were not twisted into foolish shapes. Fortunately, I had a decent place I could return to, but I knew—how very well—that literally millions of people on this continent have no such place.

Though somewhat belated, I should like to add a few interesting impressions I received in the air trip coming up to Berlin. It was a beautifully clear day when we flew up, and I could see the countryside perfectly. Though I have always thought the country of Germany was very pretty, I didn't realize how exceptionally beautiful it really is until I had a chance to view large areas of it from the air. The rolling hills, the intensively cultivated farm area, the forests and lakes compare favorably with any similar area in the world, I dare say.

Even the Russians admit that the country is beautiful. Paraphrasing somewhat a remark a Russian once made to me as we were driving through the hills of Bavaria together "The land of Germany is really very beautiful, but the people—fooey!"

I was interested to see how the farm villages were roughly in the form of a circle, and unlike the American farm villages which simply consist of a few straight streets, these houses were clustered together in a haphazard fashion without any straight avenues of any sort. It looked as if they had all huddled together for mutual warmth and protection—which, I suppose, is exactly what had happened.

I was also interested to see that not everything our Air Force dropped hit its target. For quite frequently you could see a big bomb crater right in the middle of a wheatfield or a whole row of craters marking a cornfield which ran adjacent to a railroad track. In one place I saw the complete outline of a factory reproduced in bomb craters several hundred yards to one side of the factory which was still intact.

But the most impressive sight by far was the view of the city of Magdeburg. We flew directly over the ruins of its downtown district. Everything, but absolutely everything, was colorless, smashed—odd-shaped walls in senseless designs. It was hard to believe this could exist in the midst of the

fertile agricultural plains which surrounded it. It looked as if it might have been ruins of the capital of some long-forgotten desert empire—maybe a newly discovered Carthage or Babylon. How completely ugly and absolutely stupid. It was somewhat a symbol not only of this war, but of the history of man. For here all around were the fertile fields, the raw material, and here in the middle was what man had built and man had destroyed.

Maybe it really was Carthage or Babylon after all. At any rate it made one wonder if man had developed his understanding to the point that he could justify the existence of the word "progress."

ELLIOT.

## Discharge of Members of the Armed Forces in the Pacific Area

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from a constituent of mine who is a representative of the American Red Cross, now located in Oahu, T. H.

Mr. Speaker, this letter, coming from the representative of the American Red Cross, I am sure, reflects quite accurately a cross section of the thinking of our soldiers located in the Pacific theater of war. It is worthy of our consideration.

AMERICAN RED CROSS,
OAHU, T. H., *October 25, 1945.*

A. L. MILLER,
*Member of Congress, Washington, D. C.*

DEAR DOCTOR MILLER: Greetings from Oahu—the land of the hula and pineapples. A very interesting spot but the novelty of it is wearing out and Nebraska will look very good to me and I hope it will not be long.

As a whole my work has been very pleasant and I feel that I have been of service to the men over here. The only unpleasant part of it is trying to cope with the usual inefficiency and bungling of the Army brass.

After living with Army officers and working with enlisted men these many months I think I have a pretty good idea of how they think regarding many things. The average EM can see no reason for being here since the war is over and thinks the regular Army should take over from here. Almost every day I talk to young farmers and married men with families who would do almost anything to get home for most of them are doing nothing and they are sick and tired of loafing when they are needed at home and could be doing something useful.

I find a surprisingly large number of officers hope to stay in the Army for obvious reasons. They are very much in favor of a large postwar Army and they like the idea of compulsory military training, thinking it will create a need for them. To me this line of reasoning is very futile. It seems to me that the post war Army and Navy should be small—yes, very small, but highly scientific and up to the minute. The fact is of course that with the advent of atomic energy a very large percent of the Army and Navy became obsolete—but try to convince an Army or Navy officer of that. A very few will admit it.

Doctor, you men in Congress have been doing a good job pounding away to get the men home and keep it up, for if you don't there will be a couple million men still in the service a year after Japan quit. There are many things I would like to talk to you about, such as surplus property and other things concerning this island, but that will have to wait until we can talk it over some time.

The big topic just now in Army circles is compulsory military training. Personally, I do not think the American people want it for a good many good reasons that could be enumerated, and will be in the coming weeks. I am not convinced that it would accomplish the purpose for which it is intended unless the Army brass can bring its thinking up to date, which is too much to expect.

Well, Doctor, I am trying to get home by Christmas, for I am pretty homesick for the family and the baby daughter I have not seen. Keep up the good work and with my best regards, I am,

Sincerely yours.

## The Nation's Responsibility for the Education of Its Youth

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. WHITE. Mr. Speaker, the war has demonstrated that the greatest force in the world today is education. Without education the boundless energy of petroleum would still be dormant in the earth; without education the deposits of coal and iron in this country would still be left unutilized; without education the forests of America would still be a trackless wilderness and we would be as helpless as the American Indian who roamed the fertile prairies and through the vast forests and over the mineral-laden hills, running the course of their primitive lives with nothing to protect them from the elements but animal skins and frail wigwams.

Education and applied science have made the people of America triumphant in the world-wide war which has just closed and made this country preeminent among world powers. It is unthinkable that some short-sighted Government policy, now that the war has been won, would deprive this Nation of the preeminence attained by the superiority of its educational system by taking away from the youths of this country the opportunity to secure higher education. That we may more fully appreciate the vital importance of education to the future welfare of America there is inserted herewith an article appearing in the Magazine Digest entitled "We're Committing Scientific Suicide," by Dr. M. H. Trytten, of the National Research Council.

The facts presented by Dr. Trytten are stressed by former President Herbert Hoover in a recent address where he said:

The war has brought us a loss in our intellectual life from another direction. In our lists of dead are a multitude who would have given intellectual leadership to our people. Of those who survived, the draft and diversion to war have cost us the equivalent of six annual crops of young men trained in the professions and the arts. I regret to say that after the interruptions of war, too small a part of them are returning to colleges for training. Worst of all, by continuing the draft of boys between 18 and 21 since the war has ended we are destroying still another crop. There will sometime be a shortage in scientists, teachers, doctors, engineers, lawyers, and our leaders in the humanities. It is not even intelligent of our military forces to continue depriving our future defense of these skills.

The article follows:

WE'RE COMMITTING SCIENTIFIC SUICIDE

American applied science, which furnished the Allies with the means of winning this war, is in grave danger of losing the peace—and the next war, if and when it comes. A critical shortage exists of the very men who made possible both the victory and the promise of tomorrow's more abundant life: chemists, engineers, physicians, metallurgists, mathematicians, and researchers and practitioners in the fields of physical science on which the Nation's progress, welfare, and safety depend in peace and war.

It is estimated that not until 1950 will a new crop of graduates in the sciences be available to the thousands of organizations and industries that already lack trained personnel; and not until 1955 will the top men of science—those who earn doctorates—again be "in full production."

The most recent voice added to the protest against our "scientific suicide" is a joint report by the National Research Council and the American Council on Education. It urges all colleges, universities, Government leaders, and an aroused public opinion to unite in demanding a change in the military policy which, by abolishing deferments, sharply curtailing college military programs, and refusing to assign men for scientific training, has almost completely stopped the flow of men to the technological fields. "It is amazing," the report comments, "that in the very period when the worth of such personnel is so brilliantly demonstrated, the record shows we have canceled our production of reserves."

Drafting of graduate technicians—putting scientists to swabbing decks and making professors into privates—is also deplored. The Senate committee headed by Harry S. Truman before he became President found that there was either a partial or total waste of scientific training in 90 percent of the cases checked. This waste of technical wealth, however, cannot now affect the outcome of the war; the really permanent and tragic loss to the United States is the generation of scientists who will never exist because thousands of young men of promise were pressed into military service instead of being allowed to take or complete their scientific education. It is feared a second generation may be lost unless tomorrow's technicians are drafted into technical training just as today's potential ones have been into military training.

In 1940 there were 110,000 engineering students in America; today there are only 38,000, nearly half of whom are freshmen awaiting induction, and of the remainder 4,000 are Canadians. The net result is a shortage of nearly 100,000, and nobody believes that America will need 100,000 fewer engineers in 1950 than it did in 1940. One professor who normally teaches 100 students has a class of 4 today.

Physics and chemistry have suffered even more. Enrollment has been made up almost entirely of women, and a few IV-F men.

Even at present levels, which are not likely to be maintained, there will be 19,000 fewer physicians available. Only one dentistry student is being enrolled for every eight the Nation will need. In pharmacy, 3,600 students were registered in 1945, compared with 8,200 in 1942. Unless capable male students are allowed to complete college courses in pharmacy, there will be large gaps in the

ranks of trained personnel for laboratories, retail drugstores, and health and Government services. A lowering of standards might result, with serious consequences to the public health and welfare.

Only 11 percent of the number of students in 1940 were enrolled this year in agricultural sciences; only 9 percent in forestry; and only 16 percent in mining.

The shortage of men at the top of the scientific professions is even more impressive. The number of doctorates granted in physics, mathematics, geology, chemistry, and engineering, which had increased steadily for the past 35 years, has dropped sharply during the war years, and is now back to the 1920 level.

We have not only failed to safeguard our supply of trained men for our scientific and engineering preeminence, but we have actually followed policies which must weaken our technology for years. Our policies have actually seemed to class this type of training with the most disposable elements among our institutions. * * *

Two courses of action are open for America: A change in administrative policies, or new legislation. Authorities do not plan any modification of policy, and a change can be brought about only by an aroused public opinion acting through such Government agencies as Selective Service, the War Manpower Commission, and the Office of War Mobilization and Reconversion. The alternative: Legislation can be introduced and passed by a Congress made aware of what a lack of experts in applied science will mean to America's future.

## Recommendations of Indiana Department, American Legion

EXTENSION OF REMARKS
OF
### HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. LUDLOW. Mr. Speaker, the Indiana Department of the American Legion, which at all times demonstrates leadership of the highest order in looking after the needs of veterans and their dependents, recently held a State convention and adopted four resolutions which I think are worthy of note as indicating the advanced thinking of the great veterans' organization in respect to specific proposals for the benefit of veterans.

The first is on the subject of the liberalization of nonservice pensions for men 55 years old and who are 50 percent or more disabled; the second, a resolution requesting a continuance of the high type of plastic surgery now being carried on in Wakeman Hospital in Indiana; the third, a resolution requesting that the Bunker Hill Naval Air Training Station be made available as a rehabilitation center and hospital; and the fourth, a resolution requesting that a tuberculosis hospital be set up centrally located in the State of Indiana.

By unanimous consent of the House I submit for publication in the CONGRESSIONAL RECORD the text of these resolutions as follows:

LIBERALIZATION OF NONSERVICE PENSIONS

Whereas 26 years have elapsed since close of World War I and the average age of the veterans of said war is over 50 years; and

Whereas many World War I veterans have now reached the age where their earning power has been reduced, and under the existing insurance laws many of the veterans of both wars to be unemployable; and

Whereas many disabled veterans are denied benefits through the application of the existing regulations, and the "Combined Rating Schedule" and schedular requirement for a major disability: Therefore be it

*Resolved*, That the schedular requirement for the payment of nonservice be liberalized to the point that a nonservice pension shall be paid to war veterans who have reached the age of 55 years, and who are 50 percent disabled, that a straight computation of the disabilities be rated on the 1933 rating schedule and the combined schedule shall not be applied, and that there shall be no major disability requirement; be it further

*Resolved*, That need shall be shown as under present regulations, and that the amount shall be the same as that paid the present time, $50 per month; be it further

*Resolved*, That copies of this resolution be forwarded to the national rehabilitation committee, the legislative committee, and all Members of the Congress.

PLASTIC SURGERY

Whereas while facial injuries comprise but a small percentage of all types of casualties of war, yet they are the most important from a psychological standpoint of the patient due to the universal horror of facial disfigurement, and the ensuing mental inferiority complex is more acute than the feeling associated with loss of limb or even sight, and

Whereas there is not only great psychic trauma involved in severe wounds of the face, but also to be considered are the far-reaching social, economic, and rehabilitation problems, and

Whereas this problem is much more serious than it was during the First World War due to the use of more powerful explosives and because a far greater number of these casualties survive due to the routine use of blood plasma, sulfanilamides, penicillin, and more prompt use of modern field surgery, and

Whereas almost unanimously these patients insist upon surgery, and would rather have a lump of poor flesh for an ear or nose than the most perfect stage-property accessories that can be built from synthetic substitutes, and

Whereas the most wonderful plastic surgery is being afforded these men by the best talent in the country in the nine hospitals doing this type of work throughout the country, and especially at Wakeman Hospital Center, Camp Atterbury, Ind., and

Whereas the time for the completion of these most necessary medical services may run for many months and should be done by the same doctors now rendering that service, or others of equally highly efficient technical ability and knowledge: Now, therefore, be it

*Resolved*, That it become the unswerving duty of the American Legion to take whatever action it deems necessary and see that this action be executed, be it legislative or otherwise, to insure these veterans and the casualties yet to come of the highest type medical service available after the war—said services being comparable to the excellency now being rendered in our hospitals for our armed forces; and be it further

*Resolved*, That there be a constant follow-up system inaugurated, thus making it sure that this fine facial plastic surgery be continued and made available for these men as long after the war as it may be found necessary.

PROPOSED REHABILITATION CENTER

Whereas there is a desperate need of additional hospital and rehabilitation facilities for veterans of the last war; and

Whereas the Bunker Hill Naval Air Training Station now being used to train flying cadets will be abandoned by the Navy on or before December 1, 1945; and

Whereas approximately $25,000,000 has been invested in acquiring and constructing this station; and

Whereas the facilities at this station are adequate and adaptable and should be utilized as a rehabilitation training center and hospital for veterans of this war; and

Whereas the Veterans' Administration under existing law has the first priority in acquiring Government-owned properties being abandoned as surplus by the Federal Departments and agencies: Now, therefore, be it

*Resolved by the American Legion, Department of Indiana, in annual convention assembled*, That, we appeal to and urge the Veterans' Administration to exercise its right and priority to acquire the Bunker Hill Naval Air Training Station and to convert the same into a rehabilitation center and hospital; and be it further

*Resolved*, That, copies of this resolution be forwarded to the President of the United States, General Omar Bradley, Administrator, United States Veterans' Administration, and to the United States Senators and Congressmen from the State of Indiana.

PROPOSED TUBERCULOSIS HOSPITAL

Whereas World War II veterans are being discharged from the armed services suffering from tuberculosis; and

Whereas there is no United States Government tuberculosis hospital in the State of Indiana, and our veterans are required to go to a veterans' facility located in some other State; and

Whereas experience has shown that World War I veterans would not remain in hospitals so far away from their families, and that they would leave the sanitarium and return home and then later again reenter the hospital, and that some have been readmitted to different hospitals numerous times; and

Whereas a bulletin from the National Tuberculosis Association states very few of these patients have completely recovered and many of them have constituted an army of discouraged men spreading tuberculosis throughout the country; and

Whereas many of the World War II veterans who will be discharged suffering from tuberculosis have already been away from home 2 or 3 years and will not want to leave their families and friends for treatment in a remote veterans' hospital: Now, therefore, be it

*Resolved*, That the American Legion use its influence to have tubercular veterans of World War I and World War II treated as near their homes as possible, and that a tuberculosis hospital be set up centrally located in the State of Indiana to remedy this situation; and further, that copies of this resolution be forwarded to the national executive committee and all Members of Congress from Indiana, and released to the press.

## "Not Unduly Exacting" About Poland

EXTENSION OF REMARKS
OF
### HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mrs. LUCE. Mr. Speaker, when Secretary of State James Byrnes said, in explaining the failure of the London Conference, that "we have not been unduly exacting" of Soviet Russia "in regard to Poland," he stated our foreign policy in relation to that unhappy country with painful accuracy.

The partition of Poland was a violation of the Atlantic Charter, of the Moscow agreement, and of every declaration of

intent toward Poland made during the war by the United States or its elected representatives. Our statesmen concurred in this partition on the ground that it would best serve the interests of world peace. Poland, our ally, was sacrificed on the altar of "peace" to Soviet Russia on the very same ground that the Czech Republic was sacrificed to Nazi Germany at Munich. At the time that the sacrifice was consummated, certain guaranties were given to the residual Poland by the great powers: freedom of elections, religion, publication.

How these guaranties have been observed is described by the New York Times correspondent, Gladwin Hill, in a recent series of dispatches, of which the following are excerpts:

One of the most frequent questions that a correspondent traveling in Poland is asked is: "When is the American Army coming to liberate us from the Russians?" As incredible and preposterous as this may seem, it is a widespread notion. The Moscow-created Polish Provisional Government admits the existence of this feeling. The Government-dominated newspapers have repeatedly acknowledged it. * * * The Government ascribes such talk as it ascribes virtually everything that does not please it—to reactionaries. However the explanation is not so simple as this. The writer has heard the talk from persons who definitely were not reactionaries, although they, of course, were indulging in wishful thinking. The fact is that the people of Poland today have ample reason for disliking the Russians. * * * Ancient animosity was intensified in 1939 when the Russians helped the Germans partition Poland for the fourth time in 150 years. This was not completely effaced by the Russians' subsequent arrival in the role of liberators, especially as their liberating extended to a lot of Polish property with a zeal hardly distinguishable from the Germans.

Russian authorities have in fact admitted that the Red Army, when it got to Poland, regarded it as enemy territory and drew little distinction between it and Germany.

The Russians have looted Polish industry * * * and * * * in the new western territories of Poland have taken away 30 percent of the industrial equipment. * * * The Russians have been herding farm animals by the thousands eastward * * * Russian supply troops by the thousands are settled down on the Polish countryside—the official figure is more than half a million Polish acres now being farmed by the Red Army—using the agricultural resources. * * * The Russians stripped the Polish ports of Danzig and Gdynia of most of their cranes and other maritime equipment and have taken at least three of the harbor's four important floating drydocks. This correspondent has visited Polish hospitals that have been stripped of their linen and other essential supplies by the Russians.

The Russian-Polish trade agreement * * * seems curiously one-sided. * * * Under it Poland gives Russia 5,000,000 tons of coal and coke. Silesian coal operators, 75 percent of whose production is going to the Russians (although thousands of Poles are going to freeze this winter for lack of fuel), say the Russians are paying a dollar a ton for coal, although it costs more than that to mine and the Russians are selling the same coal in southeastern Europe for ten times that price. * * *

In numerous conversations with Poles to discover the exact sources of their resentment toward the Russians the writer found that it was mostly the simple fact of the Russians' presence in Poland, not just physically but mentally, and the influence they evidently are trying to exert—the new occupation which some Poles even compare unfavorably with the German occupation. * * * They resent the setting up in their provinces of Russian military organizations under Russian generals to preserve order. They resent Russians' staffing their army and synthesizing a new Polish navy while the real Polish navy remains abroad. They resent a propaganda with the stamp of Moscow being sponsored to them by their Moscow-created provisional government.

Inflation has been added to the other troubles in Poland. Several weeks ago, to combat the trend, an offer was made to transfer the gold reserve of the old Polish Republic which is now on deposit in the United States and Canada. This offer was refused by the Polish Provisional Government by direction from Moscow, since the Kremlin—that is, the Politburo—does not trust even its own creation in Warsaw with any degree of financial independence. Under present conditions the only money circulating in Poland is unsecured paper notes, printed and issued by the Soviets, and guaranteed by them. The guaranty, of course, is simply a control of exchange which sets the rate of Polish zlotys with reference to Soviet rubles.

Every observer agrees on the prospect of a famine in Poland, due about equally to the hasty, unscientific splitting up of land and removal of practically all farm animals and tools, and the immense consumption or carrying off of foodstuffs by the various Red Army units en route home, or in garrison in Poland. In this connection many Poles recall the purge by famine of Russian peasants some 15 years ago, when the Moscow Government decided to liquidate the kulaks and other small landholders.

The details of the present situation in Poland, as given by Mr. Hill in a dispatch published by the New York Times on October 29, 1945, show living standards to have sunk to the barest subsistence level:

CHAOS MAY DEFEAT SOVIET IN POLAND—CONSERVATISM OF THE PEASANTS MAY ALSO BE A FACTOR TO CAUSE REDS' UNDOING

(By Gladwin Hill)

WARSAW, POLAND, October 17.—There are two things that may eventually defeat the Moscow-dominated Communist regime in Poland.

One is the fact that it is a tiny minority sustained by military force and disrupted conditions and that the majority of the Poles still are conservative farmers. The second thing is the extremely difficult economic situation, which would tax the resources of the ablest administration with unanimous support. The difficulty of coping with it may precipitate a reaction against the Moscow team that is running Poland by decree.

It is too early and the situation too muddled to appraise the effectiveness of the regime in dealing with conditions. Many bold steps have been taken, and conditions are improving, although it would have been hard for them to get much worse.

No one can find fault completely with the present economic system in Poland because it is a strange transitional economy with something in it to please everybody—collectivism, socialistic cooperatives, even nominal free enterprise.

SEEKS TO HELP TRADE

The Government has undertaken to ameliorate the paralysis of the normal interplay of agriculture—which constitutes two-thirds of Poland's life—and industry by stepping in and taking part in the production of each and supervising exchange. The farmers, in addition to their ordinary taxes, have to sell an average of 20 percent of their production to the Government at low fixed prices, which run as low as 5 percent of the prices the farmers could get on the free market.

This food is distributed in towns at fixed-price stores. Similarly, the Government buys up part of the manufactured goods and distributes them at low fixed prices to farmers through cooperative stores. However, this covers only a small part of the normal agriculture-industry interchange. The remainder in each case is left to find its way through free channels, which, because of the shortage of transportation and other distribution facilities, amount to a black market economically, although not juridically.

The system only scratches the surface of the problem, leaving urban people to scrounge for a lot of their food, and, in the present state of industry, leaving farmers shy a good deal of their needs of manufactured goods. The farmers are complaining that they are getting "gypped" even on the basis of the limited interchange. They say that, for every 3 zlotys' worth of produce that they are giving up to the Government at approximately double the prewar prices, they are getting back only 1 zloty's worth of manufactured goods priced up to six times the prewar values.

GOVERNMENT EMPLOYEES HELPED

There is such a severe inflation, with bread costing a hundred times what it did before the war, while salaries are still close to the prewar basis, that the Government has been forced to make adjustments so that people can eat. All Government employees—whose monthly salaries don't average much over the cost of a pair of shoes—receive food rations. These are liberal enough so that if there are several in a family it may end up with an excess in some item like sugar, which they can sell on the free market to get additional cash, and this practice is officially countenanced.

Similar improvisation is in effect in industry—which is largely under Government control—and other fields. Workers in a typical textile mill in Lodz, for instance, get in cash only a few hundred zlotys weekly—a little over a dollar at the free rate of exchange and not worth much more in purchasing power. A loaf of bread costs 25 zlotys. But in addition to cash wage workers receive pieces of cloth to sell on the free market to get additional cash. Employees of hotels—virtually all of which have been taken from private owners and are now operated by municipal governments—get low cash pay but receive one or more meals daily.

Nurses in a typical hospital get only 800 zlotys a month for a nominal 46-hour week, which actually runs about 70, but they get their meals.

From the foregoing it will be seen that a large number of Poles are now working directly or indirectly for the Government for little more than their subsistence and that Government control has been extended far. This is done at present on the ground that the national emergency necessitates centralized control. Few would gainsay this any more than the United States after Pearl Harbor, although they might question the sort of centralized control that has been instituted. The Government's long-range economic program still is not precisely defined.

HAZE OVER THE DETAILS

It has been announced that heavy industry will be "nationalized," with a Government bureau controlling each industry, although such details as what industries will be considered "heavy" and what compensation may be arranged for the private owners, domestic or foreign, and what the system of management of the enterprises will be have not yet been revealed. Formal "nationalization" has not been applied anywhere yet, but virtually everything is under Government supervision,

and in many cases old managements have been replaced by persons whose background is obscure but whose political inclinations are obvious.

There are no indications of any scheme to collectivize farming generally, and this is hardly feasible. There are many peasants, albeit humble, whose holdings have been in the family for a century, and they are confirmed property owners.

The gist of official pronouncements is that it is intended ultimately to have a mixed economy, with enterprises of general public interest controlled by the Government, national, regional, or local; distribution concentrated in the socialistic cooperatives, of which there are said to be 6,500 (half of them consumers' cooperatives) with 2,000,000 participants; and some activities still under private enterprise.

There is no indication what ventures may be left under private enterprise. A cooperative system is declared the most desirable economy for Poland, on the ground that it preserves "the flexibility of private enterprise" with socialistic control.

It is intended to revive Poland's foreign trade, particularly with Russia, and it is hoped that at least half the imports and exports will be carried in ships of a Polish merchant marine; and to welcome again foreign capital, which before the war constituted 40 percent of the capital investments in Poland.

This is a good sounding program but its value depends, of course, on the execution. One school of thought is that the Communist regime stands to win either way. If it succeeds in getting Poland back on its feet the regime will have an argument for perpetuating itself, and if it does not, there will be such chaos that it will have grounds for keeping "emergency" control.

Another school of thought is that it stands to lose either way; that, regardless of whether it succeeds or fails, if the majority will manages to assert itself the regime will be thrown out in favor of one less Red and more Polish.

These conditions are substantiated by reports from Correspondent Chares P. Arnot, of United Press, reports which, like those of Gladwin Hill, were sent via the American wires in Berlin after the reporters themselves had returned from Poland and its censorship.

Mr. Arnot's views are taken from a somewhat different angle than those of Mr. Hill, but there is no difference in the basic facts disclosed.

POLAND FACING GRAVE PROBLEMS IN REBUILDING

(By Charles P. Arnot)

BERLIN, October 13, 1945.—Poland has come out of 6 years of war and occupation to be faced by the most difficult and delicate reconstruction problems of any country in Europe. The war also has left a great political wound which will take years to heal and may even require a major operation.

While the over-all picture today is not as chaotic as reports from exiled London Poles imply, neither is it as serene and optimistic as the present government of national unity would have the outside world believe.

SHARP POLITICS

There is a sharp political cleavage and both sides are eager to convince foreign visitors their case is right. It seems apparent that Poland is not well-informed on what is happening in the outside world—particularly concerning efforts to promote a lasting peace. If you have read one Polish newspaper you have read them all.

The entire nation is undergoing a transition and the sharp political differences naturally have bred suspicion on all sides.

The Poles generally fall into three broad categories—those who are avidly pro-Russian, those who are violently anti-Russian, and a middle-of-the-road group which believes that Poland can and will play the role of "bridge" between the Eastern and Western powers.

ELECTION IN SPRING

The present Government does not appear to have tremendous popular support, but only the forthcoming elections, set for next spring, can gage national sentiment.

The Poles admit that anti-Semitism still persists. However, the Germans virtually eliminated that problem by cutting down the Jewish population in Poland from some 4,000,000 to an estimated 150,000.

Economically and industrially the swing is to the left. Nationalization of all industries employing more than 50 workers and not financed by foreign capital is under way. The cooperative movement is growing more popular and is backed by the Government.

FEAR HUNGER

The Red Army is gradually returning the railroads to Polish use but there may be hunger in the midst of plenty this winter if the transport bottleneck is not eliminated.

You can drive for miles in western Poland without seeing a single cow or a horse. The Germans seized thousands of head of livestock and Red Army troops now maintain supply units to obtain food from local sources.

Throughout the entire trip I saw only one tractor in operation. Everywhere men, women, and boys were digging in the field with hand implements.

The Russian troops are generally unpopular in Poland but so are the American GI's in Paris, simply because they are foreign soldiers. What the Poles dislike most are the new Polish police, trained by the Russians.

If the material situation of the Poles is no less than desperate, their morale and spiritual strength is being tried almost beyond endurance. Thomas Babington Macaulay once said that his conception of hell was a place where the facts of history were constantly being distorted into the ears of an historian who was deprived of the power to correct his torturers. That is exactly what is happening in Poland today to millions of Poles who know their country's history and the tremendous efforts made by the Polish Republic from 1919 to 1939.

Luckily not all those who know the facts about Poland have yet been silenced. Here is one witness:

RELIGION FREE IN POLAND—STATEMENTS OF FOREIGN MINISTERS HELD CONTRARY TO FACTS

To the EDITOR OF THE NEW YORK TIMES:

As a Protestant minister who lived and worked in Poland from 1924 to 1941, I was struck by the statements of Wincenty Rzymowski, minister of Foreign Affairs in the present Warsaw Government, in an interview printed in your paper October 25. To quote: "In 1939, he recalled there was no freedom of religion, for example, because all other faiths were stamped out by the ruling Catholic church."

I, a member of one of these stamped-out religious minorities, hereby register my emphatic protest. Poland was only 75 percent Roman Catholic. Other Christian denominations and other faiths were not only guaranteed by the Polish Constitutions of 1921 and 1935 freedom of conscience and practice but actually enjoyed it. The fact that I, an American Methodist preacher, was able for so many years to live and propagate my religious beliefs in Poland sufficiently proves the falseness of Mr. Rzymowski's statement.

Mr. Rzymowski also states "that free education, abolition of class distinctions, and the improvement of the general standard of living were on his Government's program." He implies by this that Poland before 1939 had no free education.

As one who taught for a time in a Polish school, I am well acquainted with her prewar educational system. During 20 years of independence she established 23,722 free elementary schools for children between the ages of 7 and 14. In the year 1937-38 4,851,000 children of all classes attended these public schools. In the same year there were 722 public secondary (high) schools with 221,200 pupils and 717 trade schools with 1,216 departments for special branches of industry. In the five State universities and two colleges of engineering the students paid only nominal fees for registration and examinations.

(The Reverend) GAITHER P. WARFIELD.
FREDERICK, MD., *October 25, 1945.*

From this evidence it should be perfectly plain to any impartial observer why our Secretary of State, Mr. Byrnes, said that we "have not been unduly exacting" in reference to our pledges—taken mutually with Soviet Russia—in safeguarding the freedom and self-government of the Polish people.

## Jackson Hole National Monument

EXTENSION OF REMARKS
OF
**HON. FRANK A. BARRETT**
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. BARRETT of Wyoming. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Wyoming Eagle of recent date. I may say, Mr. Speaker, that the Eagle is the leading Democratic paper of Wyoming.

The people of Wyoming, regardless of party affiliation, were opposed to the dictatorial manner in which the Jackson Hole National Monument was created, and this editorial fairly reflects the sentiment of our people.

Congress alone has the power to create or extend a national park. The creation of this monument by Executive decree was merely a subterfuge to extend the boundaries of Teton National Park. Without a doubt this was clearly a usurpation of the powers of Congress. It constituted an unwarranted invasion of the rights of the sovereign State of Wyoming. The people of my State were pleased when the Congress passed my bill to abolish the Jackson Hole National Monument.

In fairness to the people of Wyoming, the Congress insisted upon government by law instead of rule by Executive decree. The decision of Congress was eminently correct and it is the only way the matter can and will be settled.

The editorial follows:

IGNORANCE IN ST. LOUIS

Comes a copy of a recent issue of the St. Louis Times-Star containing an editorial based on the sale of a large block of Wyoming land. Before commenting on the Missouri editor's conclusions, we reprint in full what he has to say, as follows:

"INCONSISTENCY IN WYOMING

"The news wires the other day devoted a half dozen lines to a report from Cheyenne concerning the purchase by the Wyoming Game and Fish Commission of the entire

town of Lost Cabin, Wyo., and 58,000 acres of ranch land.

"If certain persons in Wyoming are in the frame of mind they were said to be in a year ago, there is trouble abrewing in old Cheyenne. Wyoming, if anyone has forgotten, is the State whose officials and other prominent citizens became almost hysterical when the late President Roosevelt set aside a parcel of scenic land to be known as the Jackson Hole National Monument. Too much of Wyoming's far-flung acreage already was publicly owned, it was argued. The idea of the President of the United States designating a few thousand more acres to be preserved in its natural state so that all America might enjoy it for generations to come was called a capricious encroachment on local rights.

"The area of privately owned land set aside for the Jackson Hole National Monument is 49,906 acres, and 33,795 of these acres had been acquired by John D. Rockefeller, Jr., for the specific purpose of turning them over to the Government for a national playground. If Wyoming could make such a fuss over 49,906 acres in Jackson Hole, how can it tolerate conversion of 58,000 acres at Lost Cabin into a State game preserve?"

The facts are these: The 58,000 acres of land in the Lost Cabin area were purchased by a Wyoming citizen, R. W. (Bill) Spratt. It happens that Mr. Spratt is a member of the State Game and Fish Commission, but this is irrelevant to the matter in hand. The land was bought by Mr. Spratt for ranching purposes, not by the commission for public-park purposes.

This leaves the St. Louis editor out on a limb, so to speak. There need be no more said. But it might be well to point out that even if he were correct in his assumption that the State game and fish commission had bought the Lost Cabin land for a game preserve, he still would be wrong in his assertion that there is anything inconsistent about Wyoming's position with respect to further Federal encroachment on State sovereignty.

It is one thing for the State to create and maintain a State game preserve and quite another thing for the Federal Government to take over a large block of Wyoming land for park purposes without consulting State government, the State's congressional delegation, or the citizens of the State.

Citizens and taxpayers have direct control over State government and over any enterprises in which it may engage. They have no control over and very little influence in management of any project which the Federal Government sets up. Where there might be no objection to State ownership of lands within the State, there could be serious objection to Federal ownership of such lands—especially when such a large proportion of the State's area already is federally owned.

It is worth noting in passing that St. Louis newspapers are the principal proponents of the MVA—a project which would deprive Wyoming of control over the waters of its principal streams. The St. Louis viewpoint seems to be that Federal encroachment is all right as long as the State of Missouri is not involved.

## Regular Veterans Association

EXTENSION OF REMARKS

OF

### HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks I include the following statement regarding the recent national convention of the Regular Veterans Association; also a news article from the Manchester (N. H.) Union of November 7, 1945, regarding a recent meeting by the Regular Veterans Association, honoring Earl Brennan:

The national convention of the Regular Veterans Association was held in Washington on November 4, 5, and 6. Under the direction of the National Council of Administration more than 138 delegates were represented in framing the slate of national officers and the program of the organization for the coming year.

William M. Floyd was again elected as national commander to guide the destiny of the RVA for another year.

With him were elected as his assistants Dr. Frank B. Gigliotti, Wardman Park Hotel, Washington, as senior vice commander, and Harold McIntyre, Van Nuys, Calif., as junior vice commander. Gigliotti is well known in Washington for services contributed by him to the Government during the war days in the OSS and other important committees, while McIntyre is well known on the Pacific Coast for his outstanding war service to our country.

Among the most important resolutions approved by the representatives of the RVA at the convention were:

1. To provide adjusted-service pay for veterans who have served in this war, as a practicable substitute for the present unsatisfactory provisions of the so-called G. I. Bill of Rights, under which the veteran receives injustice, generally, rather than benefits. Bills have already been submitted to Congress, and introduced by Congressmen IZAC and LESINSKI, to provide adjusted-service pay. They are H. R. 127 and H. R. 1176.

2. The 10-point program of the Regular Veterans Association which would provide inducements and incentive for the reenlistment of discharged personnel from our wartime Army in the Regular Establishment which must now be set up for future national security. The program provides for full payment of mustering-out pay for men reenlisting, a reenlistment allowance not to exceed $150, 30-day furloughs with pay to be granted for each year of service immediately, increase in pay levels of all officers and enlisted men, permanent commissions for the Nurse Corps of the armed forces, retirement after 25 years of active service, and retirement of officer personnel at 58 years of age with a minimum service of 34 years. Further recommendations of the program urge a peacetime Regular Establishment of such commissioned and enlisted strength as may be recommended by the War and Navy Departments.

3. Another resolution of the RVA urges Congress to take immediate action for the establishment of two veterans hospitals in the Territory of Alaska.

The organization was unalterably determined in its demand upon Congress that all members of the regular establishment should receive equal benefits with war veterans, in pension, hospitalization, domiciliary care and in civil service credits of 5 and 10 points for appointment in Federal jobs.

Congress and the War and Navy Departments were called upon for an effective program of universal military training. The RVA strongly recommended the famous Swiss system of military training or a limited modification of the system that would fit the conditions of our own country and the Western Hemisphere. It was stated that a program patterned after the Swiss system would guarantee the best possible defense of America against invasion which, the resolution stated, "will probably be the case in the next war into which we are forced by foreign ideologies and power politics."

The convention urged Congress and the Federal Government to see to it that all veterans be protected in their rights to jobs. It urged that the provisions of the selective service law guaranteeing veterans seniority above all others be enforced and that no veteran should be forced to join any union or any organization whatsoever, nor in any way be compelled to pay a tithe or tax to any group for the right to work.

One of the strongest resolutions adopted by the convention calls upon Congress to enact legislation making communism in this country a felony; calls for the indictment of ringleaders of the so-called Communist Party who made seditious speeches during war for the violent overthrow of our Government; and demands the immediate deportation of all aliens now in this country who advocate the overthrow of the Government or who are members or associates of any group which does.

The convention also went on record to restrict all immigration for a period of 10 years.

As honorary aides-de-camp of the national commander, the following veterans of past wars were appointed:

Elisha Ames, Sawtelle, Calif., Civil War veteran, 102 years of age.

Frank Conner, veteran of the Indian Wars, Arlington, Va., 82 years of age.

John Sullivan, a veteran of past wars and retired from the District of Columbia Police Department, 81 years of age.

Jack Price, a veteran of World War II, Burbank, Calif., 15 years old.

Out of a total of 23 national officers, 16 World War veterans were elected to office.

---

[From the Manchester (N. H.) Union of November 7, 1945]

HONOR OSS CHIEF FROM NEW HAMPSHIRE WHO HELPED LIBERATE ITALY

WASHINGTON, November 6.—Earl Brennan, New Hampshire-born Irishman who successfully united anti-Fascist Italians in a cloak-and-dagger enterprise to help liberate their country and hasten Allied victory in World War II, received a certificate of merit medal from the Regular Veterans Association tonight for distinguished service rendered as Chief of the Italian and Albanian Section of the Office of Strategic Services.

National Commander William M. Floyd, DSC, of Unalaska, Alaska, presented the award at a banquet attended by members of Brennan's secret team from all parts of the country, besides many prominent personages in and out of the Federal Government.

Speaker after speaker praised the modest New Englander for the 3½ years of unrewarded toil in which his agents gathered information and promoted anti-Axis sentiment among the subjects of Mussolini so that Allied invaders were hailed as liberators, fascism was overthrown, and thousands of lives were saved.

"Italy can never repay you, and America must never forget you," was the theme of the remarks by Dr. Frank Gigliotti, national adjutant of the RVA, who read the citation; Judge Eugene Alessandroni, of the Court of Common Pleas, Philadelphia; Dr. Charles Fama, president of the Osteopathic Medical Association; Prince Bomcompagni-Ludovisi, of Rome; Capt. Emilio Daddario, an OSS agent here; and the toastmaster, Victor Anfuso, of Italy, special assistant to the Commissioner of Immigration and Naturalization.

Moved almost to tears by their tributes, Mr. Brennan accepted the decoration on behalf of "his boys" everywhere who shared in the OSS achievements. In a lighter vein he remarked that his undercover work had given him the reputation of a combined Rasputin and Mephistopheles.

Mr. Brennan revealed he soon will return to his farm at East Westmoreland, N. H. He formerly practiced law at Keene and served in the legislature. He became acquainted with many of his Italian friends and fitted himself for his future war service as United States consul in Florence and Rome; also in Stettin, Germany; Gotesburg, Sweden; and Canada.

## OPA Policies

EXTENSION OF REMARKS
OF
**HON. CHARLES R. ROBERTSON**
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, a happy and prosperous people within the United States can only occur when justice accrues to all. There has been a constant barrage of propaganda, driving a deeper and deeper wedge between the peoples of the United States. This is no error of judgment, but it is malicious in its intent and dangerous in its results. There is evidence of this on every side today.

The Office of Price Administration is a symbol and a practical application of this policy. The idea of the Office of Price Administration yielding on the question of wages, but insisting that the business who pays the wages must absorb the increases, surpasses all understanding. The only answer to this question is that those who employ are fewer in number than those who work. It is pure and unadulterated politics.

The attitude of Chester Bowles on the automobile prices is reprehensible beyond question. The idea of some bureaucrat sitting in Washington, looking over the broad expanse of continental America, with no background of business experience, saying to the automobile dealers of the Nation, "You do so and so. I know more about your business than you do yourself." And we fought a war for freedom and for the democratic system.

Not alone is this policy being carried out against the automobile dealer. It is being carried out in many phases of American business, particularly in the lumber business and in the women's garment business. We were told many months ago that under new regulations they would channel vast quantities of cheaper goods into the hands of the people who had been deprived of having them for months preceding. The Office of Price Administration has had ample time to make effective its orders, and I say to this Congress unhesitatingly that they are failing miserably in every aspect of their endeavor to channel cheaper goods into the hands of the people in the lower income brackets.

Today, as has been the case down through the months, there is not yet available canvas gloves for workingmen and farmers. There is not yet available underwear for children, and it is almost totally impossible in many of the larger cities of the Nation to buy men's cotton or lisle undershirts. Many of the stores of the country today will show you these garments imported particularly from Switzerland, and some hosiery coming in from South America.

I reported to this Congress some few weeks ago an experience that I had in the women's garment industry in New York City, the greatest market in all the world. I have long been a buyer in that particular market. I said at that time, nearly a month ago, that the shortage of goods was more serious today than ever in the history of the Nation.

I have recently returned again from another visit to this market. I restate to this Congress that because of the maladministration and the ill-conceived methods of the Office of Price Administration, there never has existed a greater shortage of fabrics or manufactured goods in the city of New York than there is today. Contracts placed now for spring delivery are placed with an understanding that they will have the privilege of delivery dates as late as May and June. Remember, you are placing the contracts now, and you are told when you buy these goods that they will be delivered within this long period of time, only if they obtain the materials, and they have no assurance of securing materials.

The Office of Price Administration had for its purpose to hold the line against inflation. We are now face to face with the question of its having failed in that respect because it has yielded generally to wage increases. But because wages go to voters in great numbers, it has made this concession. By the same token, because the businessman is fewer in number, and less politically inclined, he is supposed to absorb the wage increases out of his volume of business. I want to make my case clear here. I think wages in many instances must be increased.

No more inconsistent or unreasonable policy, no more arbitrary and unbusinesslike method could ever have been engaged in. I do not want to go so far as to say that Congress should repeal the Emergency Price Control Act, but I do feel it is rapidly becoming an issue which must be decided, first because it is not stopping inflation, and for another and more important reason, namely, it is positively destroying production, when in the face of indisputable facts it goes on to issue arbitrary and unrighteous orders. The effort of the automobile dealers of the Nation was a clean understandable plan to present their case. There was nothing highjacking about it in any respect. It may be true that it was well organized, but it was carried forth on a high plane. Yet there is effort being made to indicate that the automobile dealers are a ruthless lobbying group, intent on destroying the American economic welfare. This, in spite of the fact that by and large the automobile retail dealers of the Nation sell an average of less than 30 units per year, and remember it has been many years since they had any units to sell.

Under unanimous consent, I include a statement on the question of the Office of Price Administration in a news item from the city of St. Louis, Mo.:

[From the New York Herald Tribune of November 12, 1945]

POLICY OF OPA CALLED MENACE TO DISTRIBUTION—STAND ON COST ABSORPTION HELD RECONVERSION CURB BY HEAD OF SALES GROUP

ST. LOUIS, November 11.—Charging that the present policy of the Office of Price Administration, requiring that increases in the cost of manufacture be absorbed in distribution, was doing irreparable harm to the Nation's distributive system and was retarding reconversion and full employment, George S. Jones, Jr., president of the National Federation of Sales Executives, urged yesterday in an open letter sent to 8,000 members of the organization that formal protests against the OPA's policy be sent to all Members of Congress as well as other key officials.

The OPA's present policy, Mr. Jones declared in his letter, was nullifying the efforts of the National Federation of Sales Executives and of all sales management in general to rebuild sales and distribution facilities so that the peacetime goal of 50 percent more goods can be sold, which is "essential to the support of the Nation's economy if maximum employment and prosperity can be accomplished."

"In face of the position now taken by the OPA," Mr. Jones said, "there can be only one conclusion and that is the OPA is refusing to give the green light to sales management in planning for postwar markets. Since OPA is basically an administrative division we can only conclude that this is the thinking of the majority of those people who at Washington are directing the affairs of the Nation at this time."

While part of this is due to a "deliberate intent to revise our entire economic structure," Mr. Jones continued, "much of it is due to a lack of interest and even to a lack of knowledge.

"The result is that through the CPA our Government seems to overlook the fact that the only possibility of maintaining a flow of business of sufficient size to support our postwar economy is in continued improvement in the distribution machinery."

## Elephantine Outlook

EXTENSION OF REMARKS
OF
**HON. CHARLES R. SAVAGE**
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. SAVAGE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial entitled "Elephantine Outlook," which appeared in the November 12 edition of the Washington Post:

ELEPHANTINE OUTLOOK

The current issue of the Republican News, official organ of the national committee, is just to hand, and under the caption, "It's fun to be President," we note a front-page article set in parallel columns titled "Truman's 'My Day,'" on the one hand and "A Citizen's Diary" on the other. The publication endeavors to show—we suppose—that Mr. Truman is frittering away his time while the Nation burns.

This is meant to be comical, so we'll give you a sample in order to let you share in the elephantine mirth. The GOP version of the President's diary for Saturday, October 6, starts off as follows: "Motored to Berryville, Va., for Bennett Clark's marriage to Actress Violet Heming. Took part as best man. Back to Capital where three Government planes formed air party for a Missouri weekend to see Caruthersville County Fair. Smooth trip; slept and played poker. * * *" Since the imaginary citizen whose diary for the same day appears contiguously is concerned exclusively with strike problems, we take it that the GOP publicists are trying to prove that Mr. Truman's time is occupied exclusively with trivia. All that they have accomplished, however, so far as we can see, is to disparage as trivial three revered and firmly established American institutions, marriage, county fairs, and poker.

Morally, this is, perhaps, a peg above the party's recent efforts to prove that the late President Roosevelt deliberately invited the Japanese to destroy the United States Navy at Pearl Harbor. But, politically, it is un-

likely to prove any more effective for the simple reason that it is equally nonsensical. Whatever Mr. Truman's shortcomings, he has shown no lack of conscientiousness about his job. The GOP is likely to be no more successful in the future than it has been throughout the past decade if it persists in sterile negation and a juvenile carrying of the argument "ad hominem." The American people are looking for an affirmative program.

## Matthew Fontaine Maury

EXTENSION OF REMARKS
OF
**HON. A. WILLIS ROBERTSON**
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. ROBERTSON of Virginia. Mr. Speaker, this year marks the one hundredth anniversary of the founding of the United States Naval Academy at Annapolis—a great university, and the finest naval training school in the world. The suggestion for the establishment of such a training school, on the work of which has been built the greatest Navy in the world, came from Matthew Fontaine Maury. He closed his distinguished career as a professor of physics at the Virginia Military Institute located in my home town of Lexington, Va., on whose board of visitors I now have the honor to serve.

In 2045 our Nation will be celebrating the one hundredth anniversary of the discovery of how to split and harness the power of the atom, which we all hope will mean the end of future wars. That discovery of natural laws is no more remarkable than Maury's discovery of the natural laws of the sea, which gave to the mariner mastery over winds and tides and brought the nations of the world closer together than anything that had previously occurred in recorded history.

As a member of the State Senate of Virginia I secured the adoption of a resolution in 1922 to erect a monument to Commodore Matthew Fontaine Maury in Goshen Pass, Rockbridge County, Va. That monument was dedicated on July 9, 1923, by the great English scholar, C. Alphonso Smith, then head of the Department of English of the United States Naval Academy at Annapolis. On that occasion Dr. Smith said:

I

There is a peculiar propriety in the erection of a memorial to Matthew Fontaine Maury in Goshen Pass. Of all the pleasant places of earth, it was this place that swam last before his dying vision. It was from the beauty of this spot, treasured in his memory, that he passed into the realm of changeless and unfading beauty. It was the flowers that grow here, between Laurel Run and Anchor Rock, that he wished placed upon his coffined body as the last and only tribute of affection:

"Wait till the laurel bursts its buds,
And creeping ivy flings its graces
About the lichen'd rocks, and floods
Of sunshine fill the shady places.

"Then, when the sky, the air, the grass,
Sweet Nature all, is glad and tender,
Then bear me through the Goshen Pass
Amid its flush of May-day splendor."

Fifty years ago they bore him lovingly through this pass and heaped the flowers upon him. Today we wish him to abide here. As he did not forget Goshen Pass, so Goshen Pass has not forgotten him. This tablet is the pledge of a mutual love and constancy that will know neither variableness nor the shadow of turning.

II

This is neither the time nor the place for a biography of Matthew Fontaine Maury. I shall attempt only to say what seems to me the distinctive contribution that Maury has made to science and to civilization. That he has made such a contribution is evident. Why, for example, should a distinguished writer who had never heard of Maury till he visited Virginia, add after a few days of investigation: "Yet there is no one living in the United States, or in any civilized country, whose daily life is not affected through the scientific researches and attainments of this man?" Why is it that the United States Government publishes through the Hydrographic Office in Washington four great charts every month and puts at the top of each: "Founded upon the researches made and the data collected by Lt. M. F. Maury, United States Navy"? This is a recognition paid to no other naval officer, and these charts perform a service and have for three quarters of a century performed a service without parallel among Government publications. Something that Maury thought and something that he did have plainly become the heritage of the ages, and this heritage has grown rather than diminished with every passing year.

The great thought on which Maury was to build came to him at the age of 25. It was in the year 1831. This thought was that the sea, if investigated, would be found to have its laws as constant, as uniform, as variable as those of the land. Nature to Maury was one and indivisible. She was as sovereign over the three-fourths of the world which was fluid as over the one-fourth which was solid. The waves, the winds, the storms, the currents, the depths, and the temperatures of the sea were believed by Maury to constitute a system, a complex of cause and effect, constant in its regularity, perfect in its orderliness, and so mathematically interrelated that the mind of man could by patient investigation understand its phenomena and even forecast its processes. It was more than a theory with Maury. It was a faith, the kind of antecedent faith that had led Columbus, Galileo, Harvey, and Newton to their respective goals.

Tennyson makes Columbus say from his chains:

"The golden guess
Is morning star to the full round of truth.
No guesswork! I was certain of my goal."

So was Maury. Eleven years were to pass before he could put his faith to the test of actual proof. But the very intensity of his belief, the vividness with which he saw and felt the integrity of nature, and the inviolability of her laws on sea as well as on land, was to him in the nature of a demonstration.

It was easy for men to believe, even before proof came, that the quiet land was the abode of natural law. Its regularly recurrent seasons, its testimonials of evenly laid strata, its ancient forms of animal and vegetable life, its visible adaptations of form and function to climate and soil, all spoke of an orderly development which, by investigation, man could in part understand and control. But the sea was different. It was the very symbol of caprice and lawlessness; it suggested the unknown and the unknowable. If it had its laws, they seemed beyond the reach of rational explanation.

When Byron wrote, a few years before:

"Roll on, thou deep and dark blue ocean, roll!
Ten thousand fleets sweep over thee in vain;
Man marks the earth with ruin, his control
Stops with the shore."

He expressed the prevailing attitude. Fleets did sweep over the ocean in vain so far as collective research or helpful data were concerned. Man's control did stop with the shore so far as control was dependent on the understanding of winds and currents and a compliance with their inexorable demands. When Baron von Humboldt, 25 years later, wrote his monumental Cosmos, conditions were practically the same. Though his book was considered the last word on science up to the year 1844, his scant treatment of "oceanic discoveries" is but added proof that Maury was an unheralded pioneer. Had Humboldt deferred his discussion of the ocean until 1855, Maury's name instead of being unmentioned would have led the list of marine discoverers; for in 1855 Humboldt had recognized in Maury the master scientist of the sea and had acclaimed him as a world benefactor.

Whether Maury at the age of 25 had thought of any definite means of proving his faith in the sea, I do not know. I think that he had. In a letter written to his brother in 1833, Maury speaks of resigning from the Navy, adding, however, "I have too many notions." These notions held him, and they seem to imply not merely a new view about the sea but some hoped-for plan of carrying this view into effect. In the meanwhile, though only "a passed midshipman," he was growing in knowledge, range, and power. In 1836, he published his Navigation, a book that almost immediately displaced all rivals and remained till recent years the authoritative text on that subject. It is interesting to recall that Edgar Allan Poe was one of the first to proclaim the merits of the new book and to welcome in it the new spirit of research that was beginning to manifest itself in the American navy. In 1839, Maury's leg was broken in a stage-coach accident and he limped the rest of his life. He at once turned all the more resolutely to study and investigation and began to publish in the Southern Literary Messenger a series of articles called "Scraps from the Lucky Bag of Harry Bluff, U. S. N." Nobody knew who the author was but the criticisms of the Navy, though severe, were so wisely constructive that naval officers not only welcomed them but set about embodying them in a new and better naval organization. There can be little doubt that the Naval Academy, founded at Annapolis in 1845, is the product of the suggestions made by Maury in these articles.

III

In 1842 the great opportunity came. Maury was sent to Washington and placed in charge of the Depot of Charts and Instruments which he quickly converted into the National Observatory and Hydrographical Department of the United States. The man, the hour, and the task had met; and Maury was about to become the best known and most widely honored American living. He was to make our Hydrographic Office the observed of all observatories, and he was to prove to all scientists and to the mariners of all seas that the ocean is as law-abiding as the land.

The method that he pursued was almost as fruitful as the results obtained. It was the method of cooperation. He had blank forms, abstract logs, as he called them, prepared and sent out to all ships that would use them. These called for a sort of recorded diary of temperatures, air pressures, depths, winds, and currents over every surface of every sea that was traversed. The sea was asked to grant a continuous interview and thus to have its autobiography written. This it did willingly, never having been persuasively asked before. As soon as a thousand coworkers had submitted their chapters,

Maury was ready with his pilot charts and sailing directions, and these with a few changes but with Maury's name at the top are still piloting the ships of all the seas.

The effect on navigation was immediate and dramatic. As it was on the *Falmouth*, sailing from New York to Rio de Janeiro, that Maury had first thought about uniform winds and currents, he determined to make the first test of his charts on this route. The voyage was cut in half. In 1848 gold was discovered in California and our great clipper ships began to race with their freights from New York around Cape Horn to San Francisco. The average voyage was 183 days; it was reduced at once by Maury to 135 days. One American clipper, the *Flying Cloud*, keeping close to Maury's sea lanes, accomplished the trip in 89 days, making 374 miles in 1 day. No Atlantic steamer of the time had made such a day's run. So favoring were winds along Maury's routes that many an American clipper covered the 16,000 miles from New York to San Francisco without having to reef her topsails more than twice. Gold was discovered a little later in Australia and the average trip from England to the Australian mines was reduced from 124 days to 97 days. The annual saving to the United States alone on freight to and from South America, China, and the East Indies was estimated at $5,000,000. Maury found that zigzag routes had been followed from time immemorial on the trip from New York to Cape Horn and that the Atlantic was crossed nearly three times needlessly on each voyage. Sailors had heard of terrible currents if they sailed straight, currents which Maury found to be mythical, but the fear of which had lengthened the voyages and multiplied the disasters of ships for more than 200 years. It is easy to estimate the saving of time and money that Maury effected; it is impossible to estimate the number of lives saved or the number of shipwrecks avoided.

IV

But Maury's pinnacle moment was yet to come. His system of sea lanes had been utilized chiefly by American ships, his coworkers also being chiefly Americans. Wonders had been accomplished, it is true. Rivalry at sea had been stimulated; new instruments of measurement had been devised and old ones improved; Americanism had been quickened; a new pride in our naval prowess had been aroused; and the whole Nation had thrilled time and again when the news had come that an American clipper, following Maury's sea paths, had shown her heels to a British steamer, burdened with the coal that she had to carry on the long voyage to Australia. But Maury wanted all nations to cooperate with the United States Observatory and all ships and shipping to be correspondingly benefited.

An international conference was therefore called to meet in Brussels in August 1853, a memorable date not only for navigation but for international good will and cooperation. It was the first League of Nations. Belgium, Holland, Denmark, Norway, Sweden, Russia, France, Portugal, Great Britain and the United States attended. Maury was at once nominated for president, but declined the honor in favor of the great Belgian scientist, Quetelet. The conference lasted 16 days. At its close Maury's meteorological charts had been unanimously adopted and nineteen-twentieths of the shipping of the world had come within the compass of his vast and beneficent design. When the count was made 50 years later it was found that Dutch seamen had turned in 3,500,000 of the prescribed log books accurately filled out, American seamen 5,500,000, British seamen 7,000,000, and German seamen more than 10,500,000. Maury, however, did not wait for these. One year after the great conference had met he was enabled from the data received to publish the first depth map of the North Atlantic and to point out the pathway for the first cable. In 1855 he published his Physical Geography of the Sea and inaugurated a new science. It was the first book to embrace the entire sea as its theme and thus to bring three-fourths of the world into the domain of recognized and intelligible principle. If some of its conclusions have been overthrown, as of course they have, let it be remembered that they were overthrown by a method of continuous cooperation which Maury originated and by the testimony of log books which he had drawn up. The trans-Atlantic sea routes, however, which Maury had already charted, have been changed in only one detail since his death. After the wreck of the *Titanic* in 1912 the great liners agreed to dip a little farther south to avoid the icebergs. This was not a modification of sea lane; it was a modification only in the time of changing from Maury's more northern to his more southern route.

But the Brussels Conference was more than a scientific triumph. It meant a new era in history. Never before had the great nations of the world come together to plan for the common welfare and to exclude no nation from their counsels. It was agreed that if war came Maury's logbooks should in no case be destroyed. Even if the ship were sunk in battle, the nations pledged themselves to rescue the logbooks and to transmit them to their destination. The data must not be lost. The observations of each must be harvested for the good of all. The past and the present must extend a helping hand to the future. Maury felt keenly the greatness of the moment and sought to turn the consideration of the conference from himself to the vast moral import of what they were witnessing. When Quetelet at the first meeting thanked Maury in behalf of all the delegates for his services to navigation, Maury replied:

"I am extremely grateful for the sympathy you have expressed and the praise you have been pleased to bestow on my humble efforts. On my part I beg to thank you for the kind assistance that you have afforded me. Allow me to add that we are taking part in a proceeding to which we should vainly seek for a parallel in history. Heretofore, when naval officers of different nations met in such numbers, it was to deliberate at the cannons' mouths upon the most efficacious means of destroying the human species. Today, on the contrary, we see assembled the delegates of almost every maritime nation for the noble purpose of serving humanity by seeking to render navigation more and more secure. I think, gentlemen, we may congratulate ourselves with pride upon the opening of this new era."

V

One other contribution to the new era Maury was yet to make, but a strange and tragic history was to release him for his new task. He had thought much and written much about the benefits that would accrue to the farmer if weather conditions could be anticipated on land as well as they had been anticipated on the sea. In the concluding remarks that he made in Brussels he expressed the hope that the time would soon come when a general system of observation would be established embracing both land and sea. In 1858 he wrote in one of his Sailing Directions To Accompany the Wind and Current Charts:

"As much as we have accomplished at sea, more yet can be accomplished through the magnetic telegraph on land. With a properly devised system of meteorological observations to be made at certain stations wherever the telegraph spreads its meshes, and to be reported daily by telegrams to a properly organized office, the shipping in the harbors of our seaport towns, the husbandman in the field, and the traveler on the road may all be warned of every extensive storm that visits our shores and while yet it is a great way off."

But there seemed little likelihood that Maury would ever have the opportunity to lead a crusade for a great weather bureau on land, though no one was so well fitted for it as he. Every moment of his time was occupied at the Naval Observatory. He had no thought of resigning. He was devoted to his tasks and problems. He was the recognized authority on marine meteorology in all lands. Honors such as no other American had ever received had come to him and were continuing to come to him from foreign governments. But all this was changed in the twinkling of an eye. War came, Maury resigned his position, was sent by the Confederate Government on a diplomatic mission to England, and did not see his native land again until 1868. In that year the University of Cambridge bestowed upon him and upon Tennyson the degree of LL. D. In the same year he declined the directorship of the French Imperial Observatory and accepted the call to the chair of physics in the Virginia Military Institute at Lexington.

Now began the last chapter in Maury's life. The thought of helping farmers, especially the cotton planters, by the establishment of a more effective Weather Bureau in Washington, inspired him with a zeal and enthusiasm that knew no bounds. He traveled and lectured in every section of the United States. The international mind had always been his and in a short time England and Russia were sending him resolutions of thanks for the stimulation of agriculture which his far-flung addresses had inspired. The chair of physics at the Virginia Military Institute had become the most potent platform in the United States for the propagation of the new movement.

But he had overtaxed his strength. Returning from a lecture in St. Louis he knew that his career was near its close. He must have known also that the victory had been won, that his sea charts had set the standard for the land charts, and that the task of interpreting nature in terms of help rather than of hindrance for mankind had been permanently advanced by his efforts. The end came quietly on February 1, 1873. "Do I drag my anchors?" he asked with a smile. "Yes," said his son. "All is well," he replied.

We dedicate this tablet to one who, though dead, yet lives and leads. We dedicate it to the founder of a new science, to the pilot of every ship that sails, to the herald of the new era of international cooperation. Matthew Fontaine Maury summed the past and projected the future. Over land and sea his spirit broods in abiding benediction.

## Scientist Speaks on Atomic Energy

EXTENSION OF REMARKS
OF
## HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I have the honor to include the statement of Dr. Lyle B. Borst, of the Oak Ridge, Tenn., scientists' group, made before an informal meeting of Members of Congress held on Thursday, November 8:

You have heard eminent scientists. You now hear a nobody. My name is anonymous.

You have never heard of me. You have never heard of 95 percent of the people working on the atomic bomb. It is for this group I speak. We are the young people. No more than 5 percent of the scientists working on the bomb are of an age greater than 35. The bomb could not have been accomplished without the older, more mature, more skilled scientists. We, however, have been the backbone and the workmen of the project. Our jobs have not always been interesting. We have not been able to see where we are going because our information has been limited. We have been told what to do. We have done it.

I wish to speak in three capacities today. First, representing my Association of Oak Ridge Scientists at Clinton Laboratories as a group of scientists; second, representing my association as a group of citizens; third, representing a larger Federation of Atomic Scientists. As scientists many of us have been born and bred in the project. We have come to the project directly from school. We know nothing else. We look forward to future lives. We wish to live our future lives in an atmosphere of free discussion where we can talk about our work, where we can talk on street cars; where we do not have to use code names. I am sure you people would not like to confine your discussions of legislation to small private chambers. We do not like to confine our discussions of our work to restricted areas. We wish to be creative scientists—not purely destructive scientists.

During the war we have developed a bomb, the peacetime application of which may be of equal importance. We have had no opportunity to investigate it. We wish to live at peace with the world and with our consciences. We object to military security. We object to living on military reservations where a meeting of more than 10 people is a public gathering and must be approved by military intelligence. There are plenty of jobs, jobs as interesting as those we have undertaken, and which pay more. There is a great need for fundamental research. We wish to do these things. The May-Johnson bill continues military security as has been applied during the war, with the additional penalty of a $50 fine for willful or unknowing infraction of a security regulation of the presence of which we may not be conscious. There is no guarantee within the structure of the bill itself that security regulations shall be made known to those to whom they are to be applied. There is no appeal to the decision of the administrator or commission. If we are accused of infraction we have no defense. We are expelled from the project and prevented from taking a job associated with any project coming under the jurisdiction of the Atomic Commission. There isn't much attraction about working in this field except for the appropriations available to the workers. The fundamental work of science is often done with simple apparatus. A good brain is worth many thousands of dollars of apparatus. Fundamental work doesn't require the large-scale equipment that we have associated with the project. There is little to make us want to remain in the project. There is much to cause us to leave. In terms of the Nation's good the project must go on. We need excellent men in this field. We need excellent men in other fields as well.

We have had no advanced education in the last 3 or 4 years. There is a serious gap in our manpower. The younger people wish to return to school. When they get to school they must have instructors. For that reason many of the people on the project in peacetime will leave. The project must be set up in such a manner as to attract good men and not merely to repel them.

One small detail with respect to the May-Johnson bill. In amending it in the Military Affairs Committee the purposes of the bill were somewhat altered. In the original form the scope included research on the transmutation of atomic species; the study of nuclear fission; and the release of atomic energy. In the bill as reported from committee this phrase has been changed in two or three places, but has not been changed throughout the bill. The transmutation of atomic species is an extremely broad definition. If pursued to its logical conclusion it even involves potassium, a common element in the earth's crust. I personally feel that the bill should be gone over more carefully and the alterations made in some places applied to all pertinent passages.

Second, I wish to speak as a representative of my association as citizens. Our group has grown up within 2 months as a consequence of the use of the atomic bomb as a military weapon. Assertions were made in the papers that we felt were incorrect. We wished to correct these statements. It was a new movement in the realm of science for scientists to take social responsibility for the products of their science. We have restricted information. There are perhaps no more than 2,000 people within the United States who have adequate information upon the structure of the atomic bomb, its utility, its limitations, and its power. We have also had time to consider the problem. We have had years to consider the possible social consequences of the atomic bomb. These two categories place us in a different position from the rest of the citizens of the United States. It is, therefore, our duty to help to enlighten the people of our democracy so that the action of our Government will be in keeping with the informed opinion of the people. This we have organized to do. We must not only inform the public but we must also lead the public. That is why I am here today.

We are opposed to the administrative structure of the May-Johnson bill, since the Commission is composed of part-time men who appoint their Administrator not subject to recall. The Commission must meet at least four times each year. In reality the Commission will accept the recommendations of the Administrator and the Administrator will determine to a great extent the policies of the Commission. The Administrator is isolated with respect to the will of the people. He is appointed by the Commission, not subject to any approval by Congress, not subject to any recall by the Executive or Congress except for specified misdeeds. We want a civilian Administrator. We feel that the structure of the bill includes insufficient connection between the policy-making group and the rest of the Government. We feel that there is no close and necessary tie between the policy adopted by the Commission and the policy of the State Department with regard to foreign affairs. There are other legal aspects of the bill which we are not competent to consider. We are technical men. As citizens we feel that these things should be remedied. As legislators you may be able to see many other things not apparent to us.

In my third capacity, I wish to announce the formation of a Federation of Atomic Scientists. In the history of the last few months many groups have been organized in isolated locations, independent of each other. Each group has adopted the same platform, same purposes, and same aims. During the last week we have accomplished the coalition of six of these groups—yesterday it was four. These groups comprise more than well over a thousand scientists who have been working on atomic bomb projects. The aims of the federation are (1) to study the implications on our Nation and the world of the legislation of atomic energy; (2) to create a realization of the dangers that this Nation and all civilization will face if the tremendous destructive potentiality of nuclear energy is misused. Nuclear energy is atomic energy that you have read of in the papers. It is the technical term. (3) To help establish an atmosphere of world security in which the private possibility of nuclear energy may be developed; (4) to study the relation between the national legislation and the establishment of an adequate international policy.

We are also organized to give all possible publicity to the following convictions: (1) That a continuing monopoly of the atomic bomb by the United States is impossible; (2) that there can be no specific defenses against the destructive effects of the atomic bomb; (3) and by all odds the most important, that in view of the existence of atomic power no nation can in this new age feel secure until the problem of the control of atomic power is solved on a world level.

---

## After-War Wages

EXTENSION OF REMARKS

OF

### HON. FRANK FELLOWS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bangor (Maine) Daily News of November 13, 1945:

AFTER-WAR WAGES

In all current debates over pay and prices, in the so-called non-white-collar brackets, two important factors seem to be overlooked:

1. The recent world conflict, and our share in it, forced this country into an abnormal economic condition.

2. With our expected return to a normal condition, the present emphasis on pay in the manufacturing industries will become disproportionate; our concern should have to do, not with that particular segment of pie, but with the concoction of "a real pie and a digestible one."

World War II did not start for Europe until September of 1958; for our country the shooting did not begin until the December of 1941. Yet, whereas only 29 percent of United States salaries and wages from all sources was paid by our manufacturing industries in 1939, they paid 43 percent of the total in 1944. The 1939 grand total was $43,800,000,000; the manufacturing industries' wage-and-salary share climbed in 1944 to $42,400,000,000—i. e., only $1,400,000,000 less than all the salaries and wages paid that year in all the country.

What that meant is clear: It meant that, thanks to war and the consequent rise of war industries, the country's economy had been completely transformed.

What it must soon mean should be equally clear. It must mean that today's demands for wage increases being concentrated on the field of manufacturing industry, they are concentrated on a field the great size of which is temporary and already shrinking. The war is over. We are supposed to be reconverting, with all possible speed, to a peace economy. The proportions may never again become what they were in the period just before World War I, but they will certainly not soon be what they were in 1944.

Moreover, if the present demands are carelessly granted, their effects will extend into far fields now unconsidered. Here is the case as a writer in the New York Sun sees it—and as it is:

"The grocer, the tailor, the shoe-repair man, the haberdasher—these are just as much concerned as are big operators in the manufacturing field with the effects of any

such national policy. Many of these small enterprises could be ruined by the application of a policy which big business might be able to survive. The little fellow, without financial reserves, cannot pay wages that are wholly out of proportion to what he takes in over the counter."

President Truman tells us we cannot hope, "with a reduced workweek to maintain * * * the same take-home pay for labor generally that it has had during the war."

He should add:

"During reconversion and later, we cannot hope to draw the same proportion of national income from manufacturing industry as during the war."

## Demobilization Problems

EXTENSION OF REMARKS
OF
### HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. KUNKEL. Mr. Speaker, recently a number of my friends and constituents who are serving with the armed services in the Pacific have sent me copies of the Daily Pacifican. The issue of October 24 contains a careful analysis of conditions in the port of Manila in regard to the shipment of servicemen and servicewomen back home. The existing bottlenecks in the Atlantic and Pacific theaters stranding so many thousands of men and women eligible for release or at least relief in far-off areas are the major problems the armed services must now solve. A little initiative by the President—who after all is still the Commander in Chief, although this fact is not being given the wide advertisement it received during the summer and fall of 1944—immediately after VJ-day, and better management by the armed services could have prevented all this, because the Congress has provided everything the President and the armed services needed and requested. We provided also funds sufficient to solve all the supply problems of the war, and that material and money are still available. If it were only put to proper use, thousands of these men would already be back in the United States released from the Army and back in their homes.

To a great degree, the Army has solved its demobilization problem in the continental United States. There is no basic reason for these two distressing situations not being solved. Certainly Congress has done everything it can do and certainly Congress is ready to do more if called upon. If anything is needed, then let the executive department and these agencies just tell us what it is. I feel sure Congress would give unanimous approval to any suggestion designed to remedy this trouble.

As part of my remarks, I include the above referred to article from the Daily Pacifican, the Army newspaper in the western Pacific:

HOMEWARD SAILINGS LAG BEHIND GOAL—DEPOTS CROWDED; SHIPPING LIMITED; NO BIG EXODUS BEFORE NOVEMBER

(By Sgt. Dale Kramer)

MANILA.—Analysis of facts and figures gathered from various Army agencies concerned with moving troops home for discharge reveals that:

1. Shipments from Manila for the month of October will total about half the 77,700 called for in the troop-movement schedule announced by General MacArthur's headquarters earlier in the month, judging from the number already departed and shipping facilities in sight.

2. No large-scale movement of returnees can be expected before November 1. At best, about one-fourth of the returnees in the four depots which send personnel through the Manila port—Twenty-first, Twenty-second Twenty-ninth, and Women's Distribution Center—can hope to embark before November 1.

3. The crowded depots are accepting only a few returnees mostly over 90-point men, or men over 38 years old.

4. Returnees will leave the depots on a first-in-first-out basis, rather than according to their number of points.

5. As things look now not much help can be expected from cargo ships. Some returning Liberty ships carry a dozen or so returnees in vacant crew or guard spaces, and Transportation Corps is experimenting with a couple of Libertys. The War Department gives a flat "No" on hasty camping-out conversion.

6. No help from units of the fleet can be expected immediately. The Navy has been allotted troop transports for its own personnel.

The above conclusions are drawn from information gained in interviews with officials of AFWESPAC Transportation Corps, Replacement Command, and Far Eastern Air Force's Twenty-second Replacement Depot.

Military personnel sent home through the Manila port between October 1 and October 20 totaled 31,647, according to AFWESPAC Transportation Corps. The Thirty-eighth Division, shipped as a unit, comprised a little more than half of that figure.

If the schedule for shipping as of October 22 holds, places for 7,114 persons will be available during the balance of October, with the only big ship due at the very end of the month. Waiting to fill these places, besides regular returnees, are hospital patients and a few civilians who have been employed by the Army.

Thus if 7,000 Army returnees are given places the total shipped for October will be around 37,000, compared with the 77,700 goal set in the early October schedule.

Check of the four distribution depots which send personnel through the Manila port shows that between 30,000 and 35,000 men and women now occupy them. Exact figure on October 17 was 33,987, divided as follows:

Twenty-first depot: 1,043 officers, 1,919 enlisted men;

Twenty-second depot: 1,048 officers, 7,698 enlisted men;

Twenty-ninth depot: 2,040 officers, 10,969 enlisted men;

Women's distribution center: 768 officers (including nurses) and 512 enlisted women.

Not much change has occurred since then.

Length of time returnees have remained in the depots varies from a day or two for new arrivals, to a month and a half for Wacs. Average wait before shipment has been running about 3 weeks. Prospects are that the waiting period will increase rather than lessen.

At the two big AFWESPAC ground personnel depots—the Twenty-first and Twenty-ninth—men with less than 90 points who appear are being sent back to their units until such time as space becomes available. Men with over 90 points or who are over 38 years old are received if they have permission to enter from the replacement command, the Air Corps' Twenty-second depot, overcrowded, is not accepting men.

The depots are shipping personnel on a basis of first-in-first-out, rather than on a basis of high pointers first and on down. This will mean that many men with points in the seventies will leave before many with over 90. What happened was that some units made low-point men available before high-point men—quick-acting units moved low-point men to the depots faster than others got high-point men in.

Procedure for mustering men out of AFWESPAC depots is this:

Shipment orders are cut in groups (usually of 25) to separation centers in the States, according to the arrival of men in the depots. Replacement Command says that in the case of small separation centers it may require a couple or 3 days to fill a list of 25, but that the spread is never more than 3 days. Thus, 2 men who come into a depot at the same time should leave within not more than 3 days of each other.

Cargo-ship commanders who have berths available are required to report them to Troop Movement. In this way small lots of a dozen or two returnees have been moved. But the War Department does not permit transportation of troops on unconverted cargo ships.

A few days ago the War Department did, however, grant permission to AFWESPAC Transportation Corps to convert Liberty ships under certain circumstances. But the change-over regulations are strict, with most of the usual transport conditions required—fresh vegetables, hot meals, bunks, refrigeration, and so on. Transportation Corps is now experimenting with a couple of Libertys. Once converted, a Liberty will be able to carry between 500 and 750 men.

## Address of Hon. A. Pearley Feen Before the Vermont Bar Association

EXTENSION OF REMARKS
OF
### HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. PLUMLEY. Mr. Speaker, under permission granted to extend my remarks, I wish to include an address of Hon. A. Pearley Feen, delivered as retiring president of the Vermont Bar Association before that association on October 2 entitled "A Code and a Court for a Developed Jurisprudence."

It is well worth the attention, not only of lawyers but of all citizens.

A CODE AND A COURT FOR A DEVELOPED JURISPRUDENCE

I have chosen a subject with which I feel that our bar and the profession in general will necessarily have frequent contact during the immediate and distant future.

A jurisprudence has been developing in which the Vermont lawyer has heretofore had little interest. It has now become our professional obligation to give attention to the field of labor law.

The importance of this problem is evidenced by the fact that very recently Mr. David A. Simmons, president of the American Bar Association, has publicly endorsed the program of voluntary conferences between management and labor organizations in order to avoid impending controversies between the groups. He has written the Secretary of Labor and offered the assistance of the American Bar Association to that end.

Gov. J. Howard McGrath, of Rhode Island, in his inaugural message to the last session of the legislature, proposed the establishment of a division of labor relations within the superior court of that State, but the recommendation did not provide a forum

for final adjudication (p. 15, Governor's Message, January sess., 1945).

In Vermont industry and labor have recently paved the way for the establishment of an industrial relations council.

These efforts relating to conciliation and arbitration are a necessary part of the program to insure industrial peace. This paper, however, deals with those matters which cannot be disposed of by conciliation or arbitration and should not be subjected to a decision by compromise.

It is impossible here to detail the progress of the development of many phases of this jurisprudence. I have therefore attempted to present a discussion of certain aspects which suggest the need for an orderly legislative scheme and a tribunal to administer the program.

It is my humble opinion that this jurisprudence has now reached the stage of necessary codification and that provision be made for its administration according to established judicial standards in order that both employer and employee may engage in their respective pursuits with a full understanding of their rights and obligations, not on the basis of the paternalistic whims of a political administrator who is solicitous of the good will of either employer or employee or a self-constituted arbiter of social policy. We need enactments and a tribunal which will provide certainty and not uncertainty and confusion with respect to labor relations.

Frequently the uninformed have taken the easy way out in considering the problem of labor relations by labeling employee activities as communistic. It has been interesting to note in pursuing the investigation for the preparation of this paper that such a conclusion is not warranted as a historical fact and actually is disputed by the development of industrial rights and obligations.

England is a constitutional monarchy. Nevertheless consideration of labor relations had a prominent part in England as early as the seventeenth century and all of this occurred long before bolshevism was conceived. Therefore, the answer does not lie in an antagonism to a consideration of industrial relations on the basis that it is communistic and has no place in a democratic civilization. We must meet the problem on some other and valid ground.

History establishes that it is not entirely a psychological change alone which develops labor reform. In other words, it is not solely the result of the activities of solicitous unions or solely the result of the activities of paternalistic employers. One factor has always been labor plenty or labor shortage. The treatment of labor plenty or labor shortage is the result of the attitude of a current civilization to the problem. Ultimately, it is to a large extent a practical result.

The development of certain phases of this jurisprudence in England has been strikingly similar to its development here. Let us briefly consider one form of similarity.

For example, during the recent war we naturally developed a labor shortage. Many employers were after the same workman. This form of competition was detrimental to the war effort. It could only ultimately result in an inflation which would take away from the employees the excessive wages which they could demand in such competition. In this country we met the situation in a practical way but incidentally in the very same way that an attempt was made to meet it in 1349 and 1351 in England.

In this country we enacted the Wage and Salary Stabilization Act, Public Laws 729, Seventy-seventh Congress, enacted on October 2, 1942, and there followed Executive Order 9250, which established the Office of Economic Stabilization and delegated certain powers to the War Labor Board. At the same time we amended and tied into the program the Emergency Price Control Act of 1942, regulating prices. We attempted to solve the labor shortage problem by freezing the employee in his job and his wages and at the same time by similarly freezing the prices of the things which he must buy, except to the extent permitted by the statutes, as of a date prior to the enactment. All of this has historical precedent.

England suffered a pestilence, referred to as the Black Death, and mortality rose from 5 percent to 50 percent during 1348 and 1349, and there developed a labor shortage due to the resultant depopulation of the country. The remedy applied was the promulgation of the Ordinance of Labourers published in June 1349 and the enactment of the Statute of Labourers in February 1351 which provided severe penalties for leaving employment and froze hours of labor and rates of wages (Cunningham, Growth of English Industry and Commerce, 40). However, in England the effort was one-sided as the government was unable to stabilize prices and the program was not as successful as was our program during the war (Lipson, The Economic History of England, 90).

On the other hand, an oversupply of labor in this country brought about the enactment of the Fair Labor Standards Act of 1938, enacted on June 25, 1938. One of the purposes was to extend employment by providing overtime compensation after 40 hours and thus spreading employment by reducing the normal workweek (*Williams* v. *General Mills, Inc.*, 39 Fed. Supp. 849).

The attitude toward combinations of employees has followed a parallel course in England and here. This may have been due either to our adoption of the common law of England or a similarity of industrial psychology. Let us first briefly consider the experience of employee combinations in England.

During the eighteenth century, Parliament termed such combinations and their purposes "evil examples" (7 Geo. 1 St. 1 c. 13).

In *Rex* v. *Eccles* (Leach CC 274, 1873), Lord Mansfield said:

"The illegal combination is the gist of the offense; persons in possession of any articles of trade may sell them at such prices as they may individually please, but if they confederate and agree not to sell them under certain prices, it is conspiracy; so every man may work at what price he pleases, but a combination not to work under certain prices is an indictable offense."

Conspiracy prosecutions continued in England into the nineteenth century and substantial departure from the conspiracy theory came with the enactment of the Molestation of Workmen Act of 1859 (22 Vict. c. 34). This legislation has been referred to as the peaceful-persuasion statute. The cases disclose prosecutions for conspiracy in the 1870's (*Regina* v. *Bunn*, 12 Cox CC 316). In 1875 the Conspiracy and Protection Act was enacted, and this statute permitted combinations in trade disputes and exempted the same from conspiracy prosecution, and in 1906 such combinations were exempted from liability for civil conspiracy (the Trade Disputes Act of 1906, sec. 2).

In this country the criminal-conspiracy issue seems to have been raised first in 1810 (*People* v. *Melvin*, 2 Wheeler CC 262 N. Y. 1810). The American concept was reasoned in 1935 by the chief judge of the New York Court of Appeals as follows:

"If combinations of this description are lawful in Geneva, they are so in every other place. If the bootmakers may say that boots shall not be made for less than $1 per pair, it is optional with them to say that $10 or even $50 shall be paid, and no man can wear a pair of boot without giving such price as the journeymen bootmakers may choose to require. This, I apprehend, would be a monopoly of the most odious kind. The journeymen mechanics might, by fixing their own wages, regulate the prices of all manufactured articles, and the community be enormously taxed. Should the journeymen bakers refuse to work, unless for enormous wages, which the master bakers could not afford to pay, and should they compel all the journeymen in a city to stop work, the whole population must be without bread. So of journeymen tailors, or mechanics of any description. Such combinations would be productive of derangement and confusion, which certainly must be considered 'injurious to trade.' Such consequences would follow were such combinations universal. It is true, that no great danger is to be apprehended on account of the impracticability of such universal combinations. But if universally or even generally entered into, they would be prejudicial to trade and to the public; they are wrong in each particular case. The truth is, that industry requires no such means to support it. Competition is the life of trade. If the defendants cannot make coarse boots for less than $1 per pair, let them refuse to do so; but let them not directly or indirectly undertake to say that others shall not do the work for a less price. It may be that Pennock, from greater industry or greater skill, made more profit by making boots at 75 cents per pair than the defendants at a dollar. He had a right to work for what he pleased. His employer had a right to employ him for such price as they could agree upon. The interference of the defendants was unlawful; its tendency is not only to individual oppression, but to public inconvenience and embarrassment." (*People* v. *Fisher* (14 Wendell 8, 28 Am. Dec. 501).)

Similar prosecutions were conducted in Massachusetts (*Commonwealth* v. *Hunt* (4 Metc. 111, 38 Am. Dec. 346)), New Jersey (*State* v. *Donaldson* (32 N. J. L. 151, 90 Am. Dec. 649)), Connecticut (*State* v. *Stockford* (77 Conn. 227, 58 Atl. 769)), Vermont (*State* v. *Dyer* (67 Vt. 690, 32 Atl. 814)). In the Vermont case the headnote clearly states the holding as follows:

"A combination of two or more persons to constrain an employer to discharge a particular workman by threatening to prevent his obtaining other workmen, or to constrain a workman to join a certain organization by threatening to prevent him from obtaining work unless he does so, is a criminal conspiracy at common law" (at p. 690).

And in this country we finally have the counterpart of the Trade Disputes Act in the Wagner Act (29 U. S. C. A. 157 et seq.).

It therefore becomes apparent that society in the two English-speaking nations has over the years recognized the problems of the worker and emancipated him from restraints rejected by an enlightened civilization. This was accomplished without the assistance of administrative agencies as self-constituted defenders of human liberties.

In this country during the present century many Federal and State laws have been enacted for the benefit of the worker, such as child labor laws, workmen's compensation acts, equal pay for equal work statutes, antidiscrimination laws, the Fair Labor Standards Act, the Walsh-Healy Act, the Wagner Act, wage stabilization, and we now have pending the Federal industrial relations bill. All of these had for their purpose the improvement of the situation of the worker.

The United States Department of Labor publishes annually a pamphlet entitled "Digest of State and Federal Labor Legislation." During the period from September 15, 1935, to August 1, 1944, various State legislatures and Congress enacted 1,007 statutes classified as labor legislation, of which only 22 were enacted during the period between August 1, 1943, and August 1, 1944. A business enterprise operating in a number of States has before it a real task of compliance.

In our own State, labor legislation began in earnest in 1915 and has continued down through the last session of the legislature. It has followed the trend of safeguarding the

health of the employees, providing compensation for disability due to industrial accidents, and unemployment compensation insurance.

Having in mind this broad background of the development of labor law, and especially the fact that in a decade we enacted over 1,000 statutes upon the subject, we next inquire as to how this jurisprudence is administered.

On September 5, 1945, Comptroller General Lindsay C. Warren made the following statement to the House Committee on Expenditures in the Executive Departments.

"You need no bill of particulars from me to show that the field of labor relations is spread around the Government without rhyme or reason. I have a list of eight departments and agencies having a direct bearing in that field. Certainly this is a field for study under any reorganizing authority. It is reported that some efforts along that line already are under way, but nothing of real value and permanence can be accomplished unless we have a law (proposed bill for the reorganization of Government agencies) such as here suggested to make it effective."

Original jurisdiction for the disposition of controversies arising out of the Federal enactments is presently vested in administrative agencies who adjudicate by at the same time prosecuting and deciding liability of the employer or employee in every instance except under the Fair Labor Standards Act and the Walsh-Healy Act in which instances the agency must resort to the courts to enforce its administration of the statutes. The situation is not better with respect to the matter of jurisdiction over State enactments.

A brief consideration of some of the methods and theories of these agencies will establish that the adjudication of controversies by such agencies has not been judicial but rather autocratic and with a violent disregard of recognized judicial processes. They have administered the law according to their purpose and have made no effort to administer justice.

The State constitution of Arkansas was brushed aside by the National War Labor Board for Region VII in the Ward Furniture Manufacturing Co. case (case No. 111-14141-JB) upon the ground that the Federal Government had exclusive jurisdiction to settle labor disputes. In that case it appeared that the Arkansas Constitution prohibits the denial of employment because of membership or nonmembership in a union. However, the War Labor Board directed employer to include a union-shop provision in its contract while the constitutional provision was in full force and effect and its validity had not even been subjected to a court test. It justified its ruling on the basis that haste was necessary during the war period. It further justified its position on the ground that Congress, not the Federal Constitution, intended that the War Labor Board might disregard a State constitution. However, while the Stabilization Act was still in effect, so that the circumstances were the same, the United States District Court for the Southern District of Florida in *American Federation of Labor* v. *Watson* (60 Fed. Supp. 1010) upheld an amendment to the Florida Constitution similar to the Arkansas amendment in a suit by a union seeking an injunction against its enforcement. The court sustained the Florida amendment against the charge that it violated the Federal organic law with the following clear statement:

"The wording of the Florida constitutional amendment is difficult, but it definitely does not violate the First Amendment by abridging freedom of speech or of the press or of the right of assembly, or the right of petition to the Government for redress. The assaulted amendment undertakes to preserve to employees, in full vigor, the right of collective bargaining. Instead of preventing or abridging the rights of speech, press, assembly, and petition, the amendment seeks to preserve it to those who do not join a labor union as well as to those who do. This amendment has no similarity to anti-picketing statutes or statutes which require the payment of a license by a labor organizer. The amendment is not in violation of the First Amendment to the Federal Constituion. The same is true of the allegations as to its violation of the Fourteenth Amendment. There is no prohibition against a citizen belonging to any union that he chooses, but the prohibition seems to be against requiring membership in the union in order for a citizen to be eligible for work. Under statutes of the United States, such as section 102, title 29, U. S. C. A., a citizen is declared to be free to join a union or not, and one of the purposes of that statute, as well as the National Labor Relations Act, was to accord to employees full freedom to belong or not to belong, to a union. The Florida constitutional amendment prohibits no one from joining a union but undertakes to declare that it shall not be a condition precedent to the right to work. It does not deny the labor union member the equal protection of the law, but appears to be designed to give to the non-union worker a protection of law which he had not theretofore enjoyed" (at p. 1015).

Every word of the above quotation is applicable to the Arkansas amendment.

This administrative agency followed the pattern of such institutions, that its purpose and that alone must determine the rights of the parties, that its power and authority is without constitutional restraint and that the citizen is without constitutional rights.

The dangers from an uncontrolled administrative agency are manifested with respect to one phase of activity on the part of the National Labor Relations Board. The Wagner Act, which the Board is committed to enforce, requires employers and unions to enter into collective-bargaining contracts. The contracts are in writing, and since the inception of the Wagner Act phrases and terminology having a recognized technical meaning have developed. From time immemorial written agreements have possessed a quality of binding force when entered into in the ordinary course of business. Such contracts have been protected by rules which prohibit the introduction of oral evidence to vary them. A well-known English writer has expressed the quality of such documents in the following language:

"It is likewise a general and most inflexible rule that wherever written instruments are appointed either by the requirement of law, or by the compact of the parties, to be the repository and memorials of truth, any other evidence is excluded from being used either as a substitute for such instruments or to contradict or alter them. This is a matter both of principle and policy—of principle because such instruments are, in their nature and origin, entitled to a much higher degree of credit than parol evidence; of policy, because it would be appended with great mischief if these instruments upon which men's rights depended were liable to be impeached by loose collateral evidence." (Starkie Evidence, 9th Am. ed. 587.)

This rule is ingrained in our American jurisprudence. Notwithstanding this well established obligation between the parties to a written contract the National Labor Relations Board so disregarded this fundamental principle that the United States Supreme Court in *National Labor Relations Board* v. *Sands Manufacturing Co.* (306 U. S. 332, 83 L. Ed. 683) was called upon to remind the Board that "the legislative history of the act goes far to indicate that the purpose of the statute was to compel employers to bargain collectively with their employees to the end that employment contracts binding on both parties should be made."

Again in an earlier trial of the Sands case (reported in 96 Fed. (2d) 721-725) the circuit court of appeals said: "The statute does not compel the employer to renounce reliance upon its rights under a valid agreement."

This willingness to disregard binding agreements by the National Labor Relations Board should be convincing proof of its inability to act in a judicial capacity. On this occasion the employer was the victim. On another occasion the employee might be the victim. In either case neither employer nor employee have a contract upon which they could place any reliance were it not for the intervention of the courts if the courts will have any influence upon this administrative agency and this is not a fanciful doubt.

Another phase of jurisprudence which has become ingrained in our system is the degree of proof required to establish a fact and reach a judicial conclusion. Administrative agencies have for a long time operated on the basis that they were not bound by the common-law rules of evidence. It is true that some laxity is allowed these tribunals but the State courts have generally jealously curtailed the extent to which the disregard of rules of evidence might be indulged in by such tribunals. In Vermont our supreme court cleared up the growing understanding that there were no rules of evidence which applied to the administrative tribunal when it laid down the rule that the commissioner of industries is bound, to a certain extent, by such rules. (*State* v. *Belfore*, 108 Vt. at p. 403.) The Federal courts have continuously found it necessary to remind the National Labor Relations Board that it must hear causes and determine them in accordance with judicial standards especially with respect to the degree of proof necessary to support a decision upon issues of fact (*National Labor Relations Board* v. *Atkins & Co.*, 147 Fed. (2d) 730 and *National Labor Relations Board* v. *Indiana Desk Co.*, 149 Fed. (2d) 987).

Very recently, one of the administrative agencies, in an employee controversy, assumed to interpret a statute contrary to the interpretation placed upon it by the courts for a long time. The issue is briefly put by Judge Hutcheson in the following language:

"But, says the Board in effect, the question is not what the courts think the act under construction here means, it is what the Board thinks it means, and the Board has spoken. Thus by virtue of being constituted the Board to administer the act, the Board has been endowed with a prescience, invested with a prepotence in respect of statutory construction to which the courts must bow, though the facts are undisputed and the question is entirely one of law. Thus by the simple expedient of having a lawyer, under the dignified name of general counsel for the Board issue an opinion and then adhering by a bare majority to that opinion, the Board is enabled to read the statutes as it will." (*Duquesne Warehouse Co.* v. *Railroad Retirement Board*, 148 Fed. (2d) (C. C. A. 2) 473, 477.)

In repudiating the claimed prerogative of the Railroad Retirement Board above described the court said:

"The very structure of our institutions, the very sources from which they derive, the judicial section of the Constitution itself all concur to make it crystal clear why Congress has never given, why it could not constitutionally give to the construction of a statute by the general counsel of an administrative body or by the body itself, controlling weight, and that the 'appropriate weight' which courts give to such construction is that which is not inconsistent with settled constitutional doctrine. The heresy eagerly advanced by some devotees of the administrative, as opposed to the judicial, process, and sometimes tolerated, sometimes toyed with judicially, that giving 'due weight' means the surrender of the judicial office of interpreter of statutes, has never had official sanction" (at p. 478).

What I have indicated to be the attitude of three labor relations agencies is true with

regard to all of them, both Federal and State. Any remedy must, therefore, be all inclusive.

We thus find ourselves in the situation of having established many rights and obligations of both employer and employee which are administered and controversies arising thereunder adjudicated on an independent basis by numerous administrative agencies.

The independence of this aristocracy of genius, uncontrolled by reason, precedent, and judicial restraint, is undesirable and this confused administrative process will only tend to engender and perpetuate problems and strife which will impede industrial activity and economic progress.

Do these examples of administrative judicial conduct inspire confidence in such tribunals? Does the conduct of the agencies just described tend to stabilize industrial relations? The answer is inescapable that the present system cannot endure and that while it lasts we can have only dissatisfaction and controversy between employer and employee.

I realize that we dislike to surrender State sovereignty. However, the power of Congress, in view of the modern interpretation of the commerce clause of the Constitution, is almost complete with respect to labor legislation. The only phase which is not now controlled is workmen's compensation. Codification therefore is simplified if the States would be willing to accommodate their own statutory set-up to a Federal scheme as the rare instances as yet held to be beyond regulation by Congress, because not involved in interstate commerce, are so few in number so that this need not be a consideration.

We are now ready for the codification of this developed jurisprudence either by means of a uniform State act, a Federal act, or both. The bills of lading acts are a good example of dual legislation, with the Federal statute and the State uniform acts practically identical. The proposed adoption of Federal procedure for State courts is another example. Thus a solution to the problem of codification has precedent.

In the event of a Federal act the assignment to a State tribunal of concurrent jurisdiction to administer such a code enacted by the Federal legislature is recognized as proper.

See *Fitzgerald Construction Co.* v. *Peterson* (69 Law Ed. 869).

Such code could be administered in the following manner:

1. That enforcement be assigned to the industrial department in each State and in Vermont to the commissioner of industrial relations and to the Federal agency administering the act. Such enforcement to be exclusive when once instituted by either agency.

2. That a special State court be established with specific and limited jurisdiction to hear and determine controversies under these laws. The Federal District Courts shall have concurrent jurisdiction. Jurisdiction acquired by one court to be exclusive.

3. That the trial shall be conducted in accordance with common law or statutory procedures binding upon courts in general.

4. That the decisions of this special court shall be subject to review by existing appellate courts which shall hear and determine appeals promptly.

A comprehensive code administered by a special court should be a fair exchange for the right to strike. As a matter of fact it would eliminate factors which invite strikes, slow-downs, lay-offs, and lock-outs. The parties would and should be bound to accept the result as any litigant must after a fair trial. We would avoid the present feeling that the judge is the prosecutor.

The court's jurisdiction should include the adjustment of controversies arising under all enactments relating to rights of and benefits for employees established in a comprehensive code.

The proposed code will eliminate the confusion resulting from such a large number of statutes and the disregard of a substantial body of common law developed by courts which administered justice, and now administered by administrative agencies administering laws without regard to justice. The special forum is suggested in order to remedy the present undesirable administrative procedure and rule of decision. Industrial controversies must be adjusted promptly in order that commerce may not be impeded and a separate tribunal would afford the specialized knowledge and speed necessary in the adjustment of industrial disagreements.

Such a code and a court will provide binding precedents which will establish rights and obligations and thereby eliminate uncertainty of status in a labor dispute and reduce disagreements. It will eliminate the necessity to resort to the gratuituous aid of conciliators and arbitrators who compromise by cutting down the rights of each party to the controversy. It will eliminate a decision by a tribunal which institutes the proceeding against the party whose activities it is to judge. Finally, such a code and a court will promote economic progress.

Employers and employees over the years have paid the price of industrial peace. We should crystallize the lessons of experience into a comprehensive code and establish a forum to administer it in accordance with legal concepts which have withstood the test of time, and which will preserve to industrial disputants a fair hearing and a just decision and achieve social justice without the sacrifice of human rights.

## A Bad Habit

EXTENSION OF REMARKS

OF

### HON. JOSEPH E. TALBOT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. TALBOT. Mr. Speaker, many of the letters that I am receiving are from former GI's who are now back in this country trying to make a living.

Under the GI bill of rights, they were to get certain privileges in purchasing materials declared surplus by the various branches of the Government.

Recently one of my constituents who had served 3 years in the Navy during this war stood in line at Camp Devens for 6 or 7 hours in an attempt to purchase an automobile truck from the War Department. When his turn arrived he was told that no trucks were available, although the disposing agency, RFC of Boston, had advertised such trucks for sale and had advised this young man to be at Camp Devens on a day certain.

The disposal of surplus commodities is not working out in accordance with the intention of the Congress. The boys we were going to help are being quickly forgotten. The whole system is a mess.

I desire to include the following editorial entitled "A Bad Habit," printed in the Army Times on November 10, 1945:

A BAD HABIT

It begins to look as if the veteran is going to be left holding the bag insofar as surplus property is concerned.

Unless Congress or the Surplus Property Administration takes prompt action to remedy the existing situation, veterans are going to fail in all their efforts to buy jeeps, automobiles or other desirable items that are short in the civilian market.

We think that it is time for the Government either to give the veterans an out-and-out preference on scarce items, or quit overselling a program that has no real worth to the veteran.

Congress indicated that it wanted the veterans to have a definite preference. The Surplus Property Administration, however, placed them in line behind the Government agencies, the States and the municipalities, and experience has shown that the quantity of desirable surplus items has not been sufficient to outlast the demands of these agencies. Thus, the veteran is getting no more than a tiny trickle of surplus items.

Once again a Government program to aid veterans has been oversold. Once again congressional double talk, bureaucracy, and official muddling have, in effect, broken what amounts to a promise to the ex-GI's. It's a bad habit.

## Universal Military Training

EXTENSION OF REMARKS

OF

### HON. R. EWING THOMASON

OF TEXAS

IN THE FOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by General of the Army Dwight D. Eisenhower, Commanding General, United States forces, European theater, and Military Governor, United States Zone in Germany, before the House Military Affairs Committee concerning universal-military training, Thursday, November 15, 1945:

Gentlemen, in the interests of conciseness I have prepared a brief statement which I will read; then, I would like to make a few extemporaneous remarks. After that, I will be glad to answer any questions.

I understand that the official views and detailed plans of the War Department are being presented to you by others. I hope you will allow me to speak, not as a representative of the War Department, but as a citizen and as a professional soldier to whom has been given a peculiar opportunity to participate in the greatest effort ever made by our citizen-soldiery. My personal views are largely based on that unique experience.

The men who won the victories of Africa, Sicily, Italy, France, and Germany were able to do so solely because of their individual and unit training—their ability to work as a team. The long periods spent in training camps in the United States and in England were essential to the perfection of this teamwork. Thereafter, brief battle-hardening and our teams were superb. Certain phases of this training are highly technical, involving radar, signal communications, air operations, construction, transportation, and ordnance. All this work is interdependent, and each part is vital to success. All of it was minutely geared to an equally complex schedule of tactical ground force movements which required perfect unit training and above all, timing.

Time has always been of the essence in warfare but never was it more essential than in our most recent war. With the introduction of atomic and electronic warfare and the astounding advances being made almost hourly in aerial warfare, the tempo is increasing in geometric progression. If war comes to us again the fact seems inescapable

that we will not have time to train units before we are faced with the final issue of defeat or victory. Certainly it would be unconscionable to gamble on a fortuitous recurrence of the time to prepare bought by the blood of our allies in 1917 and in 1942. We must be prepared on M-day—the day the enemy strikes—or we may never be prepared to avert defeat at the hands of any aggressor who uses against us the weapons of the future. Our weapons must be better than theirs on that day, our resources must be promptly available, and above all our manpower must have already been trained. This training must be given in time of peace. Without a standing army of prohibitive size this can only be accomplished by training our civilian reserve, our citizen army. The most democratic way to do this is by universal military training, in which every ablebodied young man is fitted to discharge his duty to protect our freedom. This has been the ultimate solution in every major military crisis this country has faced. The only difference now and the great lesson of World War II is that it must be done before, not after, the first shot is fired.

I understand that to be the issue before this committee. Although I know the general plans, I have not had time to familiarize myself with all the working details of the War Department's plan for universal military training, nor am I familiar with the testimony already presented to this committee. However, I am familiar with the President's message and with the Woodrum committee report. I cannot state too emphatically my concurrence with the recommendations contained in those documents. On the basis of my obligations to the 3,000,000 Americans that served under me in Europe, I strongly urge their early adoption. Upon the expiration of Selective Service we should be prepared to commence the training of young men who did not form a part of the armed forces in this war. Although the veterans of this war constitute at this moment a splendidly trained reserve, we must keep it constantly and currently reinforced by younger increments trained in all the most advanced techniques which research and development in the technology of warfare are bringing forth at such a rapid rate. We must train them to avert World War III, not refight World War II.

I believe that every combat leader in our armed forces agrees that success is possible only when the mass of the Army is composed of younger men. They are more readily adaptable to combat conditions and possess more vigor and dash. Certainly, the technical services must comprehend a high proportion of younger men who are capable of mastering the radically new techniques of future warfare. Therefore, it is a matter of necessity as well as fairness to add increments of currently trained young men to the civilian reserve. The alternatives are the criminal sacrifice of untrained young men, or calling on unfair proportions of older men who have already done their duty. In either event we would be without the services of trained technical specialists who will only be found among the younger men.

I have been privileged to represent the United States in a responsible position in the armed forces of the United Nations. In this capacity, I am intimately familiar with the attitude of the leaders of the other United Nations to the armed forces of the United States. This familiarity assures me that in their minds there exists no fear of our motives in keeping ourselves strong. It is my personal opinion, that the greatest single motivating force for world peace today is the organized military potential of the United States—its resources, its technological advancement and its superbly trained manpower. This organization is being demobilized at an unprecedented rate but its potential for the maintenance of peace will continue so long as the world is convinced of our willingness and ability to vitalize it in time to meet any threat of aggression from any other power. This is our greatest assurance of keeping the peace for which we fought. Far from being contrary to the purposes and intent of the United Nations Organization, I consider it to be essential to the success of that organization. I know of no better or more democratic way to demonstrate our willingness and ability than to adopt now a program of universal military training. It is eminently fair to our citizen army who fought and won this war in two ways: First, it is the best way of assuring them that they did not fight in vain; second, it will relieve them in the shortest possible time of continuing to bear the burden, as the current trained civilian reserve, of defending the peace.

Gentlemen, I have heard many arguments about the desirability or undesirability of universal military service from a moral, educational and religious standpoint. These factors have always been of the greatest concern to me in the discharge of my functions of command. There is no question but that the sum-total of these values makes up the very essence of the thing we fought to preserve—our American way of life. But the facts of today must be faced. The preservation of our way of life in a world which twice within a single generation has fought to virtual exhaustion depends squarely upon the national security. That is a truism. I sincerely believe that the only practicable way to assure the national security is by peace-time military training and that this must be universal. No practicable alternative, that I have heard of, has ever been suggested. Therefore, I believe arguments as to the incidental disadvantages or benefits to be foreign to the main issue. I feel completely confident that the Congress can provide all the necessary safeguards to prevent abuses of a method forced upon us by a necessity which must be faced.

I feel sure that no true American would be willing to take on his own shoulders the awful responsibility for actively prohibiting all training and thus leaving our country defenseless and naked before a future enemy armed with the weapons of that day. But our fighting forces in war are always made up of civilians, so a failure to provide for the training of the civilian reserve amounts to nothing less than condemning us to such a state of helplessness. A large standing army would certainly be much more objectionable on all of these grounds even if it were not economically impossible to maintain one of sufficient size without impoverishing the country.

An aspect of this whole problem that deeply concerns me is that of the rights and the best interests of the young men destined to receive the training. I wonder whether any honest opponent of peacetime training has any clear conception of the difference between the trained and untrained men on the battlefield? In terms of the larger issue of victory or defeat comparison is scarcely possible because in modern war it is not possible to win without training. But in the more personal matter of the individual's chances for survival I should say that the trained combat soldier has at least three times the chances of the untrained to live to become a veteran.

I have sincerely searched my mind on this whole problem. Through the past 3½ years the picture of the progressive destruction of civilization which war brings was constantly before me. I keenly felt the burden of the terrible responsibility I bore. I shuddered particularly at the thought how close our own beloved country came to being afflicted with the same devastation and our own people with the same indescribable sufferings that came to the peoples of Europe. I know that if it had not been for the time given us by the almost superhuman efforts of our allies, we would not have been able to mobilize our resources or to train our men to avert disaster. I know that the nature of the weapons available to future aggressors make it ridiculous to hope that we will somehow miraculously be given this same time again. Our resources must be already available, our weapons must be second to none in speed and effectiveness. This means that we must be preeminent in technical research and in industrial mobilization, and we must have a trained force large enough to make our resources and weapons instantly available for our needs.

Thus we will be a potent power to preserve the peace, and in position to act swiftly in our own preservation if the tragedy of war again appears. I do not see how we can escape the inexorable logic of the fact that if we are to attain and maintain this reasonable and necessary position we must have a trained reserve of citizens in being. This means that we must train them in peacetime.

## Automobile Dealers

EXTENSION OF REMARKS
OF
### HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. BLACKNEY. Mr. Speaker, I am intensely interested in the opposition of the automobile dealers to the proposal of the OPA to cut dealers' discounts over the old historic discount which has been in force for several years.

I am thoroughly conversant with the automobile dealers' situation in my own district—the Sixth District of Michigan—and know full well the long and difficult struggle they have had during the war years in continuing their business and giving to their patrons proper service.

It seems to me that the OPA is endeavoring to establish by arbitrary rule something that is not in the interests of the dealers nor our citizenry at large. Certainly, if our automobile dealers are not allowed a sufficient discount in order to operate their business with success, and with some profit at least, the only result can be that thousands of those dealers will be put out of business.

Anyone who has studied the matter at all knows full well that our automobile dealers are confronted with increasing expenses due to higher salaries, increased rent, and operational charges. It would not seem to be the time when any cut should be made in dealers' discount.

The fact that when the war started there were more than 40,000 dealers, and the further fact that at the present somewhere between 30,000 and 35,000 retail automobile dealers still continue to operate, shows a heavy mortality rate. Should the dealers' discount be reduced, this mortality rate will greatly increase.

President Mallon, of the National Automobile Dealers Association, in his speech before the House Small Business Committee on November 8, gave to that conference a wealth of information and data that merits the study of everyone interested, not only in the automobile dealers themselves, but in small business

in general. In Mr. Mallon's speech, he gave facts and figures pertaining to the increase in rent, to increase in salaries and wages for employees, and to the heavy increase in operational expenses and maintenance. It would seem to me that this is not the time for the OPA to use any such drastic measures as they have proposed.

In the reconversion period, through which we are now passing, it is absolutely essential that unemployment be reduced to the limit, and that small business should be given the right to conduct their business with a reasonable margin of profit.

I sincerely hope that the OPA will appreciate the magnitude of the present problem, leave the discount rates as they are, and thus enable our automobile dealers to sell their cars and properly service them in the best interests of the people of our country.

## Alaskan Frontiers for GI's Called Myth

EXTENSION OF REMARKS
OF
**HON. REID F. MURRAY**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, the following article is from the November 13 Washington Post:

ALASKAN FRONTIER FOR GI'S CALLED MYTH
(By George Connery)

JUNEAU, ALASKA, November 13.—Gov. Ernest Gruening today called the veterans' situation here horrible and warned former servicemen to take a long, careful look before shipping up to Alaska. He said the problem was too big for the Territory and called on the Federal Government to take it over.

At a press conference with touring newspapermen the Governor said he would do everything he could to end the officially sponsored myth that Alaska is a great new frontier for all the veterans who want to come up. Gruening cautioned former servicemen not to venture to Alaska under any circumstances unless they—

1. Have $2,500 in the clear and that won't last long.

2. Have a job or a business already lined up, because Alaska isn't the land of opportunity. Opportunity has to be developed here.

3. Know exactly where they're going to get housing. There are no surplus houses in Alaska. He said this shortage also is a potential handicap to any potential industries which must build their own housing once up here.

Conditions are so bad the veteran won't get his GI bill of rights protection Gruening said. Banks will not grant loans and even if they do they charge 8 percent. Veterans' Administration machinery in Alaska is a joke, he said. One man in Juneau, another in Anchorage, and a stenographer for a Territory one fifth the size of the United States.

Alaska has no regional VA office. Its official regional business, including approval of loans, has to be done through Seattle, 3 days away by boat and 8 hours by air.

Gruening is asking that Alaska immediately be given regional status as the first step.

Alaska sent 7,000 men into every service, of whom between 1,000 and 2,000 have been demobilized. However, these are only a fraction of the veterans who have eyes on Alaska. Leading the postwar rush to the North country are hundreds who served here in the Army or the Navy and like the life.

Every Government agency in Alaska and most private ones are flooded with tens of thousands of letters from men getting out of uniform. Most haven't seen Alaska and don't know much about it, but are determined to come up anyway.

The pressure has completely swamped Alaska's year-old development board, which should be a normal source of information. If a veteran wants to learn about Alaska, the governor advised him not to write there. He suggested contacting, instead, the Director of Territories of the Department of the Interior, or chambers of commerce in Alaska. This problem, one of Alaska's biggest, was born long before demobilization descended on the Territory.

For reasons of national defense there is a theory that Alaska should have a white population of 250,000. The late President Roosevelt advanced this general idea to Gruening, but the governor said he did not recall Roosevelt using the specific population figure. Roosevelt put more steam behind the proposal on October 19, 1944, after a trip to Alaska and the Aleutians.

The President, in a radio talk invited all discharged servicemen to swing northward and seek their fortunes. A little publicized State Department report in existence at the time offers more conservative advice. The North Pacific study estimates that no more than 15,000 new jobs will open up in Alaska in the next 10 years.

A group of influential Alaskans have a novel plan in mind. They propose a careful screening of applicants at Seattle to keep out of the Territory the possible misfits. Even that hasn't general support; one Alaskan said the trouble is the screening at Seattle probably would be done by a lot of civil-service people who know nothing about Alaska.

"We'd be behind the eight ball again," he said.

The part of the article I wish to call particularly to your attention is:

Conditions are so bad the veteran won't get his GI bill of rights protection, Gruening said. Banks will not grant loans and even if they do they charge 8 percent. Veterans' Administration machinery in Alaska is a joke, he said. One man in Juneau, another in Anchorage, and a stenographer for a Territory one-fifth the size of the United States.

Here then we find the veteran required to pay an interest rate of 8 percent when this administration is furnishing millions of dollars to nonveterans to buy farms at 3 percent; when other groups are furnished money for 2 percent; and when loans are being recommended for foreign countries at 2 percent interest and even this 2 percent with strings on it and to be paid only when business is good—that is, good for them.

## Speeding Doctors' Transfer

EXTENSION OF REMARKS
OF
**HON. DANIEL J. FLOOD**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. FLOOD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record, Wilkes-Barre, Pa., September 8, 1945.

SPEEDING DOCTORS' TRANSFER

A move launched in Congress to speed the transfer of doctors from the armed forces back to civilian practice was justified by the high number of physicians in the armed forces in relation to their numerical strength and by the dearth of physicians on the home front.

With an Army of seven million men and with 48,000 physicians in the Army this branch of the armed forces has one physician for every 145.7 men.

Luzerne County, with 425,000 population or thereabouts, has only 185 physicians remaining in the county. To serve this population each physician must take care of some 2,300 patients. This condition in Luzerne County, while it is less serious than in many other counties in Pennsylvania and in the United States, is typical in a general way of the shortage of physicians existing throughout the country.

On the Army basis, one physician for every 145.7 soldiers, greater New York City would be entitled to some 50,000 physicians. Even in peacetime there is no such number of physicians in New York City.

Congressmen, medical societies and the public, in pressing for early release of physicians not needed in the service, have reasonable grounds for their action.

## Armistice Day Address by Rabbi Norman Gerstenfeld

EXTENSION OF REMARKS
OF
**HON. JOSEPH F. GUFFEY**
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
*Friday, November 16 (legislative day of Monday, October 29), 1945*

Mr. GUFFEY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an Armistice Day broadcast by Rabbi Norman Gerstenfeld.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Twenty-seven years ago the guns were silenced in Flanders Field. We had fought the last war for democracy. We gave of our sons and our treasure to destroy the Old World's tyranny, and we made our sacred pledges for a new age of human liberty. Now again we come to this Armistice Day and we stand aghast as we realize that our hopes were in vain, our dreams of the future were a snare and a delusion. With sorrowing hearts we realize that with all the pious sentiments with which we have paid our homage to our sacred dead, that for the second time in one generation we have been sucked into the terrifying vortex of death and devastation, only this last war has been far more destructive—infinitely more. We face today a world where more than half of mankind are without homes and without bread. We face a world where hundreds of millions stand prostrate before the terror of the morrow without, as they mourn their slain dear ones in their hearts.

On this day let us remember that the soldiers by their sacrifice had won the war, but the civilians, because of their failure to sacrifice, had lost the peace. Freemen had proven that they had the martial discipline to defeat the foe; but they had also proven that they did not have the vision and the moral discipline to build the peace. The

world stands today on the threshold of the most dangerous age of all of human history. Let us remember that if another war will come to this bleeding earth it will mean the end of all civilization. Let us remember that if that war is not to come it will take far more than the moralistic vocabularies of opportunist politicians. It demands a sense of a great covenant with a divine law that freemen must translate into commandments for a new age, for in the words of a great American statesman last week, "All of history says that good faith alone is not sufficient for the peaceful relationship between men. Good faith must be coupled with a framework of order, of law, and of justice."

Let us remember this day that all we have in the United Nations is another League of Nations, with all the weaknesses of the past that will lead again to the betrayal of the future, unless with penitent hearts, with discerning minds and with steadfast lives we will raise aloft a growing, secret covenant of righteousness with men of all races and all creeds, a covenant of which we will be the faithful witness by the resolute purpose of our lives, so that our sacred pledges will not again become a scrap of paper.

The arrival of Prime Minister Attlee of Great Britain and Prime Minister King of Canada in our city at this time is a startling symbol of the duty that now rests upon the English-speaking world: To face together the great moral challenge of this dangerous age. We will see that challenge only if we speak the truth to each other and demand the strength of each other. Without England and her great revolution of the seventeenth century there would not have been the American Revolution of the eighteenth century; but America has been able to rescue England out of the old world's cataclysmic evil only because America has revolted against England in the past. The English-speaking world has been able to advance the cause of human freedom only because America, with all her pride and respect for the England that gave her birth, has refused to be shackled by the reactionary opportunists who from time to time have been in the saddle in England. In every land and in the heart of every people, as in the soul of every man, there is the struggle of the good and the evil, the far-visioned and the blind, the opportunist and the morally resolute, the forward-looking and those who would turn the clock back, the righteousness that is faithful to the sacred pledge and the wickedness that would make of it a scrap of paper, the spiritually covetous and the villainous that would ever be treacherous and the morally courageous that would build the ramparts of righteousness. America has has been able to save the English-speaking world because in the eighteenth century we fought the motherland to become more free and in the nineteenth century we prevented the motherland from shackling our industrial freedom. America would never have become the arsenal of the world's freedom if, with every homage to the England that gave her birth, she did not revolt against the blindness of her reactionary imperialism that would have stifled her. America has helped England and the entire English-speaking world, even as she has helped to broaden the horizon of freedom for all men, only because she has been true to her own vision.

The world today is virtually a condominum of Russia and America. They are the two world federations whose power straddles the globe. We must be on guard lest we compromise our vision of the future by any myopia about Russia. With all our friendship we must be on guard lest we be betrayed there; and with equal vigilance we must be on guard lest we be misled by the blind compromises of our English-speaking brothers. All over the world, even though the pattern of the new British Commonwealth is a clear shift of its historic framework from the coercive to the cooperative, there are still the entanglements of empire, a confused web of reactionary atavism and imperial egotism that in many lands is only a hair-breadth from being the unwitting accomplice of human vandalism—in a pattern that runs counter to the best of her own native tradition. If America is now to help the rest of the English-speaking world; if America is not herself to be dragged down into the vortex of new global catastrophe we must, in this hour as never before, speak the truth to each other, the truth that will reveal our common challenge and our common duty.

This is in fullest accord with the noble tradition of freemen exemplified in the great Winston Churchill. Only a few days ago I re-read his book, While England Slept, where he preached that kind of truth to his people, the truth they would not believe until it was almost too late, that they were heading toward doom. When the English people voted him out a few months ago it was not in condemnation of his magnificent leadership since Dunkerque, but in condemnation of the party they believed had led them to Dunkerque. Let us not forget, even as many Englishmen have, that in the years between the last armistice and Dunkerque when England slept, and failed to do its duty to the forces that would have built freedom in the Old World, that the people responsible for the tragic paralysis of England in those pre-Dunkerque years were not all Tories; that it includes many of the men in Prime Minister Attlee's party and Cabinet today. The Pact of Munich was the result not only of the Chamberlains, but the end-result of a fateful slumber to which more than a few of the labor statesmen of the last decades of England have succumbed. A few weeks ago, in his report to the Secretary of War, General Marshall said that America too, up to the eve of the war, was a sick nation. If there is now to be the clarifying vision to arouse us to a a more life-giving decision for the future, the English-speaking world, even as freemen everywhere, must not be timorous and hesitate to speak the truth for this is our first duty to our brothers in this fateful hour.

It is said that Prime Minister Attlee will discuss the atomic bomb and its relation to the new United Nations; that he will discuss the help they seek from this land in order to restore their trade and to rebuild the peace of the world; that he will also discuss the imperial problems of the middle and the Far East. All these are tied together and an alert America will demand that they be understood together. The American people today, mindful of its own mistakes and the mistakes of other free nations in the past, dare not accede to every request that Prime Minister Attlee may make, for it cannot, in this land that has virtually become a have-not nation as the result of two global wars, it cannot underwrite the military or economic commitments of the British Empire without an agreement on the basic policy that will mold her future. After the last armistice England went to sleep and we, in all humility aware of our own past ills, dare not assume that our English brothers are fully awake today. We have a responsibility to the future; and we need a strong England at our side. We can only afford to stand by the England that is strong; strong in an awareness of her duties to the rest of the world, an England that is aware of the sources of her imperial power and her country's righteous purpose, an England that is ready to keep her sacred pledges in a covenant of righteousness for which freemen now pray.

The entire world is now in the valley of the shadow of death, the fate that has come to men because the powerful were not righteous and the decent were not vigilant. We are headed toward a totalitarian hell unless the free nations by their bold vision lay the groundwork for a free world. It demands sanity and integrity, moral realism and spiritual heroism, if the world is now not to descend into an abysmal tribalism or a class fanaticism. Many Americans, aware of the responsibility that now rests upon this land, are asking profound questions about their own commitments and their basic affirmations. We are asking the same question of all the English-speaking world, who are closest to us in tradition and must share our strength or drag us down in our weakness.

There are many Americans, aware of the great significance of the Middle East, from the Black Sea to the Persian Gulf, as a future bastion of freedom, who stand aghast at the seeming implications of British policy. The riots that last week swept through the Arab world, the result of obvious planning; there are many who say that it was done to seem plausible to the gullible, the old policy of divide and rule, the old techniques of evading sacred pledges made to innocent people, whereby behind a facade of democracy, England is virtually an accomplice of an Arab feudalism that is as dismally blind to the future of freedom, even as it is willfully a betrayal of her word to the oppressed. Far more is involved in this whittling away of the original pledge of a refuge to the afflicted of Israel to settle in Palestine; far more than the death of millions who were kept out of Palestine to die in the death chambers of Hitler's Europe or to languish in the despairing cemetery of the Old World from which they have yearned to flee. The promise of a free home to the oppressed of Israel, a pledge made by England, with the authority of more than 50 nations of the world, as well as the Arab leaders; the moral callousness with which colonial administrators and opportunist politicians have torn that promise to shreds, in spite of the darkest hour that came to the afflicted, the hypocrisy and obvious duplicity of the entire record—far more is involved than the lives of the innocent who have sought refuge and who may now be left to die trapped in a hostile world as evil as the hell from which some have fled. Here is revealed the integrity and sanity of England's honor and England's soundness of vision for the future. Palestine as a refuge for the oppressed of Israel, in honest accord with the promise made nearly three decade ago, would be a strong, productive democratic state, a creative hub of a vital democratic Middle East in an Arab world heading toward freedom, an integral part of a free world. But a Palestine thrown into the lap of the politicians of the Grand Mufti, who during the war was the guest of Hitler and served as the provacateur for every move made against the free nations in their fight for survival, would only be nurturing the very evil in the Arab world after this war that England in her blindness helped to spawn on the European continent after the last war. This is the judgment of some of the noblest statesmen in England, men like Winston Churchill and a host of others of every political party who strive for a better world. But this kind of insight did not dominate English policy in the past decades. The little bureaucrats who have determined her policy in her colonial office and elsewhere are the same ilk who have led England to the edge of the precipice. Will England that after this blood bath has recognized her great mistake on the Continent of Europe now arise from her lethargy in Asia, and especially in the Middle East, that must be—if peace is to be—the hub of the world's communications and transportation, the bridge between the East and the West, the nerve center of the new democratic world for which we now hope?

We have heard in the last days that the atomic bomb requires a newly strengthened

United Nations Government to control the production and the use of atomic energy for peaceful purposes. They point out that there can be no defense against the atomic bomb, which will soon be known through scientific research to other nations; and the United Nations Charter must now be amended so that it will have the power to limit the armaments of all nations and all these must be controlled by its world government, through its security council, a council that must relinquish its veto power, and be part of a world court with compulsory jurisdiction over all nations and over all its individuals.

This is all sound except that it will probably not be accomplished or implemented unless the strategic areas of the world have strong democratic foundations. The amended United Nations Charter will be a step in the right direction but this Charter, like any other, must rest upon patterns of freedom embodied in the way of life of its peoples. Any charter, like any other pledge, can be a scrap of paper, unless the minds and the hearts of people are with it. Never as today has there been the need, and nothing would be as self-deceptive as to deny, that whatever may be the new United Nations Charter we must safeguard the strategic areas of the world for a democratic way of life; and, if we do not, then, by default, we are inevitably catapulted by the pressure of internal forces, seeking to fill the vacuum that is left, into the very totalitarianism we may abhor. That is why, however high may be the present diplomatic priority in our discussion of the atomic bomb, we dare not overlook the needs of such areas as the Middle East. Never has there been a clearer challenge to the conscience of England that she must now make up for her tragic mistakes of the past and build Palestine into the haven of freedom she had once espoused. Her loyalty to that pledge is the test of whether any charter of any kind of united nations, with all its promise of the future, is to be more than a scrap of paper in the promise of the morrow for which we have prayed.

There is much more I would like to add as a rabbi of an ancient people that has seen the world drown in the blood of the innocent. All I would say now is that the men of our tradition, with men of good will of all creeds—we have refrained during the war from saying what we could have said in the past because we believed, even against our deeper instinct, that the military effort of the struggle in the war demanded that we wait until the Axis was defeated. Now that they are vanquished and we see how brutal was the butchery of the unfortunate, how easily we could have saved them, how needless it was, how callous were the diplomats who professed freedom; now that we see the hopeless fate of those who have survived all one can say now is that we will not keep silent. We will speak if it is the last word we will utter. We will speak until the most depraved will understand, until the morally deaf will hear, that there is a pledge to the innocent that men who profess freedom must keep if all our talk of the hopes of tomorrow are to have any meaning for the generations to come.

H. G. Wells a few years ago has said, "Mankind which began in a cave will end in the disease-soaked ruins of a slum." If that fate is not to come to the children of men, then let us arise and cry out to the lethargic conscience of men who slept from the time of the last armistice, men who were saved from the very edge of doom by the valiant few who stood alone at the breach, that if this second war is to be the last men must now arise with a new discipline of their plighted word to the innocent who pray for a world of peace; men must now rise with a new fidelity and a new integrity, if there is to be any hope of the legacy of humanity, if our precious dead are not to have died in vain. Amen.

## A New Decade of False Peace

EXTENSION OF REMARKS
OF
### HON. LISTER HILL
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

*Friday, November 16 (legislative day of Monday, October 29), 1945*

Mr. HILL. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a very timely and challenging editorial written by Mr. Walling Keith, editor of the Gadsden (Ala.) Times, and appearing in the Times of last Armistice Day, Sunday, November 1, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NEW DECADE OF FALSE PEACE?

This is November 11, 1945.

Does the date mean anything?

Do you remember another November 11—a day the whistles blew, a day that meant the end of the war to end wars?

Maybe you remember it.

But we talked to a young man yesterday who doesn't remember a thing about the first armistice.

No; he doesn't remember a thing about it. He just folded away a uniform and put some medals on the shelf last week. He fought in five battles. He wears a scar under his brand-new suit.

"No," he said, "I don't remember the first armistice. How could I? I wasn't even born then. I'm not but 26."

By the grace of God and not through any foresight of America's leaders who talked so much and did so little between 1918 and 1940, this young man is back home in Gadsden. There were times when the Army doctors thought he wouldn't ever come back.

"No; I don't remember the first armistice, and as for celebrating this one, well, what the hell? We've had a war between—and what does it mean any more?"

His words cut deep. They dug ruthlessly and brutally into a feeling of sentiment grown tender with years and memory.

And with them there came the certain truth that must be faced by all who cherish memories of a wonderful day that was born in such golden hope at the end of World War I.

The new generations will not cling to old hopes they have seen die.

Those who are too young to know the pains of that war and the joys of peace that came with the armistice can see only that we didn't make it stick.

They carry their own pains and joys of a war that is very real to them.

Armistice Day hasn't meant the same thing since that "day that will live in infamy." It never will mean the same thing again. It will be a day for tribute and honor to the heroes of 1917–18, but the magical touch of peace, that confident hope which dwelt in American hearts—it's all gone from Armistice Day. It will never return.

Today is a grave reminder that after 27 years we must start all over again.

Yet today we seem to have only one advantage over that eager beginning we almost made in 1918. We are at least conscious something should be done.

But like a truant schoolboy whose conscience hurts for the whipping he's going to get when he does go home, we still cling to the fishing rod and try to put troubled thoughts out of mind, try to put hard decisions away, try to evade the harsh facts of war and peace.

Our statesmen are war weary. They are tired.

Yet, except for a crackpot here and there, one or two political accidents and a handful of tender-hearted souls who cannot stand the thought of giving pain to the moment to save the hour, there is hardly a man in the Congress of the United States who does not know that time is wasting and with it hopes for as permanent peace as man can devise.

What has happened to the world organization to which men gave such devoted lip service when the guns were firing?

Why isn't Congress working night and day on some plan for a world organization dedicated to the preservation of peace?

We'll tell you why:

Congress is busy acting as the messenger boy for the people. It is busy reducing taxes, which is all well and good, but which is secondary to permanent peace.

Congress is busy listening to pressure groups who want OPA ceiling prices lifted from merchandise these pressure groups make.

Congress is busy trying to effect peace between labor and industry, which is all well and good—except that it is a damnable thing that we should be so bitterly fighting among ourselves we can't take the time to try to find some way to keep from fighting another war.

How many citizens have sent a wire or a letter to a Congressman, saying: "Do what you can to guarantee peace in the world and help save my grandchildren from war"?

Yet wires and telegrams are flowing into Washington by the thousands and tens of thousands saying: "Demand reasonable profits for my product." Or, "Demand higher wages." Or, "Help the bean farmer get 10 cents more a pound."

Mind you we do not say that it is wrong for selfish groups to seek their own advancement, or to ask relief from burdensome legislation, or to ask for a decent wage level, or to seek more profit.

But we do say that it is a sign of human cussedness that at this time when America's millions might be thinking of the lives of little children who one day may be killed by atomic bombs, they are all busy thinking about their own bellies and their own pocketbooks and their own vanities.

Last time we blamed a small group of willful men who physically blocked the peace program of Woodrow Wilson. That small group deserves only a small share of the blame.

The same kind of American people—that's you, that's us—who went haywire chasing mythical profits on the stock market, who thought more of prosperity than politics, who blew bubbles in Florida, who counted dollar profits they never earned and spent money they didn't have on necessities they didn't need; this same kind of Americans were to blame for not making a try at world peace in the first place—and not preparing for war in the second place.

It is not so much the bathtub gin we drank while voting dry, not so much the debts we made that we couldn't pay, not so much the silly investments we made in stocks, time, and public leadership that count against us. It is the good work we failed to do that was our greatest sin against a possible world peace.

November 11, 1945.

If Armistice Day means anything to you, when you go to bed tonight, instead of trying to figure out another way to squeeze a new dime from the customer, the boss, the Government or even the soil, say a prayer for the sleeping babies over this country.

God help them if there is another war.

## The United States Merchant Marine Cadet Academy

EXTENSION OF REMARKS
OF
### HON. CORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. CANFIELD. Mr. Speaker, the United States Merchant Marine Cadet Academy at Kings Point is to the United States Merchant Marine what the United States Military Academy at West Point is to the Army and the United States Naval Academy at Annapolis is to the Navy. It contributed mightily to victory in the war just ended, and it must be maintained in peace. Recently the training organization of the War Shipping Administration prepared an Academy register. It shows that since the Academy establishment in 1938 a total of 7,038 officers have been graduated.

The summary on pages 269 to 271 of the Register indicates that:

1. Information is available on 6,823 graduates, or 96.1 percent of the total, since 1938. Some of the 260 graduates on whom no information is available may be attached to ships, ashore with the shipping industry, or missing in action.

2. Of the 7,083 graduates:

(a) Ninety-two and six-tenths percent are serving as officers of ships. Of this number, 60 percent are attached to merchant vessels, 24.6 percent are attached to naval vessels, and 8 percent are at officers' upgrade schools and on leave from ships.

(b) Two and four-tenths percent are on shore duty, attached to War Shipping Administration training and foreign service units.

(c) One and one-tenth percent are casualties, lost and missing in action, physical disability, and prisoners of war.

3. Approximately 170 graduates are masters and chief engineers of merchant vessels and 61 hold the rank of lieutenant commander or above on active duty with the Navy.

Approximately 200 cadet-midshipmen and graduates lost their lives or are missing in action. Two were prisoners of the Japanese. Many were awarded decorations. Six Liberty vessels honor their names and three Victorys honor their academy at Kings Point and their cadet schools at Pass Christian and San Mateo.

*Home States of graduates of United States Merchant Marine Cadet Corps and its academy, Kings Point, as of June 30, 1945*

## Mutual Housing, a Means of Increasing Home Ownership

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. VOORHIS of California. Mr. Speaker, the mutual housing plan is sometimes called the REA plan for housing. When the Government decided to assist in the electrification of our farms and established the Rural Electrification Administration, we discovered that when the people are encouraged to help themselves and to manage and operate their own business, they not only respond, but succeed in their ventures. Farmers organized rural electric cooperatives, borrowed money from the Government, electrified their farms, and generally have kept ahead of schedule in repayments. The rapidity of development, the efficiency of the cooperatives, the progress made in this field bear abundant testimony to the soundness of these principles.

Now it is proposed that a somewhat similar plan shall be offered for the extension of home ownership in America. It is proopsed that groups of people needing homes shall be permitted and encouraged to organize mutual housing associations, to determine what they want in housing facilities and to present financial proposals to a Mutual Housing Administration, which would be organized by the Government. Upon approval of such plans such associations would be able to borrow from the Government or from private lenders who would have the mortgages guaranteed by the Government. The soundness of the plan has already been demonstrated by several mutual housing associations. One in Dayton, Ohio, and one in South Bend, Ind., have been operating for more than 2 years and both groups have made outstanding records for low-operation costs.

Because of the widespread interest in this proposal and the questions which have been asked me about it, I am presenting herewith in question and answer form a statement relative to the mutual home-ownership plan.

Question. What is the mutual home-ownership plan?

Answer. A group of people interested in building homes for themselves, under their own direction and at the lowest possible cost, organize a mutual or nonprofit corporation. They then confer with representatives of the Government agency and get approval of the project, of the architects to be employed, of the plan for development, and so forth. The authority of the Government representatives is limited to determining the financial soundness of the plan as the concern of the Government is only that of protecting the Government's grant of credit or the Government's guaranty of the mortgage involved.

The Mutual Housing Corporation elects its board of directors and the directors appoint a manager and thus direct the building of the group of home units and development and operation of the project. The occupants of the houses then begin payment to obtain ownership through monthly payments similar to monthly rental payments.

Question. Would the occupant of a home unit in a mutual housing project begin to buy that particular house or would he begin to buy ownership in all the houses through buying ownership in the mutual housing association or corporation?

Answer. That is a question to be answered in each instance. The people will determine it for themselves. These are democratic associations which provide for one vote for each member of the association and for not more than one vote. Of course, the Government must determine in each instance whether the proposal is sound so that the loan will be protected. Some people will insist on ownership of a particular house, and perhaps a majority will adopt such a plan. Those who do not want to participate in such a plan would, of course, not join the association. In another project, the majority might decide that stock ownership in the corporation would be better for them and a plan might be developed for a long-time lease on a house for each house occupant. Some people contend that an owner's equity, if represented by ownership of shares of stock in a corporation, would be disposed of more easily and thus be more liquid. Other people contend that the occupant of a house wants to own that particular house. The plan should be flexible enough to permit the people to decide. The Government's interest centers in the soundness of the loan. It might be that a loan to a corporation might be deemed sounder in one instance and that a group loan in which individual responsibility, associated with a particular house, might provide greater protection for the Government's money in another instance.

There are only two interests that have to be decided justly and soundly. One

interest is what the people in the particular enterprise want and the other is the soundness of the Government's loan. The object here is to encourage and to help people to manage their own affairs. That is necessary if democracy is to survive. The Federal Government must not impose itself or its wishes in this respect on the people. Therefore, the Federal Government should be concerned only with the soundness of the mortgage and plan.

Question. How much down payment would be required?

Answer. The Mutual Housing Administration would have to determine that, but the minimum of Government assistance should be the minimum established for Government guaranty of mortgages to other builders through the Federal Housing Administration. But there is sound argument for more than the minimum of credit in some circumstances.

The Federal Housing Administration may now guarantee mortgages up to 90 percent of the value of the property. In other words, the home buyer need only make a down payment of 10 percent. The home buyers under the mutual-ownership plan should certainly be given equality of treatment. The minimum of consideration given to them would, therefore, be a plan where they would have to make only a 10-percent down payment.

But, there is justification for presentation and consideration, at least, of proposals where the home buyers would pay less than 10 percent down, and the authority given to the Mutual Housing Administration should permit MHA to consider such proposals.

There are large numbers of our people who need homes and who might be able to make an initial payment of let us say 5 percent or 2 percent or 1 percent. Housing must be had by these people. They are going to get it through being forced into slums as renters, or into what is now marginal slum housing, or they may get it through public-housing projects where the public, or Government, pays the entire cost of the housing, and then rents the house at less than cost.

We have one of two or three choices to make in attacking the housing problem for these people. They must have shelter. They have a right to a chance to escape from slums and semislums. Let us be fair with these people. Some of them may be victims of bad habits, and perhaps entitled to no assistance if judgment is to be made on a cold judicial basis. But most of these people are victime of economic conditions beyond their control. And even if this were not true it has been abundantly proven that society cannot afford to permit slums to exist. They cost society too much money in the cost of crime, disease, or bad health, low productivity.

Obviously, then, a social responsibility exists here which must be discharged. We cannot afford to perpetuate the slum. It would be the rankest sort of heartlessness to do so. Nor can the people themselves meet the problem. Where people cannot possibly afford to make any initial payment on their housing, either some public agency is going to have to build the houses or else some such plan as here proposed will have to be employed.

Would it not be preferable, then, where a group of people could make an initial payment of 1 percent or 2 percent, to provide them with the opportunity to get housing on their own responsibility on that basis?

Would it not be preferable where people can make no initial payment, where they are able to organize themselves into a mutual association and to assume the obligation of paying for their houses through monthly payments, similar to rent, and where they are able to assume the obligation of managing their housing projects, to provide them with that opportunity?

Every intelligent man must agree that broad authority should be given to the Mutual Housing Administration to adjust its credit plan to meet the needs that exist, to grant or to guarantee a 90-percent mortgage where that is possible and to grant or guarantee a 95-percent mortgage or a 98-percent mortgage or a 100-percent mortgage where it would be in the public interest to do so.

Of course, the objective of every housing plan must be home ownership. The Mutual Housing Administration should have the obligation of carrying on a constant and continuing education campaign to impress every occupant of a house to free himself from mortgage debt as rapidly as possible. The Mutual Housing Administration should be obligated to assist our people to understand that debt makes prisoners of our people and that they should aspire to be free from debt and be freemen.

In other words, let us suppose 100 families in Indiana wanted to build houses for themselves and needed them. Let us suppose that the need was so great that they might justify asking for the formation of a public-housing authority and for the development of public housing which would involve total-cost investment by the Government or State or city. Let us suppose the 100 families would prefer to organize their own mutual association and assume the responsibilities of management and they would present a proposal to the Government which would involve no greater investment or risk than would be involved in the building of public-housing projects. The Mutual Housing Administration should, in that instance, have the houses built through a mutual housing association.

Question. Is the mutual housing proposal a substitute for public housing?

Answer. Not necessarily. There are and will be many situations where it will be necessary to subsidize a housing development, situations where people have been impoverished until they cannot afford to pay for a house under any condition, or even rent a decent house without subsidy. The mutual housing plan would not meet those demands. Certainly there will be and must be need for public-housing authorities to meet those demands.

Question. Will we not then be confronted with a demand from people for subsidies regardless of whether their economic conditions justify subsidies and would not that defeat the purpose of mutual housing?

Answer. Public housing should only be developed where there is a complete showing of necessity for the subsidy. The average man does not want and will not seek subsidies. He will only take a subsidy of this kind when his economic condition compels him to do so. There will be thousands of families which will not qualify for public housing or subsidized housing and who will prefer the mutual housing plan. And the presence of a mutual home-ownership program will make possible a great reduction of the need for subsidized housing.

Question. What would be the interest rate on the mortgage?

Answer. That would have to be determined. If the Government insures the mortgage the interest rate should be equal only to the cost of money to the Government plus the small service charge. The Government may be able to borrow money at 3 percent, guaranteed. If so, the interest rate should not be over 3½ percent, guaranteed. If the Government is able to borrow money at 2 percent, the interest rate should not be over 2½ percent. The Government should not want to and should not be permitted to make a profit from these lending operations.

Question. Would membership in a mutual housing association involve any membership fee?

Answer. That would have to be determined by the association. Usually a small membership fee is required and small monthly dues are fixed to pay for the administrative cost of the association.

Question. Is the association incorporated?

Answer. Yes, it always is or should be. It should be incorporated under the nonprofit laws of the State or under some other law which would provide for incorporation of such associations.

Question. Would the mutual housing association have any control over the houses occupied by the members.

Answer. The mutual association would determine that through the democratic processes provided for in the association. But certainly an association would want to make certain that the common good of all the members was not injured by some irresponsible member. The associations formed have been voted, by their members, the right to require that property is maintained to the point where it does not injure the community. For example, if a property owner does not cut the weeds, the association does so and charges the cost to the property owned. The occupant might be required to paint his house to protect the mortgage and to maintain the value of the adjoining houses.

Those are matters which are worked out through the democratic processes. Everything is voluntary. No one is required to be a member of such association or to have a house in such a project, or to remain there.

Question. How long does the mortgage on such projects ordinarily run?

Answer. The plan now in operation for two projects provides for a mortgage by

the Government of 45 years to the association. But the association usually fixes its mortgage term at 30 years. This requires the house occupant to make a slightly higher monthly payment, but in that way he builds up an equity in the property. The association then permits the house occupant, in time of emergency, such as unemployment, to draw on his excess equity and thus protection is given.

Question. What about sale of the property or equity?

Answer. The house occupant is permitted to sell his equity to anyone who would be permitted by the association to become a member of the association. If the house occupant should be able to sell his equity at a much higher price than is the appraised value and the buyer could become a member of the association, he would be assisted in doing so.

Question. What advantages have been proved for mutual housing?

Answer. There are seven mutual housing projects now in operation. They have been managed at far less cost than any other housing projects, regardless of how the other projects are organized—by private speculative housing interests or by public housing authorities. The people living in the mutual home-ownership projects have appreciated the opportunity they have to manage their own business and to operate it, and they have been anxious to save and own their homes. They have been knit more closely into a community than have the occupants of any other housing developments. They become a little town government of which they can feel themselves an intimate part. They work together. They become mutually interested in the common good.

Question. Is there any saving for the home buyers under this plan?

Answer. That is a question which would be determined by the ability of the directors of the mutual association. But it has been proved beyond question that where people are given the opportunity to manage their own business they are just as capable and just as efficient as are other businessmen. Certainly if they are just as efficient they save through joint purchasing in large amounts, through joint planning, through personal supervision, through elimination of waste of all kinds. They save in many other places in fees of various kinds. Some people estimate roughly that at least 10 percent of the cost of a house could be saved and some estimate the saving might be as much as 20 percent. But it is impossible to justify any precise statement of saving. The people would be their own bosses through the democratic processes. They would work out their own destiny. Incidentally, there would be a saving in the purchase of large tracts of ground and its subdivision. The speculative housing industry usually has a good profit from its land speculation.

Question. Why is there any objection to this plan? It seems so fair to the people who are most concerned, the home owners.

Answer. It is hard to find any grounds for objection to the plan, except for motives of downright selfishness. For clearly the plan provides greater opportunity and more assurance to the home buyer and the public welfare is helped by any sound plan to promote home ownership.

Question. Why cannot the people themselves develop their own mutual associations without the help of government?

Answer. They can. But the average home buyer cannot pay more than 10 percent of the cost as a down payment. The housing industry has accepted that and has gotten the Government to insure mortgages up to 90 percent. The great sources of credit, insurance companies, building and loans associations and banks, et cetera, will lend on an insured mortgage up to 90 percent. But they are not permitted, by law, to lend more than 60 percent of the value of a property, generally speaking, when it is not insured. Therefore, the mutual needs the assistance of a Government guarantee. Inasmuch as the Government gives such a guarantee to the speculative industry, there is no reason why it should not be given to a mutual association.

Question. Someone has said the Federal Housing Administration could now, under existing law, guarantee the mortgage of a mutual association.

Answer. It could, and in a few rare instances it has. But little imagination about the possibilities of mutual home ownership has been shown. It has not encouraged mutual housing and there is no good reason to hope that it will. FHA apparently conceives its function to be to serve the housing industry as it has traditionally functioned. The Mutual Housing Administration would be designed to serve the people, the home buyers.

Question. What then is needed in the form of legislation?

Answer. We need amendments to the law which would create a Mutual Housing Administration obligated to do for mutual housing just what FHA does for other forms of housing. But this law should provide sufficient authority to the Mutual Housing Administration to permit it to develop a housing project for people under terms which would fit their individual needs. Of course, MHA would have the obligation to make no greater commitments than would be justified in the public interest and be sound from the standpoint of the National Treasury.

## Gold Miner Answers Editorial

EXTENSION OF REMARKS

OF

### HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. ENGLE of California. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a letter from the general manager of the Idaho Maryland Mines Corp., one of the largest gold-mining enterprises in the world, in regard to a recent editorial occurring in the New York Herald Tribune. This editorial attacks a bill introduced by me and by Senator MURRAY for the purpose of securing reimbursement to gold miners for losses suffered by reason of being arbitrarily closed down by the War Production Board. I feel that the answer of a practical gold miner will be of general interest.

NOVEMBER 1, 1945.

HON. CLAIR ENGLE,

*Member of Congress, Second Congressional District of California, House Office Building, Washington, D. C.*

DEAR MR. ENGLE: Relative to the editorial in the New York Herald Tribune of October 25 entitled, "Legislative 'Gold Digging.'" I would like to present to you and Senator MURRAY some facts relative to the gold-mining industry in refutation of statements made in the editorial.

Senate bill S. 1467 and H. R. 4393 request reimbursement of gold miners for losses suffered as a result of an edict known as limitation order No. 208, promulgated by the War Production Board. The avowed purpose of this bill was the diversion of miners to base metal mines. Gold-mine operators informed the War Production Board fully and clearly that the limitation order would have the result it actually had, namely, very few men would go to work in the base-metal mines. The chief results of L–208 was that it actually ruined all the small gold-mining companies and nearly all the larger companies as they were forced to close down for a period of nearly 3 years. In the hope of opening up some day they attempted to maintain their mines in working shape. Their taxes were not remitted; their staffs, limited though they were, had to be paid; their insurance on plants, buildings, and equipment went on day after day. What was the result? The result is obvious, in the 2 years and 7 months of complete closure, the capital of all the mines was drained away and the companies are broke. They had to resort to borrowing or to assessing their stockholders. I hold that the War Production Board has no right legal or implied to ruin any individual and even less right to ruin an industry, which is what they did. There is a grave doubt in my mind that the WPB had the legal right to issue such an order. However the damage has been done.

The article implies that all industries that suffered because of war would request compensation. The gold miners, one and all of them, suffered because of war long before the imposition of L–208. Their crews had shrunk materially from peacetime levels. They are not now asking nor never have asked assistance because of the war.

I further hold that the gold miner has equal rights with any contractor whose business has been terminated by official order, as have many in the past months. The settlement on termination of war contracts is being determined on the basis of actual loss plus a reasonable profit for time spent in reconverting. The gold miner is not asking for lost profits, he is not asking for a profit for reconverting his mine to peacetime operation, he is asking only for the losses he suffered because of L–208, no more and no less.

This request is not legislative gold digging, it is no more than a request for the same treatment afforded war contractors.

As for the Idaho Maryland Mines Corp. of which I am manager, we not only spent all the reserves the company possessed in October 1942, amounting to about a half million dollars, but today we are faced with the necessity of spending another half million which we do not possess in order to recapture miles of caved workings before we gain access to ore bodies which we were mining in the Idaho mine, so the closing order not only terminated all income from mining operation, it also loaded upon the companies a burden of maintenance for 3 years and now the problem of reopening the mines is upon us and we are unable to carry the burden.

If in the opinion of the Herald Tribune a request for return of our losses is legislative gold digging, I can only say that the Herald Tribune has a peculiar idea of fair play.

Sincerely,

NEIL O'DONNELL,
*General Manager.*

## Operation of the Bankruptcy Laws

EXTENSION OF REMARKS
OF
**HON. JOSEPH F. GUFFEY**
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
*Friday, November 16 (legislative day of Monday, October 29), 1945*

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from a recent issue of the Pittsburgh Press, a Scripps-Howard newspaper, on the bankruptcy laws of our country. The editorial refers to a very gross abuse of those laws in a case in which no report was filed for 40 years.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT DOESN'T WORK; FIX IT

Every Congressman should be sent a copy of the report recently filed in Federal court here by the receiver for the Pittsburgh, Shawmut & Northern Railroad.

The company has been in receivership 40 years.

In that time, judging by the report, it has been going from bad to worse.

Until the miners employed by the coal subsidiary of this company walked out in protest against living conditions in company towns, no report ever had been filed by the receiver.

The attention directed to the company by the miner walkout got the Department of Justice on the trail and as a result a special judge was sent here to look into the receivership. He, District Judge Guy K. Bard, of Philadelphia, speedily ordered a report.

That report has now been filed.

The report shows that the company is more than $30,000,000 in debt. In other words, it has assets of less than twenty-nine millions and liabilities of more than fifty-nine millions.

Where it once had 24 locomotives and 2,598 other items of rolling stock, it now lists 16 locomotives and 161 cars. Its coal properties have depreciated similarly.

The debt is many times what it was when the company first went in receivership.

But all this time the receivers have been getting well paid. If they made any real efforts to get the company out of the hole, they failed, to put it mildly.

In all this time, it appears, the court never demanded a report and the receiver volunteered none.

It is the purpose of bankruptcy proceedings to do several things:

One is to get the troubled company back on its feet, to make it a going concern.

Another is to see that the creditors get what's coming to them, or as much as possible.

If it isn't possible to pull the company out of its financial fire and convert it to a successful operation, then it is the job of bankruptcy to liquidate the firm and pay off the creditors. This is the way it works with closed banks.

And when a bankruptcy proceeding is instituted, it is the job of the receiver and the Federal court to see to it that one of these results obtains—and as soon as possible.

In this case, and in many other cases, nothing of the sort happens. Bankruptcies go on and on. Some firms do get started again. But others merely get milked and milked and milked.

It is obvious that the bankruptcy law is not working. It needs to be fixed. That's a job for Congress.

Congress can see how the law doesn't work if it will examine the Shawmut case. It can see how it doesn't work if it will study the proceedings of one of its own committees in the case of Judge Johnson of the middle district court, now being tried for misconduct on the bench as a result of his manipulation of bankruptcy proceedings.

The whole bankruptcy law needs overhauling. It is Congress' job to do it.

## America Plans Jobs for All

EXTENSION OF REMARKS
OF
**HON. JOHN W. McCORMACK**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles A. Merrill, from the Boston Sunday Globe of September 9, 1945:

AMERICA PLANS JOBS FOR ALL—IN DEBATING FULL EMPLOYMENT, CONGRESS IS MERELY ENDORSING THE ASPIRATION IN THE MINDS OF ALL AMERICANS AS WE TURN FROM WAR TO PEACE

(By Charles A. Merrill)

Better late than never, the Congress of the United States is reconvened and striving to catch up with the breathless rush of events. Having cleared the docket of all business which seemed of a pressing nature, it adjourned in July. July seems a long time ago. The war in Europe had been brought to a victorious conclusion, but our forces in the Pacific appeared only to have reached the preliminary stages of a conflict which military experts assured us could only be ended by a full-scale invasion of Japan, or China, or both. So Congress, having no premonition of the war's end, acted in July in international affairs, approving the Bretton Woods plan for currency stabilization, ratifying the United Nations security charter, and recessed. Suddenly the picture changed. Russia's entry into the war, the terrible atomic bomb, Japan's surrender. Domestic issues clamor for attention. As usual, the heartaches of war are followed by the headaches of peace and reconstruction. This time the demand is for a program which will ease the shock of shifting gears from a wartime to a peacetime economy. We are anxious to prove to the world and to ourselves that within the framework of what we call the free-enterprise system we can assure jobs and prosperity, and avoid the cycle of boom and depression which plagued the Nation after the First World War.

The task is complicated by a skepticism in some quarters about government planning. There are those who say that if the Government interferes wtih the functioning of our economic system there will be fewer, not more jobs. Suppose, to begin with, we examine this attitude and seek a rational philosophy with reference to the part we should expect our Government to play in the realm of economics. Perhaps public opinion is not so divided on the issue as has been assumed.

At this point, a witness appears in the person of Secretary of Commerce Henry A. Wallace about whom, when he stood on the threshold of the Presidential succession, the fires of controversy used to rage. Lo and behold, he talks like a chamber of commerce official. Writing in the New York Times, he says:

"Temperamentally, I like the idea of reducing Government interference in economic matters to the minimum. Most of our ancestors came to the United States from Europe because they thought there was more freedom here from the heavy hand of Government. It is in our blood and in the air we breathe to hate Government interference. We don't want to be dominated by either a permanent military or a Government bureaucracy. Both tend eventually to become bigoted, thoughtless, or arbitrary."

Mr. Wallace then lays down what must seem to most of us an eminently reasonable proposition. "To escape from excessive Government planning we must find out just what is the smallest amount of planning which will give us the greatest amount of freedom." There are, he points out, certain areas of Government responsibility which are accepted. First, the Government must plan with respect to taxes. Second, it must plan with respect to money, interes rates, and the floating of loans. Third, the Government must lay down tariff policies.

Surely, there are few among us who, viewing in retrospect our experience in the twenties and thirties, cannot go along with Mr. Wallace on the premise that what we should be on guard against, as the country seeks recovery from the impact of the biggest and worst of all wars, is not so much government planning as bad planning.

It was the lack of Government controls after World War I which produced the spiral of inflation, to be followed by deflation, bankruptcy, unemployment. When inflation was running wild the Federal Reserve Board did not even seek to check speculation by raising the rediscount rate. We are aware today that it was idiotic planning for the United States, a great creditor country, to expect to collect on foreign debts while blocking imports from debtor nations by a high-tariff policy.

The most pressing immediate matters now before Congress arise, of course, from the sudden ending of the war, cancellation of war orders, the Government's retirement as the largest buyer in the American market. A few days ago the number of workers thrown out of employment was estimated at 2,000,000. The figure is probably much higher now, but some allowance must be made for the fact that many war workers are willingly retiring from the labor market, women who are returning to their homes, younger people who will go back to school. Meanwhile, we must visualize the gradual demobilization of millions of service men and women. The problem of employment is staggering.

Fortunately, while industry is speeding reconversion, old-age and unemployment insurance are available to take up some of the slack. In his recommendation to Congress, last week, President Truman was only moving up the standard in the kind of planning which the Government embarked upon several years ago and which both political parties have accepted without reservation. He asked the Congress to supply Federal funds to the States so that unemployment compensation may be increased to a maximum of at least $25 a week over a period of 25 weeks.

This, of course, is only a stop-gap. It will help during the reconversion period. The larger, the long-range project, is the breathtaking vision of an industrial system which will provide jobs for all who are willing and able to work—permanently, year in and year out.

Here we encounter the most controversial issue which has been thrown into the congressional hopper, the so-called full employment bill. Examination of the bill, which

doubtless will be altered prior to its passage, would seem to indicate that it has stirred up more heat than is warranted. Far from being a drastic proposal for the socialization of our economy, the measure states as its objective the strengthening and preservation of our free enterprise system. Under its provisions the President would each year present a job budget to Congress. This would be an estimate of the number of jobs private industry might be expected to provide. If a deficit of jobs seemed in prospect, the President would be expected to propose legislation calculated to stimulate increased employment through non-Federal expenditure, and, also, if this appeared inadequate, to recommend Government expenditures to take up the slack.

Supporters of the bill hope it would help the country to create and maintain a stable economy. Opponents are fearful that it would inaugurate a new era of checks and controls and impose tax burdens on industry that would limit production and produce a lower standard of living.

Due caution is always in order in planning new social experiments, but is there not a greater danger in a critical hour like the present one, when mankind is emerging from the shadow of death and groping for a freer and fuller life, that we shall err on the side of timidity.

Over large sections of the earth a socialized economy now prevails. The people of England, weakened and impoverished, are turning to a program of evolutionary socialism. We in the United States, stimulated by the country's miraculous record of wartime production, still have tremendous faith in the vitality of our economic system.

As a result of our wartime experience, the people of this country, political leaders, industrialists, members of labor unions, are clinging to the vision of a system of free enterprise so integrated and efficient that it will not be subject to violent fluctuations, but will permit the American people to enjoy a high standard of living and to preserve their free political institutions. Indeed, we have always had this vision; increased efficiency, good wages, low prices, maximum purchasing power, and high volume of production.

This is the current American plan. If it is the policy of our Government to aid in this planning, why should we be cynical or pessimistic about it?

## Constitutional Amendment Limiting the Tenure of Presidents of the United States to Two Terms of 4 Years Each

EXTENSION OF REMARKS

OF

### HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me before the Committee on Election of the President, Vice President, and Representatives in Congress in support of House Joint Resolution 65, proposing an amendment to the Constitution of the United States relating to the terms of office of the President:

Mr. Chairman, in requesting a hearing before this committee, I have been prompted not so much by my own personal views on the no-third-term tradition as by the repeated urging of many Americans who feel the critical conditions of the world now make it more important than ever to set up safeguards to protect our traditional freedom under representative government. I don't believe any man on this committee, or in the whole Congress, will iew this subject from a partisan standpoint. Certainly we have had ample evidence in the past 20 years that governments can be overturned or undermined from within and that the wisdom of the founding fathers was profound. They sought to build into the Constitution the checks and balances and limitations of power which have so far been the bulwark of our personal liberties. The Bill of Rights amendments defined those liberties.

As you all know, the question of limiting the tenure of office of the President of the United States was seriously debated in the Constitutional Convention. Many of the most distinguished delegates urged on the Convention the adoption of a clause which would place a constitutional limitation upon the number of terms any President could serve. After serious deliberation the Convention finally decided not to adopt such a clause. Their failure to do so has often been cited by various persons as the authority for opposing such suggested limitations today.

I would like to point out, however, that the men who met in Constitution Hall in Philadelphia were assembled there because the framework of national government under the Articles of Confederation had already proven to be much too weak and disorganized to provide that stable and responsible government this Nation required. Their responsibility at the Convention, therefore, was to strengthen our National Government and to try to lay down principles of its functioning for succeeding generations. In a measure they were operating in a vacuum. They were forced to conjecture, and it was finally decided that limiting the President's tenure of office might place too great a limitation upon the functioning of the proposed government and that it might thereby weaken it. It is clear from the debates that this was a matter intentionally left by the framers of the Constitution for decision later in the operations of the new Government.

Actual experience in the functioning of our Government under the principles laid down in the Constitution quickly demonstrated that such limitation was practical, from the standpoint of efficiency. It also became apparent that the authority and prestige of the Presidency was so great it would be a constant temptation to an ambitious man to set himself up in office for life and so to control all the operations of Government as to be a virtual dictator.

Therefore, Thomas Jefferson and a succession of outstanding national leaders from that time until quite recently vigorously upheld the no-third-term tradition as one of the unwritten laws of our Nation and as one of the prime safeguards against tyranny.

Tyranny is a danger against which every American naturally must be vigilant. Our forefathers knew tyranny. They knew what it meant to live under an absolute ruler. They knew all the restraints and restrictions and all the discrimination and special privilege which prevail under any absolutism.

They thought, therefore, in terms of safeguarding this Nation against the establishment of a monarchy. They wanted no kings; no royal families; no dukes and duchesses; no princes; no earls; no barons. They wanted liberty; the right to determine their own form of government; the right to give to that government authority sufficient only to enable it to operate. They did not wish to submit to the personal whims of any monarch, or bow to the special privilege of caste.

Only men who have had personal experience with such tyrannical customs can fully appreciate the frustration and the misery they bring to a people. The men of that time had had very painful personal experience. They wanted to set up a government always to be under control of the governed; a government whose authority and power would be so clearly restricted as to guarantee that the instruments of power would rest in many hands under the system of checks and balances, and not in the hands of one or a few too powerful men.

Since the day Thomas Jefferson established the no-third-term principle as a primary rule in our political life, Americans have accepted it and endorsed it throughout succeeding generations. Yet, as the American people in each generation became farther removed from those men who had had personal experience with tyranny, the fear of tyranny lost its sharpness and, in time, Americans began to take for granted those personal liberties the price of which is eternal vigilance.

Now today Americans of this generation have seen with their own eyes the horrors, and have been touched in their own lives by the coercions and frustrations of a new kind of tyranny far more deadly than any the world has ever known before.

We of this generation have learned that today it is not kings we have to fear, but dictators. The twentieth-century tyrant is not one who inherits a throne, but one who seizes a government. Twentieth-century oppression is not carried on in the name of a crown; it is perpetuated in the name of democracy. We have learned that the first step in twentieth-century tyranny is popularizing a "supercolossal" leader.

We have seen the factions supporting such leaders infiltrate into the governments of Europe and of Asia. We have seen the brutality, the ruthlessness, and the utter disregard of humane principles which have been typical of all their scheming for power.

We have just fought a war because of them. We have sacrificed the lives or wounded the bodies of more than 1,000,000 Americans to defeat them. We have subjected other millions of men to the hardships, the privations, and the misery of the battlefields, of the skies, of the beaches, and the seas.

We have asked these men to make this sacrifice in the name of freedom. It is our duty to them and to our children, and to our children's children to set up those barriers to ambition which alone can guarantee that liberty.

Certainly there can be no partisan consideration today in strengthening our Constitution in such a way as to preserve its integrity and reinforce its guaranties of orderly liberty under the law to American citizens.

It is today no reflection upon any individual to adopt a constitutional amendment limiting Presidential tenure of office. We are dealing with a fundamental principle and a deadly danger, and not with personalities. Mr. Truman is at this time not a candidate to succeed himself for even a second term. There is no question, however, as to the propriety, under the traditional practices of American politics, of his doing so, if he chooses.

The tradition against a third term is broken. There are no further restraints upon the ambitious. We now have had the experience of continuing an administration in office for more than two terms.

It must now be apparent to all that any President who remains in office too long will naturally surround himself with a ring of palace favorites—men whose sole interest would be to perpetuate their patron in office and thus establish and maintain for themselves a vested interest in bureaucracy and power, and thus enjoy the selfish fruits of political monopoly. As the power of the Presidency increases, so does their power increase. And since their prestige and even, in some cases, their personal fortunes depend upon his remaining in office, they will seek in a hundred and one concealed and cynical ways to prevail upon him to do so. As he remains in office and their power in-

creases so is increasingly placed in the hands of irresponsible men the ability to maneuver whole departments and influence whole nations to foster their own personal interests, with cynical disregard of the rights or the welfare of American citizens.

How easy it would be, then, at some future time if, to remain in power, such men saw fit to overthrow our representative form of government; to establish over an unsuspecting people a dictatorship of such absolute tyranny that the rights of American citizens, and even their very lives, would be subject to the whims of men over whom the people would have no control. We have seen such events take place. We have seen wicked men in wicked ways accomplish those very evil designs in other countries in this generation.

Mr. Chairman, and honorable members of this committee, in the name of the millions of tortured and murdered, in the name of all those millions of starved and dejected humanity who know the brutality of the secret police and the horrors of the concentration camp—gentlemen, in the name of Americans of this generation, living and dead, and in the name of yet unborn generations of America, I ask that you take prompt action to start the machinery in motion for a constitutional amendment limiting the tenure of office in the Presidency to two terms of 4 years each. We must make certain that the kind of government which has made America the greatest Nation in the world is safeguarded.

I have several citations and quotations which I wish to submit as a part of my remarks to this committee. They are as follows:

Thomas Jefferson, among numerous other declarations against more than two terms in the Presidency, said:

"If some termination to the services of the Chief Magistrate be not fixed by the Constitution, or supplied by practice, his office, nominally for 4 years, will in fact become for life; and history shows how easily that degenerates into an inheritance."

Jefferson said again:

"Should a President consent to be a candidate for a third election I trust he would be rejected on this demonstration of ambitious views."

All down through our history are many incidents that prove how loyal our people and our Presidents have been to this tradition established by Washington. William Henry Harrison took office pledged to one term only. Rutherford B. Hayes favored only one term for a President and was not a candidate for a second term. Cleveland, in his characteristic strong language, declared himself against a third term. McKinley said, "I am not and will not be a candidate for a third term."

This question of limiting the Presidential term to two is not a partisan question. It has never been a partisan question.

As far back as December 15, 1875, in the Forty-fourth Congress, first session, in volume 4, part 1, page 228, we found that a Member, Mr. Springer, offered a resolution to limit the President to two terms. The resolution carried by 144 ayes to 2 noes.

In 1896 the Democratic convention adopted a plank as follows: "We declare it to be the unwritten law of the Republic established by custom and usage of a hundred years ago, and sanctioned by the example of the greatest and wisest of those who founded and maintained our Government, that no man should be elected for a third term of the Presidential office."

Again in 1912, the Democratic platform on which Woodrow Wilson was elected, and which Mr. Franklin D. Roosevelt supported, said:

"No man should be eligible for a third term of the Presidential office."

In 1928, when some people imagined Mr. Calvin Coolidge might aspire to a third term, even though one of his terms was not elective, the Senate of the United States adopted a resolution against a third term. It was supported by practically all of the Democrats in the Senate. The resolution was as follows:

"*Resolved*, That it is the sense of the Senate that the precedent established by Washington and other Presidents of the United States in retiring from the Presidential office after their second term has become, by a universal concurrence, a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions."

This resolution was introduced by Senator Robert M. La Follette, of Wisconsin, who was not a Democrat, and was supported by a vote of 56 yeas to 26 nays, with 12 not voting.

To show the nonpartisan character of this question, I desire to point out that among the Senators voting for the no-third-term resolution were the following:

Ashurst, Democrat, Arizona; Barkley (present majority leader in the Senate), Democrat, Kentucky; Black (now an Associate Justice of the Supreme Court), Democrat, Alabama; Blaine, Republican, Wisconsin; Borah, outstanding Republican, Idaho; Bratton (now Federal judge to New Mexico), Democrat, New Mexico. Among others were Senators Copeland, Democrat, of New York; Couzens, Republican, of Michigan; Curtis, Republican, of Kansas; Gerry, Democrat, of Rhode Island; Glass, Democrat, of Virginia; Harrison, Democrat, of Mississippi (since deceased); Hayden, Democrat, of Arizona; La Follette, Republican, of Wisconsin; McKellar (President pro tempore of the Senate), Democrat, Tennessee; Neely, Democrat, West Virginia; Norris (since deceased), Independent, Nebraska; Nye, Republican, of South Dakota; Pittman, Democrat, of Nevada; Robinson, Democrat, of Arkansas; Shipstead, Farmer-Labor, of Minnesota; Tydings, Democrat, Maryland; Wagner, Democrat, of New York; Walsh, Democrat (since deceased), Montana, and Wheeler, Democrat, Montana.

Many more citations could be made to show that this question is not in any sense partisan, but I believe, Mr. Chairman, these I have made will be sufficient to illustrate the point I wish to make.

It must be the determination all of these people showed in not wanting more than two terms in the Presidency for an individual still exists. The fact that the tradition was shattered has not minimized the dangers in the least. It has accentuated them.

Mr. Speaker, I have received letters from Mr. John W. Davis, candidate of the Democratic Party for the Presidency in 1924, and from Mr. Bainbridge Colby, Secretary of State under Woodrow Wilson, both of which I insert in the RECORD at this point:

DAVIS, POLK, WARDWELL,
SUNDERLAND & KIENDL,
*New York, N. Y., November 13, 1945.*

Hon. JOSEPH W. MARTIN, Jr.,
*House of Representatives,*
*Washington, D. C.*

MY DEAR CONGRESSMAN: I understand that hearings are to be held on the 15th and 16th on House Joint Resolution 65 proposed by yourself limiting to two terms the occupancy of the Presidency of the United States.

It would be a great satisfaction to me to be able to appear before the committee and give my modest support to this resolution. Unfortunately, however, I am now in the midst of a trial which I am unable to leave on either of the dates mentioned. If there is any way in which it could be accomplished without my presence, I should like to be on record among those emphatically in favor of such an amendment.

It not only is expedient but, in my judgment, is imperative. For 150 years we got along with the two-term tradition. Many statesmen of all parties from time to time have raised their voices in favor of it, but a tradition once broken ceases to have binding power. Only law expressed in the Constitution can take its place.

The basis of the tradition and the reason for your amendment is the sound principle sanctioned by all history that no free government can survive the coming of a permanent Chief Executive, least of all an Executive with the vast and increasing powers which we have conferred upon the President. There is not and there can never be in this country an indispensable man. There cannot be under any system of self-government. The only check upon governmental error is a cleansing rotation in office.

I do not labor the point as I expressed myself somewhat fully on it in hearings before a subcommittee of the Committee on the Judiciary of the Senate in 1940 when the question was brought forward. I think my remarks appear in the CONGRESSIONAL RECORD on September 19 of that year. If I were free this week to appear before the committee, there is nothing I would subtract from what I then said, and I am not sure that I would have a great deal to add.

With every hope for the adoption of your resolution, I am

Very sincerely yours,

JOHN W. DAVIS.

---

NEW YORK CITY, *November 15, 1945.*

Hon. JOSEPH W. MARTIN, Jr.,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. MARTIN: I had hoped to attend the hearing called for today before the House Committee on the Election of the President, but I am unable to make the trip to Washington at this time.

May I, however, express to you briefly the great importance I attach to your resolution proposing an amendment to the Constitution relating to the limitation of the terms of office of the President. I can hardly think of any subject more worthy of the serious study and attention of the Congress. It is not too much to say that the survival of the Republic may be wrapped up in it.

The members of your committee are too well grounded in the history of our country to make necessary a recital of the declarations of Washington and the great Presidents who for 150 years have adhered to the historical precedent which he established by refusal to accept election as President for a tenure beyond two terms. It was firmly imbedded in our national thinking until very recently that this precedent was a fixed and hallowed tradition with us and had acquired morally the force of a constitutional limitation, the validity of positive law.

Both the Senate and the House have declared repeatedly by formal resolution their belief in its wisdom and vital need.

Jefferson was strongly of the opinion that a definite period to the retention of the Presidential office was necessary to safeguard our elective form of government, thus ranging himself with Washington, who expressed the belief that no President would ever be able, by any practicable intrigue, to continue himself in office, much less perpetuate himself in it, but in "the last stage of corrupted morals and political depravity."

Grover Cleveland, at a much later date renewed the warning against a plurality of terms for a President, citing the "allurement of power, the temptation to retain public place once gained, and, more than all, the availability which his party finds in an incumbent, whom a hoard of office holders support, with a zeal born of benefits received and a hope of favors yet to come."

We have now seen, and recently, these evils, swollen beyond anything recorded in history, unleashed and shamelessly pressed into service in the effort to keep a President in office for a plurality of terms. The apprehended dangers against which we were warned have overtaken and enveloped us. We have even

heard men in high official position in a recent administration declare that the whole duty of a party in power is "to spend and spend, to tax and tax, and elect and elect."

Such has become apparently the whole gospel of bureaucracy, if not of politics in general.

Our Government is not built upon the theory that the powers we vest in an elected official shall be thrown into the scales of a political contest, to be exercised in his own interest or to insure his retention in office. This is something the people will not tolerate.

We have seen that we require a greater protection than is afforded by a "tradition" however sacred, and vital to our survival as a nation. We have reached the time when the limitation of tenure of the Presidential office must be safeguarded by express provision in our Constitution.

The proposed constitutional amendment, now before your committee with its express limitation upon a President's eligibility for reelection, provides a protection to our form of government which is sorely needed—a need which has been amply demonstrated in our experience.

Respectfully yours,

BAINBRIDGE COLBY.

## For Better Occupational Troops

EXTENSION OF REMARKS

OF

### HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. HORAN. Mr. Speaker, little heralded, yet of tremendous possibilities, was a radio broadcast put into the CONGRESSIONAL RECORD by my colleague the gentleman from Massachusetts, Hon. CHARLES R. CLASON. It was the broadcast of Mr. Hubert W. Kregeloh, commentator on a radio station, WSPR, at Springfield, Mass. It can be found on page A4866 of the Appendix of the CONGRESSIONAL RECORD and I commend it as good reading to thoughtful people everywhere.

Mr. Kregeloh comments on the difficulties we have found in occupying Germany. With certain modifications, his comments can be applied to the problems we encounter in the occupation of Japan. He suggests that we should have had troops especially trained for the occupation of the conquered countries. We have done it with combat troops and are now seeking replacements in order that these veterans may be brought home as speedily as possible.

Mr. Kregeloh's suggestions are worthy of note. Personally I think they are worthy of legislative action to put them into immediate effect. He suggests that occupational armies first should be volunteers—those who have a desire to take part in the work of occupying a conquered country. He further suggests that officers, as well as men for this purpose, should be carefully selected for above-average intelligence and that they should be over 21 years of age. For training he says that emphasis should be overwhelmingly placed on spiritual and political indoctrination, designed to equip the trainees with a type of knowledge naturally lacking in our army of occupation.

Under the circumstances, he feels that the period of training should be relatively short and that every facility available to American colleges should be used for this training immediately. He suggests that their pay be satisfactory. The period of service should be limited, and, lastly, he suggests that these occupational armies should have a distinctive uniform.

As a further comment on the unsatisfactory reports from our armies of occupation, Mr. Marquis Childs, commenting in the Washington Post recently, states that the school of military government gave only the most rudimentary grounding in how to fix sewers and organize soup kitchens. And, he concludes his column with a statement that "occupation is demoralizing to occupier and occupied. It is especially so for Americans with no background or preparation for the task. There are ways to control Germany and we must find them. The dangers in the present approach are too grave to ignore any longer."

And so it seems that in our occupational efforts, both in Germany and in Japan, things will not happen automatically. If we do not want this war to have been fought in vain, if we want to create an atmosphere which will breed good will, we had best give some thought and intelligent action to the development of occupational forces. Such a project could very easily have byproducts of experience and gathered knowledge that would help us tremendously as we contemplate our military preparedness for the peace to come. An improvement in our occupational program could definitely limit the threats to America. And it is these threats, unfortunately, which today appear to be shaping our policies for the future.

Mr. Childs' article follows:

WASHINGTON CALLING

(By Marquis Childs)

DANGER SIGNALS FROM GERMANY

By various channels reports are coming out of Germany that make it plain the American occupying force in the American zone is suffering something approaching a break-down of discipline.

Shortly before he came to this country General Eisenhower told his commanders to see to it that regulations were observed more closely. Phrased in careful military language, it must be puzzling those who did not know the background.

Members of Congress have been told of looting and disorder on a scale too considerable to be ignored. Returning observers may have exaggerated what they saw and heard, but the feeling persists, nevertheless, that there is reason for worry.

This directly concerns an American who has come through the war not only with a very great reputation but with the deep regard of Americans everywhere. General Eisenhower is giving his views this week on the military problems that we face in the immediate future. He is taking a brief leave from his assignment in Germany as reports are circulated that he will soon succeed General Marshall as Chief of Staff.

The job of occupation commander would in any event have been a thankless one. Even with all the real diplomatic skill he possesses, Eisenhower was certain to find it difficult.

Given in the circumstances, the assignment was impossible. Preparation of personnel for the occupation was feeble to the point of being futile.

The School of Military Government at Charlottesville, Va., gave only the most rudimentary grounding in how to fix sewers and organize soup kitchens. It assumed that the occupation would go on in a social and political vacuum. The same officers in charge of that school later, in England, boondoggled with an unrealistic planning council for Germany which added little light or leading.

Then, after the occupation began, Eisenhower and his staff had the utmost difficulty in getting directions out of Washington. They were compelled to improvise and temporize, because they could get no policy line clearly laid down.

The reason was obvious. There has been a conflict within the Government and, in a sense, in public opinion.

Partly this grew out of a long-sustained propaganda for a "harsh peace." It grew out of the belief that the Allies, through their occupying forces, could impose on Germany a new and simplified economy and a new way of life.

While this may have been theoretically possible, it has not proved so in practice. A major obstacle has been in getting agreement on a common policy among the four occupying forces. Governing a Germany carved into four separate pieces has proved all but impossible.

As a congressional committee recently pointed out, the harvest of this policy, or lack of policy, will soon be reaped. It will be reaped in terms of mass starvation, mass death, mass disorder and the danger of an epidemic which will not be confined within the borders of Germany.

The British are already aware of this. They live next door to Europe. As recent debates in Parliament indicate, they are fearful of the consequences, with Socialist members more emphatic than Conservatives in warning of what is to come in the next few months.

When it is reflected in black headlines and appalling newsreels, many Americans will be shocked and surprised. They will look around for a scapegoat.

General Eisenhower should not be victimized. If he is to be made Chief of Staff, now is the time. It is time, too, to recast our German policy.

Occupation is demoralizing to occupier and occupied. It is especially so for Americans with no background or preparation for the task. There are ways to control Germany and we must find them. The dangers in the present approach are too grave to ignore any longer.

## Watch Commodity Prices—Pressures Are Rising Right Across the Board

EXTENSION OF REMARKS

OF

### HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. MONRONEY. Mr. Speaker, because of the apparent feeling of many in the House and also in the business world that the threat of real and devastating inflation has passed, I would like to call the attention of the House to the following editorial from the magazine, Business Week, dated November 3, 1945. This magazine, considered as an authoritative source on business information, definitely predicts the grave inflationary dangers the country is facing at this time if controls are not properly continued. The editorial follows:

WATCH COMMODITY PRICES—PRESSURES ARE RISING RIGHT ACROSS THE BOARD

Most talk has been about prices to the consumer. Actually, manufacturers' most immediate problems are in raw materials and parts. The lid would blow, without any question, but for OPA restraints.

Contracts are not being written today at fixed prices. Everybody is hedging so as to get the benefit of price increases, to pass on costs.

The President's latest wage-price order won't alter this. It strengthens labor's wage demands but doesn't promise price relief.

Expectations of a general upward revision of prices have more to do with today's markets than have the ordinary supply-demand factors.

Even so, demand has outrun the most optimistic estimates.

Many observers feared that serious deflation might threaten the Nation sometime within 6 months of Japan's surrender. As things are working out, the pull is almost entirely in the opposite direction.

Lay-offs have been below estimates, reconversion has started faster, inflationary pressures have been building steadily (Business Week, October 20, 1945, p. 9).

Manufacturers have been pressing for more raw materials than the mines and mills, for one reason or another, could turn out.

Extremely strong market situations have developed in practically all metals with steel and copper conspicuous examples.

Before the coal strike, steel mills were building up the biggest output since 1929 if not of all time. This despite labor shortages.

Use of copper appears to be breaking all peacetime records.

Deliveries of steel are falling farther and farther behind. And prices set are usually those prevailing on date of delivery.

Thus manufacturers have no idea what the steel is going to cost them.

Parts makers, too, are caught. They don't know how much they will have to pay for the labor and steel that go into a spring or a wheel so they can't quote a firm price to the builder of motorcars.

Construction contractors pad their bids to cover possible higher costs on steel and other materials. Consequently, many bids are rejected.

All this retards the rise in civilian production.

Market circles are talking 14 cents a pound for copper, up from the long-standing ceiling of 12 cents. This hasn't been put up to OPA, of course.

There is no doubt that the price would go up if the lid were tilted.

Domestic production is running about 65,000 tons a month, and consumption 100,000. The difference is made up from imported metal and drafts on inventories held by brass and copper fabricators.

All this is very different from the gloomy postwar picture painted for copper as recently as a few months ago. Then the main worry was how tightly the Government would keep its stock pile locked up.

Now it's how to get enough miners to dig the metal that is needed.

Use of lead is running 60,000 tons a month, just about duplicating the record of the late 1920's. During the last months of the war and thus far in reconversion, we have cut deeply into the stock pile of imported metal. This holding is down to 88,000 tons against the peak of 276,000.

The outlook on imports is uncertain. Suppliers are likely to hold back shipments in the hope of forcing a higher ceiling price.

Nevertheless, imports that we do get plus the stock pile should pad out domestic mine output sufficiently to meet 1946 needs.

Largest single demand factor is storage batteries, but both cable and paint are using large quantities.

Zinc, with record supplies in sight, might be described as being in the weakest market position of the major industrial metals. Yet its price is pressing against the ceiling right along with the rest.

And quicksilver, which had a frightful spell of peace jitters in August, has been rising the last few days.

Actually, though, quicksilver got some special help. The Government took 12,000 flasks (76 pounds each) off the market recently for stock pile, and 12,000 flasks are about one-third of a normal prewar year's use.

Hiking the price of silver from 45 to 71 cents has not yet brought sufficient supplies into sight to satisfy the rampant jewelry trade and other users. However, Canada hasn't raised its ceiling, and the differential of about 30 cents an ounce is beginning to draw concentrates over the border.

Meanwhile, the congressional silver bloc is trying hard to get the Treasury's buying price hoisted from 71.11 cents to $1.29 an ounce. It will never be happy with the metal bringing no more than the world price.

Difficulties in fixing prices in sales contracts are typified by the number of escalator clauses encountered these days. Bear in mind, too, that a parts maker who buys materials on such a clause must pass costs on to his own customers on some similar terms.

A similar pricing device is very prevalent in nonferrous metals. Most sales are on an average-price basis, the average being for a day or a week or a month as agreed upon between the principals.

Higher prices have resulted almost without exception on articles whose ceilings have been raised or removed lately.

Several such instances are mentioned by the National Association of Purchasing Agents in its current business survey.

Among finished products, there are construction machinery and electrical controllers.

Rises in components take in fractional horsepower motors, gray iron and copper castings, steel forgings, and die castings; prices have been withdrawn on valves, fittings, and cast-iron pipe.

Raw materials cited include alcohol, rosin, and carbon black; a request for higher prices on southern pine lumber is expected.

Many manufacturers have been pinched by costs and ceilings to a point where they no longer are making unprofitable or narrow-profit items.

That has been familiar for a long time in textiles. Now it is reported to have become general in heavy lines such as steel.

## Generosity of America

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 13, 1945*

Mr. WHITE. Mr. Speaker, I want to call to the attention of my colleagues another evidence of the generosity of the American people as evidenced by the following letter from the Young Women's Christian Association of Boise, Idaho, in which they offer to accept the continuation of rationing if necessary that the hungry peoples of all lands may be fed. Surely this and past evidences of our desire to assist the unfortunates of other lands should be sufficient evidence of our friendship and our desire for permanent peace. I feel very sure that if a vote of all the small nations of the world was taken that they would approve the retention of the atomic bomb in our keeping, for they know they have nothing to fear from the United States. They know we are not imperialistic, that we desire no territory from others, and all Asia knows that the Filipinos, temporarily placed in our keeping, enjoy the greatest freedom and the highest standard of living of any people in the Orient.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION,
*Boise, Idaho, October 12, 1945.*

Hon. COMPTON I. WHITE,
*House Office Building,*
*Washington, D. C.*

MY DEAR MR. WHITE: The board of directors of the Boise YWCA is vitally concerned about the lack of food for people in Europe and Asia who are starving. We believe that larger allocations of food can be sent abroad without impairing the food supply here in the United States. If a continuation of rationing is necessary to insure a greater food supply to foreign countries, we are in favor of it.

Yours sincerely,
MRS. FRED W. CRICHFIELD,
*President, Board of Directors.*

## Fact and Fiction

EXTENSION OF REMARKS
OF
### HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following enlightening editorial from the November 10 editions of the Chicago Tribune:

FACT AND FICTION

Attorney General Clark's account of the catching of eight Nazi saboteurs landed on the east coast in June 1942 provides an insight into the degree of credibility which can be accorded news put out by Government agencies, especially in wartime. Mr. Clark's story differs in important particulars from the romancing indulged in by the Office of War Information and the Federal Bureau of Investigation at the time the saboteurs were caught.

In releasing the record of the secret trial of the saboteurs before a military commission, Mr. Clark makes clear that the police work which led to their arrest was simplicity itself. Four of the Germans landed on Long Island, the other four in Florida. One of the Long Island party, George John Dasch, promptly gave the plot away, with the knowledge and consent of one of his partners, Ernest Peter Burger.

As soon as he had made his way from Long Island to New York City, Dasch telephoned the FBI and said he wanted it known that a few days later he would contact FBI headquarters in Washington. He then went to Washington and telephoned J. Edgar Hoover, director of the FBI, disclosing his identity and his mission and stating that he had important information on objectives marked for sabotage. All the FBI had to do was go to his hotel and pick him up. Burger was netted in New York with no more effort. With the information provided by the pair, the FBI rounded up the rest of the saboteurs within two weeks.

There wasn't enough melodrama in this prosaic piece of police work to satisfy the OWI and FBI when they put out their stories

3 years ago. The public was given the impression of Mr. Hoover, in Washington, a disembodied brain, directing a far-flung network of G-men, all of them with hats pulled low over their eyes and speaking out of the corners of their mouths in whispers. Then—flash! as Mr. Hoover's radio press agent puts it—the FBI had scored again.

The OWI also made its contribution to detective literature with the account of how a coast guardsman on Long Island encountered the saboteurs in the dark and, in looking into the eyes of their leader, "was afraid he might be hypnotized." It made quite a story. The saboteurs got away and were safely in hiding by the time the alarm was spread and the Coast Guard mustered its forces. The OWI reticently remarked, "FBI men under J. Edgar Hoover took up the chase from there and rounded up, not only the men who had landed in the fog on Amagansett beach, but another group that had been landed on the Florida coast." No vulgar reference to voluntary stool pigeoning was permitted to intrude.

The OWI had a lot of hack writers on the Government pay roll during the war. They weren't squeamish about facts. The FBI, of course, likes to portray its operations on the plane of high intrigue and master minding, which helps when appropriations are under discussion. Wartime censorship and secrecy made it possible to dish out hop dreams to the public as news. A secret trial before a military commission helped conceal the facts. The fake news about the saboteurs was relatively harmless, but other Government agencies were distorting facts about far more important matters. That always can be expected if government is allowed to report its own activities without interference from a free press. The bureaucrats are sure to make themselves look good.

Aside from this, the true story of the saboteurs indicates a grave miscarriage of justice. Dasch, who gave the Government its case on a platter, was sentenced to 30 years, and Burger to life imprisonment. If Mr. Clark is now telling the truth, these men never intended to carry out their mission. The worst they deserve is deportation.

---

## Socialized Medicine, an Insidious Threat to Our Form of Government

EXTENSION OF REMARKS

OF

### HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. PLUMLEY. Mr. Speaker, under unanimous consent, I am including an address I made this afternoon on Socialized Medicine, an Insidious Threat to Our Form of Government, before the Montgomery County Republican Women's Club, the Republican Women's Council of Arlington, and the Fairfax County Republican Women's Club, at the Broadmoor, in the District of Columbia:

Madam President, the National Resources Planning Board once upon a time said that the Federal Government should stimulate, assist, or undertake to provide adequate medical care for the millions of our people whose need cannot be fully met from their own resources. A glorious appeal. That is generalized paternalism raised to the nth degree, under cover of humanitarianism, impossible of realization in a democratic republic where free enterprise and individualism are measures of our ability to maintain a democracy.

That is what the Wagner-Murray-Dingell bill under the cover of its alleged beneficent cloak undertakes to do for everybody—deserving or not. It is revolutionary.

Federal aid for medical care and socialized, federalized medicine are no more alike than a cat and a skunk. They may look alike, yet one is apt to regret it if he takes a skunk to his bosom thinking it is a cat.

Congress is now appropriating nearly 200 million dollars a year to assist the States in developing their own health and medical services. We provide Federal aid for maternal and child health, for services to crippled children, and for the prevention and control of tuberculosis, venereal diseases, and mental disease. Congress wishes to see States and localities develop their own health programs. Congress will aid them financially. But so far Congress has shown no desire to take the job away from the States by federalizing medicine. When the States do the job they lay down the rules; when the Federal Government does the job some official in Washington writes the rules and regulations.

I have no objection to using Federal funds to help the States provide medical care for persons with low incomes. But I do object to creating an enormous Federal insurance fund to be controlled by three Government officials, as is proposed in the Wagner-Murray-Dingell bill, and to paying all the physicians in the country from that fund. I do not want to compel every physician to choose between being a Federal insurance practitioner or going out of business. And I do not want to compel every worker to pay an additional 1½ percent social security tax as well as a higher income tax to buy medical care furnished under conditions that would be intolerable for free, independent Americans.

Moreover, the Ways and Means Committee of the House agrees that the average wage earner cannot and will not tolerate a pay roll tax deduction of more than 2 percent for social security. The Wagner-Murray-Dingell bill proposal for socialized medicine contemplates an all-over tax of 8 percent, 4 for worker and 4 for employer. That is one reason why the bill in question will not become law.

What the women of this country should understand is that if this bill becomes a law their lives are put under the control of the Surgeon General of the United States. Whether or not their unborn children shall live is put at a hazard for that they, the pregnant mothers, cannot be assured of any right to choose their doctor, or their hospital. These matters will be handled from Washington.

If only the real Americans among the women would realize what is being attempted to be done to them under the cover of something-for-nothing, there would be a revolution. And what a revolution!

Socialized medicine is the beginning of the end of this republican democracy, and no sane woman should be for it who loves her family and her country. She should be for a better public health, help from the Federal Government where the State cannot supply necessary aid, more hospitals, and so forth, but she should not yield up the control of her life to those who are really trying to take over this Government under the subterfuge of humanitarianism.

Behind this alleged humanitarian program of so-called planned economy is to be found the basis and thesis for a planned and socialized America. It undertakes insidiously the establishment of universal medical service for everybody for nothing.

Next will come the socialization of dentists, lawyers, undertakers, perhaps, and everybody else.

It is a proposal to establish a form of socialism, a socialistic movement as unadulterated as if it came from the sanctified pen of Karl Marx himself. It will not work out in a democratic republic.

If you are one of those intent upon changing the form of this Government, you will join the demagogs and Socialists and opportunists in their support of this measure which will destroy democracy—and it is so intended to do by the technique of infiltration—and by fooling the people into thinking they are getting something for nothing as against a bill of expense of $12,000,000,000 annually, which the taxpayer has to pay. Otherwise you should oppose the Wagner-Murray-Dingell bill, to save yourself from regimentation, and the country from the socialistic, demagogic-minded opportunists who are glad to live in the country so long as they can live off it—that is, off those who make it possible by hard work for them to loaf and strike.

It is high time to call a spade a spade. It is time for us who are definitely for our form of government to say so before we are sacrificed on the altar of socialism and demagogery and opportunism.

This so-called diaper-to-the-shroud bill undertakes to throw the mantle of its alleged security over everybody gainfully employed and most of their dependents at the expense of the Federal Government and under its control. But do not forget that it is the people who pay these bills.

It is undertaking by compulsion to establish a Nation-wide health program to provide alleged free medical, surgical, obstetrical, diagnostic, and hospital service to everybody, but the bill does not do it, despite its attempt to make the people think so, and in so doing to regiment the people

Every gainfully employed American would be compelled to pay a tax of 4 percent of his or her wages up to $3,600 a year to support this program. An additional 4 percent on pay rolls would be collected from employers. It is estimated that these taxes would take from the pockets of the American people at least $12,000,000,000 a year of which one-fourth would be allocated to the program for medical care and hospitalization. This is about the amount the Nation is estimated to have spent annually on such services before the war. But now the public is being asked to pay this money to the Government instead of to the doctors and hospitals. In addition, the public will have to pay the salaries of thousands of administrators, clerks, lawyers, statisticians, and investigators required to police the sickness insurance scheme. All this money for administration will be a new charge on the taxpayers. It will not be spent for medical care, but will be squandered on the salaries of Government insurance officials. These will constitute a Nation-wide bureaucratic network radiating from Washington into more than 150,000 counties, townships, municipalities, and school districts.

You must realize that the 3-billion dollar health fund, large as it is, will not be enough to pay for all the promised benefits. Expenditures for medical and hosiptal insurance services may easily cost from 5 billion dollars to 6 billion dollars a year for a population of 140 million persons. On top of that will be another billion dollars for public-health services, the construction of hospitals and health centers, and the care of the insane. Administrative costs are in addition to all expenditures for benefits.

This three billion in taxes to be collected annually toward the cost of the health program is an amount nearly equal to the average revenue of the Federal Government from all sources during the 10 immediate years of the New Deal. When were you born?

But the social-security taxes are not all you will have to pay. Large as they are they will not be sufficient to pay for all these so-called free services. There will be large deficits to be made up from general reve-

nues. That means higher State and Federal income taxes and higher real-estate taxes. Once the whole national insurance scheme planned in the Wagner-Murray-Dingell bill really gets into operation, it is estimated that about 18 percent of pay rolls will be required to finance it.

The bill undertakes to establish the Surgeon General of the Public Health Service as a medical dictator, a czar of medicine for the entire United States, in disregard of all the reserved rights of the States, or existing conditions. Under the terms of the act he would hire all the doctors, fix their fees, determine their qualifications, and in short would say who could and who could not practice medicine.

Wouldn't your grandmother rear in her chair at such a proposition? That old lady passing by would make small potatoes of such a mess.

This administrator could go further than that—for under this act he could tell you what doctor you should hire—great God; to what hospital you might go—worse yet; and what hospitals could operate, and at what price—the last straw.

He could allocate patients to such doctors as he chose; determine the number of patients a doctor might serve and a hundred other things. In short the rights of the people, of the doctors, of the hospitals would be at an end. Are you going to submit to such a program of regimentation?

Now, freedom of research and practice in the United States has brought the American people to the world's most advanced position in medical science. The history of American medicine is a consistent record of extended and expanded service, scientific achievement, and acknowledged social responsibility. These priceless national assets were not attained under a system of government control or compulsion. They were the direct result of individual initiative, of ambition, of vision, of courage, of study, of research and toil. Such blessings could come only to a people who cherished and still cling to the ideals of freedom of speech, freedom of worship, and freedom of opportunity.

Are we gone stark mad? I think not all of us anyway. For an overwhelming majority of the people are opposed to the suggested Federal system of compulsory medical supervision and control which is contemplated by the Wagner-Murray-Dingell bill. They still wish to be free. To have that freedom of thought, word, and deed which our forefathers valued above all else and fought, died, and bled to establish. They will be free!

The American people understand; they believe in our effective system of personalized medical care. They have confidence in their doctors. They demand the right of free choice of physician. They are opposed to Federal control of and interference with their lives by directing the care of their bodies, their general health, and care at the birth of their children.

The American Bar Association has declared: "The Constitution of the United States is designed to protect the citizens of this Republic in the exercise of the rights of freemen.

"The provisions of that instrument can be rendered impotent when our citizens for the sake of an apparent immediate benefit surrender to their Government such direct control over their lives that Government, by imposing a constant fear on them of having these benefits withheld and withdrawn can compel from them obedience and subservience to its dictates."

That is well said, and the peril suggested is found in the Wagner-Murray-Dingell bill in full measure, heaped up and running over.

"Those who promote this bill," says Dr. Morris Fishbein, "avoided as if it were a plague the word 'compulsory.' They do not use it anywhere. In fact, they insist that everyone will have freedom of choice of a doctor and that doctors will have complete freedom of choice of patients."

Now, I ask you, if the Federal Government regulates the provision of medical service through the Surgeon General of the Public Health Service under a system to which everybody must contribute; if it regulates the fees which doctors are to receive provided they are permitted to participate in the system; if it regulates those who are to be consultants, and determines if and when they shall be consulted, I ask you, I say, Why do they try to dodge the truth of the statement that the act is compulsory and does regiment the people as a herd of cattle would be regimented if driven into a corral to be vaccinated against Bang's disease?

The modified bill which we are considering today is a measure which undertakes to establish a compulsory system of medical care to be administered by the Federal Government and controlled through funds which are held in the hands of the Federal Government. Its purpose is to provide for socialized medicine under the complete control of the Surgeon General of the United States Public Health Service, and that is what we who are opposed to the socialization of America have to fight.

It is no easy task imposed—to meet, to fight, and to answer the powerful minorities which are out for all they can get. It is popular to be for everything they ask, to submit to, and to endorse their demands that they shall have a chance to live off the rest of us. That is one way to get votes.

It may take intestinal fortitude to fight against those who for their own selfish ends would do almost anything to accomplish them. The time has come, however, when we who love liberty as our forefathers knew it must put it and the right to enjoy it in a democratic republic, against all these socialistic-CIO communistic theories of government, which can but lead to the destruction of this greatest experiment in political history, the United States of America. It is worth all it costs so far as individuals are concerned, to stand for the maintenance and continuance of our form of government.

In order that my position may be made plain, let me say that I am opposed to the Murray-Wagner-Dingell bill to socialize the United States and to establish serfdom in this country. Every time we move one step toward giving up the rights reserved by the States and to and by the people of the several States to run their own business; every time we pat on the back those people who think this is a good Government to live in, so long as they can live off it; every time we surrender any of our rights we sacrifice our future and go a long way toward a totalitarian form of government. That is an easy way to travel. "Broad is the way that leadeth to destruction."

I was interested to learn that the International Labour Office in a recent volume entitled "Approaches to Social Security," has this to say:

"The fact is that once the whole employed population, wives and children included, is brought within the scope of compulsory sickness insurance, the great majority of doctors, dentists, nurses, and hospitals find themselves engaged in the insurance-medical service, which squeezes out most of the private practice on the one hand, and most of the medical care hitherto given by the public assistance authorities, on the other. The next step to a single national medical service is a short one."

Note that well. The International Labour Office itself points out clearly that a comprehensive compulsory sickness insurance scheme (of the type proposed in the Wagner-Murray-Dingell bill) leads inevitably to a "single national medical service."

The American people simply do not have the faintest idea of what is being planned in connection with the socialization of medicine. According to publicity releases that have been widely circulated, the public has been led to believe that by paying an additional social-security tax of 1½ percent of wages or salary (to be matched equally by the employer), all workers, including the self-employed, will in future be relieved of all expenses for medical care, hospitalization, and related services. Mr. John Q. Public is encouraged to believe that there will be no change in the relationship between himself and the physician of his choice. When he is ill, he is told, he will call his family physician who will see him through a long illness just as at present, the only difference being that no bill will be rendered for services. It sounds beautifully simple and most alluring. But that is not the way sickness insurance works.

To begin with, you may quite likely have to give up your family physician no matter how much you are attached to him. There are those who argue that you do not show good sense in picking your physician; you pick him for nonscientific reasons—because you like his personality, have confidence in him, and feel an emotional or psychological rapport with him. Supporters of socialized medicine claim that those are not good reasons, that you can get along as well with a physician whom you dislike intensely but who may have great professional competence which you are unable to appreciate. In any event, under sickness insurance, you will be expected to choose a doctor in your district who is among the group of those who have signed up with the Government. If your family physician has refused to sign up, you may not have his services unless you are prepared to pay for them yourself in addition to paying your social security tax of 1½ percent for insurance medical care which you may not want. Let us assume, for a moment, that your family physician has agreed to join the system. That is lucky for you, but if you move to another part of town you are expected to change physicians as you change apartments and grocers. You may have had the best baby doctor in the world in your estimation. If you should move out of his insurance district you would have to give him up.

There are administrative reasons for such restrictions. If all medical services throughout this vast Nation are to be distributed and paid for according to rules and regulations drafted in Washington, it is obvious that physicians and patients would have to be identified in Government records. Every change of address of every person in the country would become a matter of official record. Every physician would be registered either directly in Washington or in a regional insurance office. The names of all patients on his list would be similarly recorded and counted for the purpose of seeing that physicians received payment for services and that no recalcitrant person escaped inclusion in the system. Thus, if a capitation system of payment were generally adopted in this country, every insured person would be compelled to sign up with one of the insurance doctors in his area whether or not he wished to. This would be required by law, and if an insured person failed to select a doctor from the panel which might, for instance, be displayed in the nearest post office, he would be assigned arbitrarily to some physician whose list was not full.

I cannot stress too strongly how complete is the control over the individual under Government sickness insurance. Those of you who have small children will not be able to consult a pediatrician unless the general practitioner in the insurance system gives his consent. If a member of your family breaks his leg you cannot rush him to a specialist in fractures unless your regular

insurance doctor gives an official authorization. You will not even be able to get X-rays taken without the consent of the insurance doctor. Remember this: such limited freedom of choice as you will have will be confined to the selection you make when you enter the insurance system; you will have no freedom of choice at the time of sickness. If you have selected an insurance practitioner and decide you would prefer to have a physician who is practicing with a group of doctors, it may take 6 months to change your arrangements if we may judge from foreign experience.

Of course, you know as well as I that you are not very much concerned about freedom of choice when you are well, but that is the only kind of freedom you get under sickness insurance. The time you want freedom to get the best medical care you can obtain and to call in a specialist if you want one is when you or a member of your family is ill. And if you are not satisfied with results you want to be able to act fast. You cannot wait to fill out interminable Government forms and you cannot wait for a Government O.K. when quick action may be a matter of life or death for you or for your husband, or child, or mother, or father.

After you pick a doctor, you have no assurance that you will have the same one every time. You must realize that you will be expected to go to health centers, public clinics, dispensaries, and out-patient departments for many free municipal services in order to save the insurance funds. At a health center all you can count on is some insurance doctor to take care of you and your family.

You have no assurance that home visits will be free of charge because under the Wagner-Murray-Dingell bill you may be compelled to pay for the first home visit, or for the first two visits, or for all home visits in addition to paying your social security and income taxes for insurance benefits.

I cannot begin in the short time at my disposal to enter into a discussion of the myriad regulations that would affect your every move under a compulsory sickness insurance scheme. Perhaps you can gain some faint idea as to the amount of regulation imposed on patients and physicians when I tell you that the ordinary office manual which the British physician has to master to be sure he is carrying out Government regulations is over 350 pages in length [1] while the book setting forth the British National Health Insurance Acts of 1936–38, together with the statutory rules and the decisions of the Minister of Health, is nearly 1,300 pages long.[2]

In order to assure that these multitudinous governmental rules and regulations are carried out, experience has shown that there must be an insurance system employee, outside the field of actual delivery of medical service, for at least every 100 insured persons.[3] Think what that would mean in this country. There would be approximately 1,500,000 Federal, State, and local employees to police the sickness insurance system, to check on physicians and patients, to investigate and report on infringements, real or imaginary, of the rules and regulations emanating from Washington. The point has been well made that "compulsory sickness insurance changes so many relationships in such a permanent fashion that its enactment is not an experiment." There is a terrible finality about compulsory insurance legislation. Once it is enacted, once the administrative machinery is set in motion, once the taxes are collected by the Government and control is handed over to the Government, there is no escape. Not one of the more than 30 countries that have enacted such legislation has ever succeeded in throwing it off, however unsatisfactory the results have proved.

I urge you, therefore, to make it your business to find out what restrictions are inherent in this type of medical practice. I hope you will go further. Organize discussion groups. Get at the facts and spread the information to your clubs, to parents and teachers associations, and to other civic organizations. Be informed, be on guard, and take appropriate action if you do not want to have the private practice of medicine destroyed in this country, and if you do not want to become the slaves of government.

It is also important for you to realize that this movement for the socialization of medicine is part of a world-wide scheme sponsored by political groups working through the International Labour Office.[4] Where did the idea originate? In Germany. In 1883 Bismarck forced on the German people the first compulsory sickness insurance legislation. It applied only to the 10 percent of the population in the lowest income group. Bismarck had two objectives: To pacify the Socialists who were becoming too powerful and to ease the financial burden on local communities which were compelled to support the sick poor, and furnish free medical care through poor relief. Bismarck hit on the plan of making the workers at the bottom of the income scale pay a small tax into a social insurance fund in which, thereby, they would have a vested interest. Their employers were compelled to pay half as much as the workers. There was no government subsidy. After 50 years the financing arrangements were changed and employers and employees have shared the costs of the sickness insurance scheme equally since 1934. In time coverage was expanded to two-thirds of the population. Both cash and medical benefits were provided to workers and their dependents when ill. More than 30 countries have followed in Germany's footsteps.

In New Zealand a comprehensive system of social insurance was inaugurated in 1939.

The law as originally passed in New Zealand in 1938 arranged for a panel system with capitation payment similar to the British scheme. The majority of physicians simply refused to sign up for insurance practice and consequently the program could not be put into operation. The government then proposed to let physicians elect a fee-for-service basis of payment if they so wished. As a result, both methods of payment have been operating side by side with resultant confusion and administrative chaos. These are the methods of payment which have been proposed in the Wagner-Murray-Dingell bill. If the plan has resulted in signal failure in a small, homogeneous country like New Zealand, have we any reason to believe it would work in the United States?

The difficulties which have been encountered in the countries which have instituted comprehensive national systems for the provision of medical care should give us pause. We have more physicians per thousand of population than any other country, in the world; our hospitals and clinics serve as models to be copied abroad; our death rates and sickness rates are in the main better than in the countries which have compulsory sickness insurance. Why should we wish to destroy the very characteristics of our health and medical services which have made them the envy of other countries? Why should we seek to level our services downward instead of building up and improving them by correcting the weak spots in our present distribution of health facilities and services?

We may well ask, Why is it that there has been such a consistent effort in this country during the past 10 years to foist upon us a system of medical practice which has not been successful elsewhere and which has caused a great increase in bureaucratic controls as well as a large financial outlay for services which are mediocre? A considerable part of this agitation is due to the tremendous possibilities for centralization of power and funds. Sickness-insurance legislation the world over has been peculiarly susceptible to political manipulation. In many countries it has been the entering wedge for social-insurance legislation and subsequent general socialization of industry, banks, communications, and so on. Certain groups and individuals have fostered this type of legislation because it attracted the labor vote and could at the same time be sold to many politicians as a clever device for raising revenues. Remember that Bismarck, as Chancelor, was in search of revenues when he gave Germany sickness insurance in 1883; Lloyd George, Chancelor of the Exchequer, was faced with a large national deficit when, almost singlehanded, he forced through the British National Insurance Act in 1911; and Walter Nash, as Minister of Finance, had his thoughts on sources of revenue when, in 1938, he engineered enactment of New Zealand's Social Security Act with its new program of taxation.

In the United States the chief sponsors of compulsory Federal sickness insurance legislation have been organized labor, a few officials in the Social Security Board, and a group of persons with miscellaneous interests including social workers, public health officials, and a small number of physicians.

Are we going to let these labor groups, CIO and others, dictate to us and cajole us into enactment of this socialistic legislation, which experience shows would lower our standards, and would not lower the death or sickness rates, but would destroy some of our individual freedom and choice, making us part and parcel of a socialistic scheme?

Since the passage of the Social Security Act in 1935 there has been a persistent effort in this direction on the part of Isidore S. Falk, Ph. D., formerly Chief of the Division of Health Studies in the Social Security Board and now Director of Research and Statistics in that Board. He was the prime mover in drafting the medical care and hospitalization provisions of the Wagner bill (S. 1620) in 1939, the Wagner-Murray-Dingell bills (S. 1161 and H. R. 2861) in 1943, and the Wagner-Murray-Dingell bills (S. 1050 and H. R. 3293) in 1945.

The persons most active in pushing this type of legislation designed to set up a cumbersome, costly bureaucracy in this country for the purpose of nationalizing medicine, aside from organized labor, are: Senator Robert F. Wagner; Arthur J. Altmeyer, chairman of the Social Security Board; Isidore S. Falk, Ph. D., Director of Research and Statistics, Social Security Board; Wilbur Cohen, Assistant Director of Research and Statistics, Social Security Board; and Michael M. Davis, Ph. D., member of PAC, consultant to Mr. Falk, and long-time advocate of socialized medicine, formerly subsidized by the Rosenwald Fund for the express purpose of socializing medicine.

The Wagner-Murray-Dingell bill would put financial control of the Nation's [5] medical care and hospitalization program primarily in the hands of the already powerful Social

Security Board which has no health or medical staff. This control would be made possible by reason of the fact that the vast social insurance trust fund into which $10,000,000,000, or more, would pour each year from pay-roll taxes and other sources would have a three-man board of trustees on which the Social Security Board would be represented through its chairman, while there would be no representative of the health and medical professions.

The whole scheme, believe me, is directed toward the furtherance of the Socialist state in the United States. I therefore urge every one of you to consider well whether this is the form of Government you wish to live under. Centralization of power; bureaucratic control of the daily lives of every citizen; centralization of funds in the Federal Treasury; relinquishment of local autonomy and individual responsibility—these are the steps to state socialism. If this is what the country wants, the voters and the representatives of the people should come out openly and say so. It is time to put a stop to pious declarations that we want a democratic form of government while simultaneously sponsoring legislation designed to Germanize America and to deliver our citizenry to a powerful bureaucracy in Washington. It is obvious that socialized medicine is one of the best methods by which to gain control over all the people.

You have listened to me long and patiently. The subject deserved no light treatment. If you are socialistically minded, and after winning this war and all we have accomplished, you can have the nerve to wish to change our form of government or to let anybody even try to do it, of course you will be in favor of the Wagner-Murray-Dingell bill. I am not.

I still believe in America—with liberty and justice for all: With its government based on sound fundamental principles, yet sufficiently flexible to be readily adaptable to all essential and proper changes to meet the expanding and advanced new era of civilization.

I still take off my hat to those who founded and made it at so great cost; fought for it, bled and died for it; that we and our posterity may continue to live in, enjoy and love our America—"The land of the free and the home of the brave."

## A Practical Service by the Churches in Europe's Rehabilitation

EXTENSION OF REMARKS
OF
### HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. HAYS. Mr. Speaker, during the discussion on the resolution providing an appropriation for UNRRA reference was made to the importance of relief work being done by nongovernmental organizations, including some of the churches, and in view of the interest shown in this activity I requested officials of the Church of the Brethren to give me a detailed statement on the subject, members of this denomination having rendered a notable service in connection with relief and rehabilitation programs. Mr. Warren D. Bowman, pastor of the Washington congregation and Mr. John D. Metzler of the Service Center, New Windsor, Md., have submitted the following statement describing the work of their membership in supplying generous contributions for this practical service. Such voluntary contributions to augment the appropriation of tax funds should demonstrate to the distressed populations the great concern which the American people have for their welfare. The service of the Church of the Brethren is highly constructive and will undoubtedly be of permanent benefit. More than relief is involved. The gift of cattle is one of the first steps in restoring agricultural stability and represents not only a charitable spirit but imagination and skill in the work of reconstruction. The statement follows:

The Church of the Brethren by the end of this week will have already shipped through the Brethren Service Committee 783 head of cattle, all but 104 of which have gone to Europe. The Brethren Service Committee made the first delivery of livestock to Europe following the war, so far as we know. This consisted of six Brown Swiss sires sent to Greece for herd improvement work. It is a bit difficult to tell how many cattle we have ready to ship because they come to us in carload lots almost unannounced over the entire United States. California and Idaho have delivered two carloads each. A shipment will probably come in from the State of Washington. Nearby points are delivering cattle by truck. Please understand that not all of these cattle are contributed by members of the Church of the Brethren. They are given by many other groups including 4-H groups, radio stations, Kiwanis groups, public school groups, Catholics, and various Protestant groups. We hope to be able to ship many thousands of cattle next year.

We have two types of agreement with UNRRA. We are providing livestock attendants for UNRRA shipments. UNRRA pays these men $150 plus maintenance for one round trip. We simply secure the men and bring them to the port. This is a much-appreciated service because we have access to the quality of men which UNRRA would find difficult to secure through her channels. Our "seagoing cowboys" include most all professions and walks of life. We have ministers, school teachers, farmers, merchants, college students, high school boys, veterinarians and others assisting in the rehabilitation of livestock in Europe by this method.

In the shipping of cattle our agreement is that UNRRA is transporting Brethren Service cattle to the people of the receiving country. The Brown Swiss sires were sent through the Near East Foundation. We do not know what the agreement was between the Near East Foundation and UNRRA. We are expecting a shipment of 150 head of cattle to go this week from us through UNRRA to Poland.

We have spent considerable time in seeing that proper distribution of the cattle is made. We have worked with the governments of receiving countries to insure that proper distribution is made. In Poland the cattle are to be distributed through the National Cooperatives. We have representatives of the Brethren Service Committee in France and in Belgium to supervise distribution. In Italy a committee has been organized looking forward to the proper placing of the cattle. We are negotiating with groups in China, and if we ship to China we will probably have representatives there. Wherever possible we are using personnel already on the field to assist in the distribution.

The Brethren have been collecting wheat. Again not all of this wheat was contributed by members of the Church of the Brethren. We have provided approximately 60,000 bushels of wheat and have cash raised for the purchase of an additional 25,000 to 30,000 bushels which will be added to this shipment. This wheat is destined for Holland. We are sending carloads of rolled oats, flour, canned goods and similar foods, to Europe.

At New Windsor, Md., and at Modesto, Calif., we are receiving and processing clothing for shipment. From Brethren sources already we have contributed perhaps 60 to 80 tons of clothing, shoes, soap, and similar relief materials during the past year. Beginning on October 1 our two centers are serving the church committee on overseas relief and reconstruction. This is a cooperative group organized by the Federal Council of Churches and the foreign mission conference. The first major project of that group which we have handled was linens and bedding for Protestant pastors of Europe. We are currently shipping two carloads of these baled units, one to France and one to Holland. Indications are that this material will reach a total of perhaps 60 tons. With the publicity which is now being sent out by the United Council of Church Women, the Southern Baptists, Methodists, Presbyterians, Episcopalians, and other groups, indications are that many, many tons of clothing will be collected and sent to both Europe and Asia from our two warehouses.

## Training in the Military Forces

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from a recently discharged soldier upon the subject of compulsory military training.

Mr. Speaker, the letter I am enclosing sheds new light on a different angle of training in the military forces. The letter is from a man recently discharged after 3½ years of Army duty, most of it overseas. He has had a close-up view of what really happens back of the lines. It is worthy of our consideration.

The letter follows:

GERING, NEBR., *November 12, 1945.*

Mr. A. L. MILLER.

DEAR SIR: Just a note concerning the compulsory military training bill and why I am opposed to it. As you know, the modern army is composed of about 15 percent combat men and the rest technical experts working behind the lines. These are approximate figures. This 85 percent are soldiers who simply carried their civilian occupation over into the Army. I was one of these, having just been discharged after 3½ years of Army duty, most of it overseas. My point is this:

Our outfit was over at the start and was constantly reinforced over a period of 2½ years by recruits from the States. Invariably the men who were sent to us direct from civilian life were better men in every respect as to working, discipline, bad habits, etc., than the men who had spent considerable time in the Army. Some of the latter were not worth their passage over—or back either. I suppose other outfits noticed the same condition. Here is a case where Army training—as it is practiced—not only failed to fit a man for carrying on his part in the war, but was actually detrimental to the cause for which it was set up.

I mention only this one point. Undoubtedly you have many letters stressing others. For the 15 percent combat men I am not qualified to speak. This one thing, however, seems the most pertinent to me because it is representative of what Army life does to it's men. The Army can't help being what

it is, and if another war comes along it will again be the civilian people who put the punch into the military.

Sincerely yours,

FRED. A. SCHENBECK.

## Speed Up Return of Overseas Men

EXTENSION OF REMARKS
OF
**HON. CHARLES W. VURSELL**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. VURSELL. Mr. Speaker, we were able under the most dangerous and pressing conditions not only to land millions of men on foreign soil in this war but to supply them with billions of dollars worth of material.

Now that the war is over we hear the constant excuse that the boys are being delayed in being brought home by reason of lack of transportation. It is obvious that this problem is being neglected by the Government and the military leaders. We are lowering the morale of millions of men because of this neglect. We may cause them to become embittered to the point where it will have a very bad and continuing influence throughout their lives.

The majority of the Members of Congress feel that something should be done and have urged our military leaders to speed up the return of our men from overseas.

Congressman REED of New York has introduced a bill that would automatically release everyone from service who has served 18 months. The proper committee has not held hearings or reported this bill. Consequently, a petition has been filed by the gentleman from New York, Congressman REED, known as petition No. 8, which is on the Speaker's desk. Other petitions along this line have been filed by the gentleman from Michigan, Congressman SHAFER, and the gentleman from Mississippi, Congressman RANKIN. It will require 218 signatures to bring one of these bills to the floor of the House where, in my judgment, it will be passed by an overwhelming majority.

With the Speaker's permission, I am going to insert a letter in the RECORD which has been mailed to me from the boys on Okinawa by a boy from my district. I hope every Congressman will read this letter and when you read it I believe you will feel it your duty to come to the Speaker's desk and sign petition No. 8 which will help to get over a million men who helped to win this war back home. It is in substance a prayer from men who are becoming embittered, men who have won the war, because after having helped to win the war the Nation does not show gratitude enough to simply bring them back home.

This is a serious letter well worth your reading and worthy of action on your part after you have read it.

This boy from my district, still overseas, who sent this letter, served 18 months overseas and has 5 battle stars. Naturally, his parents also feel very keenly about it. I do hope, also, that the military leaders will hurry the return of our boys to their homeland.

The letter follows:

OKINAWA, *November 3, 1945.*

DEAR SIR: My name isn't MacArthur, Eisenhower, or Patton. Who am I? One of the many forgotten "dogfaces" exiled on Okinawa. The war's over, gentlemen. Will you listen to a soldier for a few minutes?

My buddies and I have been in the service from 2 to 5 years. We won't give you a long talk about heroes; no. Just a few plain facts. Now, we are told the war is over. Now, my buddies ask: "Why are we still here?" Could it be that Congress didn't declare the war ended? Or is it because our power-mad generals have bamboozled the public and Congress into believing that hundreds of thousands of war-scarred men are needed in policing innumerable islands dotting the Pacific—men who sit around and do nothing but grumble and yearn for home, whose lives are becoming filled with bitterness and disillusionment. Where is that glorious victory? Has the war ended for us? We wonder. Can it be the Army high command is actually making our Nation believe a need exists for keeping hundreds of thousands of men isolated in typhoon area and wastelands, living under almost battle conditions and eating miserable field rations?

There are many units on this island like ours, and scattered all over the Pacific. The War Department continually announces new point reductions and disseminates information to the public regarding efforts made to get us home. Yet nobody has been moved from our organization on time for return to the States under the point system. The men who have left were very few in number and men with extremely long service overseas who should have been rotated long ago under the War Department plan for rotation. Those men were a full month behind schedule leaving when they did get the chance. Why all this, gentlemen, or don't we have the right to ask?

During the past few years the War Department has convinced the world that brilliant organizing skill of our military has surmounted some of the greatest logistic difficulties in our history. We moved millions of men and supplies to two far-flung war fronts. We also provided lend-lease to nations throughout the world, in addition to supplying the scattered armies of our allies. Today, when we ask our officers about our return, the answer is, "Transportation isn't available." What happened to our thousands of Liberty ships? our transports? our endless supply ships? our fleets of planes? our great Navy? And if these aren't enough, why can't we lease ships from other countries in return for some of the billions of dollars we gave them?

Men who have been separated from home for long, weary months, going through all the anxieties and dangers that a war brings, feel that returning home is the beautiful and important subject in their lives. Malaria, diseases, endless hours of work and suffering, being marooned in typhoons, were some of the minor inconveniences our jobs demanded, and none of us complained or expected less. But what about relief for us now? Taxes, reconversion, voting, and readjustments all pale into nothingness when compared to this shining dream of return.

Officials have filled our ears with platitudes about a nation's gratitude to its veterans. Gentlemen, we want nothing from our country in payment for our services. We feel proud and privileged to serve. Today the need for us no longer exists. If there's gratitude to be shown, let it be by returning veterans home at once. If ships and planes are lacking, we'll try rowboats and rafts. Let's substitute common sense for logistics, civilian thinking for Army blundering, democracy for militarism.

FUTURE CIVILIANS OF THE U. S. A.

## The Weak Shall Be Made Strong

EXTENSION OF REMARKS
OF
**HON. ELLIS E. PATTERSON**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. PATTERSON. Mr. Speaker, in the light of recent scientific developments one immediate difference between military might of the future and that of the past 5,000 years becomes obvious. That difference is that, whereas in all past wars the size of a nation and the size of its army were the chief determining factors in its military might, now a country need be only large enough to hold a thousand atomic bombs and antisocial enough to use these bombs before anyone else does. A small nation like Sweden or Norway has uranium, iron, steel, and advanced scientists enough to destroy our entire civilization, if it so desires. A thousand atomic bombs can wipe out 40,000,000 people in 1 evening in our large cities. A few projectiles containing disease bacteria can wipe out a whole city in even less time. Modern marvels like the death ray, previously confined to comic-strip heroes, can help to destroy our world. Atomic energy and its uses for destruction are only the most spectacular of all the hundreds of new scientific devices which make it possible for one small nation to render the rest of the world impotent. We have now a very literal fulfillment of the Biblical prophecy that the weak shall be made strong, the humble exalted, and the meek shall inherit the earth, with the difference that the meek will also be in a position to destroy the earth.

There has been talk of decentralizing our cities or rebuilding them underground as a defense against future aggressions. However, scientists who are in a position to know affirm that no such devices can defend us against these latest scientific developments. There is only one obvious defense, one compelling need of our times—to permit a world organization to control all destructive devices by world policing and regular inspections so that any preparation for aggression, wherever it would be discovered, could be immediately curtailed.

Neither decentralized cities, nor underground dwellings, nor marching soldiers are going to be proof in the future against attempts at aggression. We must be careful therefore not to concentrate our energies in useless military training but to broaden our outlook and make effective our defense of the whole world by seeing this international problem in international terms.

## Effective and Unanswerable Testimony Continues in Behalf of Need Now for Single Department of Defense—General Eisenhower Favors Merger

EXTENSION OF REMARKS
OF
### HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. RANDOLPH. Mr. Speaker, when General Eisenhower testified today in favor of a unified command, he answered the criticisms of Navy Department spokesmen who have indicated that the job of heading a single Department of Defense was too difficult an assignment for one individual. Eisenhower said:

I am told that the task of the civilian secretary who would preside over such a department is beyond the capacity of any man. If this were true, then it follows that no man has the capacity to assume the Presidency of the United States.

I trust my colleagues will read the complete text of General Eisenhower's statement in behalf of legislation which is pending in both the House and the Senate. It is gratifying to follow the hearings being held before the Senate Military Affairs Committee, and it is my hope that hearings can begin soon before the House Committee on Expenditures in Executive Departments on legislation which I have sponsored since 1940 to effect a consolidation.

The Hearst newspapers carried today the following editorial in support of the merger proposal:

ONE NATION, ONE DEFENSE

The merits and advantages of uniting the administrative direction of the Army, Navy, and Air Forces of the United States under a single Cabinet head are so evident that arguments against it appear to border on the specious and puerile.

In fact, to borrow the terminology of war, opponents of the proposal seem to have overlooked the broad strategic objective of the plan and wasted their efforts in attacking it piecemeal, in unimportant detail and at points that are neither significant nor decisive.

The special Army-Navy committee appointed by the Joint Chiefs of Staff to study the matter, after hearing 80 high-ranking officers from all branches of the armed forces, recommended immediate legislation to create a single department so that the Army and Navy be kept free of the "alarming" lack of coordination that existed at the time of the Pearl Harbor attack.

And the committee sharply underlined the stubborn existence, after 3 years of war, of "inconsistencies, lack of understanding, jealousies, and duplications" between the services.

A single department, the committee reported, would furthermore operate more efficiently in harmonizing the all-too-frequent divergence between the national policies of the United States and their military implications.

Now what can be the objection to a proposal that is so simple, rational, practical, economic and, in the light of modern strategic concepts, so vitally necessary?

Where is there mention or intent of abolishing the Army, the Navy, or the Air Forces, or of interfering with local command, or of starving one service to feed another, or of depriving specialist officers from the opportunity within their own arm of gaining honors, authority, or victory?

Nowhere, of course.

The successful conclusion of operations in both the European and Asiatic theaters, and the crushing defeat of the Axis Powers, both proved once and for all that modern war demands the closest coordination of all arms under a responsible high command.

There is no longer such a thing as a naval war, an army war or an air war.

Actually, there is no such thing any longer as a war fought by the soldiers and sailors and aviators alone.

There is only all-out, total war, not only on the battlefield but at home, fought not only by men with arms but by the Nation's industries, science and economy.

General of the Army MacArthur, who brilliantly commanded land, sea and air forces, told General Kenney, head of the United States Far Eastern Air Forces, that he considered his opposition to unified air forces, in 1931, as "The biggest mistake of my military career."

General Kenney realized then that General MacArthur's mind "was not set in concrete. He understood the unlimited possibilities of warfare 20 years from today. Those terrible possibilities had altered his opinion."

Not all general officers have MacArthur's genius for learning nor his candor, but even the most hide-bound and tradition-ridden military mind must realize that warfare today cannot be waged successfully if men in responsible command still think in terms of "competition," which means simply haggling for advantages to the detriment of the only objective, the defense of America.

There is, and there will always be, a healthy competition between arms, and of units within the separate arms.

But it is an honorable rivalry, only to see who can most strongly and gloriously confound the enemy."

There is only one aim for Americans—be they soldiers, fliers, sailors, engineers, scientists, workmen or simple citizens—and that is to use our power justly, wisely, economically and efficiently toward the ends of safety and peace.

Compared to this objective, all others are trivial or illusory.

A single, united department of defense will take us a long way toward the objective and it should be brought to being without delay.

Mr. Speaker, we will continue to find certain individuals, largely from the Navy Department, who will oppose the merger. I pray that their efforts will fail. This is the time for Congress to show courage and vision because, in the words of Eisenhower:

Under a system of unification you could develop a more efficient organization with 75 percent of the men than you would need now.

He also declared that the Allies would have lost the war in northwest Europe and the Mediterranean without a single, over-all command. It was in this connection that he indicated that those who believed a single department would subordinate one service to another were absolutely wrong. The campaigns in Africa and Europe proved such fears to be groundless.

General Eisenhower, as well as other witnesses, has strongly supported the contention that air forces are now on a par with other branches of the military and naval services. On this subject, he said:

No sane officer can contest arguments that the air arm deserves equality with the Army and Navy.

Mr. Speaker, and my colleagues, let us take to our hearts this warning from General Eisenhower:

The unification must be accomplished lest we lose the peace we have so dearly bought.

## Veterans Cannot Take Jobs in Long Beach Area Because of Lack of Housing for Selves and Families—United States Employment Service Manager Reports Placement of World War II Veterans Are Needed by Navy and Industry but No Place To Live—Long Beach Job Placement Surpasses Five States

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. DOYLE. Mr. Speaker, I am materially helped in my work as Congressman from the Eighteenth Congressional District of California, by the cooperation of industry, management, labor, and Government in keeping me informed of data affecting said Eighteenth District and including, of course, specifically the problems of my home city of Long Beach, Calif. One of those able governmental representatives is Mr. George Toll, the manager of the Long Beach office of the United States Employment Service, and he now furnishes me the following facts:

Since VJ-day over 100,000 men have been discharged from the service through Fort MacArthur and Terminal Island separation stations. A large number of these men were inducted from southern California.

There is every indication that not only those inducted from southern California but many of those being released here who formerly lived in other States have expressed a desire to locate in the southern California area.

Eight percent of the Nation's armed forces were recruited in California; 10 to 12 percent of the Nation's armed forces are being discharged here with the intention of making California their permanent home. There is every indication that the ratio in Long Beach is even larger.

The following factors further complicate the problem: (1) Before they entered the service, a large percentage of the veterans were single and living at home. Thousands of these have married and are looking for homes of their own. (2) Housing has had to be made available to the families of men in the local United States naval hospital. It is only natural that families from every corner of the Nation flock to the bedsides of these men who were wounded in combat and who, in many cases, are back in the United States for the first time in many months. (3) While the population of the

Long Beach area has grown by leaps and bounds during the war years, housing facilities have increased by only a small percentage. (4) War-industry workers formerly housed in barracks or west-side housing projects now are seeking other types of work and moving into homes from the aircraft and shipbuilding districts. (5) Over 1,500 in-migrants are settling in the Long Beach area each month.

Long Beach has an unparalleled industrial growth ahead; it would indeed be unfortunate if the housing shortage were responsible for these veterans, whose skills will be so urgently needed, having to make their homes elsewhere.

That Long Beach holds an enviable place in the Nation's industrial growth was emphasized by George Toll, local USES manager, who revealed that in August alone the Long Beach United States Employment Service office made more placements of workers on jobs than were made in the entire States of Vermont, Delaware, North Dakota, South Dakota, or Wyoming over the same period of time.

Local placement figures for August totaled 1,849, although the workers hired throughout the Long Beach area during that time were far heavier than this figure indicated because the lifting of manpower controls made it possible for the first time since the inception of the manpower stabilization program for workers to accept any jobs they wished.

The Long Beach United States Employment Service made 1,147 placements in September and 1,435 during October, but as national statistics have not yet been made available it is not possible at the present time to compare these figures with placements made in other parts of the country during the last 2 months.

Toll stated that an analysis of his October records shows that placement of nonwhites increased 30 percent and that placements of World War II veterans almost doubled.

In September 467 workers were placed in manufacturing industries, whereas in October this figure reached 582. According to Toll, manufacturing-industry placements are expected to increase monthly, keeping pace with the growth in conversion activities.

October placements in the clerical and sales field more than doubled the September figure.

A month ago the majority of Long Beach job seekers were women; October figures show a reversal of the situation.

Mr. Speaker, and my colleagues, the facts as herein set forth—furnished by George Toll—are not limited entirely to Long Beach and the Eighteenth Congressional District either, many of them are applicable to southern California at least. He reported that it was impossible for returning veterans who were being separated from military service through the Long Beach harbor area separation centers to find living quarters. They were being forced to look elsewhere for employment unless extended housing conditions can be made available immediately.

Mr. Speaker, and my colleagues, I emphatically and specifically urge that all those concerned with it, to do their dead-level utmost, at the earliest possible date, to relieve this tragic housing shortage in this strategic area of Long Beach and of Los Angeles County and of southern California. We must not forget that into this already crowded area came many hundreds of thousands of folks from other States with their families to live and to work in industries in wartime manufacture and occupation. Nor have they returned to their home States since Japan's collapse. Surveys indicate that very few of them will return to their former abodes.

Then, when Long Beach and Los Angeles areas were designated as important separation centers, there naturally hastened thereto thousands of wives and children of men in uniform whom they anticipated would be separated in Long Beach and Los Angeles separation centers. The facts show that these men—these distinguished GI's—with their families do not choose to go back to their former States to reside. They have elected to become permanent California citizens and residents and workers and school and college attendants. But the continuing housing shortage because of the aforesaid other reasons given, is foreclosing thousands of these war veterans from doing other than living in garages or automobiles, or inadequate trailers, or in unhealthy, insanitary surroundings, or to return to their former States, or to take job opportunities elsewhere which are not nearly as advantageous or acceptable to them. So these veterans who fought and won the war for us are in practice being denied job opportunities where they are most happy to take them because there is no reasonable place to abide. This in effect Mr. Speaker, amounts to denying them their job opportunities. The American workingman, and the American war veteran, is one and the same in attitude, in opportunity, and in practice; he will not stay where he cannot earn or have decent food, housing, and clothing, and educational and recreational opportunities for his wife and children. I am sure we highly compliment him on being so sensibly American on these points. We would not respect him if he in turn did not expect and demand these reasonable opportunities as the result of his day's toil. It behooves all concerned to forthwith attack this unhappy and undemocratic condition and whip into a decent and democratic opportunity for these returning veterans with their loved ones.

## Transportation Survey

EXTENSION OF REMARKS

OF

### HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. LEA. Mr. Speaker, as the House is aware, our Transportation Subcommittee of the Committee on Interstate and Foreign Commerce has been making a survey of the transportation problems of the Nation, and particularly as to the constructive needs of transportation for the postwar period. We are approaching these problems from the long-time viewpoint rather than confining our consideration to purely temporary conditions. We have extended a widespread invitation for information and suggestions from every practicable available source.

The mass of material now in the hands of the House Committee on Interstate and Foreign Commerce, prepared by shippers, transportation agencies, economists, and others in all parts of the country, in response to the list of suggested topics sent out by the committee as a preliminary to a postwar transportation survey, indicates a tremendous public interest in national transportation problems.

The committee is now engaged in digesting and analyzing the material already in hand. The request that interested persons submit their statements by November 15 is not regarded by the committee as a deadline. Quite a number of persons and organizations have asked for an extension of time in which to present their statements. We have granted these requests and still invite all who care to do so to forward their statements as early as their convenience will permit. The analysis of the material being received by the committee will carry this preliminary work well into the New Year, giving those who have not replied time to make their views available to Congress.

The splendid cooperation received by the committee reflects a sincere and commendable desire on the part of users of transportation, transport agencies, investors, and economists to aid the Congress in reaching constructive and significant solutions of the Nation's many complicated and difficult transportation problems.

Our committee will devote all the time necessary for a thorough consideration and helpful revision of our transportation laws where we find a substantial need therefor. It is our desire to give all who can make contributions to this survey full opportunity to do so.

## Big Business Must Rebuke Chiselers in Its Ranks

EXTENSION OF REMARKS

OF

### HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. SABATH. Mr. Speaker, under the leave granted me, I insert an editorial appearing in the Philadelphia Record of November 16 entitled "Big Business Must Rebuke Chiselers in Its Ranks," as follows:

BIG BUSINESS MUST REBUKE CHISELERS IN ITS RANKS

What a wholesome thing it would be for the United States Chamber of Commerce and the National Association of Manufacturers to rebuke publicly their members who violate elementary ethics.

Weirton Steel Co. has been fined $148,215 by a Federal court for unlawful diversion, in wartime, of vital war materials for improvement of a swank country club.

Manufacturing firms controlling 90 percent of United States artificial limb production have been indicted by a Federal grand jury on charges of conspiring to fix unreasonable and noncompetitive prices, thus working a hardship on military and civilian amputees.

Such contemptible chiseling blackens the good name of all industry. That should not be.

Dishonest, unpatriotic practices by a small minority of big business should no more be

an excuse to smear all big business than all labor should be defamed because of a wartime strike by John L. Lewis.

Everybody does not reason that fairly.

That is why it is so important that the majority of industry, which does have respect for the law and ethical practice should condemn those among its members who step out of line.

We should like to hear the National Chamber of Commerce and the AMA speak out, make it clear that they are as disgusted as the general public by Weirton's snide trick and by the conspiracy to maintain high prices and retard development of lighter and improved artificial limbs.

They could hardly find a better way to serve the best interests of big business. They would be guarding its good name.

The fine imposed on Weirton Steel Co. was more of a farce than justice. It was less than 1½ percent of the profits last year of Weirton's parent concern, National Steel Co.

Even if it were proper to hold only the firm to blame, this was a slap on the wrist.

The responsible officials of the firm should have been indicted and brought to justice.

Crimes are committed by human beings, not corporations. Human beings can be sent to jail; corporations can't be.

The accused artificial-limb manufacturers, according to the Federal grand jury, bound themselves together in such a way that they could dictate prices to Government agencies, such as the Veterans' Administration.

In other words, no competition. As a result of its lack, the artificial limbs are little better, a congressional committee said recently, than those made in Civil War days. Legs and arms are cumbersome, almost useless in many cases.

While we should be providing military heroes who left arms and legs on battlefields with the best modern science can develop, modern science apparently hasn't been allowed to operate.

Is this free enterprise? No. Yet such firms probably would be among the first to shout that free enterprise was in jeopardy should Government impose controls on them.

Industry can purge itself, as can labor, of the few bad actors among its ranks if it has the courage and the will to denounce and discipline its own kind.

## Navy Sex Laxity in Japan

EXTENSION OF REMARKS
OF
### HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. BUFFETT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter by Chaplain Lawrence L. Lacour, United States Naval Reserve, from Tokyo, to the Des Moines Register. He was the first Navy chaplain in Japan, landing ahead of General MacArthur, and is a member of the Des Moines Methodist Conference.

The letter was read over Radio Station WJAG, Norfolk, Nebr., on November 9, 1945.

The letter follows:

Since a large percentage of the Navy are reserves, many of them under 20, and we chaplains are entrusted with the moral and spiritual welfare of these men, we believe the American public should be informed when conditions and policies exist that jeopardize the morality and faith of our servicemen.

As a policy of venereal-disease control, the Navy is permitting unrestricted access, by all men on liberty in the Yokosuka area, to houses of prostitution where the venereal incidence among the prostitutes is considered 100 percent.

The control is the prophylaxis administered by naval corpsmen on duty in the house.

Since September 11, liberty parties have been permitted ashore in this area. Our ship was the first to be granted liberty, and as we are tied up in the navy yard, I have been able to observe the situation from the beginning. On September 2 the medical officer in charge of venereal control told me that it would be his policy to supervise the places of prostitution by examining the prostitutes, by segregating those infected, by insisting on cleanliness within the houses, and by establishing adequate numbers of prophylactic stations throughout the town.

When liberty parties went ashore men gathered the impression that the medical department had eliminated all immediate danger. Military police and naval corpsmen informed the men in the lines in front of the houses that everything was medically inspected. As a result many enlisted men and officers, including a number from our ship, had sexual contact without using any prophylaxis.

Prior to sending men ashore some ships ran training films on venereal disease, and announced that a high percentage of venereal disease could be expected in Japan. On other ships, the commands refused to do anything to discourage promiscuity, and gave no warning about expected venereal incidence.

On September 14 it was disclosed that out of a typical group of prostitutes, 51 out of 60 had syphilis, were not being treated, that there would be no further examinations, and that no policy of treatment or segregation would be followed.

Coincidental with Archbishop Spellman's visit here, by September 16 all red-light districts were declared out of bounds. A group of us chaplains inspected the restricted area after a week of suppression. We found that although the method was not totally effective, the number of offenders that got into the restricted area was small, as the geographic location of the area made policing comparatively easy.

It was not so easy to suppress the free-lance prostitutes and the smaller houses in the unrestricted area, but there was little open violation. A man intent on sexual contact could find it, but he had to exert considerable effort and run the risk of arrest. Men were treated as usual at prophylactic stations with no great threat of disciplinary action, and, during this period of suppression, the number of treatments ashore and afloat decreased remarkably.

At a meeting of the fleet medical officers on September 26 it was proposed that one large house be opened, that it be operated with the understanding that all the women were diseased, and that a voluntary system of prophylaxis be available by placing a Navy-operated treatment station within the house.

Although some medical officers and two chaplains in attendance protested, it was stated by the senior medical officer that this was to be the policy.

Subsequently, the chaplains of the fleet met, and submitted to the flag a memorandum that represented the unanimous opinion of the group. The action of the chaplains was ignored, and Sunday, October 7 the Yosuura house was opened to enlisted men, with geisha houses permitted to accept the patronage of chiefs and officers.

Although the number of men on liberty next day was considerably under normal because of rain, I observed, in company with four chaplains and the officer of the day of the military police, a line of enlisted men four abreast almost a block long, waiting their turn.

MP's kept the lines orderly, and permitted only as many as could be served to enter at a time. As men were admitted into the lobby, they would select a companion (113 on duty that day, according to one of the Japanese attendants), pay the 10 yen to the Japanese operator, and then go with the girl to her room. We inspected several of these rooms and found them to be reasonably clean.

When the men returned they were registered and administered prophylaxis by Navy corpsmen. Although approximately 20 men could be treated at a time, there was a line waiting. True, many of the men were the type one might expect to patronize such a place, but the bulk of the customers were younger men. The open accessibility of women in this place has been a factor contributing to the first sex experience of some of my men.

When one considers the rate of disease, that there are some forms of venereal disease in the Orient that do not respond to treatment, that some of the women have been exposed to leprosy. On the basis of these facts, it is contended that:

1. The Navy's policy of unrestricted sexual opportunities with diseased women is no solution for the problem of venereal control.

2. American people would insist that the Navy immediately adopt a policy of rigid suppression in regards to prostitution.

3. The Navy, which completely ignored moral implications in the present situation, be charged to consider the moral aspects of policies governing personnel.

4. The people who loan their sons to the Government demand moral protection or refuse to supply the personnel for our armed forces.

5. Although many naval officers are gentlemen, others by example and advice have encouraged immorality among our men.

6. The Navy's unlimited sale of beer, which has contributed to moral delinquency and numerous incidents here, be discontinued. And that throughout the Navy, soft drinks be made just as available as beer whenever beverages are provided by the Navy.

7. An organization that has demonstrated such brilliant strategy in defeating the Japanese military not permit our men to become the open victims of Japanese prostitutes in the final round.

## United States Steel Corp.

EXTENSION OF REMARKS
OF
### HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. SABATH. Mr. Speaker, a very informative and interesting editorial appeared in the splendid, independent Christian Science Monitor, under date of November 13, which I feel should be read by the officials of the United States Steel Corp. and other steel magnates who have refused to talk over the matter of wage increases with their employees. I am sure it will also prove of interest to the membership of the House and to the public generally. Under the leave given me, I insert it, as follows:

START TALKING, GENTLEMEN

United States Steel's attempt to place its whole wage problem on the shoulders of OPA appears both arbitrary and untenable.

President Fairless lets it be known that his company will not bargain with the United Steel Workers until and unless the OPA grants a price increase and consents to further increases should wages be raised. Secretary Schwellenbach writes Mr. Fairless

that the Government insists on no wage increase but does ask that the company sit down with the union and that they argue out their respective cases in the presence of a Labor Department conciliator. Mr. Fairless replies that President Murray of the CIO demands a yes-or-no answer to the union's bid for $2 a day higher wages and thereby brings collective bargaining to an end. Mr. Murray so far makes no comment.

The public is by now sufficiently sophisticated—and the United States Steel Corp. should be—to recognize conventional tactics when it sees them. Labor habitually states its first demands as irreducible. Industry's standard reply is a flat "No," at the same time flourishing a threatened price boost toward the public.

The public is not convinced that the steel workers' demand for $2 a day more is justified by the present price of steel. It doesn't know. But neither is it convinced that United States Steel can't afford the boost nor that steel prices must go up.

OPA has a responsibility in this situation. It is to act promptly on the steel company's pending petition. The findings can properly enter into the bargaining, or the results of the bargaining into a subsequent plea for a price concession.

But the public interest cannot permit any industry—which eventually would mean all industry—to automatically shift the cost of wage increases to the consumers, to stipulate at the start that there exists no margin of profit to be divided between stockholders and workers through collective bargaining.

## Retail Automobile and Truck Dealers and Their Troubles With OPA

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. PITTENGER. Mr. Speaker, as of this date, November 16, 1945, the numerous retail dealers in automobile and trucks are still in Washington, not exactly offering up their adoration to the infallible Office of Price Administration, but they are in trouble and they are pleading with that outfit to give them a chance. Is it not ridiculous that American citizens in the year of our Lord 1945 have to go to an arbitrary Government agency and do something akin to begging forgiveness for sins they have never committed. Yet, that is just what has been taking place under the guidance of the Select Committee on Small Business which has conducted elaborate hearings for the benefit of the retail automobile and truck dealers in this country and that committee has advised us today that these people have been granted an audience by the OPA officials, and that the weather is fine.

Things were a little bit cloudy on November 14, or else Chester Bowles, Administrator of OPA, had high blood pressure. Maybe it was a combination of both, but he certainly sounded off like one of the old Roman dictators. I want to be perfectly fair to OPA and its officials so without elaboration, or concealment, I incorporate in my remarks at this point a news item from the Evening Star published at Washington, D. C., November 13, 1945, which news item reads as follows:

OPA BARS BOOST IN AUTO PRICES; LOBBYISTS HIT—BOWLES TELLS HOUSE GROUP PRESSURE IS SIGN OF TIMES

Bitterly denouncing "government by pressure," Price Administrator Bowles told Congress today he is rejecting demands of automobile dealers for higher retail prices on new cars. He said OPA would announce the prices Thursday.

Mr. Bowles declared that government by lobby pressure "is an ominous sign of our times."

Appearing before the House Small Business Committee, the OPA chief estimated Members of Congress have received more than 5,000 telegrams protesting OPA's automobile price plans.

Describing this as "the greatest single pressure-group operation since OPA was established," Mr. Bowles declared:

"Two and one-half years in Washington has made me something of an expert on pressure groups, lobbyist, and pressure-group tactics. I have been alarmed at the tendency on the part of some to feel that Congress and governmental officials should base their decisions, not on the validity of a particular issue, but on the measure of pressure which could be focused at any given point."

THREAT TO RIGHTS SEEN

"This idea of Government by pressure is an ominous sign of our times. It is a threat to the democratic rights of all the inarticulate, silent, little people of America."

Mr. Bowles told the committee, in the presence of hundreds of automobile dealers gathered in the House caucus room, that under the OPA price schedules for new cars the dealers "are likely to have their best profit year in 1946."

Discussing the forthcoming price announcement, Mr. Bowles said:

"Actually, cost absorption which we will require of dealers in 1946 will not exceed 4 or 5 percent. We cannot reveal the exact amount at this time. At 4 percent a dealer will get a realized profit of 20 percent, compared with his actually realized profit of the prewar period of 11.5 percent."

ALTERNATIVES LISTED

He gave an illustration in an effort to prove that a dealer selling a $1,000 car would profit by $200 under the planned OPA prices, while his prewar profit—after considering losses on trade-in cars—would be only $115.

"I am very certain," Mr. Bowles said, "that the automobile dealers do not really understand that they are asking us to accept one of two impossible alternatives:

"Either abandon the basic principle of price control which has enabled us to hold the line against the most dangerous inflationary pressures this country has ever seen, or to bow before their organized power and exempt them from a rule to which legitimately and legally there can be no exceptions. * * *

"We are sitting uneasily on a keg of dynamite, and they are asking us via Western Union to put the fuse to the keg * * *."

BASIS OF NEEDS STRESSED

"Were we free to exempt automobile dealers—which we are not—the requirement of equality of treatment would then compel us to abandon cost absorption for all trades, and industries."

He said he wanted to declare, "with all possible emphasis," that: "We believe that price control policies, like other national policies, should result from careful consideration of the needs of the Nation, not from the numerous telegrams and phone calls a pressure group can pour into Washington."

The dealers, saying they were gravely concerned over the threatened cut in their established trade discount, had led the committee last week to request Mr. Bowles to delay any final action on automobile ceilings until all the facts are investigated.

Mr. Speaker, this was a remarkable and courageous declaration of Government policy and I marvelled at the courage displayed. Since November 13 the OPA has relented and as was stated today they are granting the right of further discussion to the representatives of the automobile dealers and truck dealers.

GOVERNMENT BY PRESSURE

It would appear that the Administrator of the OPA was very much concerned on November 13 because a group of American citizens were trying to influence his infallible judgment. I personally do not believe in the doctrine of infallibility in the business world. I like to think that a man can make a mistake, and that he does not amount to much, unless he makes a mistake occasionally. The test of his real worth depends on whether or not he will admit the mistake. It takes a real man to do that.

But to get back to the subject—was it proper for the automobile and truck dealers to appeal to their Government? That is the big question, and the Evening Star, of Washington, D. C., on November 14, 1945, tosses an atomic bomb toward the OPA in a powerful editorial, which reads as follows:

PRESSURE GROUPS

OPA Administrator Chester Bowles would be entitled to an award of some sort if he had been a bit more specific in denouncing pressure groups during his appearance before the House Small Business Committee. But it is difficult to tell, despite the vehemence of his language, whether he was after big game or little game.

Mr. Bowles said that "Government by pressure is an ominous sign of our times," and with that all thoughtful citizens will agree. He also said that during his stay in Washington he has become something of an expert on lobbying tactics and he regards them as "a threat to the democratic rights of all the inarticulate, silent, little people of America."

But what lobbies was he talking about? If he had reference to the organized labor lobby, which does not hesitate to tell Congress what it must and must not do, and whose wage demands are at the bottom of most of Mr. Bowles' present troubles, he did not mention it by name. If he had reference to the big industry lobbies, which still do a thriving business, he again failed to particularize. Nor did he mention by name any of the other better-known lobbies—the farm lobby, the group lobbying against military training, the various racial lobbies, and so forth. But he did mention the retail automobile dealers, and therefore the inference is that, primarily at least, he was talking about them.

The OPA wants the dealers to absorb some of the economic pressure which continued price ceilings are going to impose on the car manufacturers. Mr. Bowles thinks the dealers can do this and still enjoy higher profits than before. The dealers apparently think otherwise, and some 5,000 of them, it is said, have sent telegrams to their Congressmen to that effect.

Perhaps this was an iniquitous thing for the dealers to do. But at worst it is a trivial aspect of the lobbying problem, and if Mr. Bowles was shooting only at the auto dealers he was out for very small game, indeed.

Now, Mr. Speaker, I am just giving the views of one of the great newspapers of our country and am not trying to influence anybody one way or another at this particular moment. Regardless of

whether or not we agree with everything the Evening Star did say, it does have a rather original way of expression, and that is why the foregoing editorial will be welcomed by the retail automobile and truck dealers throughout America.

## Farm Price Parity

EXTENSION OF REMARKS
OF
**HON. ADOLPH J. SABATH**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. SABATH. Mr. Speaker, under the leave granted me, I insert excerpts from an editorial appearing in the November 12 issue of the Baltimore Sun and an editorial appearing in the November 15 issue of the New York Times commenting on the proposed Pace and Thomas bills to boost parity prices, which would tremendously increase the price of foodstuffs should either of the bills be enacted. The editorials are as follows:

[From the Baltimore Sun of November 12, 1945]

NOW IT IS SENATOR THOMAS WHO WANTS TO BOOST PARITY

* * * * * *

The reason why some of the political farmers want to change the parity formula at this time is clear enough. Current Agriculture Department figures show that farm prices are now above parity. This is awkward, because the farmers have been saying for 20 years that if they had parity, that is all they would want. Parity, they claimed, was the fair price relationship between farm commodities and manufactured articles which would give the farmer just purchasing power for what he raised. It follows by inescapable logic that prices above parity give farmers rather more than they have asked.

If the parity formula itself can be boosted, however, this logical embarrassment will be resolved, in the political farm view. But some difficulties remain in the way. Wise farm leaders know that labor costs were excluded from the parity formula to begin with because farm wages were so low that their inclusion would actually have pulled the formula down. Wise farm leaders are not at all sure that farm wages may not yet again drop to the point where they will at least offer little upward push in the farm-parity formula.

There is another and special difficulty with Senator THOMAS' idea of shifting the base date for parity from 1909–14 to 1919–29. It just happens that in the latter period cotton prices were better than in 1910–14 relative to the prices of the other major cash crops, mainly the grains. Hence, to shift the base, as Senator THOMAS proposes, would help cotton, but it would hurt the grains relative to cotton. So the grain people are apt to be less zealous for the Thomas change than the cotton people. Is it a coincidence that Senator THOMAS comes from a cotton State?

How the present agitation over the parity formula will come out, no one can tell. But in the past, splits within the farm ranks like that between the cotton men and the grain men on the Thomas bill have prevented any change. Some of the shrewder farmers realize, moreover, that they risk loss of public confidence in what they have always insisted was an objective and just principle if they keep tinkering with it to boost prices. How influential such considerations will be this time we have yet to see.

[From the New York Times of November 15, 1945]

FARM PRICE PARITY

The farm bloc has renewed its efforts to raise farm prices. Once more this effort is addressed to a redefinition of "parity" price to include the cost of farm labor in the index of things that the farmer buys. It will be recalled that farm price "parity" refers to the relationship between the things the farmer buys and the price of the product he is selling. By including labor costs in the comparative index, the parity price for farm products will be raised accordingly. Two bills have been introduced to accomplish this objective: The Pace bill, before the House, provides that the 1909–14 base period be used in figuring the labor increase; the Thomas bill, before the Senate, would use 1919–29 as the base period. The magnitude of the increases in parity price which would develop under these formulas is shown in the following tabulation:

| | |
|---|---|
| Wheat: | *Bushel* |
| Present parity price | $1.55 |
| Pace bill | 2.02 |
| Thomas bill | 1.58 |
| Corn: | |
| Present parity price | 1.12 |
| Pace bill | 1.47 |
| Thomas bill | 1.26 |
| Cotton: | *Pound* |
| Present parity price | $0.217 |
| Pace bill | .284 |
| Thomas bill | .305 |

Under the Pace bill, wheat parity would increase almost one-third, while under the Thomas bill it would increase more than 20 percent. The parity price for cotton would increase by more than 30 percent under the Pace bill and more than 40 percent under the Thomas proposal. These higher parity prices would be combined with an extension of the loan program, which is now 90 percent of parity for basic farm products except cotton, for which it is nearly 92½ percent. The adoption of these proposals, therefore, would mean a sharp rise in the cost of living.

The drive for higher farm prices, taken together with the 30-percent increase in wage rates demanded by labor, would make certain a sharp inflationary spiral. Higher costs for foods and other products would lead to demands for still further increases in wage rates. The combination of higher wage rates and higher prices for farm products would raise the cost of things which the farmer buys, and thus in turn lead to still higher parity prices. This in turn would again raise the cost of living and lead to renewed demands by labor.

During the war years farm income has risen to the highest levels on record—exceeding the inflated 1919 peak by 50 percent. As a reflection of this improvement in earnings, farmers have been reducing their mortgage debt in contrast with the sharp increase that took place during and immediately after the First World War. These data provide no evidence that the farmer is suffering any hardship. If we are to avoid an inflationary spiral these new and unwarranted demands must be rejected.

## Industrial Use of Gold in War Exceeds Total United States Production

EXTENSION OF REMARKS
OF
**HON. CLAIR ENGLE**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. ENGLE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article by W. F. Boericke from the New York Herald Tribune. This article shows that the industrial use of gold in this country is more than twice the production. When we have not enough gold in annual production to meet our industrial requirements, how are we going to get more gold to back our currency? This article points out the necessity of giving some encouragement and support to the gold-mining industry in this country:

Use of gold in industry during the war years has been vastly greater than is generally known. The prevailing conception of gold as a monetary medium gives little consideration to its place as a commodity in the arts and its part in the manufacture of special equipment for military demands. Yet the value of gold issued for industrial use in the United States was $96,864,000 in 1943, according to the Bureau of Mines, and this total exceeded the value of gold production from the mines in that year of $41,487,000, by $55,377,000, or more than 130 percent. While figures for the industrial consumption of gold in 1944 are not yet available, it is probable that with a mine production of only 1,000,000 ounces in the last year valued at $35,000,000, industry took three times the amount of bullion that was mined.

Beginning in 1940, the value of gold issued for industrial purposes in this country mounted from $41,173,000 to $96,864,000 in 1943. Formerly much of this gold was returned for resale and the net industrial consumption of new metal was far less. Thus in 1940 the net consumption was valued at $13,306,000 as $27,872,000 had been returned from industry. But in 1943 the value of the gold returned was only $10,521,000, leaving a net industrial consumption for the year of $86,343,000.

NEW ROLE PLAYED IN WAR

War industry has developed special needs for gold and, as noted by the Bureau of Mines, it continues to play an important part for use in many types of instruments, electrical and industrial equipment, and color photography. This is in addition to its normal use in jewelry, gold plating, dentistry, chemicalware, and therapeutics. Gold is also utilized as an alloy for brushes in motor generator sets employed in connection with electrical equipment that measures the speed of aircraft engines.

During the decade 1920–30 the net industrial consumption of gold was about 800,000 ounces annually, with a value at the then prevailing price of gold of some $16,500,000. In the following decade—1930–40—the net consumption was actually zero, although the value of the metal issued for industrial purposes exceeded $29,000,000 a year. This, no doubt, was due to the huge amounts returned to the market during the depression years, aided, of course, by the increase in the gold price from $20.67 to $35 an ounce, which made resale of gold acquired at the old price extremely profitable.

It is probably extravagant to assume that in the postwar era industrial demands for gold will approximate the present large figure of nearly $100,000,000 annually. Even if this should prove to be the case, the normal return from industry should reduce the net consumption to about one-third of this amount, or $33,000,000. If 1940 were accepted as a normal year, some 1,170,000 ounces of gold, valued at $41,000,000, went into industrial consumption, but new gold required was less than 400,000 ounces.

IMPROVED OUTPUT SEEN

Gold production in the United States for the first 5 months of 1945 has been estimated by the American Bureau of Metal Statistics at 346,922 ounces, compared with 436,117 ounces for a similar period in 1944. If

output does not improve during the rest of the year, total production for this country at this rate would approximate only 800,000 ounces in 1945. However, this appears to be too pessimistic a view. With the lifting of the L-208 order for the gold-mining industry, some improvement in production is certain to follow, and the final figures for the year should show an increase over those for 1944. But even if this occurs, the output of new bullion will apparently fall far short of supplying industrial needs for gold, without adding to the bullion reserve of the Government.

Decline in gold-mine output has not been confined exclusively to the United States. While the gold-mining industry has fared worse here than in other countries where gold is an important product, decreases in output have been universal. The year 1940 represented the peak in world gold production, and the total of 37,100,000 ounces—exclusive of Russian output—then achieved will not likely be exceeded for many years. Compared with records in that banner year, the output of gold in the United States had dropped 83 percent in 1944; that of Canada, 45 percent; Australia, 58 percent; and the world total—outside of Russia, data on which are unavailable—38 percent. Of all gold-producing countries, only the Union of South Africa held up its gold production, with a nominal 12 percent decline, receding from 14,000,000 ounces in 1940 to 12,300,000 in 1944.

To indicate just how badly the gold mines of the United States have been affected during the war years, only half the limited production of 1,000,000 ounces last year can be credited to the straight gold producers as the other 50 percent came from mining operations of copper, lead, and zinc producers, where gold is only a byproduct. The story was different in 1940 when gold mines accounted for 87 percent of the total gold, and base metal mines 13 percent. Lifting of the L-208 order will not act as sufficient incentive for reopening of many gold mines closed down since 1942, confronted as they are with shortage of manpower, need for paying substantially higher wages than prevailed in mining camps before the war, and burdensome taxation. Statistically, it would be easy to prove that gold mining will languish until economic conditions become more favorable, but this would not take into account the age-old willingness of the gold miner to take a chance in the face of difficulties that appear formidable.

## World Cooperation

EXTENSION OF REMARKS

OF

### HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Monday, November 19 (legislative day of Monday, October 29), 1945*

Mr. MAYBANK. Mr. President, on Friday last the city of Charleston and its people welcomed home South Carolina's No. 1 citizen, the Honorable James F. Byrnes, Secretary of State, a native of Charleston.

On this occasion the Secretary of State delivered a most able, courageous, and enlightening address, of world-wide significance and importance. It clearly sets forth the necessity for world cooperation, and states in a most able manner the leadership the United States must develop in perfecting world peace and the use of atomic energy. I therefore ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When I accepted Charleston's very gracious invitation to return to the city of my birth and the scenes of my younger days, I thought that nothing I could say here would interest you more than world trade.

Charleston, being one of the oldest ports in America, certainly has a vital interest in the restoration of world commerce.

Since accepting this invitation to be with you I have participated in a conference in Washington which concerns every human being and civilization itself.

Therefore, before expressing some views on international trade, I wish to comment briefly on the efforts we are making to control atomic energy so that it may be used, not for war and destruction, but for the peace and happiness of the world.

The full significance of the release of atomic energy is not quickly or easily comprehended. As it happened, in my capacity as Director of War Mobilization I was well aware of the awesome character of the great experiment that we then referred to as the Manhattan project.

Later, during the short period I was out of the Government service, it became clear to the scientists that an atomic bomb was an immediate practical possibility. At that time I was asked to serve as the President's representative on the committee, under the chairmanship of Secretary of War Stimson, which laid the plans for the New Mexico experiment.

Despite this experience, I know that I cannot presently evaluate the true impact of this discovery upon the future of the world.

But from the day the first bomb fell on Hiroshima, one thing has been clear to all of us. The civilized world cannot survive an atomic war.

This is the challenge to our generation. To meet it we must let our minds be bold. At the same time we must not imagine wishfully that overnight there can arise full-grown a world government wise and strong enough to protect all of us and tolerant and democratic enough to command our willing loyalty.

If we are to preserve the continuity of civilized life, we must work with the materials at hand, improving and adding to existing institutions until they can meet the stern test of our time.

Accordingly, the President of the United States and the Prime Ministers of Great Britain and Canada—the partners in the historic scientific and engineering undertaking that resulted in the release of atomic energy—have taken the first step in an effort to rescue the world from a desperate armament race.

In their statement, they declared their willingness to make immediate arrangements for the exchange of basic scientific information for peaceful purposes. Much of this kind of basic information essential to the development of atomic energy has already been disseminated. We shall continue to make such information available.

In addition to these immediate proposals the conference recommended that at the earliest practicable date a Commission should be established under the United Nations Organization. This can be done within 60 days.

It would be the duty of this Commission to draft recommendations for extending the international exchange of basic scientific information for peaceful purposes, for the control of atomic energy to the extent necessary to insure its use only for peaceful purposes, and for the elimination from national armaments of atomic weapons and of all other weapons adaptable to mass destruction.

The Commission would recommend effective safeguards by way of inspection of other means to protect complying States against the hazards of violations and evasions.

Such protection would be afforded by having the work proceed by stages.

As a starting point the Commission might recommend the wide exchange of scientists and scientific information. The next step might be the sharing of knowledge about the raw materials necessary to the release of atomic energy.

The successful completion of each stage would develop the confidence to proceed to the next stage.

A very serious question arises, however, when we reach the stage of exchanging detailed information about the practical industrial application of atomic energy. The thought to be borne in mind here is that up to a certain rather advanced point, the so-called know-how of production is the same whether atomic energy is to be stored in bombs or harnessed as power for a peaceful industrial purpose.

And so it was necessary for the conferees to determine in the light of this fact, how soon information concerning the practical application of atomic energy should be disseminated.

Only one answer was possible. Until effective safeguards can be developed, in the form of international inspection or otherwise, the secrets of production know-how must be held, in the words of the President, as a sacred trust—a trust in the exercise of which we are already under definite international obligation.

Under the Charter of the United Nations we have pledged ourselves not to use force except in support of the purposes and principles of the Charter. The suggestion that we are using the atomic bomb as a diplomatic or military threat against any nation is not only untrue in fact but is a wholly unwarranted reflection upon the American Government and people.

It is one of the inherent characteristics of our democracy that we can fight a war only with the genuine consent of our people. No President in the absence of a declaration of war by the Congress could authorize an atomic bombing without running the risk of impeachment.

No one who knows the peace-loving temper of our people can believe that our Congress would adopt a declaration of war contrary to our solemnly undertaken obligations under the United Nations Charter.

The history of 1914 to 1917 and of 1939 to 1941 is convincing proof of the slowness of Congress to declare war. There is surely no reason to believe that it would be more eager to engage in a future war more terrible than any we have known.

While we consider it proper and necessary, therefore, to continue for a time to hold these production secrets in trust, this period need not be unnecessarily prolonged.

As experience demonstrates that the sharing of information is full and unreserved, it is to be hoped that the exchange for peaceful purposes, can be extended to some and eventually to all the practical applications of atomic energy and of other scientific discoveries. This is the objective we seek.

It is our purpose and grave duty to act in our relations with other nations with the boldness and generosity that the atomic age demands of us. No officials of Government have ever been called upon to make a decision fraught with more serious consequences. We must act. But we will act in a manner that will not undermine our safety or the safety of the world.

Our declaration of willingness to exchange immediately the basic scientific information and our plans for the setting up of a commission under United Nations sponsorship have been sent by me to members of the United Nations Organization. We look forward to their cooperation.

No one appreciates more keenly than those who have advanced these proposals that they represent a very modest first step in what is certain to prove a long and difficult journey. I wish to emphasize our conviction that the creation and development of safeguards to protect us all from unspeakable destruction is not the exclusive responsibility of the United States or Great Britain or Canada. It is the responsibility of all governments.

Without the united effort and unremitting cooperation of all the nations of the world, there will be no enduring and effective protection against the atomic bomb. There will be no protection against bacteriological warfare, an even more frightful method of human destruction.

Atomic energy is a new instrument that has been given to man. He may use it to destroy himself and a civilization which centuries of sweat and toil and blood have built. Or he may use it to win for himself new dignity and a better and more abundant life.

If we can move gradually but surely toward free and unlimited exchange of scientific and industrial information, to control and perhaps eventually to eliminate the manufacture of atomic weapons and other weapons capable of mass destruction, we will have progressed toward achieving freedom from fear.

But it is not enough to banish atomic or bacteriological warfare. We must banish war. To that great goal of humanity we must ever rededicate our hearts and strength.

To help us move toward that goal we must guard not only against military threats to world security but economic threats to world well-being.

Political peace and economic warfare cannot long exist together. If we are going to have peace in this world, we must learn to live together and work together. We must be able to do business together.

Nations that will not do business with one another or try to exclude one another from doing business with other countries are not likely in the long run to be good neighbors.

Trade black-outs, just as much as other types of black-outs, breed distrust and disunity. Business relations bring nations and their peoples closer together and, perhaps more than anything else, promote good will and determination for peace.

Many of the existing restrictions on world trade result from present-day conditions and practices, largely growing out of the war.

Many countries, and not least Great Britain, had to sacrifice their foreign earning power to win the war. They have sold most of their foreign stocks and bonds, borrowed heavily abroad, let their foreign commerce go, and lost ships and factories to enemy attack.

Their needs for foreign goods are great and pressing but they lack foreign exchange, that is, purchasing power to buy abroad. Without aid they cannot see their way to buy as they used to abroad, not to speak of the additional things they need from abroad to rehabilitate their shattered and devastated economies.

In a situation of this kind what can a country do? It can seek to borrow the foreign currencies it needs, which will enable it to apply the liberal principles of trade which must be the basis of any permanent prosperity.

Or it can draw in its belt. It can reduce the standard of living of its people, conserve in every way the foreign currencies that it finds hard to get, and transfer its foreign trade by Government decree to countries whose currencies are easier to obtain.

In the latter way lies increased discrimination and the division of the commerce of the world into exclusive blocs. We cannot oppose exclusive blocs if we do not help remove the conditions which impel other nations, often against their will, to create them.

We must not only oppose these exclusive trading blocs but we must also cooperate with other nations in removing conditions which breed discrimination in world trade.

Whatever foreign loans we make will, of course, increase the markets for American products, for in the long run the dollars we lend can be spent only in this country.

The countries devastated by the war want to get back to work. They want to get back to production which will enable them to support themselves. When they can do this, they will buy goods from us. America, in helping them, will be helping herself.

We cannot play Santa Claus to the world, but we can make loans to governments whose credit is good, provided such governments will make changes in commercial policies which will make it possible for us to increase our trade with them.

In addition to loans, lend-lease settlements, and the disposal of our surplus war materials, we have been discussing with Great Britain the principle of commercial relations, principles we want to see applied by all nations in the postwar world.

These are the same liberal principles which my friend and predecessor, Cordell Hull, urged for so many years.

They are based on the conviction that what matters most in trade is not the buttressing of particular competitive positions, but the increase of productive employment, the increase of production, and the increase of general prosperity.

The reasons for poverty and hunger are no longer the stinginess of nature. Modern knowledge makes it technically possible for mankind to produce enough good things to go around. The world's present capacity to produce gives it the greatest opportunity in history to increase the standards of living for all peoples of the world.

Trade between countries is one of the greatest forces leading to the fuller use of these tremendously expanded productive powers. But the world will lose this opportunity to improve the lot of her peoples if their countries do not learn to trade as neighbors and friends. If we are going to have a real people's peace, world trade cannot be throttled by burdensome restrictions.

Some of these restrictions are imposed by Government decree; others by private combination. They must be removed if we are to have full employment.

To do this it will be necessary to agree upon some general rules, and to apply them in detail. We shall shortly submit to the peoples of the world our views about these matters.

We intend to propose that commercial quotas and embargoes be restricted to a few really necessary cases, and that discrimination in their application be avoided.

We intend to propose that tariffs be reduced and tariff preferences be eliminated. The Trade Agreements Act is our standing offer to negotiate to that end.

We intend to propose that subsidies, in general, should be the subject of international discussion, and that subsidies on exports should be confined to exceptional cases, under general rules, as soon as the period of emergency adjustment is over.

We intend to propose that governments conducting public enterprises in foreign trade should agree to give fair treatment to commerce of all friendly states, that they should make their purchases and sales on purely economic grounds, and that they should avoid using a monopoly of imports to give excessive protection to their own producers.

We intend to propose that international cartels and monopolies should be prevented by international action from restricting the commerce of the world.

We intend to propose that the special problems of the great primary commodities should be studied internationally, and that consuming countries should have an equal voice with producing countries in whatever decisions may be made.

We intend to propose that the efforts of all countries to maintain full and regular employment should be guided by the rule that no country should solve its domestic problems by measures that would prevent the expansion of world trade, and no country is at liberty to export its unemployment to its neighbors.

We intend to propose that an international trade organization be created, under the Economic and Social Council, as an integral part of the structure of the United Nations.

We intend to propose that the United Nations call an international conference on trade and employment to deal with all these problems.

In preparation for that conference we intend to go forward with actual negotiations with several countries for the reduction of trade barriers, under the Reciprocal Trade Agreements Act.

Just when these negotiations will commence has not been determined. They will be announced in the usual way, as required by the act, and due notice will be given in order that all interested persons may be heard before the detailed offers to be made by the United States are settled.

Success in these negotiations will be the soundest preparation for the general conference we hope will be called by the United Nations Organization.

By proposing that the United Nations Organization appoint a commission to consider the subject of atomic energy and by proposing that the Organization likewise call a conference to enable nations to consider the problems of international trade, we demonstrate our confidence in that Organization as an effective instrumentality for world cooperation and world peace.

After the First World War we rejected the plea of Woodrow Wilson and refused to join the League of Nations. Our action contributed to the ineffectiveness of the League.

Now the situation is different. We have sponsored the United Nations Organization. We are giving it our whole-hearted and enthusiastic support. We recognize our responsibility in the affairs of the world. We shall not evade that responsibility.

With other nations of the world we shall walk hand in hand in the paths of peace in the hope that all peoples can find freedom from fear and freedom from want.

## Recent Statement of Catholic Bishops of America

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. McCORMACK. Mr. Speaker, during the past week the annual conference of the Catholic bishops of the United States was held in Washington, after which a statement was issued by the administrative board of the National Catholic Welfare Conference, and in the light of existing world conditions, a well-considered statement made at an appropriate time, on the very important matters covered therein, and worthy of the profound consideration of all persons without regard to creed, color, or racial origin.

Under the consent granted I include the text of the bishops' statement in my remarks:

TEXT OF BISHOPS' STATEMENT

The war is over but there is no peace in the world. In the Atlantic Charter we were given the broad outline of the peace for which we fought and bled and, at an incalculable price, won a great martial victory.

It was that ideal of peace which sustained us through the war, which inspired the heroic defense of liberty by millions driven underground in enslaved countries. It made small, oppressed nations confide in us as the trustee of their freedoms. It was the broad outline of a good peace.

Are we going to give up this ideal of peace? If, under the pretext of a false realism, we do so, then we shall stand face to face with the awful catastrophe of atomic war.

Since the Moscow Conference of 1943 the United States, Great Britain, and Russia, have undertaken to shape gradually the peace which they are imposing on the nations. From the conferences of these victorious powers there is emerging slowly their pattern for the peace. It is disappointing in the extreme.

Assurances are given us in the announced peace principles of our country but so far results do not square with these principles. We are in perhaps the greatest crisis of human history. Our country has the power, the right and the responsibility to demand a genuine peace, based on justice which will answer the cry in the hearts of men across the world.

PROFOUND DIFFERENCES

We want to work in unity with other nations for the making of a good peace. During the war, perhaps, it may have been necessary for strategic reasons to postpone final decisions on many questions mooted at the conferences of the three great powers. Now we must face the facts.

There are profound differences of thought and policy between Russia and the western democracies. Russia has acted unilaterally on many important settlements. It has sought to establish its sphere of influence in eastern and southeastern Europe, not on the basis of sound regional agreements in which sovereignties and rights are respected, but by the imposition of its sovereignty and by ruthlessly setting up helpless puppet states. Its Asiatic policy, so important for the peace of the world, is an enigma.

The totalitarian dictators promised benefits to the masses through an omnipotent police-state which extends its authority to to all human relations and recognizes no innate freedoms. Their theories, moreover, look to the realization of world well-being as ultimately to be secured by the inclusion of all countries in their system.

Sometimes Russia uses our vocabulary and talks of democracy and rights, but it attaches distorted meanings to the words. We think in terms of our historic culture. We see God-given, inviolable human rights in every person and we know democracy as the free collaboration under law of citizens in a free country.

There is a clash of ideologies. The frank recognition of these differences is preliminary to any sincere effort in realistic world cooperation for peace. The basis of this cooperation must be mutual adherence to justice. It would be unjust for us to be an accomplice in violating the rights of nations, groups, and individuals anywhere in the world.

A first step toward effective negotiation for peace is to have a plan. A good plan states principles in terms of all the specific questions at issue. Instead, so far, we have compromised and sought to make mere piecemeal settlements.

RETURN TO POWER POLITICS

Instead of honest, promising discussion even on diverging plans, we are witnessing a return of the tragedy of power politics and the danger of balance of power arrangements which, with the substitution of mere expediency for justice, have begotten war after war. We must, indeed, aim at collaborating with all of our allies in the making of a good peace. There are, however, concessions which we dare not make because they are immoral and destructive of genuine peace.

Our peace program envisions a world organization of nations. The Charter which emerged from the San Francisco Conference, while undoubtedly an improvement on the Dumbarton Oaks proposals, does not provide for a sound, institutional organization of the international society. The Security Council provisions make it no more than a virtual alliance of the great powers for the maintenance of peace. These nations are given a status above the law.

Nevertheless, our country acted wisely in deciding to participate in this world organization. It is better than world chaos. From the provision in the Charter for calling a constituent assembly in the future, there comes the hope that in time the defects may be eliminated and we may have a sound, institutional organization of the international community which will develop, not through mere voluntary concessions of the nations, but from the recognition of the rights and duties of international society.

While peace is in the making, there are urgent issues which we can no longer evade. At Yalta we gave a pledge to the Polish people and assumed responsibility before the world that they would be unhampered in setting up their own independent, democratic government.

POLISH, BALKAN ISSUES

Are we working to the fulfillment of that pledge in the full measure of our responsibility and our power? What apology can be offered for the failure of the protagonists of democracy to protest the absorption by force and artifice of the Baltic countries into the Union of Soviet Republics?

We are shocked by the news which is leaking out from Slovakia, Croatia, Slovenia, and other southeastern European countries. Religious persecution, which is both brutal and cunning, rages in many lands. No reason of policy justifies our silence. What is happening behind the black-out of eastern and southeastern Europe is a stark contradiction to the high ideals which inspired our fighting to save the world from totalitarian aggression.

No one can fail to see the importance of a reconstructed, revitalized Europe, which is the cradle of western culture. We deplore the tragic indifference to the plight of the Italian people who threw off the chains of a Fascist regime, who fought side by side with us in ardent loyalty. For over two long years of agony the friends of democracy in that country have had to stand by in impotence while we have toyed with the vital problems of relief and rehabilitation and deferred the fulfillment of our own solemn promises.

Our own national interest, as well as the cause of world peace, and the fate of Christian culture are at stake in Italy. Today, it is an outpost of western civilization. We are fully confident that the Italian people, if we save them from despair by our helpful interest, will stand fast against the deceitful appeal of alien and subversive ideologies and shape their future in the spirit of their own noble Christian tradition.

We cannot be unconcerned about the future of Germany, Austria, and Hungary. Whatever period of probation must be imposed on the vanquished nations, we must help them to take their rightful place in the family of nations. To treat them in a spirit of vengeance is neither right nor politic.

RELIEF URGED ON CONGRESS

Justice demands the punishment of the guilty and reasonable reparations of damage done. But we cannot forget, or allow our representatives to forget, that our traditional system of punitive justice is anchored to the concept of individual responsibility. The inhumanities which now mark the mass transference of populations, the systematized use of slave labor and the cruel treatment of prisoners of war should have no place in our civilization.

Acute suffering is the daily lot of whole populations in many war-torn lands. Every report indicates that unless heroic measures are taken at once, millions will die from starvation and exposure during the coming winter. The feeding and clothing and sheltering of these suffering people is not a work which can be left to some future convenient date.

Our country, because of our greater resources, must do the major part of this work of relief. In it we have the right and duty to insist on the leadership which corresponds to our sacrifices and contributions. It is imperative that Congress make adequate appropriations for this work from the Public Treasury.

It is equally imperative that private relief agencies be given a full opportunity to carry on their beneficent work among all suffering peoples. And relief must envision something larger than merely feeding the starving and sheltering the homeless. Help must be given to peoples whose economies are ruined. They have the right to assistance in getting back to normal economic life. Neither the prosperity of the greater nations nor their might will prevent war unless conditions are removed in which poor, helpless peoples are denied the opportunity of a decent living standard. The world is one only insofar as men live together as brothers under God.

OUR GRAVE RESPONSIBILITY

Ours is a grave responsibility. The heart and hand of America are called upon in a way that is unique, not only in the history of our country but even in the annals of mankind. We know that democracy is as capable of solving the admittedly difficult problems of peace as it has shown itself in war. We must be true to ourselves. We must hold fast to our own free institutions. We must resolutely oppose the few among us who are trying to sabotage them. We may well pity those who in their half-veiled sympathy for totalitarianism are playing with the thought that perhaps in this great emergency its day is at hand. On bended knees let us ask God in His blessed Providence to help us to be the vigorous champion of democratic freedom and the generous friend of the needy and oppressed throughout the world.

Signed by the members of the administrative board, National Catholic Welfare Conference, in the names of the Bishops of the United States:

Samuel A. Stritch, Archbishop of Chicago; John Gregory Murray, Archbishop of St. Paul; Francis J. Spellman, Archbishop of New York; John Mark Gannon, Bishop of Erie; John J. Mitty, Archbishop of San Francisco; Joseph F. Rummel, Archbishop of New Orleans; Richard J. Cushing, Archbishop of Boston; James H. Ryan, Archbishop of Omaha; John F. Noll, Bishop of Fort Wayne; Karl J. Alter, Bishop of Toledo.

## Pressure?

EXTENSION OF REMARKS

OF

## HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. HOFFMAN. Mr. Speaker, article I of the Bill of Rights, an inherent part of our Constitution, states:

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

It will be noted that our forefathers in their wisdom considered the right of petition to be such an important one that they included it in the first amendment to the Constitution, along with freedom of religion, freedom of speech and of the press. Even Congress, the lawmaker of the land, is expressly prohibited from enacting legislation which in any manner might abridge the right of petition.

Last week, in the lawful exercise of that right, a representative group of automobile dealers came to Washington to present to the House Small Business Committee, a special committee of the House of Representatives—a part of the Congress, a part of our Government—their views on the proposed OPA order to compel automobile dealers to absorb part or all of any price increase which might be granted to car manufacturers. In the lawful exercise of that right, dealers from all over the United States also presented their views to individual Members of Congress.

Subsequently, and on November 13, Mr. Chester Bowles, OPA's Administrator, appeared before the same House committee and, as a part of his attempt to justify his agency's proposed order, described the action of the automobile dealers in presenting their side of the issue as "the greatest single pressure group operation since OPA was established."

Well, it must be admitted that Mr. Bowles should know something about pressure and its use as a medium of coercion, for the administration which appointed him and which sponsors the policies of his agency has given many an object demonstration of its pressure tactics. Is there any businessman or, for that matter, anyone who has dealt with the Government, who cannot cite some instance of pressure exerted—directly or indirectly—not only by Mr. Bowles' own agency, but by many other administration agencies?

And what about the pressure which administration leaders attempt to exert upon Members of Congress? As a recent example: For some time, it has been the plan to recess for a short period so that Congressmen might have an opportunity to go home for the holidays; to visit their families, their neighbors and friends, during the festive season. But not many days ago, the Democratic leader in the Senate announced that Congress need not expect to leave the Capital until it had passed certain legislation on the must list of the administration.

Obviously, Congress does not consider the legislation with a favorable eye. Had Congress wished to pass it, that action could have been taken some weeks ago. If even a bare majority favored its passage or desired that it be brought up for consideration, it should not have been too difficult a matter to secure 218 signatures to a petition which would have forced the reporting out of the bill and its consideration on the floor of the House. But no such action was taken. So the administration leaders crack the whip—exert a little "pressure"; tell Congress it will do as ordered or else.

Yes, for examples of real "pressure," OPA's Administrator should observe the tactics of the party in power—of the administration under which he holds his appointment.

Mr. Bowles, in his statement to the House Small Business Committee, further said:

This idea of government by pressure is an ominous sign of our times.

That may be, but the ominousness of the situation to which Mr. Bowles refers lies not in the fact that citizens exercise their constitutional right to petition their Government, to present their grievances, but in the fact that the administration in control of that Government should seek to stifle that right, to deny its citizens the opportunity to be heard, to present their case, and to have it decided on its merits. Appointive officials should realize that in our Government they are the servants, not the masters, of the people.

## Is Compulsory Military Peacetime Training Adequate or Necessary?

EXTENSION OF REMARKS
OF
## HON. GRAHAM A. BARDEN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. BARDEN. Mr. Speaker, under leave granted me, I insert a most interesting and informative sermon delivered by the Reverend F. Hubert Morris, of the First Presbyterian Church, New Bern, N. C. I know Reverend Morris personally, and know him to be able, sincere, and courageous. Regardless of whether a person is for or against compulsory military training or peacetime draft, this sermon would prove to be quite interesting.

There are times in the history of a nation when it is necessary to make revolutionary changes in government. Governments are made for the people and not people for governments. At least that is true of democratic governments. We remember the early days of our country when we were willing to be under the government of the British Emipre, but there came a time when Thirteen Colonies decided that for the good of the people who dwelt in those colonies a new government should be established. That was revolution! It was costly as all revolutions are costly, but history has proved that the American Colonies made a wise choice by taking a path that led to revolution.

There are times when revolutionary changes have to be made within governments. But a people ought to think long and seriously before they make a radical departure from a traditional policy, especially if that policy has always worked effectively. The United States is facing the question today as to whether we should make a radical departure from a policy that has always proved effective. The question is this: Is compulsory military peacetime training adequate or necessary?

1. I maintain that peacetime conscription does not insure peace. We are told by the military men of our country that to preserve the peace we will have to have peacetime conscription. Our President has become convinced by the military men of our country that we need peacetime conscription. They believe it is necessary for the defense of our Nation. They believe it will build the health and the morale of the youth of the Nation. They believe it will teach discipline that will carry over into civilian life. They believe that with it we will be immune to attack in the future from any possible aggressor. Every one of these claims is debatable.

The first point I would like to emphasize is that peacetime conscription does not insure peace. It never has insured peace and it never will. The four tasks that the President wants this conscripted army to do, can be done by an army of regulars who delight in warfare. Germany has had universal military training for many years. The German people became more and more military-minded, a nation of goose-stepping soldiers. As Roy L. Ruth said: "They came to delight in flexing their martial muscles and growling out threats to small nations around them. And finally, conscious of great military might, they decided to strike out and take what they wanted." I am sure that we do not want the United States to become a goose-stepping nation of soldiers menacing the peace of the world. That must not happen here. The exponents of peacetime military training say it cannot happen here. They point out the fact that this military machine will not be an army, but civilians trained for national defense. The point remains that this so-called civilian army which in itself is a contradiction in terms, will be under the rigid discipline of our Army men, and armies make dictators possible.

In 1939 France had the finest and the best equipped army in the world. She also had peacetime conscription but that did not keep her from being attacked by Germany. France has had 12 wars under peacetime conscription and lost 5 of them. Under peacetime conscription Germany has participated in 10 wars. Frank L. Wright tells us in the Christian Century a few months ago, that in 1926 prominent citizens of 14 countries called upon the League of Nations to propose the abolition of compulsory military training in all countries. "It is our belief," the manifesto continued, "that conscript armies, with their large corps of professional officers, are a grave menace to peace." Consider if you will, the countries that have had peacetime conscription, Germany, Japan, Italy, and France. Have these countries been noted for their peace-loving natures? Did peacetime conscription keep them from war? Past history has proven concisely that peacetime conscription has not paved the way to peace, but to war.

At the request of the State Department, the committee of Congress which reports on the various bills designed to establish peacetime conscription last spring agreed to postpone consideration until summer. The reason given is interesting. "The State Department feared that if peacetime conscription should come up in Congress while the San Francisco Conference was in session some of the other nations might get mistaken ideas about the devotion of this country to the cause of peace and international collaboration." The newspaper release said, "Discussion at this time might muddy the waters at San Francisco." I am sure that it would have muddied the waters at that time, even as it has now. I have been thinking about Russia. She has gone ahead with demobilization of her troops faster than any other of the victor nations. How will she interpret the action of this country if we embrace peacetime military training? As Roy L. Ruth has said: "To talk about an international organization to keep the peace while advocating universal military training is the most nonsensical double-talk."

Then there is another question that I would like to raise. Why do we need peacetime military training? This question has never been answered satisfactorily. Who is the enemy that we will be prepared to fight? Have we not demanded and received unconditional surrender from Germany and Japan? Is there not to be a military occupation of these lands for many years, with periodic inspections of their factories to assure ourselves that they are not preparing for war? Are not the enemy countries completely disarmed? Are not the victor nations in the European theater united in their efforts for the preservation of peace? Did not Britain and Russia aid us in the fight against Japan? If all these things are true, why do we need compulsory military training in peacetime? Do the military men have plans for another war? Are they afraid we are facing another conflict? If so, the American people have the right to be told, and should be told.

This past summer 12 American generals landed one morning at LaGuardia Field. They gave a mass interview to the press, and Gen. Jacob L. Devers acted as spokesman for the group. The point that was stressed by General Devers was that Germany is through for a hundred years as a war-making power. This was the unanimous opinion of the 12 generals. Certainly we cannot expect Germany or Japan to be aggressors in the near future. Why is there such haste in getting conscription saddled on the American people?

General Eisenhower on his return home said: "The task of a commander is to send men into battle knowing some of them—often many—must be killed or wounded in order to achieve necessary missions. It is a soul-killing task. My sorrow is not only for the fine young lives lost or broken, but it is equally for the parents, the wives, and the friends who have been bereaved. The price they pay is possibly the greatest for the victory won. The blackness of their grief can be relieved only by the faith that all this shall not happen again." General Patton, however, in a speech to a kindergarten class in a Los Angeles Sunday school said: "You children here, whether you like it or not, are the soldiers of the next war. There will be war again, because there have always been such things." (Editorial, Christian Century, July 4, 1945.) Let us have the faith of General Eisenhower that "this shall not happen again."

It is my firm belief based on the facts already presented, that peacetime military conscription does not insure peace. In fact, it seems to breed wars. If peacetime conscription insured peace, then Europe would be the most peaceful continent in the world.

2. The second reason I am opposed to compulsory military training is because it is a form of totalitarianism. In other words, peacetime military training, as it is proposed at the present time is not in accord with democratic principles. We have fought wars to obtain freedom and to put in compulsory training is to destroy that freedom for which we have fought.

In time of war we surrender our personal judgment. We give the War Department the right to regulate industry and commerce, to control labor, and to mobilize the manpower of the Nation. War of necessity demands dictator methods and we gladly surrender our personal rights during a period of warfare, but the American people will not want to surrender their liberty a moment longer than is necessary.

Compulsory military training is not a democratic procedure. It is not fair to the youth of our country. The bills as they now stand (H. R. 515 and S. 188) provide for the compulsory induction into the armed service of our country every able-bodied male youth at the age of 18 for a year of military training. Special cases might be allowed to enter later, but not later than age 22. If the youth is able bodied there is no appeal, he has to enter into this military service. Is not that dictatorship?

Then too there is the matter of religious freedom involved. You will find that all the major religious denominations, both Protestant and Catholic have spoken out against this proposed conscription. (It is interesting in this connection that not a single major religious denomination spoke out against the Selective Service Act when it was passed in 1940.) This matter of religious freedom is dear to my heart and to the hearts of most churchmen. Suppose a man's conscience will not permit him to bear arms? He must bear arms or suffer the consequences. If this bill is made law there are thousands in this fair land of ours who would be jailed, because according to their conscience, they must obey God rather than man. Now I am not a pacifist and have never been one. I feel it is necessary to restrain evil if that evil is embodied in a person or a State. I can, I hope, turn my other cheek, but I do not feel that I should turn the cheeks of my children or those of unborn generations to a savage enemy who would destroy, if he could, every vestige of Christianity. But on the other hand there are thousands who would have to disobey this law because their conscience would not permit them to take this training.

It seems strange to me that in a country where religious freedom has been guaranteed, that where a country was settled largely because people sought religious freedom, that those who love religious freedom would have to flee from it because of professional militarists who would rule the Nation. Have you thought about that?

We were thrilled last week to read in Time, [October 22, 1945] that President Harry Truman had presented the Congressional Medal of Honor to a conscientious objector. Here is the story. Desmond Doss was a carpenter, a Seventh-Day Adventist, and a pacifist. He refused to bear arms in World War II, but he did not object to serving as an Army medical corpsman. He asked for, and received assignments in the front lines. He knew fear, but conquered his fear through prayer and faith in his God. During the fighting on Guam and Leyte he became famous because of his fearlessness in the face of death. In the Okinawa campaign his fame grew. Twice he was wounded. Amid heavy artillery, mortar, and rifle fire he was exposed to the fire of the enemy, while lowering 75 wounded men down a rock wall to safety. I mention this story only as an illustration to show that even pacifists are willing to make any sacrifices for their country, except to deny the freedom of their conscience. Under peacetime compulsory military training, without some exemptions, Desmond Doss would never have received the Congressional Medal of Honor because he would have been behind bars for refusing to bear arms.

It is not strange that the majority of the educators of our country are opposed to peacetime training. It would wreck the educational system of our country. No educational organization has gone on record for peacetime conscription whereas most of them have expressed their opposition. Some months ago, 12 university presidents wrote to the President of the United States expressing their opposition to peacetime military training and listed 6 reasons for their opposition. These presidents from Harvard, Chicago, Vanderbilt, Cornell, Princeton, Tulane, Missouri, Kansas, Indiana, California, Stanford, and Brown, have not received satisfactory answers to their opposition.

It is admitted that the Army life is an education in itself, but it is not the type of education a boy would need for his life work, unless he wants an Army career. As Dr. Walter L. Lingle has pointed out in the Christian Observer (July 18, 1945): "Gen. Robert E. Lee, who was one of the greatest soldiers of all time should be an authority on that point. In his great life of Lee, Dr. Douglas Freeman tells us that General Lee refused to introduce military training into Washington and Lee University when he was president of that institution, saying that 'military training is not the best to qualify men for the duties of citizenship, or for success in life.'"

When a boy goes to war, or is compelled to take military training, do you think it will be easy to come back to a college campus? It will not. For war is not a boy's game, but is conducted by boys who have become men through the processes of war. In other words, boys become men when they take military training, and you can't become a man and then easily go back to a boy's life. And the Army intends to make fighters out of these conscripted youths. In a circular distributed to officers the Army says: "There will be no place in a sound universal military training program for activities that are nonessential to the task of preparing our young men for combat." Is it not dictatorship for a government to insist on taking over a year of the education of its youth, whether the youth of the land wishes it or not? It is. As these 12 university presidents mentioned above said: "Moreover, we do not favor the control of even a year's education of young men by the Federal Government."

The exponents of peacetime-military training say that such a system will build the health and the morale of the youth of the Nation and will teach them discipline. Charles Clayton Morrison has pointed out this fact in regard to the health of the soldier: "If we are to head off the shocking incidence of physical and mental deficiency which the present war has revealed in our young men and women, it will be necessary to begin before they reach draft age. A large proportion of the defects which have incapacitated so many is the result of inadequate food, clothing, housing, and education in the growing years of adolescence and childhood."

Dr. W. W. Sikes, in the Presbyterian Outlook, quotes Hanson W. Baldwin, one of the foremost military analysts, as saying: "As to health, the benefits of peacetime conscription would be slight and slow, for the program would not strike at the root of our physical and mental deficiencies."

The discipline of Army life will not have any good carry-over value into civilian life. The American youth rebels against the discipline of the Army. He does not like it, nor does he want anything to do with it. It is the reaction to discipline that makes the soldier a problem when he is on furlough or on leave of liberty in a town. One youngster came to see me one Saturday night and he had been drinking heavily. He apologized for his condition and then he said: "If you had a top sergeant like mine, who was on your neck all the time, you would get drunk, too." Now, then, is it not reasonable to believe that in a conscripted peacetime Army our youth would rebel against this Army discipline? Would not this cause a problem when he returned to his home after serving his year in the conscripted Army? Can you not see the readjustments that he would have to make?

Then, too, I wonder if any student of adolescent psychology would agree that Army life is conducive to the moral development of an 18-year-old youngster? The boy is then at one of the most formative periods of his life, and everyone will admit that there are many demoralizing influences connected with Army life. An Army man wrote: "The average soldier is pretty much the same as he was in civilian life, except that his morals are lower, his conversation coarser, and his religious outlook more casual." The 18-year-old is in the period of his life when he doubts everything that he is told. It is the age when he begins to question the eternal truths he had been taught as a child. As a baby he simply believed everything his parents told

him because they were his parents. But by the time he is 18 he has studied science and he begins to question the spiritual truths he had learned as a child. Now, here is the question: Can he face this period of his life better in the Army than in his home surrounded by parents who love him and by a church that is interested in his moral development? Is it not the method of the dictator to make the youth leave his home whether he wants to leave or not? Our militarists in the United States are better men morally than Hitler or Tojo ever thought about being, but governmentally all militarists are the same stripe as any dictator we have ever seen.

I am thankful for Christian gentlemen as General Marshall and General Eisenhower who lead our armies, but is it not a fact that generally speaking, Army officers do not care about morals? Brig. Gen. Henry J. Reilly said: "Morale is more important than morals to the soldier. Leave the morale to the Army and to hell with morals. Some people want to keep the young soldier from women and liquor. That's what he needs." It is true that those who have strong Christian characters come out of the Army even stronger in their Christian convictions, but it leaves scars upon their souls. I have talked with many marines in my congregation, and have yet to find one who thinks the life in the service is conducive to moral Christian development.

3. The third thing I want you to consider is the economic burden of peacetime conscription. Frank L. Wright told us last March in the Christian Century, "that peacetime conscription will prove a serious economic burden to a Nation already staggering under an enormous debt. A committee of the United States Chamber of Commerce estimates the cost at three or possibly four billion dollars per year. The money expended on a million conscripts in 1 year would easily provide 4 to 7 years of academic, professional or technical training for these same youth."

The cost of this peacetime army that our military men want will run into astronomical figures. One who attended the military hearings in Washington recently said that the cost for every private in this proposed program would be $100 per month. Multiply that by 1,200,000 and you will have considered the cost of the privates alone.

I received a letter recently from the Honorable Josephus Daniels, who as you remember was the Secretary of the Navy under President Wilson for 8 years. He sent me his editorial which appeared in the Raleigh News and Observer of June 12. In that article he tells of a company of civilian officials and officers of the Army and Navy discussing this subject of peacetime conscription. A civilian was advancing the familiar arguments for conscription, advanced first by Bismarck and then by Hitler. The Honorable Josephus Daniels said an admiral interrupted to ask the question: "How much would it cost to give this universal training?" As argument after argument was brought forth, the admiral confounded the group with the same statement: "How much will it cost?" Finally one of the group said: "No matter what the cost, it will be cheaper than the two wars in which we have been engaged." The persistent admiral asked: "Did compulsory military service in France stop Hitler in 1940? And did it guarantee the peace you think that an un-American system would insure for us when a war lord is bent on military domination?" The question remains unanswered. Then the vice admiral said: "I have not forgotten the fundamentals of democracy I learned as a boy. Compulsory military service in peacetime is contrary to those principles. Let us stick to our Americanism and we have nothing to fear."

There is no present, immediate need to change our American system. The Selective Service Act is still in effect and will continue for 6 months after Congress has declared the war to be ended. "This act," as Dr. Sikes reminds us, "has completely mobilized our manpower. Every eligible boy 18 years old will not only be a soldier when the war ends, but by section 3 (c) of the act he and all his fellows inducted into service will remain as a reserve in the Army or Navy subject to call to active duty for a period of 10 years or until they are 45 years old." With from ten to thirteen million veterans subject to call if we need them, why then the haste to pass this legislation now? The War Department remembers with what ease the eighteenth amendment was passed during the last World War and they want to settle it now while the pressure is on the American people.

With a well-trained standing Army which we have—and it need not be large—and with a Navy that is equal to all the other navies of the world, and working with the Allies in keeping the peace secure in the defeated countries, there is no need for peacetime military training in the United States.

Both of the World Wars in which we have engaged have proved the fact that the graduates of our American high schools, colleges, and universities have shown an ability to think quickly and correctly when confronted by emergencies that transcended the achievements of those who have been trained from childhood in the science of warfare. Gen. Omar Bradley has said that the American soldier is the finest trained soldier in the world.

I pray God we may never have to fight another war. But if we do, remember the American way has always proved successful. We have never lost a war. Why copy a method that has been proved to be obsolete? Why change from one method that has always proved successful to one that has failed over and over again?

As we began, there are times when revolutionary changes have to be made in governments, but the American people ought to think long and seriously before we take the road to a militarized government.

F. HUBERT MORRIS,
*Minister, First Presbyterian Church,*
*New Bern, N. C.*

## Statement by the American Slav Congress Before House Appropriations Committee Hearing on President Truman's Request for $550,000,000 UNRRA Allotment

EXTENSION OF REMARKS

OF

## HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, under permission to extend and revise my remarks in the RECORD, I wish to include a statement by the American Slav Congress before the House Appropriations Committee on October 11, 1945.

Mr. Speaker, peace is the objective of our foreign policy as it is the objective of the peoples of the world. But millions upon millions of people in the world will face starvation and cold this winter. We are the only nation which can greatly help. We help not only to succor those in dire need but so that we may help to bring about the healthy conditions which are essential to the establishment of a just and enduring peace.

Remembering that peace is our objective, I endorse the statement made by the American Slav Congress.

Mr. Chairman, members of the House Appropriations Committee, appearing on behalf of the American Slav Congress, we wish to state from the outset that our organization, representing millions of Slavic Americans throughout the country, wholeheartedly supports President Truman's request to Congress for an additional appropriation of $550,000,000 for UNRRA aid to the peoples of the liberated countries.

The urgency for such an appropriation has been amply emphasized in the President's message to Congress and in the reports by UNRRA representatives in the hunger-stricken regions of eastern Europe and elsewhere.

If additional proof is needed, here is a letter by a nurse who holds the rank of captain in the United States Public Health Service and is attached to UNRRA in Yugoslavia. She writes:

"I'm about to go to Bosnia to improve the orphan children's diet by adding two ounces of powdered milk to the one piece of bread they eat every other day. Of course, I'm supposed to teach nutrition—what they should eat if they had it. In case anyone at home wants to know—they've lost the victory if we don't feed southern Europe this winter. We hear that the United States of America is afraid to draw on its food reserves because the average American diet is down to 3,800 calories. Ask them how they'd like to live on 800 and watch their children starve to death. It's true that about two of the 15,000,000 people will have enough to eat. But there's no surplus, and even if there was, there's no transportation. Roads have to be rebuilt and railroads reestablished. Between Servia and Bosnia the railroad has 99 tunnels and every one is dynamited and mined. Hard manual labor is required and hungry people can't work very efficiently. The enemy has been brutally cruel to this nation that refused to capitulate and literally fought on with bare hands. For miles on end there isn't a village or farm left standing. I read somewhere that all America knows about Cassino, but there are thousands of Cassinos in Yugoslavia. Our nursing program is started. The girls want to learn, but I wonder if it's worth the effort if the nurses and patients are going to starve this winter. You may be sure the Yugoslavs will produce superhuman effort and if they're fed this winter they'll do the rest themselves."

Another heartbreaking story of the terrible sufferings of the people of Yugoslavia and how inadequate present UNRRA help is was offered by chief of UNRRA mission to that heroic country, Mr. Srgeychik; in a statement to the press he said:

"During the day the men and horses are dying. They bury men, women, and children but have no time to bury the horses. The urgent vision of winter drives them on. They and those who lie buried by the road are casualties, not of the war but of the liberation, victims of the promise that would make an ironic epitaph: 'Being determined that immediately upon the liberation of any area by the armed forces of the United Nations or as a consequence of the retreat of the enemy the population shall receive aid and relief from their sufferings; food, clothing, and shelter, and aid in the prevention of pestilence and in the recovery of the health of the people.' This was written in 1943 by the 44 nations setting up the UNRRA. The people who came back to their villages heard it on the radio or as it was repeated from mouth to mouth.

"You do not have to travel far in Yugoslavia to see the meaning of the facts and figures in terms of suffering and courage, life and death. The people in devastated Yugoslavia know that many will die this winter. Even on the hottest days, as they sweat at their work, the prospect of a winter without food, clothing, or shelter is before their eyes. They know it is too late to save all, so their only concern is to make the death roll as short as possible. The time has come for more than promises. The UNRRA mission to Yugoslavia, aware of world shortages, advised the Yugoslav Government to prepare their requests, not on the basis laid down in 1943 but on their own bare minimum requirements. They were advised that the requests would stand a better chance of acceptance if this were done. But when these requests were submitted by UNRRA the combined boards in Washington drastically scaled down the total allocation for UNRRA.

"The area of western Yugoslavia is as large and as unfertile as Greece. Yet the allocation is eight times as much to Greece as to Yugoslavia. This does not mean to say that Greece does not need these supplies, but that Yugoslavia needs them equally. The point is that the total allocated by the combined boards to UNRRA countries is quite inadequate, no matter how it is divided. Washington is far from Europe, but if the members of the combined boards could spend a day in Lika and Bosnia and see with what courage the Yugoslavs are facing their grim present and their grimmer future, it would be impossible for them to continue the allocations at the present inadequate level. They would realize that reduction in Washington means the increase of the death rate in Europe."

In Central Poland, for instance, 9 out of 10 persons you meet, Gladwin Hill cabled New York Times the other day, from Stettin are those who have been uprooted, persons who came from somewhere else, persons whose normal livelihood has been wiped out and who are seeking an existence elsewhere, persons whose mothers, fathers, brothers, sisters, sons and daughters have been slaughtered by the Germans.

Ukraine and Byelorussia have been devastated beyond description. All these countries do not have foreign exchange and cannot buy any food even if they can find it somewhere. Their people depend entirely on UNRRA aid.

Letters from the people of these countries to relatives in the United States are full of the most terrible stories of the slow death by hunger. Most of these letters have been printed in the Slavic newspapers of Pittsburgh, Cleveland, Detroit, Chicago, New York, and the large Slavic population of these and other vital centers of the country have been greatly aroused by the failure of Congress so far to allocate additional funds for UNRRA.

We have here with us a letter to Congress signed by 60 of the most outstanding Americans of Slav descent in which they urge every Congressman to give his or her support to the request of President Truman. We are submitting this letter with the names of the signers as part of our statement at this hearing. Millions of Slavic Americans throughout the country have been among the most conscientious and energetic participants in the war effort of our country and their view on this important question should be taken under the most serious consideration by Congress. We would like also to call your attention to an editorial in yesterday's New York Post entitled "Our Pledge to UNRRA" in which this problem is treated in a very concrete and simple way that makes the need for immediate action most obvious. The editorial states in one part:

"Deaths from tuberculosis, scarlet fever, diphtheria, etc., are sweeping Europe, claiming thousands more people than were killed by the fighting. In some areas, 8 out of 10 babies have been dying soon after birth.

"These decimating diseases are all spreading from the same cause—malnutrition. These hundreds of thousands of people are all dying by the same death—starvation."

The $550,000,000 which the President requests has been long overdue. This is the balance of the appropriation which we promised UNRRA more than a year ago. Frankly speaking, it seems inconceivable how any further delay in appropriating this sum can be justified on any humanitarian ground.

Representative CLARENCE BROWN from Ohio said a few days ago as reported in the press that no UNRRA funds should be used in foreign countries which do not accord free access to all news and do not permit freedom of the press as it is understood in the United States. But such a condition in granting aid to the hungry men, women, and children of the liberated countries will be a gross departure from and a clear violation of the basic humanitarian principles and purposes of UNRRA. Such a condition would mean that we would use food and clothing as a political weapon, as a club over the heads of our allies who happen to have a different concept of what constitutes a free press. No; a free country like ours cannot adopt a policy of using food to impose on its Allies its views on vital matters. We call upon Congress to reject such proposals. They are inconsistent with the spirit and the principles of our democracy.

In our opinion, Congress should approve speedily the appropriation on the basis of our freely arrived at and freely undertaken obligation to help save the lives of millions of hungry people who fought our common Nazi foe and whose towns and homes were destroyed by the Nazi hordes.

Any further delay in approving and giving this sum to UNRRA will mean an increase of the death rate in the liberated countries. America should not do that. Congress must not commit such an act.

We strongly urge immediate approval by Congress of the request of President Truman for $550,000,000 for UNRRA aid to the peoples of the liberated countries. We also urge favorable consideration by Congress of UNRRA's request for a second assessment of 1 percent of the national income of the member nations which have not suffered invasion. "Without food there can be no peace," General Eisenhower declared.

"We must act and act now. It is inconceivable that the United Nations could abandon the peoples of the liberated areas of Europe at the moment of their greatest peril," said UNRRA Director, former Governor Lehman.

Timely aid is a double aid.

ZLATKO BALOKOVIC,
*Acting President.*
GEORGE PIRINSKY,
*Executive Secretary.*

## Palestine and the Jewish Need

EXTENSION OF REMARKS
OF
## HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. LUDLOW. Mr. Speaker, Dr. Clarence W. Efroymson, of Butler University, a brilliant educator and an outstanding authority on the Jewish homeland, has sent me a letter entitled "Palestine and the Jewish Need—1945 Summary," which contains a wealth of information in regard to the Palestine problem. By unanimous consent of the House I present this illuminating document for printing in the CONGRESSIONAL RECORD. It is as follows:

PALESTINE AND THE JEWISH NEED—1945
SUMMARY

I. PLIGHT OF THE JEWS IN EUROPE

From the Jewish point of view, Continental Europe west of the old Soviet boundary is a charnel house. The indictment before the high tribunal at Nuremberg states that 5,700,000 Jews of the 9,600,000 formerly living in the areas dominated by the Nazis have disappeared. The most conservative estimates indicate that 4,000,000 Jews were slaughtered by the Nazis and their allies.

It is estimated that 1,250,000 Jews remain at this moment in Europe west of the old Soviet boundaries. (I think there is no point in this paper to attempt to account for the balance, 2,750,000, of the 5,700,000 who have not disappeared.)

Something of the plight of the million and a quarter who remain may be gleaned from the recently released report to President Truman of Earl G. Harrison. Mr. Harrison, who is dean of the law school of the University of Pennsylvania, was sent to Europe to inquire into the situation of displaced persons in western Europe and in the areas of Germany and Austria occupied by the United States. His report may be summarized in one sentence. In these occupied areas there are 100,000 Jews still in "camps" and who have no homes to go to. (Controversy has arisen with respect to conditions in these camps, but that is aside the present point.) Dean Harrison says these persons "want to be evacuated to Palestine now, just as other national groups are being evacuated to their homes."

There can be no doubt as to why these people want to go to Palestine and not back to the countries from which they fled or were evacuated. All reports agree on this—it is the legacy of Hitler. There is a vast difference in this respect between the countries of eastern Europe—Poland, Rumania, Hungary, etc.—where the bulk of the 1,250,000 survivors cower in terror; and western Europe—France, Belgium, Holland, etc. But even in the latter, where at least Jews are not today being openly murdered, an impossible situation confronts most of the returning Jews. In these western countries, in addition to the influence of a decade of intensive anti-Semitic propaganda from Germany, there are active groups who have special interests to defend. These are the—sometimes innocent—purchasers of Jewish property and occupants of former Jewish positions. They fear any attempt of returning Jews to reclaim properties, rented apartments and homes, and business which the Nazis took from Jews and then sold to Frenchmen, Belgians, Dutchmen, etc. In France De Gaulle abandoned the idea of prosecuting some thousands of Frenchmen who had cooperated in the Vichy measures of expropriation for fear lest such prosecutions would increase anti-Semitism, and a league of tenants (occupying properties stolen from Jews and other victims of Nazis) had to be dissolved by Government action. Even in Holland, classic land of European freedom, returning Jews fear to claim what once was theirs, and those who benefited by their expulsion are busy fanning the flames of hatred.

In eastern Europe the situation is infinitely worse. There Hitler's agents found all too much indigenous anti-Semitism on which to build their hate structure. Today Jews scurry from the smaller towns where they had lived for generations to the poor protection of numbers—and the presence of occupation troops—in the capitals, Budapest, Bucharest, Warsaw. American soldiers write from Berlin of Jews who returned to Poland

and now have sought temporary refuge in—of all places—Berlin.

II. PALESTINE THE HAVEN

Dean Harrison reported that some of the Jews in the camps which he inspected want to go to English-speaking countries—mostly those who have relatives there; and that some Polish and other Jews want to return—temporarily, to look for their families—to Poland and the Baltic countries; but that the mass know only one place to go to—Palestine.

In Palestine there is today an economically healthy Jewish community of about 650,000 persons. These men and women are anxious and prepared to receive immediately and take care of not less than 100,000 refugees, and many more in the months and years to follow.

The political foundation of this community is laid, of course, in the various papers and statements issued by the British, American, and other Allied governments in the closing phases of World War I, and in particular, in the mandate of July 24, 1922, whereby the Council of the League of Nations turned Palestine over to Great Britain, "to be placed under such political, administrative, and economic conditions * * * as will secure the establishment of the Jewish national home * * * Jewish immigration under suitable conditions, is to be facilitated, * * * and close settlement by the Jews on the land * * * is to be encouraged."

On the basis of this international sanction the Jews have built a flourishing community which successfully absorbed 61,854 Jewish refugees in the single year 1935, when the community was less than half its present size. This is not the place to describe Jewish achievement in Palestine. Suffice to say that 150,000 of the immigrants are settled in 300 agricultural communities, deriving sustenance from diversified farming and citriculture; that the Jews have developed a great Hebrew university on Mount Scopus outside Jerusalem, and a thriving industry in Tel-Aviv and other towns, which contributed immeasurably to the success of Montgomery in Africa; and that the fact of the Jewish community in Palestine was a potent factor in discouraging the tendency of Fascist-minded Arab sheiks to revolt when Hitler's armies threatened Suez and the Middle East. Incidentally, all this was accomplished at a time when not less than 30,000 Palestinian Jewish volunteers had left their farms and shops to serve in the British ranks.

III. THE WHITE PAPER

The present impasse is the direct result of the issuance by the Chamberlain government in May 1939 of the so-called white paper. This document—which is still in force—provides that, from May 1939, not more than 75,000 Jews may emigrate to Palestine, except with Arab agreement. In addition, it severely restricts the right of Jews to purchase land in Palestine. At present the 75,000 quota of immigrants is exhausted, and no more may enter. Palestine is thus today the single country in the whole world with official, specifically racial restrictions—obviously based on the Nazi philosophy—against the Jews.

It is of little use to recount the charges against the white paper. Winston Churchill, in Parliament, May 23, 1939, said it "is a plain breach of a solemn obligation." The Permanent Mandates Commission of the League of Nations unanimously declared: "The policy set out in the white paper was not in accordance with the interpretation which in agreement with the Mandatory Power and Council the Commission had placed upon the Palestine mandate." Herbert Morrison, of the Labor Party, in the Parliamentary debate of May 1939, said: "The Government must understand that this document will not be binding upon their successors in office, whatever the circumstances of the time may be."

IV. THE ARABS

The white paper was an attempt by the ill-fated Chamberlain government to appease certain elements among the Arabs. Like the effort which gave Hitler Czechoslovakia, it failed. Haj Amin el Husseim, one-time Mufti of Jerusalem, fled during the war to Rome and Berlin, broadcast in the interest of the Axis, and is now a war criminal. Iraq revolted when Rommel threatened Suez, and, as is well known, Egypt, when the Germans were at the gates of Alexandria, did not send a soldier to fend off the Nazis.

The Arab spokesmen for Palestine cite a long list of grievances, chiefly displacement of Arabs in Palestine by the Jews. Yet the truth is that the coming of the Jews—because their industry has developed new sources of livelihood, and restored the fertility of an eroding and neglected soil—has made more room for Arabs, even while the Jews were crowding in. The Arab population of Palestine grew from about 600,000 to over 1,000,000 during the very years of Jewish immigration. Malcolm MacDonald, Secretary of State for the Colonies (and as such the individual man who bears greatest responsibility for the white-paper policy), said in the House of Commons in 1938:

"The Arabs cannot say that the Jews are driving them out of their country. If not a single Jew had come to Palestine after 1918, I believe that the Arab population would still have been around the 600,000 figure (instead of over 1,000,000, as at present), at which it had been stable under Turkish rule. It is because the Jews who have come to Palestine bring modern health services and other advantages that Arab men and women who would have been dead are alive today, that Arab children who would never have drawn breath have been born and grow strong."

Actually, instead of being driven out, Arabs have immigrated into Palestine during the years of Jewish development. Officially registered Arab immigrants numbered 28,664 in the years 1923–43. This does not include the thousands who drifted across the desert frontiers. This immigration is explained by the higher wages and better living conditions in Palestine compared to any of the surrounding Arab communities.

Explanation of the paradox of Arab opposition to Jewish immigration in the face of immense benefits is not far to seek. The Arab countries are composed of masses of inarticulate and illiterate peasants—called fellahin—and Bedouins who are ruled and exploited by a few wealthy sheiks and effendi. The Arab countries are feudal societies, reminiscent of England in the so-called Dark Ages, and the feudal rulers fear that western ideas carried into the Middle East by Jewish immigration will destroy their hold. Dr. Wendell Phillips, now rector of Christ Church, Rye, N. Y., formerly at the American University of Cairo, says:

"The small group in power have everything; the rest of the people nothing. The leaders, the emirs and feudal owners, the professional classes, and clergy who benefit by serving them, are the recipients of whatever fruit the land bears.

"Between them and the masses there is a great gulf which no one is interested in bridging * * * there is no concern about the masses * * * this is the situation and it suits those on top very nicely."

These facts explain the Arab riots against the Jews and Arab sympathy with the Nazis. They also explain the ease with which the Jews of Palestine defended themselves against the rioters. It was not the Arabs who revolted or rioted, but the feudal exploiting classes, who are no more the enemies of the Jews than of the fellahin who suffer by their misrule and exploitation.

At present the Arab chieftains are threatening revolt or war if Jews are again admitted to Palestine. Competent observers—pointing out primitive conditions in Arab countries, the ease with which the wartime disturbances in Iraq and Syria were quelled, and the present inability of Iraq to end the Kurdish rebellion now going on—minimize these threats. They think that the Arab rulers will acquiesce in a firmly announced policy—that it is necessary merely to end the months and years of vacillation and appeasement in the face of threats.

V. AMERICA'S STAKE

What is America's interest in the matter?

The answer is twofold: a legalistic and a humanitarian interest.

From the legal point of view we may recall that the wartime (World War I) pledge of Palestine as a Jewish homeland was submitted for President Wilson's approval before the British Cabinet announced it on November 2, 1917; that Congress in joint resolution in 1922 unanimously approved the pledge, and that the United States on December 3, 1924, entered into a convention with Great Britain whereby the United States consented to the administration of Palestine by Great Britain "pursuant to the mandate (of the League of Nations)," and specified that: "Nothing contained in the present convention shall be affected by any modification which may be made in the terms of the mandate, as recited above, unless such modification shall have been assented to by the United States."

The white paper, as pointed out above, is a modification—in fact a reversal—of the mandate; and the United States has not assented to it. In Germany and Japan we have abolished racial and other Fascist laws which violate the fundamental principles of human decency on which we stand. Since the days when Daniel Webster stood up in Congress to denounce Turkish misrule in Greece, American statesmen have realized that the United States does have an interest in the elimination of injustice and terror in other parts of the world. In the recent war and today in Indonesia, Indochina, and India, we were and are acutely aware of the danger to us of unenlightened policies which the backward and unimaginative colonial administrators of our allies may attempt to carry out, even in the face of the humane and sensible opinions which may prevail in the homelands. We in America may have a less direct interest than London. But our voice can be all the more powerful in encouraging the home government in London to throw out an antiquated and disaster-fraught colonial policy in Palestine.

## Russia and the Bomb

EXTENSION OF REMARKS

OF

### HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Freda Kerchivey from the Nation of November 17, 1945:

RUSSIA AND THE BOMB

(By Freda Kirchwey)

That Russia should be given full information about the atomic bomb is so evident that the question no longer seems arguable. The obvious objections have been answered with devasting finality in the last few weeks by many scientists and a few public men. They have proved beyond question that not even the narrowest concept of national security will be served by secrecy. Since this is so,

the longer the matter is discussed the worse for all of us, for the debate itself generates poisons out of which, if they are not soon neutralized and washed away, the next war—the atomic war—will certainly come.

Our secrecy policy, restated only the other day by President Truman, would have been accepted without question in other circumstances. A new weapon of ordinary dimensions, according to traditional practices, is kept for the use of the country that perfects it; only in the course of actual warfare would the secret be shared even with a trusted ally. The war was over almost immediately after the bombs hit Hiroshima and Nagasaki. And nothing that has happened since then has increased official American or British trust in our Russian ally. What more natural, therefore, than to sit tight on the secret of the bomb, particularly in view of its unprecedented destructive power?

Natural, but futile, and therefore stupid. For the destructive power of atomic explosion is exactly what makes an attempt to monopolize it more dangerous than the bomb itself. It is not merely a new weapon. It is a weapon which gives the Nation controlling it the power of life or death over any other nation. This is a situation which in its essence is intolerable. At the same time, as the nuclear scientists have patiently explained, it is a situation impossible to perpetuate. Put those two facts together in proper proportions and you have the makings of the greatest explosion on earth.

Many people, I believe, were temporarily deceived by the restraint exhibited by other nations in discussing America's monopoly on total destruction. It seemed at first as if our allies, grateful for the sudden ending of hostilities and awed by our overpowering display of energy, creative ability, and cold cash, were prepared to accept us as the appointed trustees on earth of the released power of the universe. Even Russia said not a word. But soon, very soon, the reaction began, and it has been growing steadily in many parts of the world; its most important manifestation has been a solid, total deadlock in our relations with Russia. It is that deadlock which strangled the Foreign Ministers' Conference in London and kept Russia out of the meeting of the Far Eastern Advisory Commission in Washington. It is that deadlock which has brought Prime Minister Attlee to the White House.

But what of it? some of the arguers may still ask. Suppose Russia doesn't like it, what then? Didn't Mr. Churchill have the answer when he said that even during the war Russia had shown little inclination to share its military secrets with its allies, and would hardly hand over the secret of the bomb today if it had it? This position might be worth considering—though at best it betrays a rather juvenile approach to a grimly adult problem—if the United States were permitted the freedom to decide, which Mr. Churchill and Mr. Truman and most of our military leaders assume for purposes of debate. The scientists have ruthlessly snatched away that freedom. We can't keep the secret because every advanced nation already knows all we know about atomic energy and how to release it, and even our last reserved area, the sacred American "know how," will be conquered soon.

This is accepted fact; neither General Marshall nor Mr. Truman would think of disputing it. What, then, do they hope to gain by hiding our technical knowledge behind barred gates and building stock piles of hatred and suspicion abroad? What do they hope to gain by legislation creating a Federal dictatorship over all atomic investigation, as well as production, and making the interchange of scientific information in the field of nuclear experiment impossible under threat of criminal prosecution? What is it all about, if Russia and Sweden and France, and perhaps Spain and Argentina, will be able to make bombs within the next 5 years?

The answer is a complex one. Chiefly, they hope to gain time. And in the time gained, they hope to do two incompatible things: First, accumulate a lot of improved atomic bombs so that we can maintain our head start in destructive power; and, second, create some sort of international control to take charge of the situation when other nations finally get around to manufacturing bombs themselves. This sounds, perhaps, too silly to be taken seriously, but it is the only explanation so far publicly offered for our policy of secrecy. If you suggest that secrecy plus bomb production makes difficult the achievement of that mutual trust—especially with Russia—on which any effective international control must rest, you will be fobbed off with the theme that ran through Mr. Truman's unfortunate Navy Day speech: The bomb is a sacred trust; everyone in the world believes us and knows that we will not violate that trust. The only catch is that the premise is inaccurate. How inaccurate, can be best realized if for a moment one imagines that Russia possesses the secret of the bomb and has announced in the same pious words its determination to hang on to it. Would we decide forthwith to drop our efforts to make a bomb of our own? Would we accept Russia's protestations of good will? The questions answer themselves, and demolish at the same time the position of those who hope to build a structure of international trust on a foundation of Anglo-American (though chiefly American) monopoly of atomic power.

Only one explanation of our policy would make sense. A short period of secrecy would be worth the cost if we intended to start an offensive war against Russia or if we expected Russia to attack us in the immediate future. In either case our temporary monopoly would give us an overwhelming advantage; we could destroy Russian cities and industries without fear of retaliation and quickly bring the Soviet Union to total defeat. But this, the one sensible explanation for our present policy, paradoxically makes no sense whatever. For in spite of our bluster and our camouflaged designs on strategic bases, and our shocked objections to other nations' similar designs; in spite of a few generals and Congressmen and newspaper editors who, accepting war with Russia as inevitable, argue with a sort of maniac's logic that it had best come soon while we have the upper hand; in spite of all this, the United States is not going to attack Russia. And Russia is not going to attack us, bomb or no bomb. One can be certain that no disagreements Moscow may have with any major power will be allowed to develop to the point of war as long as Russia is desperately struggling to restore its shattered economic life and rebuild its cities. The Soviet Union needs peace even more than we do.

In fact, the reality is exactly the opposite and the danger a very different one. Since the chance of our being involved in war in the next 2 or 3 years is remote, the possession of the bomb secret is a positive disadvantage and the bomb becomes a weapon aimed at ourselves. If we don't intend to use it first we are creating suspicion without any compensating benefit. By the time other nations have made bombs of their own the international situation may have so deteriorated as to make certain a war in which we shall be the attacked, not the attacker, and our guarded secret, our sacred trust, will ironically have been one of the chief factors in producing the break-down.

The position I have put here is not only supported by most liberal opinion in America; the British press, from left to right, accepts as a prerequisite to all further international action the necessity for conquering Russia's distrust by giving it the secret of the bomb. Presumably the Prime Minister will convey to the President that point of view and the various reasons for it. He must persuade Mr. Truman that those advisers are wrong who recently urged that Russia should not be let in on the secret "until the various peace settlements have been finally determined." Their insistence that the bomb gives the United States and Britain "dominance in current discussions" has been disproved by events. The contrary is the case. Only if we approach Russia with the secret (not the bomb) in one hand and our proposals in the other will the proposals be taken at their face value. At present they make a funny noise when we drop them on the conference table.

A decision to give the bomb to Russia would immediately shift to new ground the other urgent problems facing the powers. It would not solve those problems. The differences between Russia and the West are real differences; they existed long before the first bomb was dropped, and they would still exist if Russia had the secret. But the bomb has intensified them and stalled efforts to solve them. Mr. Molotov opened the way to a new attempt to overcome those differences in his speech last week. He stated clearly but moderately Russia's intention to develop the bomb through its own efforts, he offered a detailed explanation of Russian policy, domestic and foreign, and he emphasized the desire of the Government for close cooperation among the Big Three. "Expressions of good intentions are not enough," he said. "The Soviet Union has been and will continue to be a reliable bulwark in the defense of peace and the security of peoples, and is ready to prove this, not in words, but in deeds."

If Attlee and Truman want to put Molotov's promise to the test, they can easily do so. The bomb is not a bargaining counter to be used to extract from Russia concessions which would serve the national interests of Britain and the United States. It must be given freely. But in giving it, the western powers would have a right to assure themselves and the world that Russia will accept genuine international control of atomic power and will cooperate in converting the machinery of peace to the demands of the new age. Much needs to be done to the structure of the United Nations Organization and to the rules under which it operates before it can be trusted with powers of atomic control. Russia must be ready to accept such chances, as must the western powers themselves.

If the necessity to give Russia the secret of the bomb is self-evident, there are subsidiary questions of vast importance that require detailed consideration. Many dangers could be avoided if the conferees in Washington would settle the secrecy issue quickly and get on to those other matters. For the secret is only an obstacle; the real problems lie on the other side.

---

## Universal Military Training

EXTENSION OF REMARKS

OF

## HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Monday, November 19 (legislative day of Monday, October 29), 1945*

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two letters, one from a major and the other from a captain, both of whom have served with distinction overseas, and have recently been discharged from the service. Both

of them discuss the important policy as it relates to our national defense.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SUGGESTIONS FOR NATIONAL DEFENSE

NOVEMBER 7, 1945.

Senator CLYDE R. HOEY,
*Senate Office Building,*
*Washington, D. C.*

DEAR SIR: Apparently there will soon be under consideration by Congress legislation providing for a year of compulsory military training for all American youths. I have just returned from 20 months of service overseas, where I was a major in the Air Corps, and submit for your consideration in arriving at your conclusions on this proposal the following points.

1. The moral standards of the young men in the armed forces rapidly deteriorated. This was in part due to the fact that when large groups of men are gathered together and freed from the restraint of the opinion of the people of their homes and communities there is usually such a tendency. But it was also due in large measure to the lack of moral standards among many of the high ranking Regular Army officers themselves.

2. If it is decided that a year of compulsory military training is necessary for our security—it seems to me that this is doubtful—then a commission composed of men skilled in moral leadership of youth, including men of the type in charge of some of our outstanding private military schools, should be established and should have control of the daily life, as distinguished from the technical instruction, of the boys. Some of the military schools seem to have shown remarkable ability to develop the admirable qualities in boys. I have in mind such schools as Darlington and Shattuck.

3. I have never seen before, nor did I ever expect to see, such wholesale inefficiency as exists in the Army.

4. This is traceable in part to the relative idleness of Army officers between wars. Men with little to do commonly fail to do even that little effectively and well.

5. The Army needs a complete reexamination by a commission composed for the most part of civilians, together with Army officers of recognized efficiency and ability, such as, of course, General Eisenhower. Included among the civilians should be a number of outstanding men who served during the war and learned to evaluate the Army's output of publicity concerning the quality of its work in its various branches.

6. One objective of such a commission should be to see to it that the program of Army training and operations is constantly adjusted to the use of atomic weapons. Otherwise we are likely to have the atomic developments on the one hand and training in existing methods on the other, rather than a close coordination of the two into one system. Witness the fact that upon the outbreak of this war there was no complete and thorough adjustment of Army techniques to the airplane and the tank, nor to the innumerable technical skills a modern Army employs by drawing upon experts from civilian life.

7. Another objective should be a change in the type of personnel in the Regular Army and their activities between wars. Especially among the officers there is need for developing organizers, administrators, thinkers, and technicians.

---

COMPULSORY MILITARY TRAINING

A captain who has served overseas and is fully convinced that we ought not adopt compulsory military training says:

"Compulsory military training has been recommended as a peacetime necessity. To say that we do not need adequate protection would be foolish. We must have adequate protection. There is such a thing as having too little or too much protection—one is as dangerous as the other.

"Germany and Japan felt before World War II that nothing less that a full size compulsory military training would give them adequate protection. We did not have compulsary training and we overcame those two nations. 'Not by power or strength but by spirit, sayeth the Lord.' That is still true. It is the spirit of the men behind the guns that wins or loses a war. In the Army it is called morale.

"This question of compulsory military training is a big one, one that will make itself felt in every home over a period of years.

"Let us ask ourselves two or three questions before final decision on this question.

"1. Why are our troops in Japan and Germany today: They are there to clear these two nations of militarism. What's the use of sending our troops to Japan and to Germany to pull up the tree of militarism and then to replant that tree at home. This is double talk, it is like the old saying about the mugwump. A mugwump, you know, is a bird sitting on the fence—his mug on one side, his wump on the other. Cleaning militarism out of Japan and Germany is the mug, bringing militarism back home is the wump.

"2. Who are we preparing to fight the next war against: If it is either Germany or Japan then we have already fought World War II in vain. Our occupational army is there to see that another war will not be possible.

"3. Why do we have to have another war: Some say prepare for you never know where lightning is going to strike. That is true, one never knows where lightning is going to strike and we put up lightning rods for self-protection. They call universal military training the lightning rods of self-protection. It must be remembered that too many lightning rods all over the house may draw the lightning which we are seeking to protect ourselves against. The lightning rods of militarism in Germany and Japan surely brought lightning from the rest of the world.

"The militarists say that compulsory military training is necessary. We must remember that there is no immediate danger of war. No nation is ready now. Furthermore, for the next 10 years at least we have a reserve force of around 12,000,000 which at the present we are demobilizing because there is no need for such a reserve. Twelve million have already been trained and there is no immediate danger for they can be recalled if necessary.

"This talk about the Army building up a boy is nonsense. Those who have been in service know what it does to our American boys. You cannot teach a boy to be a killer and say he has been built up. Hate, suspicion, mistrust of our enemies have to be taught in the Army. This is bad enough during wartime but many a good boy in spite of his attempts to avoid the evils of army life begins following the crowd. They become accustomed to working, moving, and thinking in groups. They eat together, they march together, they have the same problems. Regimentation is not the American way of life.

"It is time for our young manhood to begin training and thinking about peace instead of war. We cannot believe that because we have always had war we will always have it. We have always had smallpox and other diseases, but we are controlling these deadly diseases. At one time we had always had slavery, but we gave it up because slavery was wrong. World opinion has already outlawed war. World opinion outlawed the old-honored custom of settling disputes by the methods of dueling.

"Militarism forces a false philosophy upon draftees. It forces young men to believe in the power of force instead of righteousness and right relationships. The good will of other nations is a better security than to have them afraid of us.

"Compulsory military training in this country would start another world-armament race. This race would result in another world war and even those who advocate universal military training agree that mankind cannot survive another world war with our modern policy of destruction.

"Such training will destroy the confidence other nations are trying to place in us. It will breed mistrust and suspicion on the part of other nations toward us. It will furnish the background for the psychology of another war. The Japanese would not have struck without the background of universal military training.

"Who wants this universal military training:

"Not the mothers of our Nation.

"Not the boys who have to take the training.

"Not the ones who are now in the service (notice how rapidly they are trying to get out).

"Not the taxpayers who must foot the bill.

"The militarists want it, but this is a democracy and the militarists are the servants of the people. The militarists were in control of Japan and they made the people their servants. They were in control in Germany and they brought destruction upon themselves with their false philosophy of superman and might make right.

"We are told that military training is good national insurance. This policy did not save Japan and Germany. A nation can have too little or too much insurance. France had universal training and became a victim of overconfidence in her military training.

"The one outstanding thing our Nation is respected for is American ingenuity and initiative. Regimentation will kill this, our greatest and most respected weapon.

"This is a world problem. We no longer are an isolated nation seeking to protect ourselves. We are a part of a world drawn close together, so the problem is one which we must work out in cooperation with other nations. We cannot police the world alone, we must work with other nations in keeping down aggressors."

---

## Critique of Labor Law

EXTENSION OF REMARKS

OF

## HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

*Monday, November 19 (legislative day of Monday, October 29), 1945*

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting address entitled "Critique of Labor Law" delivered by Prof. William Sternberg of Creighton University School of Law, Omaha, Nebr., before the Postwar Institute of the Nebraska Bar Association, held on October 31, 1945, at Creighton University.

The estimate from the Government Printing Office indicates that the address will exceed by one-third of a page the two pages allowed under the rule and that the printing will cost $121.40.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CRITIQUE OF LABOR LAW

If you will bear with me a little longer, I would like to offer a few suggestions concerning the right approach to labor law and its

problems. Just to give this second part of my discourse some kind of name, I call it a critique. But there is a preliminary point that I would like to emphasize; namely, the need for legislation on this subject.

This need is ultimately traceable, I think, to the economic theory with which we began our economic history. I refer to the theory of economic individualism of which Adam Smith was the great apostle. His ideal in domestic affairs was unrestrained competition, not only in the commodity market, but in the labor market as well. Now individualism is not entirely wrong: it has its good points—notably the recognition of natural rights. But when unrestrained, it permits the rich and the strong to exploit the poor and the weak. And that is exactly what happened during the first sixty or seventy years of our national existence. When employers transformed themselves into large companies and immense corporations, the individual worker lost what little bargaining power he had. More and more he became the victim of unscrupulous exploitation. It was quite natural that the worker should be reminded of the maxim, "In union there is strength." It must be admitted that organized labor has gained tremendous advantages for the individual worker. It may have sometimes adopted tactics and pursued policies that are questionable both legally and morally, but it has certainly been a powerful weapon in the battle for higher wages and shorter hours. But capital acted on the same maxim and formed employer associations. They attempted to solve the labor problem by scientific management and personal technique. The result was that instead of having a fight between a giant and a pygmy, we have a battle between two giants, more damaging to the public interest than ever before.

There are especially two reasons why these two types of social control failed to put an end to industrial warfare. One is their lack of genuine interest in any measure designed to reduce unemployment. For both types of organization, this is merely incidental. Why should the employer worry about unemployment as long as he has all the workers he needs for his own business. About the only way that it affects him is some additional expense involved in a larger labor turn-over. On the other hand, it may seem somewhat surprising to say that unions are interested only incidentally. In our recent Labor Day celebration, labor leaders seemed to be greatly concerned about the threatening unemployment. Much of this concern was certainly genuine, because the unemployment threatens to become so extensive as to involve union members. That's when the unions become active and vocal. That's the very purpose of their organization: to protect and promote the interest of their members. Unemployment, as it affects 40,000,000 nonunion workers, is simply not within the scope of their aims. This comment is not intended as a criticism of either the employer or of the union. Each of these simply restricts itself to the purpose for which it is organized. You can't blame them for that. But it discloses their inherent limitations with respect to the general problem of unemployment and the necessity of interference by some other agency of social control.

Another reason why these agencies have so completely failed to bring industrial peace is their utter selfishness. The principal aim of employer associations is to help the employer get more for his money. Even when an employer has shown exceptional liberality and consideration for the personal welfare of the worker, it arouses resentment among union officials. They call it paternalism. They want higher wages, but they want it in recognition of their rights, not as a token of benevolence. In any event, any concession which scientific management and personal technique may make to the union demands is merely a means to the ultimate end of larger returns. But the same is true of organized labor, which is organized for the selfish end of more money and less work. Such things as the closed shop, the check-off, the maintenance of membership clauses in labor agreements, feather-bedding rules, and collective bargaining—these are all means to the same end.

This is true also of their demand for industrial democracy by which the workers get a share in the control of the business. It's not because they love democracy. If that were true, it would be more noticeable in their own organization. They have a better reason—from their own standpoint. They want industrial democracy, because they know that it is the most effective means of getting the other things they want: more money, less work, better working conditions. Nobody can blame them for wanting these things. Such desires are very natural. Nor do I blame them for organizing to get them, as long as their specific tactics and activity do not conflict with the statutes, the Constitution, or the moral law. My purpose just now is to point out the reason why these two agencies of scientific management and unionism fail to solve the problem. Each one works for a unilateral purpose. They do not even aim at the common good; whenever they talk about it, they identify their own interest with it. This is well exemplified by their actions with respect to unemployment compensation. At every session of the legislature, the employer groups exert pressure to prevent any increase of benefits without regard to their present insufficiency. Unionist groups seek to obtain all possible increase of benefits without regard to the solvency of the fund from which they are to be paid.

Under these circumstances it seems clear that any permanently harmonious cooperation between employers and unions cannot come from their voluntary agreements. It must be brought about by some independent agency strong enough to control both parties and courageous enough to prevent the use of force by either party. That, of course, means the Government. But since ours is a government of laws and not of men, this governmental interference itself must be according to law. Up to about 1911 the only law we had on the subject was the common law. But the common law certainly got a terribly wrong start when the first American labor case was decided in 1810, called the Cordwainers case, holding that a combination of laborers to raise wages was a criminal conspiracy. After that wrong start, it took them some years to gain recognition of their natural right to organize, and after it was recognized, it took more time to get organized and still more time to become strong enough to accomplish anything. After that first case was decided, it was a full hundred years before there was really any important legislation, but since 1911, when the first workmen's compensation laws and minimum-wage statutes were enacted, labor laws have been coming from the legislatures and Congress in a steady stream.

One reason for this accumulation of statutory law on this subject was the great increase in the complexity of our industrial system. The marvelous advance of technological improvements created new situations with such rapidity and in such variety that a more specific regulative standard was required than could be found in the broad principles of the common law. Another and more important reason is the radical change in government policy. It was felt that the development of the common law was proceeding along lines inimical to the interest and to the just demands of laborers and thus indirectly injurious to the common good. A corrective was needed. Consequently, some of these statutes not only establish more specific guides for the decision of cases involving labor regulations, but actually abrogate the old standard of the common law. The best known example of this is the common-law principle that no innocent man should be penalized or punished by law. Liability was based on culpability. A person who was in no way to blame for what happened was in no way responsible for what happened. One notable exception to this rule was the responsibility of the principal for the torts of his agent. But the common-law criterion of culpability has little, if any, application in cases involving modern labor legislation. Under those statutes, the doctrine of liability without fault is no longer open to question. They do not proceed on any theory of compensation for wrong done. Of course, where the perpetration of a wrong is alleged and some evidence is offered to prove it, the question of culpability and good faith becomes important. But modern labor laws rest upon a different policy and purpose. Some of them like the Wagner Act and the wage-hour law, are directed toward the prevention rather than the redress of wrongs. Others, like the workmen's compensation law, aim at a situation where a loss occurs without anybody's fault. The statute then aims to place and apportion the loss which must be borne by somebody. Other statutes, like the unemployment insurance law, proceed upon a still different basis. When these statutes were first enacted, they were called unemployment compensation laws, but that was a misnomer. They did not contemplate compensation for wrong done or injury sustained. Of course, if the unemployment is due to the employee's own fault or the fault of the employer, the question of culpability again becomes important; but where it is not due to anybody's fault, most of these statutes, like the Nebraska statutes, assume that the employer should help to provide protection against that contingency.

Some of this legislation is frankly for the benefit of one class in the population at the expense of the rest. Ordinarily that would be a violation of distributive justice, but within proper limits, and under present circumstances, it can be justified. There was a time when the working class certainly needed the protection which the law now gives them. There may be some provisions in these laws which seriously conflict with their avowed purpose of protecting the workman against unscrupulous exploitation. There may also be some features in the policies adopted by the administrative agencies which go far beyond the scope of the statute by which they were created. These defects in the law and in its administration are often due to forgetfulness of the fact that improvement in the condition of the working classs, which form a large and important part of the social body, is only a means to the ultimate and only proper aim of legislation, to wit: the common good. Both employers and unionists have frequently overlooked this ultimate aim. That makes it difficult for them to understand the attitude of legislators and courts. Lawmakers and law interpreters must be guided by the public welfare. If they did anything else, they would be recreant to their trust.

### THE NINE-POINT DEVICE

This brings us to the most fundamental problem in this whole field. How can we determine what is for the public good? In these immediately postwar days, that is a question of tremendous importance. Some of the present labor laws will be repealed, many will be amended; new laws of far-reaching consequence will be enacted. The time is at hand for a thorough revision of labor laws and the establishment of a complete labor code that will put an end to industrial warfare and inaugurate an era of domestic peace in which strikes will be unnecessary. This new code will conserve, consolidate, and coordinate what has thus far been gained. It will establish a procedure, by which labor disputes of every kind without exception can be settled peacefully—a procedure available to every person seeking

justice and terminating in a judgment binding on all the parties thereto and backed up by the power of the United States Government. With good will and courage it can be done.

But as men learned in the law and experienced in its practice, you well realize that there is not and cannot be any short and simple answer to this problem. There are no fool-proof scales that automatically adjust themselves to a fine equilibrium in the balance of conflicting interests. And yet there must be some basic consideration pertinent to labor law and indicating its relation to public welfare. I know you have never heard of my nine-point device which is the fruit of my deliberations on this topic. It consists of three parts with three points in each part. I venture to submit it to you for your consideration whenever you have anything to do with labor law.

*A. The triplex of postulates*

The first part is a triplex of postulates. Every science has its postulates, certain basic assumptions, essential to any reasoning on the subject and taken for granted without proof. I remember when at school we began to study algebra and geometry we started with certain axioms which were assumed to be true without proof. We assumed, for instance, that things equal to the same third thing are equal to each other. Even philosophy, which is the most fundamental of all science, has its postulates, like the principle of contradiction. So, in the study of labor relations, there are certain postulates necessary to any understanding of those relations and the laws applicable thereto.

The first postulate is the inherent dignity of man. When we study labor relations, it is not like studying physics or chemistry, where we deal with inanimate bodies. The factors in that problem are human beings, and no matter which side they are on, they are still human beings endowed by their Creator with free will and immortality. Sometimes writers on this subject put so much emphasis on heredity and environment as to forget that after all man is a free moral agent. He has his choice between right and wrong. Perhaps you remember the words of the Psalmist who says of man: "Thou hast crowned him with glory and made him a little less than the angels." I call this the philosophical postulate.

The second is a legal postulate. It affirms that a contract of employment is essentially different from a contract of sale. Over and over again in the discussion of this topic labor is referred to as though it were a commodity, like a bushel of potatoes which you can pick up and deliver. Labor is not a commodity. There is nothing in the nature of a title passing from one party to the other in a contract of employment. Labor is creative. It creates value, but the value that it creates is not susceptible of separate ownership. It is not something the laborer first owns and then passes to his employer. There is no transfer of any kind from one to the other, which is the essence of a contract of sale. In contemplation of law the two contracts belong to different categories. Only confusion and error can arise from treating them as though they were of the same nature.

The third postulate is an economic postulate, and it is known as the law of demand and supply. One reason for confusing contracts of employment with contracts of sale is the fact that both are affected by this so-called law. When a commodity becomes scare its price tends to rise. So also when the supply of labor is small in comparison with the demand the terms of the contract become more favorable to the worker. But just because these two contracts are different in their nature this economic principle does not affect them to the same extent. In the case of labor there are many factors which hinder its operation. In order to work properly, the demand and the supply must be capable of meeting in the same place. If, in New York, there is a demand for a commodity which is in San Francisco it won't be very long until the commodity is in New York. But if, in New York, there is a demand for a laborer who lives in San Francisco he may never get to New York. For personal and human reasons he may want to stay where he is.

So there may be in New York a great demand for law-school professors. But I like it in Omaha, and I have a hundred reasons for staying here. Thus the mobility of commodities is much greater than that of labor. Market analysis does show that this and other factors make the labor market much more imperfect than the commodity market; but the point of significance is that these factors do not disprove the economic theorem itself. When all due allowance is made for this difference there is still a very wide scope for the operation of this principle in the field of labor relations.

*B. The triplex of fallacies*

This, then, is the triplex of postulates which constitutes the first part in the nine-point device: the dignity of man, the legal distinction between sale and employment, and the real applicability of the law of demand and supply.

The second part of the nine-point device is a triplex of fallacies or false assumptions or wrong approaches which must be avoided.

One of these is the overoptimistic approach. We should frankly concede that no single expedient will obviate all labor difficulties. The factors of that problem are too many, too various, and too closely interrelated. It may be that such a result can be accomplished in a socialistic or communistic regime by abolishing private property if that were possible and feasible. So also Stalin and Hitler have proved that all labor difficulties can be avoided by the single measure of establishing a dictatorship. Needless to say, these methods are not open to us, at least as long as we pay homage to democratic ideals. For us there is no panacea for all labor problems, Henry Wallace to the contrary notwithstanding. And yet at various times such a panacea was proposed. A good example of this was the Clayton Act, which was the first anti-injunction statute. The platforms of both political parties in 1903 and 1912 expressly committed themselves to the enactment of such a statute. When Congress did enact it in 1914 labor leaders rejoiced. In their joyful optimism they hailed it as their magna charta and their bill of rights. The Clayton Act is still on the books but nobody regards it as magna charta of any kind.

Another wrong approach is the assumption that the inductive method of reasoning is the only scientific method. Certainly we all want to be scientific in this as in other things. But I contend that induction is not the whole of science. It may be the large portion of the physical science, but when science deals with the conduct of human beings and ignores deductive logic, it sinks to the level of a pseudo-science. This is vitally important, because wherever human conduct is involved the moral law is involved, and to insist that induction is the only scientific method is to deny that there are any principles, any concepts, any premises from which sound conclusions can be derived by deduction. The protagonists of this view tell us that industrial conditions are subject to constant change, so that what may have been a true premise yesterday is untrue today. They tell us that deduction loses sight of the realities. It deals with concepts instead of facts.

It seems to me, gentlemen, the requirements of the scientific method, in its application to labor law and labor relations, is fourfold. The first is the use of deductive as well as inductive reasoning, because it is only by deduction that we can apply the moral law to any situation. Among all men of probity and good will there is a certain moral code, containing the premises from which conclusion can be drawn deductively and applied to labor disputes. The second requirement is open-mindedness, or objectivity.

There is always a strong emotional pull in the dramatic conflict of interest involved in labor troubles which may influence both legislation and the interpretation of labor law. There is therefore an especial need for a scrupulously conscientious effort to confront the facts squarely. The third requirement is vigilance. When reasoning deductively, it is vigilance in the choice of the minor premise, being sure that it is clearly established. When reasoning inductively, it is vigilance in distinguishing fact from allegation. There is hardly any field in which truth and fiction are so finely interwoven as in this field. Both sides are constantly engaged in propaganda. Some time ago the NAM covered billboards with the slogan, "What helps business, helps you." The CIO responded by decorating the windows of their cars with the slogan, "What helps labor, helps everybody." Consequently, if you deal with labor relations, although you may come from Oshkosh, it behooves you to take the attitude ascribed to those who come from Missouri. The fourth requirement of the scientific method is the frank recognition of the evolutionary process in human institutions. Industrial conditions do change. They change constantly, rapidly and radically. Any new labor law and any application of an old law must always be suitable to the new need. This is sometimes called the dynamic concept of human institutions as distinguished from the static. I do not know of anyone who has the static concept, although we who believe in a natural order ordained and established by the Creator are often accused of having that concept. But the accusation is without foundation. We are not so blind we cannot see the changes that are taking place everywhere.

We may recognize the immutability of certain moral principles, but we know very well that living in the twentieth century is quite a different thing from living in the twelfth. Where we differ from our friends is not in the choice between the dynamic and the static concept, but in the kind of dynamic concept that we have. Theirs involves a denial of the natural order, ours does not. We hold that within this natural order there is ample room for growth, development, or evolution, whichever name you prefer. Pope Pius XI called it the reconstruction of the social order. The Latin motto in the great seal of the United States calls it "the new order of the ages" (novus ordo seclorum). In the spirit of this motto our forefathers established a democratic order which fits very neatly and nicely in the natural order, and we want to keep it that way. But that was more than 150 years ago, and things have changed since then. We hold that these substantial changes call for a new definition of rights. This new definition cannot be inconsistent with the old, so that what was right yesterday is wrong today; but it must be more specific in its reference to the new conditions. A definition of private ownership or freedom of contract, for instance, which was sufficient for a thirteenth century society may be quite inadequate for a society existing in the twentieth century. We therefore call for a new definition, reaffirming the old, but formulated with more specific reference to modern conditions.

The point I wish to emphasize at this moment is that the truly scientific method includes both deductive and inductive logic, that by eliminating the former we cast away the moral law, and that by retaining it we do not in any way hamper the desirable evolution of society. This disregard of deductive logic is something that irritates me.

If it were not for the fact that I have a certain distaste for vulgarity, I would express my disapproval by using that vulgar little phrase in favor with some people who, when they dislike a thing, pretend that it is offensive to their olfactory sensibilities.

The third wrong approach is the assumption that courts are naturally antagonistic to the workingman. I do not think that in an assembly of lawyers any argument is necessary to show that the assumption is altogether unwarranted. I get a little impatient when I see such aspersions cast upon the judiciary. The pet charge is that courts have put property rights above human rights.

The accusation in that form discloses a serious misconception. All rights are human rights, because only human beings have rights. These rights may or may not relate to property. Whether they do or not, one cannot be above another, except in the sense that one may be more valuable. Nor can the specific right of any person be in conflict with that of another person. Interests may conflict, as those of employer and employee frequently do. But one specific right cannot be in conflict with another any more than one true proposition can contradict another, because rights are created by law, and with reference to the same specific act the law cannot at the same time require it to be done and not to be done. Q. 76.

*C. The triplex of standards*

This, then, is the triplex of cautions which constitute the second part of the nine-point device: the caution against the search for a panacea; against the assumption that deductive processes are not truly scientific; and against the presumption of judicial hostility to labor. The third part of the nine-point device is a triplex of standards especially applicable to the enactment and interpretation of labor law. For convenience I call them the economic, the legal, and the moral criterion.

The economic criterion is maximum production at minimum cost. As a Nation, we have immense resources of raw materials, capital wealth, and manpower. Any legislation which regulates these three factors so as to increase production and reduce cost will redound to the public good. With scientific management and a wise regulation of labor relations, the raw material of the country, supplemented somewhat by importation, can be turned into consumable goods in such quantities that everybody will have at least enough if not plenty of everything. One of the great misfortunes that befell our country before the war was the scarcity theory of economics which unfortunately gained a wide acceptance among people in responsible positions. They thought that the general welfare could be promoted by creating an artificial scarcity of certain goods, particularly farm products. It was based on the false analogy that a policy which is good for an individual or private organization is also good governmental policy. Labor organizations often seek to raise wages by creating an artificial scarcity of labor; manufacturers seek to raise the price of their product in the same way. This policy may be good for these private organizations and they have a right to adopt it, but when the Government itself sets out to create an artificial scarcity by paying for nonproduction and in some instances even destroying what is produced, the first criterion of the general welfare is flagrantly disregarded. An honest subsidy would be better than that.

The legal criterion is the Constitution. If at some future time we should decide to adopt the English model of democracy and abandon our traditional form, then, of course, we will have no further use for this criterion. But as long as we believe in constitutional democracy, then we must assume that only such legislation can be for the common good which is consistent with the Constitution. Personally, I am convinced that American democracy is preferable to the English model both in principle and in practice.

In the past this criterion has too often been ignored. Sponsors of labor legislation, in their very laudable desire to help the workman and prevent his exploitation, have sometimes adopted the attitude recommended by President Roosevelt when the Guffey coal bill was pending in Congress. He told the Senators to disregard constitutional objections, no matter how reasonable they were. And the Senators did. No wonder the act was declared unconstitutional.

As far as labor legislation is concerned, the part of the Constitution most frequently involved is the clause which guarantees freedom of contract. Most of the difficulty and dissatisfaction in the application of this clause arises from the refusal to recognize anything beyond positive enactments and civil remedies as a means of determining the scope of this freedom; otherwise it must have been understood from the beginning that the constitutionally guaranteed freedom does not include making an unjust contract, or indeed, doing anything morally wrong. The whole difficulty is ultimately traceable to a positivist jurisprudence.

But more important than either the economic or the legal criterion is the standard of right and wrong. In the adjustment of human relations there can never be anything more important than the triumph of justice. No solution of any economic or social problem can in the long run be for the common good, unless it pays due respect to the moral law and to its author. Consequently, we must assume that this law applies to labor relations as well as to other transactions. Too often in recent discussions of labor law, the question of what is morally right or wrong has been conspicuous by its absence. I have just finished reading a book on labor relations by Carroll R. Daugherty. It is a book of a thousand pages, well written, and full of valuable information, but it is written on the assumption that moral questions have no connection with labor problems. The author has nothing but sarcasm and scorn for any theory of natural rights. He calls it armchair theorizing.

Another utterance of the same kind was more shocking to me because of the person from whom it came and the position that he later held. It was William M. Leiserson, who for a while was a member of the National Labor Relations Board. He bluntly declared, "There is no standard of right and wrong by which wages may be determined. What income working people ought to receive in return for their labor is a question that cannot be answered by any ethical judgment." It is true that the moral law allows a certain margin between the moral minimum and the moral maximum, within which any wage may be just which is fixed by the agreement of the parties acting without coercion. But certainly that is quite different from declaring that the moral standard has no application to wage determination. I think it is now generally conceded that in ordinary circumstances any compensation less than a living wage would be morally wrong. If those who negotiate labor agreements through collective bargaining, and those who enact labor laws and those who help to interpret and apply them, make it their aim in good faith to satisfy the requirement of commutative justice, then and not until then may we hope to see the end of industrial warfare. This may be a difficult task, but it is neither impossible nor impractical. In fact, we are in some respects already moving in that direction. This is strikingly illustrated in the history of minimum-wage legislation. The earlier laws appealed to humanitarian and charitable motives. They did not recognize the rights of labor. The later laws, which have been sustained, seek to use legislation as an instrument of justice. And we may be very sure that insofar as justice prevails, the common good will be promoted. There is no phase of governmental action which presents a finer opportunity for the application of the Biblical injunction: "Seek ye first the kingdom of God and His justice, and all these things will be added unto you."

At the recent Labor Day celebration Rev. Benjamin L. Masse preached a sermon at St. Patrick's Cathedral in New York City which, at the request of Senator WAGNER, is printed in the Appendix of the CONGRESSIONAL RECORD, page A3776. The text which he chose seemed to be especially appropriate for a Labor Day sermon. He spoke on the fourth beatitude: "Blessed are they who hunger and thirst for justice, for they shall be satisfied."

That, gentlemen, is my nine-point device for social legislation, of which labor law forms so large a part, including three postulates, three warnings, and three standards. As a kind of appendage to this nine-point device I would like to close my remarks by reminding you that the limits of effective legislation are inherent in its nature and are due principally to two factors—the insufficiency of human wisdom in formulating the rule and the insufficiency of any humanly devised sanction. No one is wise enough to foresee every possible contingency or to frame a rule that would clearly fit every actual case, and even if such a statute were enacted, there would still remain the impossible task of securing complete obedience. It has never been done, even with the powerful aid of religion. But as civilization advances and the beneficent influence of religion more and more controls the mind of men, we hope that the moral law will be more and more clearly reflected in the customs of the people and the laws of the land.

## Postwar Problems

EXTENSION OF REMARKS
OF
### HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address on postwar problems delivered by me at the annual meeting of the Colorado State Chamber of Commerce at Colorado Springs, Colo., on November 9, 1945:

Ladies and gentlemen, the primary function of a chamber of commerce is to promote business and industry. The welfare of business and industry, however, is inseparably linked with the welfare of the communities in which they are located. It is, therefore, an important and necessary function of a chamber of commerce to promote the welfare of a community if it is to serve its members properly. Nor should we think of the community in the restricted and confined sense of the local neighborhood. Every business and industry is affected by local, State, national, and even international conditions, and businessmen and business organizations must broaden the scope of their thinking and extend their activities into wider fields if they are to measure up to their responsibilities and adequately discharge their functions.

With the rest of the world our thoughts have centered on war for the past 5 years, and we have devoted our entire energies and resources to the cause of victory. The powerful and irresponsible forces which sought world domination have now been completely subdued, and our priceless heritage of liberty and freedom has been preserved, at least for the time being.

We now face the period of reconversion. Since the cessation of hostilities there has been a noticeable tendency among our people to relax their efforts and rest from the arduous duties of winning the war. This is a perfectly natural tendency, in view of the fact that we have so constantly centered our attention on this one objective. We must not lose sight of the fact, however, that we won a World War in 1918 and were deprived of the fruits of victory because we relaxed our efforts and failed to follow through to win the peace.

At the conclusion of World War I, the balance of power for the first time in history switched from the continent of Europe to the United States of America. The nations looked to the United States for leadership. Our Nation faced an unprecedented opportunity; it likewise faced a grave responsibility. We were unwilling to accept the responsibility and we lost the opportunity. Instead of assuming a position of world leadership we adopted a policy of isolationism under the false assumption that we could isolate ourselves from the strife of the rest of the world. It cannot be said with certainty that a different policy would have prevented the Second World War, but certainly our aloofness from world affairs did not keep us out of it when it came.

At the conclusion of World War II the nations again look to the United States for leadership; once more the opportunity is ours; once again we face the responsibility, and what a responsibility it is, for unless the nations can chart a sound course to permanent peace, our entire civilization is in grave danger of destruction.

When we consider the progress that has been made within the last 25 years in the development of the technique of war and visualize the possibilities of future development, we must realize that our present civilization cannot survive periodic repetitions of such conflicts. The control of atomic energy and the development of jet propulsion now make it imperative that we devise means of settling international disputes without resort to war and of curbing aggressor nations who seek to dominate by the use of force.

We must, therefore, turn our attention to the development of the technique of peace rather than the technique of war. Already gratifying progress has been made in this direction. When representatives of the nations gathered at the San Francisco Conference to frame the United Nations Charter and their deliberations extended into days and then into weeks, some of our people began to despair lest they would be unable to reach an agreement. But let us compare that assemblage with a similar situation in the history of our Nation. After the American Revolution it became increasingly evident that if the States of this Union were to be welded together into a strong and virile nation, a national government would have to be created with sufficient powers to insure domestic tranquility and unity and to provide for the common defense. A convention was, therefore, called to meet in Philadelphia on May 14, 1787, for the purpose of drafting a Federal Constitution. This convention was attended by representatives from the various States, all of whom spoke the same language, had substantially the same interests, and followed the same ideologies of government, and yet so different were their opinions that it took over 4 months for them to reach a final agreement upon the provisions of the Constitution. At San Francisco the representatives of 50 nations assembled. Most of these representatives spoke different languages; many of them represented nations with conflicting interests, and many represented nations with different ideologies of government. Nevertheless, they were able to agree on the provisions of the Charter of the United Nations in 1 month and 1 day.

It is to be regretted that the recent conference of Prime Ministers in London did not show the same unanimity, but differences of opinion from time to time must be expected. Here again reference to our past history is encouraging, for even after the adoption of the Constitution of the United States, which, in my opinion, is one of the greatest documents penned by man, my own State of Virginia refused to ratify it until certain amendments were agreed upon, and a war between the States ensued before the solidarity of the union was firmly established.

We cannot look upon the Charter of the United Nations as a completed edifice; it must rather be regarded as the foundation upon which the superstructure of peace may be erected. The task is a difficult one, and its progress is now being impeded by hatreds, prejudices, selfishness, and suspicions. When the herald angels on the hills of Judea announced the birth of the Prince of Peace, they proclaimed "Peace on earth among men of good will," and the events of succeeding years have demonstrated that it is only among men of good will that peace can be maintained. If, therefore, we are to measure up to our responsibilities, we cannot be oblivious to the destitution and the needs of the rest of the world, but to the best of our ability we must cooperate in the work of establishing stable governments, of relieving distress, and otherwise creating the good will which is essential to durable peace.

Although we may indulge the hope and belief that our efforts for peace will succeed, we must resolve as a Nation that if another war should come, we will not again be caught totally unprepared. With this in view we must not repeat the mistake we made after World War I of junking our fleet. We now have the greatest Navy that ever sailed the seas. We, of course, will not need all the ships in active commission, but those which are not needed should constitute a reserve which may be brought into action on short notice. The House recently adopted a resolution prescribing the size of our postwar Navy. The resolution will not be effective without subsequent annual appropriations, but it at least outlines a definite policy which is a step in the right direction.

The discovery and liberation of atomic energy presents a problem of paramount importance to the future security of the world. If it is properly controlled untold uses for the benefit of mankind may be developed. The scientists who perfected the atomic bomb tell us, however, that the secrets of its construction cannot be safeguarded and, therefore, that a continuing monopoly by the United States is impossible; that there can be no specific defenses against its destructive effects; and that unless the use of the bomb is controlled by international agreements civilization is in constant peril of destruction. This situation emphasizes the absolute necessity for international cooperation and the establishment of an international organization with sufficient power to control atomic energy on a world level, so that in the future it may be developed for the benefit of mankind rather than for his destruction.

Although it now appears that an adequate national-defense program requires some form of postwar universal military training, I am constrained to believe that such a program should be coordinated with our existing educational system. A too large percentage of our boys was rejected by the selective service in this war because of physical defects. This situation can be corrected by installing an adequate system of physical development over a period of years. If, in addition, instructions in the fundamentals of military technique are given in the schools, whatever additional training may be necessary can be given in the camps without too seriously disrupting the training of our boys for peace, which to my mind is more important than training for war.

We cannot, however, maintain our influence and properly protect our interests abroad unless we remain strong at home. We face numerous domestic problems today, upon the proper solution of which largely depends our national destiny. Outstanding among these is our present fiscal situation. The national debt, which has increased steadily from $16,000,000,000 in 1930, is now approaching $275,000,000,000, and before the annual budget can be balanced it will probably reach the stupendous sum of $300,000,000,000. It is generally agreed by those in a position to know that to insure the payment of the interest on the public debt and to provide the funds for the necessary postwar expenditures of the Federal Government, the annual national income will have to be maintained at a level of from $125,000,000,000 to $150,000,000,000. The estimated national income for 1945 is $194,000,000,000. It must be remembered, however, that the largest national income prior to World War II was $99,000,000,000 in 1929.

If, therefore, we are to avoid fiscal chaos, we must maintain our national income at a much higher level than at any time prior to the beginning of the war. To do this, two things are essential. We must maintain a high level of production, and we also must maintain a high level of purchasing power. National income cannot be maintained at a high level without producing new wealth, and the production of commodities constituting wealth is useless unless there is someone to purchase them at a profitable price.

The most effective stimulus that can be given to production at the present time is a sound program of tax relief. It was my privilege to serve as a member of the Federal Taxation Committee of the National Association of State Chambers of Commerce until my election to the Congress in March of this year, and I have followed the work of the Committee very closely since that time. The members of the Committee have labored diligently and well, and they have prepared a program for Federal taxes, which has been approved by your Chamber and is worthy of the wholehearted support of every member.

The tax programs which have been presented to the Congress are legion, and the sponsors of a number of them undertake to speak for business. With various business and industrial organizations presenting different and conflicting views the Members of the Congress naturally become confused and uncertain as to what business and industry really want. The National Association of State Chambers of Commerce has striven for several years for the adoption of a unified program to be sponsored by all of the organizations. Numerous conferences have been held, and although complete unity has not been attained, substantial progress toward better cooperation has been made. Business would undoubtedly be more effective in achieving its aims if it spoke with a united voice.

The Congress, recognizing the need for immediate and thorough tax revision, determined to divide the program so that those measures necessary to speed reconversion might be immediately adopted and the more detailed considerations incident to a thorough revision might be postponed until 1946.

In conformity with that program the interim measure known as the Revenue Act of 1945 has already been enacted by the Congress and awaits the President's signature. It provides the largest reduction in tax liabilities ever granted in a single revenue measure. The repeal of the excess-profits tax as of January 1, 1946, the elimination of the capital-stock tax, and the reduction of surtax rates will result in savings to corporations on 1946 income estimated to aggregate $3,136,000,000 or 34.6 percent of total corporate liability under the present law.

In dealing with individual taxpayers the largest percentage reductions go to low-income-tax groups, but the dollar savings in the upper brackets are substantial. An increase of exemptions for the normal tax relieves 12,000,000 of the very low-income-tax

group from the payment of any tax whatever and the total savings to individuals are estimated to aggregate $2,644,000,000. In addition the repeal of the $5 automobile use tax will serve to abate a nuisance and will inure to the benefit of both corporations and individuals.

This law by increasing the rewards of risk-taking should encourage the investment of venture capital and should provide a tremendous stimulus to production and to business activities generally.

The purchasing power of the Nation depends largely upon full employment and the maintenance of an adequate wage scale. The cessation of war work has thrown large numbers of workers out of employment, has forced many to seek less profitable jobs and has resulted in the stoppage of overtime work, thereby drastically reducing the take home pay of millions. When a person who has been working a 48-hour week with time and a half for overtime is cut back to a 40-hour week, his take-home pay is reduced nearly 25 percent, and a large percentage of workers is suffering that reduction or more. We are, therefore, entering upon the reconversion period with steps toward deflation which will prove just as harmful to the national economy as uncontrolled inflation.

The situation certainly calls for some adjustment of our basic wage rates if our purchasing power is to be maintained and our national economy stabilized.

Our States and localities are facing postwar problems which demand serious and careful consideration. There was a growing feeling among the citizens of my State that our educational program was not keeping pace with the programs of other States and that our children were not receiving the educational advantages to which they were entitled. Our State chamber thought that this was a matter of interest to business and industry, and in 1943 we completed and published a study of high-school education in Virginia which received the first certificate of recognition for the John N. Van der Vries award of the National Institute of Commercial Organization and Trade Association Executives. The study was extended to vocational and technical education under the college level, and this year we are completing and publishing the results of that study.

The Committee on Taxation and Government of the Virginia Chamber has just completed a very thorough study of the State tax laws which have not been revised generally since 1927. The report of this committee will be published in time for the consideration of the General Assembly of Virginia which convenes in January of next year.

These and many other problems of the postwar period provide a broad field of opportunity in which State chambers of commerce are peculiarly qualified to serve. They can reach up to the national level through the national association and the United States Chamber of Commerce; they can reach down to the local level through the local chambers and their own members, who are scattered through the various localities.

If the voice of business and industry is to be heard in legislative councils, they must be properly organized, and they must speak with unity. Organization, however, in itself is not sufficient. Legislators are most responsive to their local constituents. The local businessman must, therefore, be brought to realize that eternal vigilance is the price of free enterprise as well as the price of liberty. There is a tendency among businessmen to treat politics with disdain and all aspirants for political office with contempt. Such an attitude is unfortunate and may result in deterring qualified men from seeking public office and in placing the control of government in the hands of those who are incompetent and seek to serve selfish interests. It is of the utmost importance that businessmen throw off their lethargy, inform themselves on public questions, and exert their influence in behalf of better government. The man who refuses to participate in governmental affairs has no legitimate right to complain of the kind of government he receives. A heavy responsibility rests upon State chambers of commerce to stimulate this interest among businessmen.

The future, which now appears uncertain, will depend to a large extent upon how well we discharge the many responsibilities which rest upon us. I prefer, however, to think of the opportunities rather than the responsibilities—opportunities which present a challenge and offer a supreme reward—opportunities to build a better America, a better world.

When our sturdy ancestors first set foot on the shores of the New World and viewed the vast wilderness before them, they did not falter, but rather they gave thanks to their God for the safe voyage over a treacherous sea and asked for divine guidance in the tasks that lay ahead. Such was the beginning of a great Nation. Their faith set the pattern for an annual custom which we still observe. May we on Thanksgiving Day of this year follow in the footsteps of those early builders of America and give thanks to our God for the victories which we have achieved and seek His guidance in the solution of the problems which lie ahead. With courage, determination, unity, and His help we may face the future with confidence.

## The Prompt Discharge of the Men Who Have Won This War Is an Obligation of the Government That Cannot Be Escaped

EXTENSION OF REMARKS
OF
### HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. CURTIS. Mr. Speaker, the brave men who entered the service of our country to defeat Germany and Japan have completed their job. Neither country will rise again as a military power. Those men have wives, children, parents, and other relatives and friends here at home. They ought to be back with them. They ought to be back home to once more pick up the threads of their life plans. It is idle talk to speak of veterans' benefits, and at the same time deny discharges to the men who have spent years away from family and home.

The Congress should without further delay take a hand in this discharge program. No one is being fooled by the propaganda that is being put out about demobilization. We all know that men with 2, 3, and 4 years' service ought to be home, and they are not.

Mr. Speaker, without disclosing any name I wish to insert the major portion of a letter that arrived on my desk within the last day or two. Is there anyone who dares challenge the right of this young man, who wrote this letter, to speak out on the subject of discharges?

I have refrained from writing you up until this time about the discharge situation, thinking that one should be a little patient and give the War Department a chance to adjust themselves to the situation. But the air is so full of propaganda, half-truths, distortions, and outright lies and conscious sabotage of the demobilization program that almost all of the thousands of men over here half way around the world are fully convinced that they are going to now have to fight for a freedom which the American people and "our way of life" said they would be returned to once they had fought for and secured the "freedom" of our country and the world.

One of the most vicious things that has been done is the attempt to confuse the necessity of adequately keeping the peace and maintaining an adequate defense program and troops, with the program of returning immediately the millions of us who have seen long service, much of it overseas away from our wives and families, and who now, if anybody does, have the right to return to this status of freedom, that was an axiom of our fighting morale.

I do not intend this letter to be a brief of specific instances of the above sabotage, half-truths, and so forth, that have been crammed down the throats of hundreds of thousands of men here completely helpless to do anything about it. In the meantime, back home propaganda is artfully handled to placate you and the American people. There are 8,000,000 men in this Army. Enough in numbers have been discharged in the States to temporarily placate a lot of people, no doubt. And false statements are released as to "eligibility" under the point system, and the number of men to be returned at a specific time, troop movements, and so forth. In the meantime ships are leaving here empty for the States, not one of them, but a lot of them. Marine crews are asking that their ships be used to take soldiers home and are being refused by the Army. Suddenly there is a big Navy Day program in New York, ostensibly, according to Secretary Forrestal, because these ships had to be refitted and recrewed on the east coast—Pearl Harbor, San Francisco, Seattle, Los Angles could not do this job. There is suddenly a "shipping shortage," but not one to take Jap prisoners home or to land Marines or nationalist troops in China, where they can, and are, getting into trouble with the Communist troops. The schedule released by the War Department on troop movement to AP and which was given the people back home called for 77,000 troops to leave here during October. Actually, somewhere between seven and nine thousand left, and the Army here having all the figures has refused to release to the Pacifican the figures so that they can carry a daily box score to see how things are going. By General MacArthur's official proclamation there is no occupation of the Philippines, and hundreds and thousands of soldiers are here doing nothing but taking care of themselves, miserable and away from their heritage, filling up the ranks so that the generals can maintain their commands. Every question as to using ships, all the thousands of planes, and so forth, is met by passing the buck to someone else, vague answers such as "improper facilities," "authority will have to be secured from Washington," "no replacements," "essentiality," and a thousand others. The miracle of transport and efficiency across the countless miles of the Pacific has suddenly vanished. Though thousands of young single officers have signed up for the "emergency plus 6 months" and the streets are full of officers doing nothing, the War Department has not reduced the point system below 75 points for them. Do you realize that under the point system that a married officer would have to stay in the service for 6 years and 3 months to have 75 points, and then he would only be eligible for discharge. I am interested in this principle of freedom, but, incidentally, someone might stop and figure out what this is costing the American people.

The conclusion from what is happening over here is simple: The Army does not want to demobilize even men of long service, is consciously sabotaging the program to hold on to its tremendous entrenched power for

as long as possible and maintain the rank of all its generals, of which there are hundreds over here.

There is only one answer, and that is a simple one: Congress must take the matter in hand and pass a law requiring the immediate release of all men with at least 2 years' service. Something must be done. We are helpless over here and the people back home must know that.

I am enclosing a few clippings, just a few, to show you what the situation is over here. Letters come in every day to this Pacifican, the Army newspaper, and it is the only thing these men can do.

In my own personal case, and it is comparatively mild, what am I going to do? I am 35 years old, 44 months in the Infantry, 17 months overseas. In the 10 years I practiced law, I built up a good practice. If I don't get back soon even the possibility of salvaging something from what I have sacrificed will be gone. You men representing us are our only chances to get even an elementary application of justice. Have we earned the right to return to "our way of life"?

I am shocked that it would ever be necessary to write a letter such as this. Certainly no man in the service ever thought that once the war was over this would happen. His morale was the hope and promise of freedom and home. We were at first apprehensive, than alarmed, disillusioned, and soon desperate. Let's cut out the monkey business. Get us home and then form your plans for a postwar Army, if such be needed, and then everybody will be satisfied.

## Radio Addresses of Hon. Fred Bradley, of Michigan, and Hon. Robert A. Grant, of Indiana

EXTENSION OF REMARKS

OF

### HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I include my broadcast of this week over the three Stations WSOO, Sault Ste. Marie, Mich.; WDBC, Escanaba, Mich.; and WMAM, Marinette, Wis.:

Representative BRADLEY. Ladies and gentlemen, I have another very pleasant treat for you today in line with a policy which I hope to follow out in these broadcasts as frequently as possible; namely, to bring some of my colleagues into the studio with me to tell about some of their experiences on various official trips abroad. Today, I have with me my good friend the Honorable ROBERT A. GRANT, representing the Third District of Indiana, who is a member of the Naval Affairs Committee and who left these shores June 7 with a special committee to investigate conditions in the Pacific and other naval conditions in other parts of the globe. This committee traveled completely around the globe in a matter of about 6 weeks and covered approximately 35,000 miles. Inasmuch as Representative JONKMAN discussed the situation in Europe after VE-day, we will skip Europe today but I am going to ask Bob if he will tell us about some of the conditions he found in the Pacific; remembering, of course, that he was there through the month of June when the Pacific war was at its peak and we were beginning to get ready for the final assault on Japan proper. So I want to present to you now my good friend, BOB GRANT, and ask you, Bob, if you will not skip over the details of your trip to Pearl Harbor but bring us more quickly to the actual conditions in the Pacific theater as you found them when your committee arrived.

Representative GRANT. In the first place, Fred, may I tell you how glad I am to be with you on this program and to talk with you and to the good people of the Eleventh District of Michigan. I well recall the visit I made back home with you a few years ago when you crowned the Winter Sports Queen in Alpena. I have long looked forward to another visit back home with you.

Briefly our itinerary beyond the California coast was as follows: Pearl Harbor; Palmyra; American Samoa. Both Palmyra and Samoa have long been tiny installations of our Navy in the Pacific and although they served as vital stepping stones and as bases in the early days of the war, they did not figure much in the actual fighting. From there we went to Noumea in New Caledonia. America's large installation there was really the base for all large-scale fighting in the days of Guadalcanal and in general in the early days of the war in the South Pacific. That installation is, of course, "rolling up" quite rapidly today—to use the Navy's words.

Representative BRADLEY. By that, Bob, you mean closing down its activities?

Representative GRANT. That is right. The war had long since passed from these shores and instead we saw miles and miles of mechanized equipment of one sort or another and other stores and supplies packed around the harbor waiting for bottoms to move it up front. From there we hopped to Sidney and Brisbane, where this same story generally prevailed. From Brisbane we went north over Milne Bay and up to Manus in the Admiralty Islands. This tiny spot just a few degrees below the Equator was one of the most vital spots in our Navy's line of defense, in the southwest Pacific war. We find there one of the largest harbors in the world. Uncle Sam has spent tens of millions of dollars in building up our base there.

Representative BRADLEY. Is that one of the bases we intend to keep permanently?

Representative GRANT. I certainly hope so, Fred; the Admiralty Islands have been under an Australian mandate since the Treaty of Versailles following the First World War. While in Australia we talked with some of the officials of the Australian Government and we have no reason to believe that satisfactory arrangements cannot be made, whereby we shall maintain our installations at that vital outpost.

From Manus we flew north and spent some time in the Marianas—Guam, Tinian, and Saipan. Guam is an impressive looking place as you approach it from the air, jutting up from the sea as a natural fortress. It is more than 30 miles long, contains 225 square miles in all, and with the work on the breakwater that we have done during the war boasts a very fine harbor.

Representative BRADLEY. The construction of that breakwater, incidentally, is the only question that ever came before us on the floor of the House in connection with the so-called fortification of Guam, which you recall was quite a political issue not so many years back. Isn't that correct?

Representative GRANT. In fact, Fred, the question we were called upon to vote back in the days before the war wasn't even as broad as the breakwater. That harbor was pitted with tiny coral reefs that were a hindrance to the operation of Pan American seaplanes that were stopping at Guam on their long flights and the small item of $5,000,000 that was debated in the Congress was only a provision to clear the water for the operation of these seaplanes and had nothing whatsoever to do with the fortification of the island of Guam.

Representative BRADLEY. Have we since spent any money on the actual fortification of the island or did the Japs build fortifications while they were in control there for several years?

Representative GRANT. The Japs did not leave any permanent fortifications that were of any value to us but you may be sure that we have spent many tens of millions of dollars in fortifying Guam since we recaptured it in the summer of 1944. The same thing is true of Tinian and in Saipan. Where once impenetrable jungles grew, our Seabees and our Army engineers—God bless them all—have done a miraculous job. Fred, they have built many airports with runways 9,000 and more feet long to accommodate our B-29's. When you come upon one of these large airports you find not just one strip 9,000 feet long but four parallel strips made of coral, 100 yards apart, each of them pouring B-29's into the air at the same time.

Representative BRADLEY. I am glad to hear you comment on the Seabees and the Army engineers, because it has long been my opinion that they are among the unsung heroes of this war.

Representative GRANT. Fred, you really have to see the job they have done to truly appreciate the miracles they have performed in this war.

We spent a day up at the tiny island of Iwo Jima—perhaps the hottest and dustiest place in the world. That tiny island isn't more than 6 or 7 miles long. It is very narrow. As you survey this tiny spot from the top of Mount Suribachi your eye is caught by two very large marine cemeteries where rest the last remains of those thousands of our valiant men who made the supreme sacrifice to capture this island.

Representative BRADLEY. Bob, was it because of its location that Iwo Jima was regarded as such a strategic point that we had to spill all that blood to capture such a tiny spot?

Representative GRANT. Yes, Fred; to be out there or to examine your globe carefully you will see what I mean. It is roughly 1,500 miles from the Marianas to Tokio. Practically all of our big bomber operations originated in the Marianas. Iwo Jima was half way to Tokio and right on the beam. Jap fighters were rising up from Iwo Jima to intercept our bombing missions from the Marianas.

Representative BRADLEY. Well, of course, we had to wipe those out and not only that I have heard since that it became an invaluable haven for some of our returning bombers who might perhaps have suffered flak or fighter damage over Japan, or whose fuel might have been running low.

Representative GRANT. Yes, Fred; in fact I was on an airfield in the Marianas one day, watching the B-29's coming back from a raid over Tokio. Five hundred had gone out on that raid. Eventually every one of them got home but the point is that about 100 of the 500 landed at Iwo Jima on their return or might not otherwise have made it.

After going back to Guam, we then hopped to Leyte, the point of the initial Philippine landings by General MacArthur just a little over a year ago, and from there we went up to Manila. In Manila we saw the most complete destruction we found anywhere on our visit.

Representative BRADLEY. Was that destruction caused primarily by the retreating Japs when they saw their goose was cooked?

Representative GRANT. Undoubtedly they did a lot of it, but the finishing touches were supplied by our own heavy artillery after we had lost a lot of men in trying to recapture the city of Manila. Our big guns were drawn up and at point-blank range the walls of the inner city and every building within those walls was levelled to the ground.

Representative BRADLEY. In other words, MacArthur paid them back many times over for their devastation on him and on Wainwright's valiant men in the early days of the war.

Representative GRANT. You can be sure he did, in a thorough fashion.

Representative GRANT. We left Manila one night at midnight in a driving rain. All lights were extinguished aboard the plane as we neared the Japanese-held China coast just below Hongkong. We landed at Kunming—that vital cross-roads of the air that served all of our traffic coming into China—both that coming from the Philippines and that coming "over the hump" from India. We made a hop down to the war Capital of China—Chungking, and had some interesting sessions with our American Ambassador, Pat Hurley, and with our military and naval leaders in China.

Representative BRADLEY. What is your impression, Bob, of the interior of China?

Representative GRANT. Fred, when you have a first-hand look at the teeming, sweating millions in China and in India together with the conditions of squalor and of poverty under which they exist you become quite convinced that we could dump our whole much-prized American standard of living into that melting pot and not raise the average thereby an appreciable degree—and we would have lost ours in the bargain.

Representative BRADLEY. In other words, then, Bob, when we talk about making any appreciable contribution toward feeding the Chinese coolies under UNRRA or any other conceivable program, it seems like a most hopeless task, indeed. What, then, is the economic salvation for China?

Representative GRANT. That is true, Fred, you cannot make much of a dent in it. China is going to have to work out a lot of her own problems through her own people and that, of course, is a long process and one that America cannot solve with the stroke of a pen. About all we can hope to do is to teach them to help themselves.

We came home through the Middle East and through Europe—across the Atlantic by way of the Azores and Bermuda—but I know that BARNEY JONKMAN covered Europe well when he appeared on this program with you recently.

Representative BRADLEY. By the way, Bob, I am glad you mentioned the Azores and Bermuda because we are having discussions right now in our own Merchant Marine and Fisheries Committee about postwar world-wide aviation; especially the question of permitting American steamship lines to operate air lines in conjunction with their foreign service. I assume that probably you landed not only at Bermuda and the Azores on fields which were constructed with American money but probably many others in the Far East. There is some question about just how much American commercial air lines are going to be permitted to use those fields in the future. I wonder if you would comment on that before we close.

Representative GRANT. Yes, Fred, the situation at Bermuda is a striking example. Our rights in Bermuda stem from that famous 50 destroyer deal that President Roosevelt made with Great Britain many months before our entrance into the war. You will recall that we gave Britain 50 of our destroyers in exchange for which we received certain rights in Atlantic bases. Following that up, our Government has spent about $90,000,000 of the taxpayers' money in Bermuda. We have there one of the finest airports in the world. It was constructed of made land sucked up out of the ocean. But the difficulty is this. Our only rights there are military rights. Our own Government by its voluntary act has denied the use of that vital airport to the commercial air lines of America for 99 years—95 of which are yet to run. Bermuda is 4 hours by air from New York. It is the same distance from Washington. Unless you cross the Atlantic by the northern route, Bermuda becomes a vital stepping stone in any trans-Atlantic travel. Our Government's failure to protect the interest of our own nationals is an outstanding example of the extent to which this Government has gone in playing Santa Claus to the world without any apparent concern for the future of our own people.

Representative BRADLEY. For which I assume we will get, as usual, very little thanks from the rest of the world.

Representative GRANT. I know how you feel about it, Fred. We have carried on this fight for a long time and the majority in Congress must soon come to the conclusion that it is long past time when we should be giving more concern to the interest of our own people.

Representative BRADLEY. Thank you very much, BOB GRANT, for joining me today.

Representative GRANT. Thank you, Fred, for the opportunity—and in conclusion may I say that I am sure that the people of the Eleventh District of Michigan realize the outstanding job that you are doing for them in Congress.

## Our Children

EXTENSION OF REMARKS
OF
### HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

*Monday, November 19 (legislative day of Monday, October 29), 1945*

Mr. JOHNSON of Colorado. Mr. President, humanity in this uncivilized world appears to be impotent and helpless to escape from the scourge of war and, therefore, does experience periodically the sorrow of parting with its only valuable asset—its young and robust youth.

In recent days all of us have witnessed the intense grief of parents whose sons have died in the terrible wars which, thank God, have now come to an end.

I have a very talented friend with whom I am often in disagreement, but for whom I have great respect and admiration. His name is Edward T. Paca, and he lives in Englewood, Colo. Mr. Paca's son was killed on Okinawa on May 20 of this year. In the bitter anguish of his grief he has composed a poem and dedicated it to those slaughtered and maimed in World War II. To understand the spirit of the great sacrifice which has been made by many parents, I urge that it be read by every Member of Congress.

I ask unanimous consent to print this poem, which is titled "Our Children," in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

OUR CHILDREN

(Dedicated to those slaughtered and maimed in World War II)

They stood upon the threshold of their years
Looking with eager eyes beyond our thoughts
Into their world of joyousness and dream.
They saw the future as the future is:
A place of plenty, full of thoughts and things,
Where the vast pageantry of life moves on
In harmony begot of gladsome deeds.
They pitied us because our gloomy thought
Built barriers between life's helping hand
And our decrepit vision, tinged with age.
Their bubbling mirth, their frolicsome delight.
Their clean, sweet trust, their guileless happy hearts,
These are the annals of their brief true youth.
Then came the demon, with his hand of law,
His lying tongue, his patriotic zeal,
And seized them as a hawk would seize a finch,
And bullied them, and filled them full of hate,
Then told them they must kill as they were bid.
One hundred million persons is the toll:
The fruit of lust, of envy, and of hate.
The hearts that sorrow for their own lost ones
Cannot be reckoned by the man who counts.
Hostilities have ceased, we pause, give thanks,
While God the mother folds her weary ones
Tender and lovingly in their last sleep.
Her heart is bleeding, and her eyes are wet,
While God the Father, her avenging one,
Looks on in pity, and with changeless mind
Declares His will: "Who did this deed shall die."

## Full Employment for Returning Servicemen

REMARKS
OF
### HON. WILLIAM J. GALLAGHER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. GALLAGHER. Mr. Speaker, I am one of the authors of the full-employment bill. We kept our soldiers employed at home and abroad, and, in my opinion, they are entitled to be employed when they return from the armed services. We hear much talk about taxation. May I say, Mr. Speaker, that the Lord gave the earth and all of its natural resources to the children of man so that they could be employed and enjoy life. The owners of these resources are taxing the people of the United States more than the Government does and it is time that we do some sane thinking.

## Resolutions of Dutchess County Ministerial Association

EXTENSION OF REMARKS
OF
### HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following resolutions received by me and recently passed by the Dutchess County Ministerial Association, one on Feeding Our Enemies and the other one Against Universal Peacetime Military Training:

FEEDING OUR ENEMIES

Nothing has shocked public sentiment in America more than the death march from Bataan, when Japanese soldiers were completely indifferent to the sufferings of our soldiers. It was a crime against civilization, for our men as prisoners of war, were at their mercy.

At the present moment, the Japanese and Germans are at our mercy. Through their surrender, they have become our wards. Regardless of whether we like them or not,

we will be held accountable at the bar of history for any unnecessary suffering we may inflict upon them.

This winter both Japanese and Germans are facing death by starvation by tens of thousands and possibly hundreds of thousands. Our administrators, on the spot, are aware of this, and are doing all they can to meet the situation. They can do more, if we, as a people recognize our humanitarian obligation to support them to the full in their efforts.

As an association, we, the Dutchess County Ministerial Association (State of New York), call for the united support of all American citizens, behind the efforts of our leaders to prevent this wholesale starvation which will inevitably involve women and children who have been innocent of war guilt.

(Copies to President Truman, Senators Wagner and Mead, Representative LeFevre, Administrator Herbert Lehman, the Poughkeepsie New Yorker.)

RESOLUTION AGAINST UNIVERSAL MILITARY TRAINING

We, the members of the Dutchess County Ministerial Association (State of New York), meeting November 5, 1945, reaffirm our long-maintained support of the national administration's participation in the United Nations Organization, but we deplore the lamentable contradiction of the program by President Truman's appeal for the continuance of conscription under the name of universal military training, as a permanent policy.

We, therefore, call upon Congress to end the draft now, because with the end of the war, and the gradual restoration of law and order, and economic relations, we believe that the time has come to reassert our commitment to the ways of freedom under law, to assure our allies that we are ending the use of force as an instrument of national policy, and are relying on goodwill, the use of conference, and the world court as the means of settling the difficulties that may arise.

Copies to President Truman, Senators Wagner and Mead, and Representative LeFevre.

## The Pearl Harbor Inquiry

EXTENSION OF REMARKS
OF
### HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. NEELY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

THE PEARL HARBOR INQUIRY

The Congressional committee investigating the Pearl Harbor disaster has been so bedeviled from the start by partisan wrangling on both sides that it has already seriously undermined public confidence in its fairness and impartiality. But the latest conduct of some of its Republican members in particular can hardly bring comfort or satisfaction to the national leaders of that party.

The Republican party has provided distinguished leadership to the nation in the past and aspires to lead it again in the future. But Republican members on the Pearl Harbor committee have not only attempted to impugn the honesty of the American Navy; they are also espousing the cause of Japan against that of their own country. And they are doing so in defiance of all the historic evidence. The country has the right to know and know now, whether these tactics are merely the result of the strategy of the individual Republicans involved, or whether they are part of the calculated strategy of the Republican congressional leadership. It is up to that leadership either to repudiate the slurs cast upon the American fighting forces and American policy, or to stand convicted of identifying itself with them—if only by silence.

The thesis of some of the Republican members was stated most bluntly by Representative GEARHART, of California, when he declared: "The Japanese were doing everything in their power to get an acceptable agreement and got slapped in the face on November 26. That precipitated the war." Representative GEARHART was referring to the famous American note of November 26, 1941, which those of his persuasion prefer to call by its Japanese designation of the "Hull ultimatum." There was never an excuse for any mistake about that note. There is even less now in view of the evidence before the committee itself. And only deliberate misstatement of the facts can now sustain Representative GEARHART'S charge.

The record speaks for itself. As early as 1931, Japan embarked on a career of conquest as ambitious and as frankly avowed as was that of the Nazis. She first subjugated Manchuria over American protests. In 1936 she concluded the anti-Comintern pact with Germany and with that as a backing invaded China the next year. In 1940, when the western powers were engaged in a life-and-death struggle with Hitler, she concluded a hard and fast military alliance with Germany and Italy, and prepared not only to drive the "foreign barbarians" from the Far East, but also to swallow the whole Orient in her "coprosperity sphere," as a base for world conquest. As early as January 1941, the war lords began to prepare for war against the United States, including an attack on Pearl Harbor.

Her great opportunity, hailed in Japan as a "divine wind," came when Germany invaded Russia on June 22, 1941, thereby securing Japan's northern flank. Ten days later, an Imperial Conference presided over by the Japanese Emperor adopted a "crucial national policy" whose nature was revealed in another 10 days by orders for an all-out mobilization for total war. Within 2 weeks, Japan invaded French Indochina, to provide a base for attacks on the Netherland Indies and Singapore. This was followed by mutual freezing of assets and virtual suspension of trade. By August, the Japanese fleet began to assemble for "war games" to rehearse the attack on Pearl Harbor, and the plans for it were completed by September 13. On October 5, the date of the attack was fixed for December 7 our time; General Tojo took over the government October 17, and the fleet sailed on its fateful mission November 25, or 24 hours before the Hull note was even delivered.

True, the Japanese fleet could have been recalled if a settlement had been reached before December 7. But the only settlement that would have recalled it would have been an American acceptance of the Japanese note of November 20, which was a real ultimatum because, unlike the Hull note, it contained, even if unknown to the American Government, a time limit after which military action was to follow automatically. And that note demanded that the United States end her long-standing policy of supporting China, and not only supply Japan with all she wanted for the prosecution of her war in China, especially oil, but also compel the Netherlands East Indies to do likewise. Had the United States bowed to it, Germany and Japan would now control all Europe and Asia, and this country would stand alone against their might. Great Britain and France did not need such a humiliating ultimatum to declare war on Hitler. The American Government merely replied with a note offering a broad basis of agreement, which contained no threat whatever. General Tojo himself has declared that he accepts responsibility for the war. Does Mr. GEARHART wish to relieve him of it?

## A Soldier's Letter

EXTENSION OF REMARKS
OF
### HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

LOS ANGELES, CALIF.

DEAR FRIEND: It is possible that you previously received from me, copies of letters from Staff Sgt. Roderick Sheridan Cooney, MTO-UTC, from north Africa, Sicily, and Italy, but this is probably the last from overseas. Thought you might like to read the thoughts of a 22-year-old typical Los Angeles boy, proud to be a student of Loyola University, on his final experiences over there. He is a brother of Platoon Sgt. James G. Cooney, USMC, just discharged from Marine Officers Training at Quantico, Va., after 2½ years service in the Pacific with 11 battle stars, H. McKenzie Cooney SCU 1976, Enlisted Detachment, Torrey General Hospital, Palm Springs, Calif., and Jack Grattan Cooney formerly of the United States merchant marine, Neill Laurence Cooney, senior at Loyola High, Virginia Ann Harris, R. N., and Patricia K. Cooney, and a son of a much beloved mother, Marie Ready Cooney, who passed on while he was overseas.

PATRICK J. COONEY.

LEGHORN, ITALY, *October 29, 1945.*

DEAR POP: Here I am in Leghorn, Italy. Wish you were here instead of me.

I have deserted the lamp of learning and am now acting as a supply sergeant for an Army corrective detention camp. But not for long, however, since my number is coming up and, barring the unforeseen but expected hitch, I should be on orders to return stateside ere the week is out. I therefore should caution you about writing further since I will be leaving within a month and would probably not receive any correspondence mailed after the receipt of this letter.

And so, after 28 months of that war which was to perpetuate the rights of Joe Stalin to deprive half the world of theirs, your most disappointing offspring returns home to shed the vestige which was once the uniform of the United States Army but which now cloaks the backs of half the people of Europe. The afore-mentioned disappointing offspring is ready to come home, that definitely!

The Mediterranean theater of operations is fast becoming history and most of the heavy, and virtually all of the light, equipment is being turned over to UNRRA, AC, and other relief organizations for whatever misuse it may be put. All this would be acceptable since we cannot now use this stuff but the sight of an immense 10-ton truck to be used in a country where there is no gasoline causes me to fervently pray that the United States develops another source of power to replace the oil of which we will have none very shortly. We will furnish the gas for Italy and probably Europe and then we are committed in the Near East oil fields which are even now clamoring for a war to decide the issue.

Your son,

RODERICK SHERIDAN COONEY.

## Statement of the Council for Democracy

EXTENSION OF REMARKS
OF
**HON. JOSEPH CLARK BALDWIN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. BALDWIN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

THE COUNCIL FOR DEMOCRACY URGES SIX-POINT PROGRAM TOWARD SETTING UP A WORLD GOVERNMENT FOR FIRST MEETING OF UNITED NATIONS ORGANIZATION ASSEMBLY IN JANUARY

In view of statements by Foreign Commissar Molotov and Winston Churchill concerning the atomic bomb, the Administrative Committee of the Council for Democracy, 11 West Forty-second Street, at a special meeting today issued a statement calling on President Truman and Secretary of State Byrnes to take steps toward a world government. The Council for Democracy, of which Raymond Swing is chairman, having considered the problem of sovereignty and security, recommends that the Assembly of the United Nations Organization at its first meeting in January consider the following steps towards conversion of the United Nations Organization into a world government to control production and use of atomic energy for peaceful purposes. The statement follows:

The United States is faced with a choice between unlimited sovereignty and national security—it is no longer possible to have both. Those who think that the United States can "talk tough" because we are at present the most powerful nation on earth ignore the fact that with the development of the use of atomic energy we might become the most vulnerable nation on earth.

"Talking tough" makes other nations wonder where we are heading. What would America do if Russia, for example, had the strongest army, the largest fleet, the greatest air force, the atomic bomb, and was "talking tough"? There is no doubt but that we would regard Russia with suspicion and fear, and we would prod our military leaders into preparing for eventualities. The other nations of the world have reason for viewing us with suspicion in the light of our own tough statements, and suspicion breeds division and war.

If we allow our foreign policy to be based on preatomic concepts of national sovereignty, it will be the American people—you and yours, perhaps—who will pay with their lives.

Nations have frequently ceded a measure of sovereignty to gain an end of greater value. Most agreements into which this country has entered have meant some limitation of sovereignty. The important fact in each case has been the value of what we received in return for what we ceded.

That is the important fact now. Scientists tell us that there is no defense against the atomic bomb and that there is no secret about it which cannot be solved by other nations. Here, then, are the alternatives.

1. We can build and maintain strategically located rocket atomic bomb sites and, at the slightest sign of tension, have them alerted and the bombs trained on the principal cities of the disturbing nation. Then, if their rocket atomic bombs are launched and we detect them approaching, we can push our buttons, too. It would, of course, be too late to save our cities and millions of Americans might die before our bombs hit the enemy cities.

2. Or there can be created a world government having sovereignty in matters of security but allowing complete autonomy to each nation in internal affairs.

What we mean by sovereignty of the world government in matters of international security is the control of large-scale armaments including the new ultradestructive weapons. We do not mean sovereignty of the world government in matters such as tariffs, immigration, waterways, etc.

Once we realize that there is important compensation for the relinquishment of this measure of national sovereignty, our course is clear. The maintenance of national security must not be sacrificed to the illusion of absolute sovereignty.

The creation of a world government must not mean that the United Nations Organization be scrapped—it should be developed into a world government in matters of security by strengthening its functions and amending its Charter.

We urge the following measures as first steps toward such a development.

1. Limitation of the armaments controlled by individual nations to those arms essential for internal security, all other arms such as rocket and atomic bombs, tanks, bombing planes, etc., to be controlled by the World Government.

2. Effective and complete control in every country, by the Security Council of the United Nations Organization, of the production and use of atomic energy so that it will serve peaceful purposes.

3. Elimination of the veto power in the voting procedure of the Security Council.

4. Immediate universal acceptance of the compulsory jurisdiction of the World Court—not only over nations, but also over individuals.

5. Extension of self-government as soon as practicable to the dependent peoples.

6. The Assembly of the United Nations Organization, at its first meeting in January 1946, should give immediate consideration to the foregoing measures.

## Suggestions for Success—Contributing Factors—Faith in the Ultimate Outcome

EXTENSION OF REMARKS
OF
**HON. JOSEPH R. BRYSON**
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith a copy of a most excellent address delivered by Prof. Louis D. Bliss to the Vaughn Sunday school class of Calvary Baptist Church on October 28, 1945.

Some half century ago, Commander Vaughn organized this Sunday school class for men here in the city of Washington. The class has gradually grown until now it is one of the great classes of the entire country. Maj. Daniel F. Boone, of the United States Army, is now president of the class.

My heart is filled with many happy memories as I think of the years long ago when I stood before you men of the Vaughn class regularly every Sunday.

At the Bliss Electrical School, where I work, we start the day each morning with a 10-minute chapel period. Everyone attends. We have a hymn, a few verses of Scripture and a prayer. Once a week I take a few extra minutes to bring the boys some suggestions for everyday living which we believe will be helpful.

Thirty years ago a Methodist minister, Dr. Frank Crane, wrote what were called Four Minute Essays. These were syndicated and widely published. He became the most widely read writer of his time. It was estimated that 20,000,000 people read his essays every day. I have found these so helpful that I have used them as a basis for my weekly chapel talks and hundreds of Bliss trained men throughout the world are constantly expressing their appreciation of the help they have derived therefrom.

This morning I am bringing you three of these essays in the hope that you, too, may find therein something of a practical, helpful nature.

In the first, Dr. Crane offers some suggestions for attaining success in life. He says, "I have before me a letter from a young man who says, 'What is a young man to do, when he has reached the age of 21, with no special training.' He has a lot of ambition beside ability, but he finds that all this talk about courage and will power is nothing but nonsense, for whenever he seeks an opportunity to start from the bottom, no one pays any attention. The very men who preach opportunity and rising to a high position in life by hard work refuse to make a place for him. They tell you about using your brains, but at the same time they don't give you a chance to use them. How is there a chance for such a man?"

Well, in the first place, living all those years until 21, without training, is a crime. But perhaps it was not your fault. If you ever have children, however, see that you do not wrong them as your parents, and the State, and possibly yourself wronged you.

Still, at 21, you have the world before you. Possibly these hints may help you:

1. Don't be impatient. It's a life job you are tackling. Set your jaw. Plan for years, not for tomorrow only.

Franklin Roosevelt once said, "The things we have determined wholeheartedly to do are not fulfilled merely by desire, but through painful toil."

2. Remember that your real success takes place inside your mind. It's not facts, or others' acts, nor events that matter. Nothing matters in the long run, but the temper of your spirit. Keep thinking success, and the more you are rebuffed, the harder you must think it.

3. You seem sorry for yourself. That looks bad. Flee thoughts of self-pity as you would the devil. Are you alive and kicking, and have you a clear head and two good hands, and are you out of jail? If so, you are in luck.

4. Study. I'll venture to say, your waste of spare time in 4 years is enough to make you eligible for a doctor's degree, if properly applied. Find out what you want to do. Say it's engineering. Take up a course of study in that direction.

5. Do well what you can find to do. Do it with all your skill and enthusiasm. Do it better than anyone else can do it. Do it! And, keep your eyes open for something better. Be efficient. Every factory, store, and farm in the world is hungry for the man who can do the business and not make excuses.

"Creation's cry goes up
From age to cheated age:
Give us the men who do the work
For which they get the wage."

6. Don't fret. Don't worry. Have faith. Believe in yourself. Believe in the world. Believe in eternal justice. If you do, the stars will fight for you. And if you don't believe, if you complain and get it into your head that this world is down on you, why, it will come down on you and smash you;

you'll get what you believed in. Everybody does.

Be persistent. In 1934 there was graduated from the Bliss Electrical School a young man named Morgan, from Nanticoke, Pa. It was in the depth of the long, hard depression. Morgan earnestly sought employment but could find nothing. He had a car and decided to drive to Endicott, N. Y., to interview the personnel representative of the International Business Machines Corp. This corporation employed a considerable number of Bliss men. He was courteously received, but they told him they could not use him. A few weeks later he drove back a second time and made a similar call. Again he was courteously received, but they told him they had no opening. After a while he drove back a third time, and then a fourth time, and then a fifth time. When he came in the sixth time they told him they were tired of seeing him around, and they did not want him to come around any more, but he went back the seventh time and they hired him.

7. Be persistent. Fortune's a fickle jade. If she does not say "Yes" the first five times you ask her, ask her 25 times. After awhile she will favor you, for she dearly loves importunity.

8 Get the luck idea out of your head. There is no such thing as luck, but that is not what you are looking for. What you want is success, and there is no luck about that. It's just as certain as the corn crop, for those who know how to raise it.

9. Don't expect anything of anybody except yourself.

Joshua 1: 7-8: "Only be thou strong and very courageous; then thou shalt make thy way prosperous, and thou shalt have good success."

10. And keep cheerful. It's all in a lifetime. Meanwhile, there are doughnuts and coffee, and the pleasant sun is shining. I suspect you are missing a lot of happiness because you don't recognize it when you see it.

"Getting what you go after is called success, but licking it while you are getting it is happiness."

Do you remember what Lincoln said? "I have noticed that most people in this world are about as happy as they have made up their minds to be."

Psalm 27: "The Lord is my light and my salvation. Whom shall I fear? The Lord is the strength of my life; of whom shall I be afraid?"

"When the wicked, even mine enemies and my foes, came upon be to eat up my flesh, they stumbled and fell.

"Though an host should encamp against me, my heart shall not fear: though war should rise up against me, in this will I be confident.

"One thing have I desired of the Lord. That will I seek after. That I may dwell in the house of the Lord all the days of my life, to behold the beauty of the Lord, and to enquire in His temple.

"For in the time of trouble shall He hide me in His pavilion; in the secret of His tabernacle shall He hide me; He shall set me up upon a rock.

"I had fainted unless I had believed to see the goodness of the Lord in the land of the living.

"Wait on the Lord: Be of good courage, and He shall strengthen thine heart: Wait, I say, on the Lord."

Twenty-seven years ago Dr. Crane wrote an editorial for a Washington paper in which he emphasized the importance of steadfastness and determination. He says:

"There are some men who can obey orders and there are some men who can get things done. It is well to be obedient. It is better to be resourceful.

"A resourceful man is one who when he cannot get a thing done one way does it another. He keeps trying. When it is time to quit, he begins. When he is licked, he starts fighting again.

"Attaining success in life is not like shooting at a mark with a rifle. It is more like trying to hit a mark with a stream of water from a hose. You just keep on trying until finally you hit it, maybe.

"It is well to know how; it is better to try, for by trying, you learn how.

"The achievement of success is like picking a lock; not like working an example in long division. It is like starting a fire with damp wood, more than it is like getting a chemical reaction in a laboratory.

"It is like fitting together the pieces of a torn letter, more than it is like building a wall of brick.

"All the big things of life are accomplished by trying, trying, trying. Only the little things can be done by rule and a cheap hand to do them.

"To paint a great picture means an infinite number of approximations. None is ever painted by rule.

"The man who fails is not the man who has no gift, no chance, no pull, no encouragement, no training; it is the man who quits."

Some years ago before the days of sound there was produced a silent movie entitled "The Midshipman." The scene was laid in the Naval Academy at Annapolis. The story was of a freshman who was having a hard time adjusting himself to his surroundings. He became so discouraged that he almost decided to quit. An upper classman took him under his wing in order to steady, stimulate, and encourage him. In the course of conversation the upper classman said to him, "Remember this, a quitter never wins and a winner never quits!" I have had that motto engrossed and a framed copy hangs upon the wall of our lecture room where our students may see it every day.

Genius is the inexhaustible capacity for going on. Edison said, "Genius is 1 percent inspiration and 99 percent perspiration."

In my office I have another framed motto attributed to Edison, "There is no substitute for hard work."

Training, education, and the like, before you go to work, are valuable, but it is the training and education you get, by and while doing your work, that count most.

There are three rules for success. The first is go on. The second is go on, and the third is go on.

You can't win a woman by the rules of a book, nor can you make biscuit. We had an old colored woman to whom my family was devoted, who worked in our home for 20 years. She had more common sense than many a white woman. She could not read nor write but oh what biscuits she could make.

You can't win a woman by the rules of a book, nor can you make biscuit, nor get elected to office, nor build up a trade, nor get yourself liked, nor achieve contentment, nor get to Heaven.

Life is an endless experiment.

Wisdom is the precipitate of experiment.

Belief is the spirit of experiment.

Character is the subjective result of experiment.

And success is the objective result of experiment.

Psalm 1: "Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful.

"But his delight is in the law of the Lord; and in His law doth he meditate day and night.

"And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper.

"The ungodly are not so; but are like the chaff which the wind driveth away.

"Therefore, the ungodly shall not stand in the judgment, nor sinners in the congregation of the righteous.

"For the Lord knoweth the way of the righteous; but the way of the ungodly shall perish."

The third essay I want to bring to you represents Dr. Crane's faith in the ultimate outcome of life, if we do our part. He says, "Mine own will come to me." I like to repeat this magic formula over and over. It is not provable. The deepest truths of life never are.

The creeds of the world, that have led men up out of barbarism into civilization, out of war into law, out of lust into love, are all inherently dubitable.

We do not reach these sublime conclusions, that transform our lives, by building Babel Towers with bricks of logic, for the end of all such work is confusion of tongues. We fly to them by the airplanes of faith. We believe them. We do not know them, and the best things of existence are believed, not known. We believe them because we are drawn to them, because something in them appeals to something in us. We believe them for much the same kind of reason that impels us to love one woman.

The most usable and persuasive wisdom has never been included in the encyclopedias. It is felt by simple hearts, even as sunshine is felt. It comes to us by affinities and repulsions, as mysterious, yet as potent and undeniable, as electricity.

So, mine own will come to me,
Unhasting, my reward approaches.
Behind the mists of tomorrow, stands my
Throne, made ready.

My place is prepared for me. In due time I shall occupy it, and all the world consent. Destiny makes no mistakes. It is not blinded by fear or favor. Every man shall receive his penny, and I mine.

The Great Shepherd never loses a sheep. I shall not want.

In my closet will always be clothes enough, in my pantry food enough, in my bank money enough, in my acquaintance friends enough, to last me my time, as long as I am needed in this world.

I shall not worry. Mine own will come to me. I shall not strain or chafe. I shall not drop into the weakness of petulance. I shall not allow the silly fevers of premonition. I shall not poison my strength with doubt. Why should I, when my own will surely come to me?

Mine own will doubtless not be what I fancy. What it will be is no business of mine. All the time I spend in speculating on what it may be is wasted and breeds disappointment.

Mine is the simpler task, just to do my work, to find the great cosmic laws and heed them, to love and be happy. For mine own will come to me. It is on its way. It is stepping surely down from the future, and one day will open the door of the present and come in, and I shall be satisfied.

Psalm 23: "The Lord is my Shepherd; I shall not want. He maketh me to lie down in green pastures: He leadeth me beside the still waters.

"He restoreth my soul: He leadeth me in the paths of righteousness for His name's sake.

"Yea, though I walk through the valley of the shadow of death, I will fear no evil: for Thou art with me; Thy rod and Thy staff they comfort me.

"Thou preparest a table before me in the presence of mine enemies: Thou anointest my head with oil; my cup runneth over.

"Surely goodness and mercy shall follow me all the days of my life; and I will dwell in the house of the Lord forever."

"MY WORK

"Let me but do my work from day to day,
In field or forest, at the desk or loom,
In roaring market place, or tranquil room,
Let me but find it in my heart to say
When vagrant wishes beckon me astray,
This is my work, my blessing, not my doom;
Of all who live, I am the one, by whom
This work can best be done, in the right way.

"Then shall I see it not too great nor small
To suit my spirit, and so prove my powers;
Then shall I cheerfully greet the laboring hours
And cheerfully turn, when the long shadows fall
At eventide, to play, and love, and rest,
Because I know for me, my life is best."

—Henry Van Dyke.

## Washington Star Demands Genuine Investigation of Sex Laxity by Navy

EXTENSION OF REMARKS
OF
### HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. BUFFETT. Mr. Speaker, the Sunday Washington Star of yesterday carried in full the letter by Chaplain Lawrence Lacour detailing charges of naval sex laxity in Japan.

The publicity given this story is indicative of the growing concern over the social consequences of the tremendous military establishment.

Editorially, the Star proposes a genuine investigation, to be followed by court-martial proceedings if the facts warrant.

The Star editorial follows:

A SHOCKING ACCUSATION

In the news columns of today's Star there is reprinted the full text of a letter to the Des Moines Register from Navy Chaplain Lawrence L. Lacour, United States Naval Reserve. In substance, the letter charges that the Navy authorities at Yokosuka, over the unanimous protest of chaplains assigned to fleet units there, have set up what amounts to an organized system of prostitution for the personnel of the fleet. According to Chaplain Lacour, this has been done in a manner which virtually lends official Navy sanction to the practice, despite the fact that all or nearly all of the Japanese girls involved are afflicted with venereal disease.

This shocking accusation has been brought to the attention of the Navy Department by the Register, and Admiral King, asserting that such practices would be in conflict with Navy policy, has given assurance that an investigation is under way.

The investigation is one which must be pressed with vigor and without regard to any individuals who may be involved. If it is ascertained that the charges made in the chaplain's letter are true, the responsible Navy officers should be brought to this country and court martialed. If the investigators conclude that the facts do not support the charges, the Navy should make public a full statement of the basis for that conclusion.

The American people—and especially those with sons in the Navy—have too vital an interest in a matter of this kind to tolerate anything which smacks of complacency or whitewash. And if the Navy values its good reputation, it will see to it that its investigation and subsequent action are of the kind which will leave no room for doubt or suspicion.

## Housing Situation in California

EXTENSION OF REMARKS
OF
### HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. ANDERSON of California. Mr. Speaker, I wish to call the attention of the Congress to the unsatisfactory housing situation which exists in the State of California.

The following thought-provoking newspaper article by Charles Raudebaugh indicates that although there is a large supply of surplus building materials held in storage very little is being released for home construction. I am of the opinion that the National Housing Agency and other interested Government agencies should immediately investigate this matter and ascertain how much of this surplus material can be made available for home construction. Certainly our returning veterans are entitled to a better break than they are receiving at the present time.

VETS CAN'T BUILD, BUT WAREHOUSES BULGE

(By Charles Raudebaugh)

STOCKTON, November 10.—Vast quantities of critical building material—almost fantastic amounts of sorely needed goods—are lying in nearby military and naval establishments while San Francisco and her veterans are experiencing an acute housing shortage.

Top Washington officials of the Civilian Production Agency, peacetime successor to the War Production Board, will be told Monday of a visit made by two San Franciscans to a single Army depot at Stockton which revealed billions of dollars of needed material.

Edward P. (Slip) Madigan, regional director here for the Smaller War Plants Corporation, checked the speedometer of his car and found that he drove 27½ miles through lanes of structural steel, water pipe, soil pipe, crated tractors, and other products now acutely short on the civilian market.

An official report of the Civilian Production Agency notes that the tractors alone have a value of $20,000,000 and are of the heavy type which the lumber industry has been trying vainly to get ever since the war ended.

There are 2,000 such tractors at the Army Engineers Holding and Issue Depot at Lathrop, near Stockton. They are still in their original crates.

In addition to the tractors there are acres of trailers and dollies equipped with rubber tires deteriorating in the sun, and more roofing and building material than I have ever seen.

His report states that there are tremendous quantities of steel pipe from 2 to 48 inches in diameter and several thousand tons of cast-iron pipe, including the critically short soil pipe so urgently needed in small-homes construction.

The whole picture of what was found at the Lathrop Depot fits perfectly into the gripes of returning servicemen who are unable to obtain housing. They can't rent houses or apartments in San Francisco, and they can't build because of inflated costs, due—among other things—to the shortage of much of this material.

Edward Halloran, regional director of the CPA, took the report on the Lathrop Depot back to Washington to present Monday at a national conference of Government executives which is to deal with reconversion problems.

The report was written to back up a suggestion that the CPA be authorized to go into depots and warehouses in search of items immediately needed for civilian production.

Executives of the CPA in San Francisco declare there is at present no way of estimating how much material is being held by the Army, Navy, and Marine Corps.

The ex-serviceman who desperately needs a house, or who wants to buy military equipment no longer essential to win a war, says bluntly that the Army and Navy are hoarding.

LUMBER HOARDS

A month ago, according to the CPA, there was 75,000,000 board feet of lumber at the Navy Hueneme base, another 20,000,000 in the Navy Oakland base, and 15,000,000 in the Islais Creek depot of the Marine Corps.

The lumber at the Hueneme base alone represents 3,000 carloads—enough for about 10,000 homes.

But it takes more than lumber to build homes. What of the other products?

The CPA executives who visited Lathrop said that he saw toilets, washbowls, and sinks by the thousands. He saw wire and cable by the thousands of reels. He saw everything, he said, needed to build a small city. Lathrop is 1 mile wide and 2 miles long—and is piled high with building material and equipment.

There is not a veteran who hesitates in telling you that what exists at Lathrop can be found over and over again at dozens of military or naval installations of the country.

Lathrop is merely an advance depot, a sort of a jobbing warehouse. Imagine, they say, what exists in the main supply dumps!

VETS' CENTER REPORT

In contrast to the vast pile of supplies at Lathrop is this statement by Russel A. Owen, acting director of the Veterans Information Center at San Francisco city hall:

"During October a daily average of 260 veterans came into the information center. The records show that 25.2 percent of them were in need of housing. The records in San Francisco show that housing is the biggest single problem facing the veterans."

## Congressional Protector of Small Business—Article by Hon. Wright Patman, of Texas, on Activities of Select Committee on Small Business

EXTENSION OF REMARKS
OF
### HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include a statement by our colleague, Hon. WRIGHT PATMAN, the able chairman of the House Small Business Committee, which was recently widely published.

The statement is as follows:

Small business is really the biggest business in this country from the standpoint of number of enterprises, number of people employed, combined production and importance in spreading prosperity and opportunities for individual initiative. It is vital therefore that all such enterprises are not only protected from elimination but their welfare promoted to the fullest extent if we are to reach the goal of full employment and enable returning service men and women to have a place in the business picture.

The House Committee on Small Business is, as a consequence, a vital congressional agency that concerns itself with the interest of the so-called little man to see that he is given every facility to develop a business of his own without restraint from monopoly or unfair competition. This applies to those now in business who have shouldered the difficulties of the past war as well as to GI Joes who have ambitions to enter some business upon their discharge from the armed forces.

Small businesses need a representative congressional committee that is independent of all Government agencies as a protector and champion. It is that kind of service which the House Committee on Small Business seeks to serve as a mouthpiece in all matters concerning their welfare. They cannot afford to employ a high-powered Washington representative, or to make expensive trips to Washington to get something of vital concern ironed out.

That is just where this committee can, and does, render service before such governmental agencies as the Office of Price Administration, War Food Administration, Civilian Production Administration (formerly War Production Board) or any other branches of the Government. Through these activities it has corrected many complaints or ironed out many problems that have been disconcerting without the necessity of an expensive trip to Washington.

Small business asks no favors and does not want an umbrella to cover up inefficiencies. By the same token it believes in equal opportunities for all and special privileges to none. The chief draw-back to the progress of small business has been the favoritism of the large operators whether in production or distribution which, though professing ability to do a better job invariably require special consideration.

The war has brought this out forcibly as the small manufacturer has had difficulty getting supplies until his ability to produce was demonstrated and congressional insistence was insisted upon. Likewise, the small crossroads merchant, so to speak, was handicapped in obtaining supplies of scarce merchandise. The big operators were favored as a course of least resistance by certain manufacturers. It has been the work of the House Committee to correct these abuses which have interfered with the progress of the small merchants in all lines.

Realizing this as a Member of Congress, I have introduced H. R. 4200, which is an amendment to the Internal Revenue Code. It provides that chain corporations operating stores without a profit to establish themselves in a community may not deduct such losses from their income-tax returns. It has been shown in evidence in a recent trial of the largest chain corporation that as many as 4,374 stores in 1 year were operated at a net loss.

This practice not only injures established retail merchants by forcing destructive prices but it is an unfair method of competition. Aside from this the Treasury of the United States loses revenue that would otherwise be payable. In addition competitors are not able to realize normal profits which likewise affects the flow of income taxes from that source. In the end small business and the Government are injured.

Another bill which I have introduced is H. R. 4201 to amend the Robinson-Patman Act. It has been learned that a few very large buyers are given secret advantages in prices despite the provisions of this law. Under this amendment all manufacturers and other sellers are required to make known to all their customers all their terms as to prices and discounts. With this knowledge public, secret deals with the few will automatically be overcome.

The House Committee on Small Business invites correspondence from small businessmen who have any discriminatory problems to contend with.

## Eighty-Second Anniversary of the Gettysburg Address

EXTENSION OF REMARKS
OF
### HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on the occasion of the observance of the eighty-second anniversary of Lincoln's Gettysburg Address by the Gettysburg Camp, Sons of Union Veterans of the Civil War, at Gettysburg, November 17, 1945.

It will be 82 years on November 19 since Abraham Lincoln stood on a platform at Gettysburg and in 2 minutes, and 270 words, delivered an address which has not "perished from the earth."

He was invited to make a few appropriate remarks, evidently not because of his ability as an orator nor for what he might say. He was President of the United States and, as such, would draw a crowd. The committee in charge of arrangements came very near not inviting him.

Lincoln spoke about the government of the people having a new birth of freedom and that it should not perish from the earth. The Civil War was at its height. He was not sure that the Nation would survive, but he did ask that the dead should not have died in vain.

The heartaches, the grief, the hopes, the prayers, and the faith of a liberty-loving people were expressed by him in simple words. They have become engraved in the minds of men forever.

Our Nation today needs leadership of his homely virtue and simple philosophy. Lincoln dedicated himself to the great task before him. Let us, a free people, rededicate ourselves to the principles for which he stood. This is the only way we can successfully solve the grave problems confronting us. We are the stewards of his trust and faith in us.

The beauty and the eloquence of the Gettysburg address remain undimmed with the passage of time. Rarely, if ever, has any man said so much in so few words. Its brevity, modesty, and simplicity, its charm and power, mark it a masterpiece of the purest English; and it still stands as the oration of the age. The cadence of its words makes it as beautiful as a psalm.

There were those who appreciated the address. But it was severly criticized by many of our newspapers, and even the London Times called it dull and commonplace.

In high places today we need men of his homely virtue; we need his simple philosophy throughout our national life.

If Lincoln were here speaking to us today I believe he would be saying: It is time for a new birth of freedom from regimentation in our America.

It is time for freedom from all forms of intolerance.

It is time for America to live within her income.

It is time to demonstrate that constitutionally organized freedom and truly representative government are far better for America than communism or national socialism.

It is time to emphasize the value of a reasonable separation of local from Federal functions and of the executive from the legislative branch of our Federal Government.

It is time to develop dependable prosperity through increased production and widened distribution of newly created wealth.

It is time to liberate the natural strength of large and small private enterprise and to encourage the production, distribution, and sale of the products of American shops, and farms, both at home and abroad. This means seeing to it that our economy and our Government are agencies of freedom and progress suited to our needs and equal to the hopes of our young people who have fought this war and who are looking for results worthy of their sacrifices and their efforts.

Since there can be no progress without the human effort needed to produce the standards or facilities sought, every advance in our standards of living comes from the efforts of someone who produces those benefits. One man alone on an island knows that his condition can be no better than he makes it by his personal efforts. He, therefore, gets to work on new facilities to improve his condition. There is nothing in the presence of 2 men on the island, or of 2,000,000,000 men on the earth, that changes that simple fact. It is through the combined efforts and exchange of efforts that men do more together than they can do alone. In any case, however, the gain depends upon someone's real effort.

Today great progress is being made through countless scientific advances, labor-saving devices, and inventions. Their benefits now contribute so widely to the advance of mankind that each generation is better off than its predecessors, although each individual expends less physical labor than did his ancestors. The advance of mankind will be substantially in proportion to the efforts of mankind, and civilization will suffer substantially in proportion as men fail to make the best productive use of their abilities.

If Lincoln were speaking to us today, he would say:

"Let freedom be our cause. Let us go to work. Lest we perish from the earth."

## Truman, the Man of the People

EXTENSION OF REMARKS
OF
### HON. LYLE H. BOREN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. BOREN. Mr. Speaker, when Harry S. Truman became President of the United States, the people of Oklahoma, my people, in many towns on many occasions queried me on my appraisal of Truman as President.

I replied in earnest and heart-searching sincerity, "Truman will be a good President."

To my people I said, "Entertain no doubt about Truman, he merits your confidence."

In public, in private, on every occasion, I declared my faith that Truman would justify our full, wholehearted trust in him.

People asked, "What kind of a man is he?" and I replied, "He is not vastly different in any respect from you, from me, from us. He is one of us. He is a man of the people."

They asked, "Is he capable?" and I replied, "We, the people, rule America. If we are capable, he is capable. He is one of us. He is a man of the people."

They asked, "Can he solve our international problems?" and I replied, "Can you, can I, can we solve our international problems? It takes us all, he is one of us, he is a man of the people."

They asked, "Will he solve our domestic problems?" and I replied, "Will you, will I, will we solve our domestic problems? It takes all of us. He is one of us, he is a man of the people."

And so we reasoned together. We laughed together over the childs query, "How big was Alexander, pa, that people called him great?" And we realized that America is built on the principle that a king is just a man and every man a king might be.

When people asked, "Is Truman great?" I asked, "Are the American people great?"

We saw Truman as one of us. We asked ourselves, "What if my son were President?" We saw Truman and we asked ourselves, "What if my brother were President?" And we knew that if our son were President he would try so hard to do the right thing, and we would be anxious with him. We knew that if our brother were President he would with all his mind and heart try to do the right thing. We knew, each of us, that we would try so very, very earnestly to do the task and do it right. And we said to ourselves, "Truman is like us, like my son," said one. "Like my brother," said another, "like my father, like me." He is one of us. He is a man of the people. And we, each and all, were glad Truman was President. His being President made the story of democracy true.

In my public speeches I said, "I know Truman—I know him well—and I know he merits your confidence.

"I know he is a man of courage.

"I know he is a man of ability.

"I know he is a man of strong character.

"I know he is a man of experience.

"I know he is a man you can depend on.

"Truman is humble, he knows his own limitations, he is earnest, he is honest, he will do his dead level best. It is a good thing for America that Truman is our President."

Those were my words on that day when Truman became President.

Today, Mr. Speaker, I reiterate and reassert those same views.

Were I to speak to the people of Oklahoma, my people, today, I would say, "Truman is a good President, he merits your confidence."

If people asked, "Has he made any errors?" I would reply, "Yes, he is like us, he is one of us, he is human."

If they asked, "Is he capable?" I would reply, "Yes, he has demonstrated it—examine his every act. Look at every time he has been to bat—two home runs for every error. Can you do better?"

If they asked about our international problems, I would say, "He has done well—ask General Eisenhower, General MacArthur, Admiral Nimitz, Admiral Halsey—ask Stalin, ask Chiang, ask Britain, ask even the Mikado."

I would ask my people, "Did you want lower taxes? Did you want wartime controls like gasoline rationing, daylight saving time, and a hundred other things, to end?"

We expect him to be cautious and careful. Are we when we criticize?

We expect him to be patient and considerate. Are we?

We expect him to be thoughtful, judicious, and fair. Are we?

I think Truman is a good President.

I think Truman is a great President measured by the same rule that measured Jackson and Johnson and Garfield and Lincoln.

He is trying to do what is right, like you, like me. He is one of us. He is a man of the people.

## Socialized Medicine

EXTENSION OF REMARKS

OF

### HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. RAMEY. Mr. Speaker, the inclosed message has just been mailed to me by my devoted friend, Dr. E. J. McCormick, of Toledo, Ohio, formerly president of the Academy of Medicine, past grand exalted ruler of the Elks of the United States of America, and one of Ohio's outstanding citizens—a man unselfishly devoting his good works to the service of others.

In addition to the statement in regard to socialized medicine, I wish to state I had the pleasure of visiting socialized medicine hospitals in Russia and the observations of the activities there constrains me to emphatically say I hope it never happens here. This is not said in criticism of that country nor of the doctors there. I merely hope no system ever arrives whereby human bodies, even though they be treated efficiently, are treated just as though they were another machine.

SOCIALISM IN NEW ZEALAND

New Zealand's state medical system, which is supposed to grant "free" medical care to all, is breaking down under the weight of abuse by patients, doctors, and political meddling in general. It is reported that the Government of New Zealand is seriously considering discontinuance of the system.

The experience of New Zealand is an example of why many people in this country are slow to favor committing the United States to a Nation-wide Government medical system. A mistake could cost the lives and health of millions of people. The position of the medical profession on the question of socialized medicin is ably stated by a leading doctor:

"No person of intelligence will oppose constructive social legislation, and least of all the medical profession whose chief concern is human welfare. It is extremely difficult, however, to determine where constructive measures end and destructive paternalism begins, especially when administered by an impersonal and an entrenched bureaucracy.

"Our problem is the provision of medical care of high quality to the Nation without sacrifice of liberty. Sacrifice of small liberties leads to sacrifice of greater liberties and eventual loss of all. It is not likely that the working people and the employers of this Nation are ready to submit to compulsory taxation to support a medical care plan administered by a Federal bureaucracy."

## Letter From Overseas Servicemen

EXTENSION OF REMARKS

OF

### HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following letters that appeared in the Stars and Stripes on November 7, written by men in the service overseas:

REPLACEMENTS WANTED

Eighty points has been set as the critical score for discharge of medical officers, 5 points higher than for officers in all other branches. Newspapers and magazines spread the word that all Army medical officers of 80 points and over would be caring for civilians by December 15 if they so wished. A teletype from our higher headquarters confirmed that medical officers with 80-plus points were nonessential.

We doctors in the Ninth Air Force are now told that we will have to wait for replacements to come before we can be relieved. Instead of 80, our going-home score is set at 93 points. All this is supposedly due to difficulty in obtaining replacements from the States. We can get out of the Army with 80 points if we get to the States, but it takes 93 points to get to the States.

And the crowning low blow—for medical officers in the States, 45 points are enough to keep them there. This policy will reduce the amount of available replacements, and questions the all-out effort to obtain replacements that we believed was being made.

CAPTAIN ELKIN,
*Eighty-sixth Fighter Group.*

NO TIME FOR TOURISTS

I have just finished reading in a London paper that regular American liner services with weekly sailings between New York, Boston, Southampton, and Hamburg had commenced September 1. Each vessel is a 17,500-ton job, and there are six of them.

Is this the time to return to business as usual when a million GI's are awaiting transportation that will take them home? If it's just a case of money, we'll gladly pay our own way back on these civilian ships.

We unwilling ETO occupants deeply appreciate this catering to the tourist classes when we have been told that our redeployment schedule has been set back a month for "lack of shipping space."

THREE FRIENDS OF CLEM.

GUARD HAPPY

In basic we were told that the proper way to pull guard was for a man to be on for 2 hours and off for 4 for a 24-hour period and then he'd get 24 hours of rest. We are now pulling four on and eight off 7 days a week. This has been going on for several weeks now. We are promised relief when replacements arrive, but at least one bunch of replacements has just been turned down by Regiment.

One of our four-man posts is at a British camp, guarding British troops. And the British maintain a three-man MP patrol there, too.

The rate of courts-martial in our company is high now and it will go higher if we don't get a break soon. This schedule is too much.

(Signed by 23 EM's, Twenty-ninth Infantry Regiment.)

WHY NOT TAPER OFF?

Why is it that men of 60 points and over, now eligible for discharge and who must remain here until shipping space is available, still must work 8 and 9 hours a day 7 days a week?

Surplus pools should be created where all men with ASR scores over the discharge level should be stationed until shipping is available. At this place they should be accorded all the privileges denied them during the war. Sightseeing tours through the Continent, furloughs to cities that are a "must" for every European tourist, stays at various rest and recreational centers, so that the GI can get away from army routine as much as possible.

Sergeant GINZBURG,
*Biarritz Army University.*

## Relief of Disabled Veterans

EXTENSION OF REMARKS
OF
### HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I take pleasure in calling attention to the following resolution recently adopted by the Campbell Post, No. 596, of the American Legion:

Whereas great pressure has been exerted upon the administrative agencies of the United States Government and its legislative branches to provide funds for the restoration of devastated countries throughout the world and for the rehabilitation of people in foreign lands whose lives have been disrupted by the ravages of war; and

Whereas it has been rumored and reported that the Government of the United States intends to provide funds for these purposes, directly or indirectly through legislative or administrative action, or through lend-lease; and

Whereas the United States Government owes a duty of care to its own disabled veterans and to able-bodied veterans whose homes and lives have been disrupted by reasons of the war. Now, therefore, be it

*Resolved*, That (without passing upon the merits or demerits of aid to the devastated countries of the world and to the needy people of foreign lands) the American Legion demand that the Government of the United States expend for the rehabilitation of disabled veterans of this country and for aid to veterans whose lives and homes have been disrupted during their service in the military forces of the United States a sum of money that shall not be less than that expended or advanced, directly or indirectly, for the restoration of devastated countries or the rehabilitation of needy people in foreign lands; and be it further

*Resolved*, That the Government of the United States, in every appropriation of moneys to be used, directly or indirectly, for the restoration of devastated countries or the rehabilitation of needy people in foreign lands, it be provided that a similar sum be appropriated and expended for the rehabilitation of disabled veterans of this country and for aid to veterans whose homes and lives have been disrupted by reason of the war; and be it further

*Resolved*, That copies of this resolution be sent to the President of the United States, the Presiding Officer of the United States Senate, the Speaker of the House of Representatives, Hon. SHERIDAN DOWNEY and Hon. WILLIAM F. KNOWLAND, Senators from the State of California, and Hon. JACK Z. ANDERSON, Congressman from the Eighth Congressional District of California.

(Approved October 10, 1945.)

## Our Republic

EXTENSION OF REMARKS
OF
### HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I wish to say that I am glad to have inserted in the RECORD an article written by Col. Francis Scott Key Smith, a member of the Washington, D. C., bar in which he shows the difference between a democracy and republic. Let us not forget that ours is a republic and recognized as the great American Republic.

OUR REPUBLIC

James Madison, a member of the Constitutional Convention which framed and proposed the Constitution for adoption, in advocating its adoption, declared:

"The first question that offers itself is whether the general form and aspect of the Government be strictly republican. It is evident that no other form would be reconcilable with the genius of the people * * *. If the plan of the Convention, therefore, be found to depart from the republican character, its advocates must abandon it as no longer defensible."

And he added:

"Democracies have ever been spectacles of turbulence and contention; have ever been found incompatible with personal security or the rights of property and have been in general as short in their lives as they have been violent in their deaths."

Samuel Adams also about the same time remarked:

"Democracy never lasts long. It soon wastes, exhausts, and murders itself. There never was a democracy that did not commit suicide."

The ordinance for the government of the great Northwest Territory passed by Congress in July 1787, during the time that the Constitutional Convention was in session in Philadelphia, provided, that the States formed in said territory when admitted into the Union may adopt State constitutions, *"Provided*, the constitution and government so to be formed shall be republican."

Likewise, section 4 of article IV of the Constitution provides: "The United States shall guarantee to every State in this Union a republican form of government."

Andrew Jackson, seventh President of the United States and an acknowledged exponent of democracy even to this day, regarded the American constitutional Government as a republic. In all of his official and private utterances, Jackson, ever referred to the Federal Government as a republic never once speaking of it as a democracy in anything he wrote.

In his farewell address upon leaving the Presidency, he makes use of such expressions as "the history of republics," "citizens of this great republic," "this great and glorious republic." And he speaks of "principles of economy which ought to characterize every republican government."

Again in his appeal to South Carolina to abandon its nullification ordinances Jackson said, "To inspire new confidence in republican institutions."

Bequeathing the sword presented him by the citizens of Philadelphia to his grandson Jackson admonished that he "will always use it in defense of the Constitution and glorious Union, and the perpetuation of our republican system."

In his letter to Commodore J. D. Elliott, written in March 1845, a little over two months before his death, in which he declined a tendered honor of a Sarcophagus for his remains, Jackson wrote, "My republican feelings and principles forbid it; the simplicity of our system of government forbid it. Every monument erected to perpetuate the memory of our heroes and statesmen ought to bear evidence of the economy and simplicity of our republican institutions; and the plainness of our republican citizens."

General Washington also in his farewell address twice refers to the republican character of the American government and system. At one place, he wrote, "Foreign influence is one of the most baneful foes of republican government." At another, "Overgrown military establishments are particularly hostile to republican liberty."

The purpose throughout the entire Constitution is to subjugate power through combinations of instrumentalities—to create a government of the people by combining the principles of intelligent aristocracy with those of sound democracy. The check upon legislation established by the original set up for two houses of Congress; the one elected by a State agency to represent the sovereignty of the States and the other elected by the people at large to represent the people or populace clearly demonstrates the purpose to combine the aristocratic system with the democratic and so preserve both an intelligent and fair government along with them. It is a system for the protection and promotion of individual initiative and enterprise; for safeguarding personal security and private property and the encouragement of home and family. It is the diametrical opposite of socialism and communism and the two can not exist together. The one is for human progress and happiness, the other is destructive of both.

A system which acknowledges that free adult people sui juris, are better able to manage their private business than tax paid public servants. The allegiance of the American people is to the constitutional republic of the United States.

## When Will the Boys in the Pacific Area Return Home?

EXTENSION OF REMARKS
OF
### HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter that I received from a mother who has a son on Luzon, together with a clipping from the Daily Pacifican dated November 1, 1945.

This letter is only one of many that I have received in the last few weeks from the boys in the Pacific or from their families at home. It is queer indeed that these men who have been overseas for so long still find themselves stranded out

there without any immediate prospects of being shipped home.

This policy of neglect and inaction on the part of the War Department is creating an army of occupation that is sullen and disgruntled. After all, these men are not professional soldiers and they have a right to feel that their job is finished, and that it was well done. They are longing to return home to their families—to get out of uniform and to resume civilian life. In my opinion, this policy of inaction in discharging and returning these men to their homes is one of the main reasons why there is so much opposition to the proposed conscription legislation. People are just losing confidence on the Army and the War Department.

Oh, I know the War Department is proud of the record they established in October on discharges, but that still does not explain why so few of the high-point men in the Pacific theater have been released. Every time the question is asked we get the same answer—a shortage of shipping space—a shortage of shipping space. This argument is wearing pretty thin with a good many of us. All the shipping space that we possessed could not have suddenly vanished into thin air.

What has happened to all the shipping space? Who is responsible? Both the Military Affairs Committee and the Naval Affairs Committee ought to make this question their first order of business. Yes, the conscription bill and a lot of other legislation can rest and wait awhile. But these committees of the House and Senate should start an investigation immediately and shake down a few of our generals and admirals, and I am sure that we would then find the shipping space.

HEADQUARTERS
DETACHMENT, SEVENTY-
FIRST QUARTERMASTER BATTALION,
APO 70, CARE OF POSTMASTER,
*San Francisco, Calif., November 2, 1945.*

DEAR MOM: Well, the mail has been a little slow lately, but I guess everything is O. K. back there.

I don't know what information is being imparted to those at home concerning the rate of transfer of men from overseas stations to the States for discharge, but for your information, here are a few facts about the rate of transfer from Luzon.

At this date men who have waited as long as a month in disposition centers for transportation home are being sent back to their former units. Men now in disposition centers have adjusted service rating scores ranging from 70 to 100 points. Sixty-point men are still in their organizations with no prospect whatsoever of going home. Recently a small number of men left Manila Bay in a Liberty ship which they converted for troop use themselves.

GI's here are very bitter about the delay in their being sent home. Some of the fellows have been away from their families for 36 months. They have up to 100 points and can't go home.

Read some of the letters in the clipping I've inclosed.

Write when you can.

Till later,

JEROME.

---

[From the Daily Pacifican of November 1, 1945]

MAIL BAG

HOODWINKED

EDITOR: It is rather obvious to this writer that the War Department is saving face and hoodwinking Congress and the American people by discharging low-point men in the States and bringing them back from nearer theaters such as Europe and Hawaii. This compiles a fine statistical record to forestall domestic criticism ("foreign" criticism is of no account) and makes the point system as much a laughing stock among GI's as temporary duty and rotation have been.

It is our proposal that no man should be returned to the States or discharged within the States with less than 90 points until all men with over 90 points are brought back from all theaters. Nor should they be granted indefinite furloughs. This is not purely a spite suggestion. A bad situation should be spread out rather than directed against a minority which is so far from home they can't do anything about it. By thus bringing the true situation to all the American people some decent action might result rather than some high-flown figures that do not tell the whole truth.

We should like to see some transports in this theater. We did not ask to be sent here. Ninety-nine percent wanted to go to Europe. Why should a man actually be punished for spending years on such unsavory places as Guadalcanal, Saipan, or New Guinea?

We should like also not two Liberty ships to be converted (an obvious save-face policy) but 200, and not next week but now. It is nothing short of idiotic to "experiment" with something that has been put in practice for 3 years.

Screaming headlines state that 60-point men are eligible for return November 1. This makes wonderful reading for the folks back home. They do not know that there are 80- to 90-point men over here and not the slightest possibility of 60-point men returning in November or even December. Any day they miss a letter they figure their boys are on the way back home. Beautiful propaganda!

LT. COL. S. P. HUBBARD
And 25 others.
*APO 718.*

NUMBERS GAME

EDITOR: I see by the paper that the Army expects to ship only 77,000 home during the month of October and that only half that number have left so far. The other day the office of the commanding general, United States Army Forces, Western Pacific, published a circular (No. 46) giving the list of redeployed units presently located at Philippine bases. This list was 14 pages long. We added up the number of men in each unit on the first two pages and the total was 75,648. Multiply this by approximately seven and see what you get. The Army got them all over here in 3 months and all the way from Europe, too. Strange that it can't get a quarter of these troops half that distance now.

T/4 LAWRENCE GREEN,
*APO 75.*

BOX SCORE

EDITOR: Getting the box score on discharges was a fine accomplishment and now that those in charge have committed themselves we hope your paper will dig out the actual figures at the end of each month so we may see for ourselves just how accurate the estimates are.

According to one official at a replacement center here in Tacloban, one of the main reasons for the slowness of troop movements is the fact that Manila is "grabbing off" all the empty ships. We wonder if this condition was taken into consideration at the time the box-score figures were made up. Or is Manila going to be the only replacement center to make its quota?

In closing, we'd like to add that if some officer here in Tacloban will offer his services and experience in fitting out Liberty ships as Colonel Davidson has done in Manila, getting volunteers will never be a problem. Just say the word, sir. Furthermore, we'll personally make the rounds of all the mess halls on the island and plead with them to each contribute one M-37 cooking range for the best cause in the world.

T/4 DECKER SCHUCH and
T/3 JACK E. ALLEN.

REMOTE CONTROL

EDITOR: This outfit has nearly 2 years overseas. We came to the Pacific direct from the ETO. We did get a 5-hour stopover in Panama. After riding all over the Pacific Ocean we disembarked in Manila and were sent to a small village some 60 miles north of Manila. Since being here we have been pulling town patrol. The squawk is this—no mail, no cigarettes, no beer, no patches to clean our guns, no pay for 3 months, and no bread with our meals. The biggest yell of all is that the men with over 80 points can't even get as far as Manila.

## Delay in Discharging Servicemen

EXTENSION OF REMARKS
OF
## HON. W. LEE O'DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Monday, November 19 (legislative day of Monday, October 29), 1945*

Mr. O'DANIEL. Mr. President, I have a letter written to me by a soldier on Bataan, complaining about the slowness with which the servicemen are being sent home. I also have a letter dated Linden, Tex., November 5, from the wife of a soldier. She states that her husband has written to her on the same subject. I have also a letter dated Austin, Tex., November 8, from the wife of another soldier. The three letters all deal with the same subject. I have the originals of the letters in my files and they are properly signed. I am not divulging the names of the writers for the protection of those who wrote them. I ask unanimous consent that the three letters may be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

BATAAN, P. I., *November 4, 1945.*

DEAR SENATOR: It is highly improbable that you remember our meeting at the Fort Worth fat stock show some years back but it is a cherished memory to me. My approval of the many fine things you stand for is my reason for coming to you for assistance at this time.

My problem is the one of getting a whole lot of soldiers home in a manner similar to that which hurried us overseas when we were needed. Now that we have accomplished our mission which in itself was no Sunday school picnic, it would appear that our usefulness is ended and interest in us has been abandoned by those in authority to lend their influence in hastening the pace to return us to our homes and life as we choose to live. I know that no man with your affection for people has let this problem drop idle. We fellows over here are human and fully realize the enormity of the job but at the same time we are skeptical of the news that would lead us to believe that shipping is the bottleneck when we see daily the same ships laying idle at anchor in the bay.

It is hard to believe that the same type of ships we rode all over the Pacific are im-

mediately unsatisfactory for troop movement. Possibly the employment situation causes the delay. Or could it be the people in authority fear a control taken by those who have given a rich part of life to protect and hope for our homes when we completed our mission? Whatever be the cause of the slow operation I ask humbly of you to learn and shout it to the high heavens with a belief that once the true cause is brought to light we shall see an immediate increase in our numbers returning to life, love and home.

We want a lot of plain old-fashioned Texas truth—nothing more, nothing less.

Thanks for your very best efforts.

Sincerely.

---

LINDEN, TEX., *November 5, 1945.*

Hon. W. LEE O'DANIEL,
*Senator from Texas,*
*Washington, D. C.*

DEAR MR. O'DANIEL: Is not there something that can be done to make Navy release their men faster? The Army, Marines, and Coast Guards are way ahead of the Navy with their demobilization of men.

My husband is stationed on Okinawa where he describes living conditions as terrible. He is a storekeeper with only 42 points and is not eligible for a discharge because SK's have been frozen to 44 points. Yet on that island and at other naval bases we have SK's doing carpenter's mate work, electrician's mate work, boatswain's mate work, mailman's work, even driving trucks and picking up rubbish; doing everything in the books but storekeeper work. Still, SK's are declared essential and have to stay in while those other rates get to come home. Is that fair? He states that there is no necessity for more than one-third of the men. They are actually in each other's way and that it is not a shortage of ships because between 50 and 100 passenger-carrying ships have left there in the past month without a single passenger. Many more that could have carried a few more men have left and hundreds are still in the bay.

My husband has been in 2½ years, and if the Navy high-ups have their way, they will keep them all in just as long as possible because they like their power and rank which they might lose when the men are discharged.

The waste and destruction of supplies he describes is beyond comprehension of the people here at home who have never seen it.

Are the people here in the States going to forget what we owe the servicemen now that the war is over? I do hope something can be done to get them home as soon as possible without harm to our Nation's security.

Sincerely.

---

AUSTIN, TEX., *November 8, 1945.*

DEAR SIR: I suppose you are tired of receiving complaints from the soldiers overseas and the soldiers' folks at home. However, I'd like to register my complaint chiefly because of what my husband's letters say.

He is at Manila awaiting transportation home. He has 71 points. He and all the rest of the boys are very much displeased with the slowness of shipping home. He sent me clippings from the soldiers' newspaper, the Pacifican, proving that the schedule for shipping is far behind. For instance the quota for October was 77,700 set by MacArthur; only approximately 37,000 men were shipped from Manila port in October.

The depots are overcrowded and are hardly accepting men. What is needed are more ships. The boys don't demand luxury liners. They will ride in anything so long as it is headed for home. The Liberty ships should all be reconverted instead of just a few experimentally.

One captain wrote in the Pacifican that at his base they were fixing Liberty ships to haul Jap POWs to their homes. I quote him, "It seems a pity that our own soldiers couldn't be given as much consideration as the Japs are receiving."

Help the boys get home faster. They all are so depressed. Thank you so much.

---

## Postwar Peace Problems in Europe

EXTENSION OF REMARKS
OF
## HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. PITTENGER. Mr. Speaker, we have heard a lot of discussion and have read a good many newspaper items dealing with plans of the United States in the postwar period in connection with occupied countries, as well as other countries, in Europe, following the ending of World War II. These reports have been disquieting and have led me to believe that something is wrong.

We are vitally interested in just what is going to be done among the conquered nations in Europe. Most of us want to see constructive work done there and proper measures taken so that those countries can again govern themselves. The only alternative is to have the United States of America keep our American soldiers there indefinitely as policemen. In plain language, that is just what military government means.

We have been reading newspaper articles which indicate that efforts to reconstruct these European countries are not working out satisfactorily. A few days ago I notice a newspaper item, written by a newspaper correspondent in Germany, who said that the United States Army was requesting American food supplies for Germany of over 750,000 tons, and that food was really needed to prevent starvation until the next harvest. There is, of course, more to this article, but it does not satisfy me that reconstruction work is going on properly in Europe.

Then there is another article in the same newspaper which purports to speak for official Washington and for the President's War Relief Control Board. This article conflicts in a way with the other article, and I quote it in full because of the many implications. It appears in the Washington Daily News for Friday, November 9, and is as follows:

PRIVATE UNITED STATES RELIEF DENIED GERMANS

Private and religious groups seeking to send food, clothing, and money into Germany have found no sympathy so far in official Washington.

The President's War Relief Control Board, which must grant permission for foreign relief activities, has denied the four applications made to it to date for German relief.

All of these, according to James Brunot, executive director, were by bona fide groups. Three of the applications were from church organizations.

A spokesman for the Civil Affairs Section of the War Department said the Army couldn't and wouldn't handle private relief for Germans unless it were so ordered.

HOW TO GET IT IN?

"If they raised $100,000 to send into Germany, there wouldn't be any way to get it in," said the Army spokesman. "If they got together 100,000 tons of sauerkraut, there wouldn't be any way to get that in either."

The spokesman pointed out that no communications of any sort are being permitted with Germans by persons outside the country. This policy was said to conform to the Potsdam Declaration.

LESSON IN SELF-SUPPORT

"Under that declaration," said the Army spokesman, "the German people are to be taught to depend upon themselves and not to lean on the Salvation Army, the Red Cross, or other relief agencies."

The Army itself, of course, is feeding Germans to prevent starvation and bloodshed and to help teach democracy.

"That is an Army mission," concluded the spokesman.

The foregoing article flatly contradicts another article to which I have referred which bears this headline: "Army asks food to feed Germany." There is just simply something wrong in the way the postwar program is being handled over there.

Then, Mr. Speaker, in another newspaper a few days ago we were told in headlines from a foreign correspondent that "prisoners returned to Yanks by French found unfit to work." Then follows a rather gruesome article, indicating that war prisoners had not been given sufficient food. This spells out a condition that is not exactly slavery. It is worse than slavery.

A couple of days ago I happened to meet an Army officer who had been in Europe, in occupied territory, and who was willing to answer some questions in reference to just what was being done to rehabilitate those war-torn countries. He could not, of course, permit his name to be used, but he told me plenty. He rather indicated that the Army was following orders from "higher-ups" somewhere here in Washington and without any hesitation expressed his rather vigorous disapproval of the entire program.

I do not now spell out the details, but they indicate that somebody, someplace, somewhere wants the reconstruction period to be a punishment period. The statements made to me also indicate clearly that policies are being formulated by some person or persons who are either lacking in common sense or else have a lot of wrong conceptions about things.

Naturally, with Gen. Dwight Eisenhower right here, I would like to ask him how he is getting along over there. But we are all familiar with Army procedure. No one talks out of turn. Naturally, if I asked Gen. Dwight Eisenhower any questions, he would look at me with an authoritative expression and answer me with an air of finality to the effect that our postwar program in conquered countries in Europe is going along fine. He might not mean a word of it, because he simply is not going to talk out of turn. He is carrying out orders, and part of his orders is to tell you that everything is fine.

This reminds me of what happened to Gen. George Patton, who is rated quite a soldier among some of our folks. He is supposed to have had a few original ideas about how to run the government of conquered countries. He expressed

opinions. He talked out of turn. And so they put him in the doghouse.

Who did this? Who ordered General Eisenhower to chastise this modest young fellow by the name of Patton? I would like to know. I think the Members of the House would like to know.

Let me say right here that the way things are being handled in occupied territory in Europe is horrible by comparison with the way Gen. Douglas MacArthur has handled the situation in Japan. MacArthur has his critics, and they are sharp ones. A lot of fellow travelers would like to catch him making mistakes. All reports we get indicate that the military government of Japan, contrasted with the dismal failure of the military goverment in Europe, has been efficient and highly satisfactory, and it is getting results.

Do you remember what a sensation took place down at the State Department when Gen. Douglas MacArthur said that he was going to demobilize the Army and get along with 200,000 soldiers, as I recall it. Well, something happened down at the State Department almost as demoralizing as the results of an atomic bomb. The spokesman down there admitted that the State Department had won the war against Japan with a little slight and inconsequential help from the War Department and Gen. Douglas MacArthur. This sounds foolish, but that is just what happened.

VENGEANCE IS MINE

I am convinced, Mr. Speaker, that somebody in some branch of our Government is looking for vengeance in the occupied countries of Europe. They have a blueprint for subjugating the civilian population in occupied countries so as to punish them for the misdeeds of their military leaders. There may be some people who want to follow this sort of a program because of what has happened in these European countries in the past. They feel that one wrong justifies the commission of another crime. Now is the time for them to learn that two wrongs do not make a right.

If I had any doubt as to the correctness of my position, that doubt was removed yesterday when the newspapers published the challenging statement of the Catholic bishops of the United States dealing with the postwar peace pattern. That statement is one of the most worthwhile declarations on this subject that has come to my notice. It uses the word "vengeance," and the statement contains this line:

> The statement denounced Russia for giving lip service to democracy, but actually following totalitarian practices. It protested against betrayal of Poland, the absorption of the Baltic countries by Russia, the indifference to the plight of the people of Italy, and the policy of vengeance in force against Germany, Austria, and Hungary.

So I think, with this official declaration from religious leaders, that I may properly suggest to the House of Representatives that we ought to find out who is responsible for this postwar program on the part of the United States to rehabilitate Europe. Is the State Department the guilty party? If so, who is there in the State Department that is committing these mistakes? If responsibility rests on some other agency of the administration, let us find out what branch of the Government issues orders to our military people in Europe. Let us find out the names of the men who are responsible.

Ordinarily, I do not get enthusiastic about congressional investigations. Here is one matter, however, that I think should be investigated by Congress. We ought to appoint a committee, and the committee ought to get the answer to this question as to who is responsible for a policy of vengeance.

---

## The Suribachi Flag

EXTENSION OF REMARKS

OF

### HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. HINSHAW. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include a letter from Lt. (jg) Allan S. Wood, USNR, communications officer of the U. S. S. *LST 779* to Mrs. Ruth Tawney, wife of the minority clerk of the Ways and Means Committee. Lieutenant Wood is a resident of Pasadena, Calif.

The letter follows:

*U. S. S. LST 779,*
*Care of F. P. O, San Francisco.*

MY DEAR RUTH: I am sorry I have been so lazy about writing. Especially am I sorry that I didn't write you a first-hand account of our doings at Iwo. I thought I had written you, but apparently I didn't. Please forgive me.

I've written so many letters about Iwo that it's becoming a pretty dry subject to me, but I shall try and do my best by you. My little mother has been as busy as a little bee publicizing (?) my exploits. Besides the local papers and a local radio broadcast, the latest appears in the letter column of Time. I also got a letter from a certain Brigadier General Denig, of marine headquarters in Washington asking me for a fuller account of the flag (you don't know him by any chance, do you?). First time I've ever gotten chummy with a general. Speaking of generals, you're not doing so bad yourself. General LeMay is a big man out here—read about him in Time also. I have seen a lot of his B-29's and P-51's. They're really doing a bang-up job, those boys are.

But newspapers, radio, generals—they're not for me. I don't fancy publicity much, especially in the case of Iwo where the credit due belongs to the United States Marines. The Navy could have gone on pounding the hell out of that island with shells and bombs from now until doomsday, but it still couldn't have made the marine's job any easier, because the Japs had hidden themselves so well that they had to be burned and blasted out by hand. Everybody knew it was going to be tough, but it turned out even tougher, as you know. I'll never forget the look on the faces of a few of the marines I saw after the first two or three hellish nights on the beach. Some looked as though they wanted to cry but couldn't others had faces which showed absolutely no emotion at all. The total effect was heightened by a ghostly pallor on their faces—the result of several days' layers of dust.

Even more horrible were the twisted, mangled bodies of dead marines—and the stench of them up close. The whole area of the beach had that peculiar, faint, sickish-sweet odor of dead bodies.

Yet, through it all you never saw such a willing bunch of lads. They did all that was asked of them—sometimes more cheerfully and oftentimes humorously. Most of the marines were vete..ans. The ones we had on board—part of a 155-millimeter howitzer battalion—had been at Guadalcanal, Tarawa, Guam, Saipan, etc. Talking to them and watching them in action made me feel the greatest respect for them, and I thank God that I haven't as yet had to endure anything similar to what most of them have gone through. We had a few bad hours, but I'll get to that later.

It all started for us back at Pearl Harbor where we got all the advance information on Iwo, the operation plan (as thick as a New York City telephone book) etc. It was about that time that I ran across the flag at a salvage depot. I was just rummaging around looking for anything that might be of use when I found this apparently brand new flag in a duffle bag with some old signal flags. It was a large flag and I was glad to find it because we were out of large flags. Little did I know how famous it would one day become.

After going through extensive invasion rehearsals we set out for Iwo. It was our first operation and naturally we were a little excited. We knew it would be pretty important because Iwo was so close to Japan.

After stopping at Eniwetok and Saipan for logistics, we set out on the last leg of our journey. The trip was uneventful and the sea fairly calm. We listened in on our radio and heard aircraft spotters giving spots for the big guns of the Navy, which were giving Iwo a preinvasion shelling.

On the 19th of February—a clear, cool, beautiful day—we rolled up to Iwo, which was a mass of smoke and dust. The big ships of the Navy circled the island and were leisurely pumping a steady barrage of shells at it. Overhead our planes buzzed and roared as wave after wave dove at the beaches and Mt. Suribachi. It didn't seem possible there could be a living thing left on Iwo when the marines got there. It looked like a pushover. But that afternoon as we cruised around, several thousand yards off the beach, we could tell by looking through binoculars that the Japs were doing a lot of fighting back. We could see burning tanks and LVT's, and, most disheartening for us, we could see the splash of mortar and artillery shells around beached LSM's. However, we figured we would be among the last of the LST's to beach so we weren't too worried. We were very much surprised the next day, however, when we were ordered into the beach. No LST's had beached up to that time. Apparently they needed our howitzers pretty bad, so in we went. The other two LST's that were supposed to come with us didn't show up, so we hit the beach all alone—the first to beach at Iwo. It wasn't until 2 days later that the rest came in. The beach was a madhouse of men, supplies, and noisy vehicles. Suribachi was a few thousand yards down the beach on our left and the front line, marked by some entrenched tanks, was only a few hundred yards down the beach. Our own artillery and mortars, dug in on the beach, were popping and banging continuously. Occasionally you could hear a spatter of small-arms fire, and all too often a big Jap mortar would explode with a shattering burst, and with terrible finality, right on the beach in the midst of all the men, supplies, and machines.

We unloaded the rest of the afternoon and most of that night. I'll never forget that night—the pale moon, the eerie yellow star shells, the black grotesque outline of Suribachi, the occasional burst of a shell, sometimes close at hand, and the continual clank

and groan of the tracked vehicles unloading our ship, and the wash of the surf on the wreckage which littered the shore line. There was a feeling of death in the air that was overpowering—almost stimulating—which prevented any weary eyes from closing for any length of time.

About 4 o'clock the next morning, when things were more or less quiet, the Japs suddenly cut loose with a mortar barrage on the beach and we found ourselves almost in the middle of it. Several mortars landed within a few feet of our ship causing it to tremble and shake. Shrapnel spraying against the steel plates sounded like someone was throwing great handfulls of gravel at us. How we missed being hit I don't know. If we had, the result would have been most disastrous, for we were loaded with ammunition and high octane gasoline—some of it right on our main deck out in the open. After that, the skipper decided it wasn't healthy for us to stay where we were any longer, so we pulled off the beach in record time. We beached again 2 days later, little closer to Suribachi. The marines were taking over Suribachi and late that morning (the 23d of February) they raised the first small flag on top of the mountain. The marines on the beach may have cheered (I was on the beach at the time) but if they did I didn't hear them. Most everyone was too busy for much more than a quick glance at the mountain.

Later a marine came aboard our ship and wanted to "borrow" a large flag. The skipper asked me how our flag situation was. I in turn asked the signalman. They said we had one large flag and several small ones. So I told the captain I thought it would be O. K. if we gave the marine our large flag. So we gave him the flag, and later we saw it fluttering from Suribachi. We were proud, of course, that our flag flew from that bloody mountain, but even then we didn't know that it was destined to become so famous.

One could hardly attach any significance to the fact that our LST happened to be the nearest one to Mount Suribachi and thus the logical one for the marines to borrow a flag from. However, it makes a good story to tell how the Iwo flag was salvaged at Pearl Harbor to be raised on Mount Suribachi, a fitting symbol of how Americans endured bitter defeat at the hands of the Japanese only to come back with stupendous military forces to crush Japan.

Well, Ruthie, there's your story—patriotic blandishments (?) and all. The crux of the whole matter is that it should never happen again. Our failure or the failure of the generations before us, was to let world conditions get to a point where war and battles like Iwo are a last resort and a most costly necessity. It hurts to think of what might have been done with all the human energy and all the material wealth that has been put into this war. If we could only think, invent, produce, and spend as lavishly on more peaceful pursuits.

As I see it now, it is our job and responsibility to straighten out the world and bring some semblance of order, and eventually see that every group of people and every nation is reasonably satisfied with what it has got. If a group of people or a nation are dissatisfied and needful, there's where trouble starts and there's where crackpots like Hitler will find fertile fields to sow their wild schemes. We can't be isolationists. The concern of every people is our concern.

But those are weighty subjects and I'm getting tired of same (you too probably by this time). Anyway, you can be sure I'll duck anytime anything comes flying at me. By this time it becomes a habit.

I've got 8 or 10 more months to go out here so you've got lots of time to buy your car and motor out to San Francisco and meet me when I come back.

## Wartime Controls Should End Now

EXTENSION OF REMARKS
OF
### HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. CURTIS. Mr. Speaker, the time has come to take the harness off the American people. Our so-called wartime controls were put on to help win the war. They have served their purpose, and should be terminated and terminated now.

Government controls, established in wartime, are today retarding reconversion. Factories are not producing goods or providing jobs while they are waiting for months on Washington for an approval of the prices for their articles. New industries are not started and new ideas are not being developed because of Government interference.

American farmers, laborers, manufacturers, wholesalers, retailers and professional people are not a group of infants that require the Government to act as their guardian. As law abiding, free men and free women they have faith in the system that has made America great. That system cannot survive, if Government consent must be obtained for a farmer to sell his city friend a pound of butter, or if Government consent must be obtained to rent a room, build a house, or make a contract for services. Our American system cannot survive if a Washington bureaucrat can keep factories and distributors idle under the guise of controlling prices.

Temporary continuance of wartime controls means in many instances permanent control. It is the sure way to strangle and kill private enterprise. It may be granted that the immediate removal of all wartime controls will make some situations a little rough, but in the long run its effect will be wholesome. It will make more goods available at a lower price, and thus combat inflation.

The greatest step that this Government can take in preventing inflation would be to end all wartime controls, discharge 2,000,000 Federal employees, and balance the Federal budget. If this is done, the system that has given us more good things, and at the same time paid higher wages than any other system in the world, will serve us well in the years that lie ahead.

## Armistice Day

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address which I delivered on Armistice Day, November 11, 1945, over radio station WLAW, Lawrence, Mass., under the auspices of the Jewish War Veterans of the United States:

The war is over. The peace remains to be won. As the echoes of the second and, as we hope, the last atom bomb still ring in our ears, we pause to count the cost we have paid for victory.

Some may say $300,000,000,000. They are right as far as they go. Tremendous quantities of material lie on the bottom of the ocean or have been consumed in the furnace of war. In time, this loss can be replaced. Work and wealth will build again. But the cost I speak of is beyond our poor power to replace. So many that we knew, gave all that we might win. Today as we meet to give thanks that the tragedy of war is over, there is an emptiness in our hearts. We think of the smiling faces of those who should be with us but never will. We miss the strength of their courage as we face an uncertain future. We cannot bring them back for they gave to the last full measure of their devotion. This then is the real and the terrible cost of war. Armistice means that the blood-letting has stopped. We look over the battlefields and count our dead.

The ravaged earth has been smoothed over. Man is trying to cover the scars left by the blistering fire of war. Damaged buildings are removed, splintered trees are cut down. The barbed wire and the wrecked tanks have been taken away. Bulldozers have leveled the gaping wounds dug by shell and bomb. Grass grows again to conceal the devastation of war.

Even the slit-trenches have been filled in and many of the men who used them to escape the flying steel have found permanent shelter. Wars and the threat of wars will torture them no more. They died. They sleep. Row upon row of crosses, interspersed with the star of David, cover the battlefields.

They tell of the sacrifices made for us by our American youth.

In happier days to come, as men travel in peace, they will come upon these cemeteries in strange and far away places; on a mountainside in Italy, on a tropical island in the Pacific, along a quiet roadside in France where cows graze in a nearby meadow, in Germany, Japan, China, and India. These simple white markers will face us everywhere we go, forever reminding us of the price which some Americans paid that all the rest of us might live.

Who were these few who were called upon to do so much? Were they Irish, English, Italian, French, Polish, Greek, or Jew? They were these and many more. But they fought as Americans, united by a bond which is greater than race or class or creed. They fought for tolerance and justice and for a world which must emphasize man's humanity to man.

Even as we speak these words, we know that evil forces which seek to divide men—to pit one against the other so that evil may profit—are at work in a war-torn world. In our own country they have started a campaign of lies to stir up hate and disunity. They have already begun to separate veteran from civilian and civilian from veteran. The servicemen have been urged, in tales which have gone out to the fighting fronts to "Come back and clean up the mess at home. The Government is full of reds, the unions are running the country, the war-workers have been banking millions and going on strike while you've been sacrificing everything. We're just waiting for you to get home and fix everything up and get rid of all these foreign agitators and subversive elements so America can be a country for Americans again."

It is such an old and vicious technique, this business of dividing people. It will always be used by the ignorant, the envious, the bigots, and the failures. And some people will always fall for it. For the peace and progress of our America, we must be everlastingly on guard against this subtle poison. We must cease talking about democracy and work to put these moral principles into action. We must practice tolerance and we must learn to puncture propaganda with fact and truth and charity.

That is why, on this Armistice Day, which observes the end of one war and which expresses the universal longing for the elimination of all war, we speak up against those who are trying to stir up civil war.

On street corners, in barrooms, at bridge parties, wherever people gather in small groups, these poisoners spread their evil. With half-truths and isolated examples, they foment racial and religious intolerance. Unfortunately, they succeed with those who have never learned to think.

"Blood money," you can hear them whispering, "While our men fight the wars the Jews get rich on them."

Let us give the answer to that lie from the record.

At the time of the Revolutionary War, though there were very few Jews in this country, the record states that 46 of them fought for the patriot cause. In the short War of 1812, 44 Jews took part, ranging in rank from private to colonel. Fifty-eight served in the Mexican War. At the outset of the Civil War, there were less than 200,000 Jews in the United States, yet more than 8,000 of them saw active military service. During the First World War, over 200,000 were in uniform. This was more than 4 percent of the armed forces of our country, while the Jewish population was but 3 percent of the total population. Over 1,100 citations for bravery were awarded to men of Jewish faith. One thousand five hundred were killed in action or died of wounds.

The greatest epic of courage to come out of that war—the exploits of the Lost Battalion—was essentially a Jewish achievement. For the members of the Lost Battalion, which refused to surrender even though it was cut off and surrounded for 4 days without food and with little ammunition, were a part of the Seventy-seventh Division, an East Side, Yiddish division. They fought like wildcats, these tailors, factory workers, clerks, and pushcart men from the crowded tenements of New York.

The many Jews who went from Lawrence and Boston and the other cities and towns of our Commonwealth gave Massachusetts the proud rank of fourth-highest State in the Union, in the number of Jews who fought as American soldiers and sailors in that conflict.

The Second World War began with the persecution of the Jews. A certain creature in Germany—I cannot abuse the word "man" by referring to him as such—this creature vaulted to power by appealing to mob passion and prejudice. The infamous Nuremberg racial laws, designed to exterminate the Jews, supplanted the laws of reason and justice. Thinking men all over the world saw in this a sign of the jungle terror to come. They warned us that evil was on the march inside Nazi Germany and that it was preparing to assault civilization. But the world, preoccupied with its own troubles, failed to heed. Then the beast struck. His armies and his air forces swept over Europe, enslaving all. Not content with these conquests, he set out to liquidate the Jewish people. With his concentration camps and his murder factories he made deliberate, hideous war on Jewish civilians.

Then the sluggish conscience of the world woke up. But hundreds of thousands of defenseless Jews had to stand and die for the common dignity of man before we saw the danger to ourselves. The contempt which this creature had for the Jews was a sign of his contempt for all mankind. After the Jews there would be other victims. No man was safe. All men of good will, no matter what their race or creed might be, knew they had to band together to fight for the humanity which made them brothers. And so the United States came into the war and we poured our wealth, our energy, our faith, and our lives into the struggle. There were years of dark days and anxious nights before we earned our victory. This ordeal has taught us a stern lesson. This war began with the persecution of a minority. Other wars may begin the same way unless we resolve to stamp out intolerance in time. The persecution of one is the persecution of all.

We shall not speak of the Jewish martyrs of our day. It is a chapter of history which fills us with shame at the thought that members of our human family should be capable of committing such fearful crimes against their brothers. Millions of victims point their fingers at us and say: "This must never happen again. This is the grim harvest of intolerance."

On this day, we have come to speak of the men and women of Jewish faith who fought and died with their fellow Americans as they beat back the surge of ignorance and hate and cruelty which was set in motion by evil men.

Out of the hundreds of thousands of Jews who fought for us, Mr. Bernard Postal, director of B'nai B'rith, has compiled a roll of honor entitled, "First for Freedom," a document worthy of our reverent attention. Among the firsts credited to Jewish men and women in the armed forces of the United States in World War II are these:

First American penetration of German soil was made by the Third Armored Division, commanded by Maj. Gen. Maurice Rose, of Denver, who gave his life for his country.

First American assault boat to hit the shore of France on D-day was commanded by Lt. Abe Condiotti, of Brooklyn.

First Nazi plane shot down for Uncle Sam is credited to Lt. William S. Beck, of Nashville, Tenn.

First American Red Cross nurse killed in World War II was Esther Richards, of San Francisco, who died of wounds received at Anzio beachhead.

First American Army nurse killed on the western front was Lt. Frances Slanger, of Boston, who died of wounds received in Belgium.

First American unit to break through to relieve the trapped American garrison in Bastogne was a tank unit commanded by Col. Creyton Abrams, of West Newton, Mass.

First American enlisted man to receive the Purple Heart in continental Europe was Sgt. Irving Allen, of Union City, N. J.

First American officer killed in the Philippines was Lt. Henry D. Mark, of Los Angeles.

First four-medal winner in the American Army in World War II was Lt. Morris Berenson, of Garfield, N. J.

First member of the WAVES to be killed in line of duty, was Elizabeth Korensky, of Philadelphia.

The first Japanese battleship sunk in the war was the *Haruna*, sent to the bottom by a plane piloted by Capt. Colin Kelly whose bombardier was Sgt. Meyer Levin.

The first Gold Star Mother of World War II, was Mrs. Gertrude Kram, of New York, whose son, Seaman Leonard Kram, was killed in action at sea.

This, in part, is the answer to those who would try to belittle the great contribution which the Jews of our country have made to the winning of the war. But it is more than this. The splendid record of the Jews is an affirmation of their passionate faith in our way of life and of their spiritual communion with all Americans of the right side—the fair, the tolerant, the progressive side.

The Jewish War Veterans of America meet this day to observe the ending of one war and to dedicate themselves to the great tasks of peace confronting the Nation. They know the terrible price we have paid for this second chance. Their dead—which are our dead—hold us to this responsibility. We, the living, must work hand-in-hand to earn opportunity and enlightenment for all. Before this teamwork, the forces which seek to divide us will collapse. For, out of our common sacrifices we have learned the lessons of understanding, cooperation and unity. As Americans we shall go forward together.

---

## Sgt. Leonard A. Funk, Jr.

EXTENSION OF REMARKS

OF

### HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. WEISS. Mr. Speaker, among the great heroes of World War II, Sgt. Leonard A. Funk, Jr., Company C, Five Hundred and Eighth Parachute Infantry, United States Army, residing in my district in Braddock Township, Pa., will rank with the greatest. Always a modest, retiring young American, he was loved, admired, and respected in our community because he was a regular fellow. He hated war, but when the Japs attacked the United States at Pearl Harbor, Leonard was "rarin' " to go and he joined Uncle Sam's Parachute Infantry. The same blood that ran in the veins of our founding fathers at Valley Forge ran in the veins of Sgt. Leonard Funk. For gallantry, courage, and bravery far beyond the call of duty at Holzheim, Belgium, on January 29, 1945, he was awarded the Congressional Medal of Honor, America's highest war decoration. To all of us, Sergeant Funk is a symbol of American bravery and courage. I am happy to include as part of my remarks the citation granted him by the President of the United States, Harry S. Truman:

CITATION

The President of the United States takes pleasure in awarding the Medal of Honor to First Sgt. Leonard A. Funk, Jr., Company C, Five Hundred and Eighth Parachute Infantry, United States Army, for services as set forth in the following citation:

"Sergeant Funk distinguished himself by gallant, intrepid actions against the enemy at Holzheim, Belgium, on the 29th of January, 1945. After advancing 15 miles in a driving snowstorm, the American forces prepared to attack through waist-deep drifts. The company executive officer became a casualty, and Sergeant Funk immediately assumed his duties, forming headquarters soldiers into a combat unit for an assault in the face of direct artillery shelling and harassing fire from the right flank. Under his skilled and courageous leadership, this miscellaneous group, and the Third Platoon, attacked 15 houses, cleared them and took 30 prisoners without suffering a casualty.

"The fierce drive of Company C quickly overran Holzheim, netting some 80 prisoners, who were placed under a 4-man guard, all that could be spared, while the rest of the under-strength unit went about mopping up isolated points of resistance. An enemy patrol, by means of a ruse, succeeded in capturing the guards and freeing the prison-

ers, who had begun preparations to attack Company C from the rear, when Sergeant Funk walked around the building and into their midst. He was ordered to surrender by a German officer, who pushed a machine pistol into his stomach. Although overwhelmingly outnumbered and facing almost certain death, Sergeant Funk, pretending to comply with the order, began slowly to unsling his sub-machine gun from his shoulder; then, with lightning motion, brought the muzzle into line and riddled the German officer. He turned upon the other Germans, firing and shouting to the Americans to seize the enemy's weapons. In the ensuing fight 21 Germans were killed, many wounded, and the remainder recaptured.

"Sergeant Funk's bold action and heroic disregard for his own safety were directly responsible for the recapture of a vastly superior enemy force, which, if allowed to remain free, could have taken the widespread units of Company C by surprise, and endangered the entire attack plan."

HARRY S. TRUMAN,
*President of the United States.*

## Now Is the Time

EXTENSION OF REMARKS
OF
### HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of Saturday, November 17, 1945:

NOW IS THE TIME

This was the day, 145 years ago, when Congress was to hold its first meeting in the new city of Washington. There must have been considerable grumbling among the Members who had gotten here to keep the date, traveling over terrible roads, finding a place to live in the rough village being carved out of the wilderness. A quorum was not available and it was not until 8 days later that enough Members had straggled in to form one, and to hear President Adams' message calling their attention to the fact that one of the first things for Congress to decide was whether to assume immediate jurisdiction over this District, set aside as a Capital.

Seventeen years before, the constitutional provision had been written calling for establishment of an area which would be the Capital. The men who wrote it did not know where it would be, who would live there, what States, if they were willing to do it at all, would agree to cede the territory. They were not even sure that the baby Republic then being born would live long enough even to see the establishment of such a Capital. If they thought much about how the people there would vote, they probably decided that the States which ceded the territory would take care of the matter.

But the States of Maryland and Virginia—unlike the Czar of Russia, the King of Spain, or the Emperor Napoleon, when they sold their holdings in America to the infant Republic later on—failed to provide for the citizenship rights of the people who lived on the land. And in 1800 it is to be doubted that the voting question had been very seriously considered even by the people. Those who lived here voted as citizens of Maryland and Virginia in 1800—just before Congress came here. They may have thought they would keep right on voting.

When they found this was not the case the people of Virginia began an agitation which lasted until 1846, when Congress, making a fatal error, receded the Virginia portion of the District. The people of Georgetown were equally upset but were unable to do anything about it. And except for national elections, they were running their own affairs pretty much as they pleased without too much interference from Congress. It was not until 1874 that Congress really assumed the jurisdiction over the District as a whole as we understand it today.

On Monday the Senate Judiciary Committee may reach a vote on a proposed amendment to the Constitution giving to Congress the power to grant to the people of the District voting representation in Congress and in the electoral college. The resolution offers an opportunity not merely to correct a mistake and to right a wrong, but to take a great, progressive step in governing this Capital of the United States. It should be reported to the Senate by a great majority. For it is believed that if Congress and the people of the United States are given opportunity to vote on so simple and elementary a question of right and wrong, there can be only one answer and that the people of the American Capital will be admitted to membership in the Union they have served so well for so long.

## Gen. George S. Patton, Jr.

EXTENSION OF REMARKS
OF
### HON. SAMUEL A. WEISS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. WEISS. Mr. Speaker, I have always been an admirer of Gen. George S. Patton, Jr., as an outstanding military leader. His record as a hero of this war cannot be denied, and although General Patton failed in his administrative assignment following the end of the European war, his ability as a militarist will be recorded in history.

Columnist John O'Donnell's attempt to stigmatize General Patton's recent dismissal from his Third Army command as an anti-Semitic issue, boomeranged. The attached release dealing with correspondence between General Patton and Mr. Joseph Wilner, of Washington, D. C., deserves the attention of every American, and I therefore include it as part of my remarks:

CHICAGO, October 29.—General George S. Patton, Jr., in a letter made public here today, formally denied anti-Jewish remarks attributed to him by John O'Donnell, New York Daily News-Washington Times-Herald columnist.

In a letter to Joseph Wilner, of Washington, D. C., father of four servicemen, two of whom died in service, General Patton said:

"I am glad to have the opportunity of categorically denying that I have ever made any statement contrary to the Jewish or any other religious faith. I am a sincere believer in the Supreme Being and have never interfered with or even examined the religious or racial antecedence of the men I have the honor to command. My sole effort has been to provide victorious soldiers who can serve their country and defeat the enemy with the minimum loss to themselves."

Wilner, one of whose sons, Capt. John Wilner, was killed while serving with the Third Army under General Patton, had cabled the General that he was "deeply distressed at injustice being done your reputation" when O'Donnell's column appeared on October 3, and pointed out that the "whole implication of article is that you are guilty of sentiments contrary to the fair-mindedness which my son's correspondence described."

In a retraction and apology published October 19, O'Donnell admitted as untrue his statements attributing Patton's removal from command of the Third Army to pressure of influential Jews and that the soldier in the slapping incident in a Sicily hospital was Jewish, but made no specific retraction of the remarks he had attributed to Patton in the original column.

Wilner released the Patton correspondence while attending the annual meeting here of the executive committee of the Anti-Defamation League of B'nai B'rith, of which he is a member.

Text of his cablegram to General Patton and the latter's reply follow:

OCTOBER 11, 1945.

Gen. GEORGE S. PATTON, Jr.,
*ASN O-2605,*
*Commander, Fifteenth Army,*
*APO 408, New York, N. Y.:*

As bereaved father of two sons lost in service, one Capt. John Wilner, of your command, I am deeply distressed at injustice being done your reputation by Columnist O'Donnell of Patterson newspapers. Article attributes to you certain remarks derogatory of Jewish servicemen at time of Sicily hospital incident and falsely asserts soldier involved, Charles Herman Kuhl, was Jewish. Whole implication of article is that you are guilty of sentiments contrary to the fair-mindedness which my son's correspondence described. Would appreciate assurance of misrepresentation your attitude by afore-mentioned newspapers.

JOSEPH WILNER.

WASHINGTON, D. C.

HEADQUARTERS, FIFTEENTH
UNITED STATES ARMY,
OFFICE OF THE COMMANDING GENERAL,
APO 408, *October 15, 1945*

Mr. JOSEPH WILNER,
*Washington, D. C.*

MY DEAR MR. WILNER. Replying to your Western Union telegram, I am glad to have the opportunity of categorically denying that I have ever made any statement contrary to the Jewish or any other religious faith. I am a sincere believer in the Supreme Being and have never interfered with or even examined the religious or racial antecedents of the men I have the honor to command. My sole effort has been to provide victorious soldiers who can serve their country and defeat the enemy with the minimum loss to themselves.

With appreciation of and thanks for your interest, I am

Yours truly,

GEORGE S. PATTON, Jr.

## Not Unduly Exacting About Censorship

EXTENSION OF REMARKS
OF
### HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mrs. LUCE. Mr. Speaker, for some years now many friends of the Soviet Union have insisted that most American criticism of Soviet methods was due to American ignorance concerning the facts about Russia, and that it was only necessary to understand the Russians in

order to see the logic and righteousness of almost all their international attitudes, policies, and demands. But the long-standing difficulties of obtaining the facts which would enable us to understand Russia were clearly stated in the following editorial from the New York Times of October 2, 1945, and excerpts from a letter written this year by a former American correspondent in Moscow, who has now resigned his post:

[From the New York Times of October 2, 1945]

A MESSAGE FROM STALIN

When Senator PEPPER asked Generalissimo Stalin whether he wanted to send him away from his interview with any special message the Russian leader hesitated and then said: "Just judge the Soviet Union objectively. Do not either praise us or scold us. Just know us and judge us as we are, and base your estimate of us upon facts and not rumors."

It is an excellent prescription, but how are we to follow it? How are we to know Russia, how are we to base our estimate of Russia's purposes and aspirations "upon facts and not rumors," if the Russians themselves discourage us from doing this?

A Russian observer in the United States, whether he is a Soviet journalist or an official of the Soviet Government, can travel wherever he likes, see what he wants to see, talk with anyone he wants to talk with, and send back to Russia, wholly without censorship of any kind, a report on any given situation which is based to the best of his ability "upon facts and not rumors." But this is not true of an American observer in Russia. An American in Russia can travel only where the Government wishes him to travel, see only what he is permitted to see, and talk only with people the Government wishes him to talk with. He cannot separate facts from rumors because the Government will not give him the means to do so. And when, on the basis of evidence which is often insufficient, he prepares his report for transmission to the United States he must submit it to a heavy-handed censorship which is more interested in the propaganda values than the objectivity of his findings.

Moreover, this is true not only throughout the whole territory of the U. S. S. R. It is also true wherever, outside of the U. S. S. R. Russian influence is paramount today. For months our own Government was placed in the humiliating position of begging Russia to permit American newspaper correspondents to go into countries in eastern Europe—Poland, Rumania, Bulgaria, etc.—which had been liberated from German domination with the aid of American arms. Now, when these correspondents have at last been permitted to visit such countries, they find obstacles placed in some cases in the way of transmitting their dispatches. Moreover, what has been happening in Russian-controlled Europe has been happening also in Russian-controlled Asia. The American public is now so thoroughly accustomed to Russian blackouts that it has seemed to be the most natural thing in the world that we should now be told not an inkling of what is happening in Soviet-controlled Korea. The moment the Soviet armies occupied Manchuria, the inevitable headline read, "Soviet blackout in Manchuria."

Why does Generalissimo Stalin's government pursue this policy, if Stalin himself really wants us to "judge the Soviet Union objectively," if he really wants us to "know" Russia, if he really wants us to "judge the Russians as they are" and "base our estimates of them upon facts and not rumors"?

This policy defeats its own purposes. Inevitably it feeds rumors instead of clearing them away. It creates suspicions. It handicaps good relations. It makes difficult certain actions which would otherwise be simple. When, for example, the American people are asked to make a very large loan to Russia, it is natural that they should want to be in the position of acquiring as much knowledge about Russia and Russian policies as any prudent private creditor would desire in similar circumstances. Certainly in private transactions of this kind full and willingly granted access to all relevant information is the sine qua non of extending credit. Present Russian policy does not encourage the acquisition of such information. It dos not encourage that mutual confidence which alone can serve as a sound basis for the pooling of Russian and American efforts in such matters, for example, as control of offensive weapons like the atomic bomb.

Probably nothing else in the world is so important at this moment as good relations between Russia and the United States. Probably nothing would do so much to promote and cement those good relations as an end of Russian black-outs, foreign and domestic.

---

EXCERPTS FROM A LETTER WRITTEN BY A FORMER CORRESPONDENT IN MOSCOW ASKING FOR CHANGE OF ASSIGNMENT IN AUGUST 1945

I have to stay in spite of encouragement I have had from you; I have not been satisfied with what I have been able to accomplish. * * * No story I sent * * * was satisfactory to me. This feeling is partly due to censorship * * * and partly to indifference or hostility (I cannot decide which it is) on the part of Russian authorities. * * *

Taking the matter of censorship first, we have to start with the understanding that it is dishonest in that it not only kills news which has a bearing on United States' national interests but it also distorts dispatches by killing some portions and leaving others intact. Such a selection, sometimes done skillfully and sometimes ham-handedly, always serves to make the whole story read quite differently from the original. It raises in the writer's mind the question of whether to send the dispatch at all. Except on occasions where the violence done was so great as to become a total reserval of what I had originally intended, I have followed the practice of sending on censored stories in the hope that the necessary correctives would be seen and applied at the other end. This is far from satisfactory; it opens wide opportunities for blameless error. But the only alternative was no story at all.

On this subject of censorship there is as yet no real sign of change of policy. * * * There has been some scattered and wholly unofficial talk about abolishing censorship. But of recent weeks I have found it more unpredictable, senseless and onerous than at any time previous. Whole stories have quietly disappeared into the Foreign Office never to emerge. Every piece of any consequence on the activities of the Reparations Commission here was killed totally. If the United States Government is moving toward a policy of more public enlightenment on diplomatic deals, then it is to the interest of the United States public to see that no more international conferences are held here until censorship is totally abolished.

This examination of censorship leads to another consideration. That is the attitude and work of correspondents. Some correspondents, mentally excusing themselves on the grounds that if they write the full truth the censors will not pass it anyway, deliberately slant their conclusions and twist their incidents so that everything they write is calculated to be pleasing to the Russian authorities. If the volume of stuff they get past the censors is a sole criterion they can be praised for doing a good job. But is it good? Isn't it true that VOKS or any other wholly Russian agency devoted to propoganda could do the same job with greater authority and volume? It seems to me we have three choices:

1. To keep on doing the best we can to get at the facts while censorship goes on hindering or distorting the result of such effort;

2. To resign curselves to propaganda whether distributed by a governmental agency or supplied by a supine correspondent;

3. To cancel all efforts to cover Russian news objectively, withdraw from Moscow, and depend on the hand outs for news of major events.

The foregoing letter is typical of honest reports which were steadily received by many American and British editors from their correspondents in Moscow all during the war and up until the 20th of last month. By the 20th of October the situation had reached such an impasse that the Anglo-American Correspondents' Association in Moscow addressed a letter to Mr. Molotov, Soviet Commissar for Foreign Affairs, stating that:

The Soviet Union is the only great power still retaining wartime censorship. * * * Censorship in peacetime of all dispatches relating not only to military affairs but to politics, economic and cultural affairs, and every aspect of life in the Soviet Union destroys the value of foreign correspondence in a free world and has created general distrust abroad of all news emanating from the Soviet Union.

Ten days went by before Mr. Molotov acknowledged receipt of the correspondents' protest. When he did so, it was through a spokesman from the Foreign Office staff. Mr. Molotov's acknowledgement, as translated was:

In the opinion of Comrade Molotov the association's letter in general was not solid and he did not find it necessary to give it his attention.

However, this apparent rebuff was not the final response. As shown by Associated Press dispatch to the New York Times on November 11, Moscow in its mysterious way, and without any official lifting of the censorship suddenly entered a phase of expediting uncensored news from Moscow.

[From the New York Times of November 11, 1945]

SOVIET APPARENTLY LIFTS CENSORSHIP AFTER MOLOTOV'S HINT TO UNITED STATES WRITER

Moscow, November 11.—Russian censorship of outgoing news dispatches appeared today to have been lifted, although there has been no official announcement and foreign correspondents are still submitting stories as previously for stamping by censors.

All Associated Press dispatches filed since November 7 have been passed without any deletions and the censorship process on political commentaries and similar stories, which often in the past have been held up for several hours, has been expedited. Other correspondents report similar experiences.

This marks the first time since the Germans invaded the Soviet Union and censorship was established that correspondents have been able to feel that their stories would go through without deletions or delay. The continuation of censorship after the end of the war was protested recently by the Anglo-American Correspondents Association of Moscow. It received a reply saying that Foreign Commissar Vyacheslav M. Molotov had found "without substance" certain points on which the protest was based.

The first and only mention of censorship came on November 7 at Mr. Molotov's reception during the celebration of the October revolution anniversary. Persons present ex-

pressed the opinion that he hinted then that censorship was being ended.

Carrying out his custom at the reception, Mr. Molotov at midnight began moving through the crowd of diplomats, military men, journalists, and other guests. He was accompanied by Deputy Foreign Commissar A. Y. Vyshinsky and was followed by waiters bearing vodka, wine, and glasses.

After drinking a toast with the Chinese Ambassador, Mr. Molotov walked up to an Associated Press correspondent, Eddy Gilmore, and said, "I want to drink a toast with American Correspondent Gilmore—if you were in my position, what sort of toast would you propose?"

Mr. Gilmore answered that he supposed that Mr. Molotov should propose a toast to a better understanding between the press of the Soviet Union and the United States.

"That is a good toast," Mr. Molotov said, "but what is your main issue as a correspondent now?"

"Mine is trying to write an interpretation of your speech last night at the Kremlin, which I thought was the most important in months," Mr. Gilmore replied.

Mr. Molotov said: "Now come on—you are not a politician, and I will not be one. You know correspondents do not like Soviet censorship. You want to wipe it out."

Mr. Gilmore answered: "Well, sir, you read our letter and our telegram."

Mr. Molotov said: "What would you say if I told you I would agree to reciprocity?"

Mr. Gilmore said: "I think it would be a very fine thing."

Mr. Molotov beamed and said: "Let us drink a toast, then."

Mr. Gilmore chose vodka instead of wine and Mr. Molotov smiled, saying: "That's a real Russian toast." They drank to a "better understanding of both our countries."

Mr. Molotov emptied his glass and held it upside down over his head, smiled again, and passed on.

A few minutes later a high foreign diplomat who had witnessed the toast approached Mr. Gilmore and said: "I think you have got censorship lifted."

During the past few years the Russian censor has assumed some responsibilities for the correctness of stories that he passed. If it is correct that censorship is now merely a formality, undoubtedly this responsibility is to be transferred directly to correspondents.

---

[From the New York Times of November 14, 1945]

RUSSIA'S CENSORSHIP

Though no change in policy has been announced officially, Brooks Atkinson reports from Moscow that the Russian censorship on outgoing news "seems to have been lifted." The censorship organization itself remains intact; but for a week, news dispatches have been passing through the censor's office without changes or deletions. "To correspondents accustomed to waiting 3 or 4 hours, and sometimes days, for the censor's decision, the speed has been astonishing."

We hope that the new policy sticks, and that it will be followed by other steps to encourage a freer flow of news from Russia. Censorship, of course, does not begin in the censor's office. It merely ends there. It begins in restrictions which prevent foreign correspondents from traveling where they wish to travel and talking with people who have information which they believe to be of interest and importance. Censorship of this kind shuts off free access to the news long before the stage of the censor's stamp is reached. As Mr. Atkinson points out, under such conditions the correspondent even begins to censor himself. "He does not write about subjects that he knows the censor is likely to refuse to pass. When writing on controversial subjects he does not write frankly; he writes by indirection, avoiding flat statements and indulging in hints, irony, and circumlocution. Under censorship, journalism becomes a pallid profession afflicted with petty nervous disorders."

Russian-American friendship would gain if the Soviet Government made a genuinely clean sweep of all controls on foreign correspondents who go to Russia in search of news. As the newsmen themselves said, in their recent protest to Mr. Molotov, peacetime censorship destroys the value of foreign correspondence in a free world, creates distrust abroad of news emanating from Russia, and prevents the growth of better understanding between the Soviet Union and the rest of the world.

Mr. Speaker, it is impossible to say what caused Molotov's change of heart on censorship, but it is possible to hazard a guess: It was the stiffening of American and British public opinion which has increasingly determined that cooperation with Russia must be a two-way street if there is to be harmony among the United Nations and peace in the world.

When Mr. Byrnes, the Secretary of State, after the failure of the London Conference, told us that our Government was "not unduly exacting" in its requests of the Soviet Union for the fulfillment of mutually token and mutually beneficial pledges, he did not specifically mention the question of a free press. But these developments in regard to getting factual information from Soviet-controlled areas seem to indicate that a policy of "due exaction" might produce the happiest results.

## Home on the Range

EXTENSION OF REMARKS

OF

### HON. ROBERT F. ROCKWELL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. ROCKWELL. Mr. Speaker, one of the most popular western songs is entitled, "Home on the Range." There have been many stories about where it was written, and by whom. I desire to quote from an article in the November Rotarian, proving that the story was written in the year 1885 at a mining camp near Leadville, Colo., which is in my congressional district, and that its authors were Bob Swartz and some prospector friends of his:

It was the late Kenneth S. Clark, Princeton's favorite musical son, who dug up the story under Home on the Range. In the middle eighties a group of prospectors headed by C. O. (Bob) Swartz and including Bingham Graves, a certain Bill McCabe, and a gentleman known merely as Jim lived in a cabin, which they called the Junk Lane Hotel, near Leadville, Colo. All musical, they filled their evenings with friendly and often improvised harmony. On a night early in 1885 they worked out a melody and set words to it to create the song which the world now sings as Home on the Range. They, however, called it Colorado Home.

A letter from Bob Swartz to his "Dear Folks" dated February 15, 1885, describes the event and gives the complete words and music, which are almost identical with those of Home on the Range as it is known today. There are slight differences in the melodic line, and it was only later that the text acquired a definite cowboy slant. But the song is all there in the faded yellow letter which Bob's sister, Mrs. Laura M. Anderson, discovered among her belongings in 1930. Bob Swartz died in 1932, and 2 years later, at the suggestion of Mr. Clark, Mrs. Anderson signed an affidavit which credited her brother and his friends with the writing of the song. Financially it meant nothing to them, for even if there had been a copyright, it would have expired without renewal in 1913. The song is now in the public domain free from copyright restrictions. It is in the folk or traditional class.

Upon finding Bob's letter in 1930, Mrs. Anderson sent him a copy of it. In his reply, dated November 14, 1930, he said he could still see the whole gang setting around on soap boxes and on the bed, all trying to make the lines rhyme so they sounded like poetry.

I also wish to quote a few of the original verses:

Oh, give me a home, where the buffalo roam,
And the deer and the antelope play.
Where seldom is heard a discouraging word,
And the sky is not cloudy all day.

CHORUS

A home. A home.
Where the deer and the antelope play.
Where seldom is heard a discouraging word
And the sky is not cloudy all day.

Oh, give me the hill, and the ring of the drill
In the rich silver ore in the ground
And give me the gulch, where the miners can sluice
And the bright yellow gold can be found.

Oh, give me the gleam, of the swift mountain stream
And the place where no hurricanes blow
And give me the park, with the prairie dog bark
And the mountains all covered with snow.

Oh, give me the mines where the prospector finds
The gold in its own native land,
With the hot springs below, where the sick people go
And camp on the banks of the Grand.

Oh, show me the camp, where the prospectors tramp
And business is always alive,
Where dance halls come first, and faro banks burst
And every saloon is a dive.

## German Business Still a Menace

EXTENSION OF REMARKS

OF

### HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

*Monday, November 19 (legislative day of Monday, October 29), 1945*

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "German Business—Still a Menace," written by the senior Senator from Utah [Mr. THOMAS], and published in the November 1945 issue of the American magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMAN BUSINESS—STILL A MENACE

(By ELBERT D. THOMAS, United States Senator from Utah)

Hitler is reported dead, the Reich destroyed, but the real war lords of Germany, the Nazi

industrialists, still remain to menace the peace of the world.

I am convinced that even now they are planning to outwit the Allies, as they did after the First World War, to refinance themselves at our expense, and to arm their nation for new and greater aggression. We can prevent this if we are stern and ever vigilant.

The average American assumes that the industrial might of Germany was shattered by bombs and shells. I wish it were so. The fact is, on competent authority, that three-fourths of the industrial power of wartime Germany remains relatively intact. The general manager of Krupp, the great German armament corporation, stated recently that his plants were operating at 60-percent capacity on VE-day and could resume full production within a few months.

While our planes played havoc with German industrial installations, the damage was only temporary. As rapidly as factories were destroyed, they were restored, often underground. When our troops occupied German cities they found armies of laborers cleaning up the debris of recent bombings and preparing to rebuild.

The great ball-bearing plant at Scheinfurt was flattened in the course of the war, but today its workers and machines are ready to produce again. We found one huge dye plant, which in 1 year could manufacture almost as much dye as all the plants in the United States combined, without even a window broken.

All Germany's great steel furnaces can be operated with only minor repairs. And Germany can produce 25,000,000 tons of steel a year, far more than she needs for the purposes of peace.

Most of her plants which make nitrogen out of the air are only slightly damaged. Twenty-eight percent of the contents of a bomb is nitrogen.

In 1939, with a population of only 70,000,000, Germany's machine-tool inventory and production capacity were greater even than that of the United States, with her population of 130,000,000, and it is safe to say that, after some plant repair, they will continue to be greater than ours. Machine tools, nitrogen, and dye and chemical works are the vital instruments of war making.

But German industry is not confined to Germany alone. Its ramifications are already known to be world wide and of ominous magnitude, and our Government is continuing investigations. Already we know of 750 affiliates and subsidiaries of German industries in neutral countries—233 in Sweden, 214 in Switzerland, 112 in Spain, 98 in the Argentine, 58 in Portugal, and 35 in Turkey—and there is every reason to believe that agreements made between some of our corporations and German industrialists before the war will take effect after the peace treaty. Under these agreements German industries may share ownership of some vital American factories, unless we move to prevent it.

German ownership of foreign industries is cloaked by every device known to high finance. Tracing the ownership of stock in these companies would baffle a Nero Wolfe. We have followed many of the devious trails back to Nazi domination, but our proof in most cases is still so fragile that few names can be mentioned. Let me give you an example of the intricacy of some of the ruses practiced today by Nazi industrialists:

Recently documents came into our hands showing that an agent for a German munitions family held for them in Switzerland a large number of shares in a Swedish holding company. This company, in turn, held the shares of a Portuguese holding company, which held the shares of another Swedish holding company, which, we discovered, held the shares of an American company. If your head is swimming now, consider the plight of those charged with the responsibility of tracking down the Nazis behind it all. Many of these foreign industries are masked with a mask, which is masked by another.

Some Nazi industries abroad no longer have their stock registered. It has been transferred to bearer shares, and the bearers are still in hiding. They intend to come out in the open when some kind German Government is set up again.

On the books of a certain corporation, not long ago, we found the name of a resident of a friendly country who was listed as having the right to purchase at any time a large block of shares in the corporation. He had not, of course, purchased them, but he was welcome to do so at any time. It was an unusual option, enough to attract the attention of investigators. The mystery was solved later when we found in a German vault a written promise by this same gentleman not to exercise his right except upon the demand of and in the interest of a German company. In effect, then, the German company already had its hands on the control of the foreign-owned industry.

There are many less spectacular forms of cloaking than these. In some cases a German industry does not own a foreign subsidary, in the true sense of the word. It simply keeps a firm grip on the patents involved in manufacture, and through this patent control can assume ownership at any time.

In neutral countries the German industrialists may merely share in ownership along with neutral capitalists, hoping by this device to keep the friendship of the neutral governments, making them less disposed to kick them out. German bank accounts are being kept in neutral banks by numbers, rather than names, and bank transfers are made by numbers. It is extremely difficult to trace the ownership of these accounts, and they may represent the earnings of German-owned industries.

It may seem fantastic to the average man that German industrialists, whom I have called the real Nazi war lords, could make a comeback after such a shattering defeat as that inflicted upon their country. Let us not be deceived, lest again we be lulled into the complacency of the 1920's and 1930's. We sat back and watched Germany collapse economically, and became so sorry for her that we rushed to her financial aid.

What we did not know was that the devastating inflation in the Reich, which followed the First World War, was engineered entirely by German industrialists. They were seeking to wipe out their debts and destroy small competitors with one coup. They succeeded. Then, while their coffers abroad bulged with gold, they sniveled at our gates and feigned poverty. It was they, not Dawes and Young, who wrote the Dawes plan, which enabled them to refinance themselves, and it was they who wrote the Hoover moratorium, which made it unnecessary for them to continue to pay their war debts.

Eager for world trade domination, as they were before the First World War, they financed Hitler. They backed him and equipped him. Even as the Mikado represents the great industrial families of Japan, the feudal capitalists, so did Hitler represent the power of the German industrialists, as the Kaiser did before him. Just before we entered this war, Fritz Thyssen, powerful German industrialist, admitted as much in a signed article, I Made a Mistake When I Backed Hitler, in the American Magazine. And he was sorry, I presume, because he was one of the few German industrialists whom Hitler knifed. They not only backed Hitler, but they urged him to move against the world. Only recently one representative of I. G. Farben, chemical and dye producers, probably the greatest corporate financial structure on earth, admitted in a signed statement that his company encouraged the invasion of Austria, Czechoslovakia, and France.

But when the top officials of the company were questioned, they were hurt and indignant at any suggestion of their war guilt. That is the way most German businessmen are acting. Despite the known interlocking relationships between German Government and industry in the last two decades, businessmen in Germany are taking the attitude that neither the war nor its consequences have anything to do with them.

The officials of one great company in Germany actually said, "Now that the war is over, Americans should be helping us get back on our feet. Keep asking us questions and we'll get our American friends to come to our rescue."

One Nazi industrialist shrugged his shoulders at his interrogators and said, "I am just a plain, neutral businessman," and with that he produced a long list of names of American and British associates, who, he said, would be happy to supply character references.

And all of these Nazi businessmen professed to hate nazism and loathe Hitler. Yet, 6 months ago, Hitler was their god and their advocate. They escaped, before, only to wage a new war. They must not do it again.

A recently discovered document reveals that on August 10, 1944, when they were convinced of the inevitable defeat of Germany, a group of Nazi industrialists met in Strasbourg, France, to make plans to save their hides and restores their companies. They represented such powerful companies as Krupp, Messerschmitt, Hermadorff & Schenburg, Rheinmettal, Volkswegenwerk, and many other armament and chemicals companies. They discussed devices for escaping war guilt, sending and recovering funds abroad. It was agreed that when the Nazi party went underground, they would support it. Do not forget that, as you listen now to their indignant denials of war guilt, their quavering plea for help.

Soon after this meeting, Hitler ordered 650 economic leaders to leave the country to prepare for the industrial rehabilitation of the Reich. Fortunately, most of them were captured. How many others escaped into neutral countries later we do not yet know.

But more important than the escape of capitalists has been the escape of technicians. It was reported that a few were seized in a captured submarine. If a new war comes, it may be won by the brains of one or a dozen scientists. Consider the atomic bomb, two 28-pound packages of devastating neutrons and electrons destroyed two great cities. The Japanese Emperor, as you know, admitted that his nation had surrendered because of these bombs.

Germany, before her collapse, had almost fathomed the secret. Where are the scientists who did the research? Are they at large? Where are those who invented the V-2 jet bomb? One German industrialist told our investigators that if the war had lasted 6 months longer, Germany would have attacked New York and Washington, perhaps laid them waste, with larger bombs than were used in the war. Perhaps they even intended to jet atomic bombs across the ocean, each powerful enough to destroy a city.

Part of the plans of the German industrial war lords was to send these technicians, the brains of German manufacture, into underground hiding or enable them to escape into neutral countries. Wherever they are, they must be ferreted out and controlled. The world is not safe as long as they are free to experiment, backed by the hidden fortunes of German industry.

This is not mere alarmism. Telefunken, a German electrical company, purchased a plant in a neutral country as recently as the summer of 1943. With Nazi capital it was modernized and enlarged and completely equipped with facilities for testing and experimenting with intricate short-wave equipment. For what purpose? I do not know, but I do know it was not for the purposes of peace. As late as April of this year, negotiations were in progress between the Nazis

and the neutral nation to permit skilled German scientists to work in this plant. That is the last information I have received.

Pressure must be brought upon neutral countries, if necessary, to force them to stand guard upon such places or to legislate them out of existence. They may produce some unheard-of weapon of vast potentialities for evil—a weapon which, like the atomic bomb, can be produced by only one factory in quantities large enough to destroy the world.

Before VE-day a semiofficial German organization offered another neutral country, which was eager to encourage manufacturing, the means of establishing and equipping a technical school system. The Germans were to bring in quantities of machines and technical equipment for research and teaching, and to construct a plant for the manufacture of machine tools. Of course, the schools were to be staffed by German instructors and technicians. Since the Germans were then losing the war, it is evident that they were seeking to establish Nazi-dominated experimental laboratories out of the reach of the Allies. The scientists they intended to send as instructors may have been the very ones then experimenting in atomic explosion and the jet bombs.

What shall we do about the plotters, who are attempting to do the very same thing by the very same methods which they did after the First World War? Reformation, of course, must always begin at home. Who, for instance, were the American friends of the Nazi businessman who boasted that they would give him character references? I do not know who they were or whether they would recommend him, but there certainly were a number of American industries which, up until our entrance into this war, had friendly dealings with the German industrial war lords.

In the 1920's and 1930's, the Germans were buying heavily into foreign industry, including ours, trading patents, making cartel agreements to control world prices on strategic materials. An American company and Krupp of Germany formed a patent agreement to control the use of tungsten carbide. The result was that in the United States the price rose to $453 a pound, while in Germany it never exceeded $50 a pound. In 1941, Germany was using about 20 times as much of this strategic material in hardening steel as factories in America. We didn't know how to use it, because it was too expensive for experimentation.

In this same period an agreement was made between German Siemens & Hakske and an American corporation to restrict production of beryllium in the United States. Beryllium has contributed to the production of the atomic bomb. Another American company and I. G. Farben—which already had added to its dye-making business the business of spying upon the world—made an agreement to restrict American production of magnesium. And another cartel agreement was made to curtail our production of Diesel engines and to prevent our supplying tetracene to Great Britain.

It has been said that wherever America and the Allies felt a shortage of any strategic commodity during the war, that shortage could be traced to the cartel agreements of this or the subsequent period. So successful were the Germans in circumventing the provisions of the Versailles Treaty and outwitting the Control Commission that by 1939 they had industrial and technical facilities ranking second only to the United States.

Will some of our industrialists continue to play ball with the industrial war lords of Germany when peace comes? Will they connive with the Nazi schemers, deliver their secrets to them, help them to control prices to the detriment of our national defense? Since Germany's horrible behavior in the last 6 years, cartels have become a moral issue. To continue making such agreements would be evil. Whatever legislative steps we must take, cartels must be stamped out. We can begin by even a stricter enforcement of our own antitrust laws. But the burden rests with American business. It must not permit Germany to buy into our country again. It must trade no patents with her industrial leaders. You couldn't do business with Hitler; you mustn't do business with Germany. The Germans have proved themselves unworthy of trust and even of trusts.

Next, our occupation of Germany must not be a temporary farce, as it was after the last war. It must be stern and it must endure until the German people and their new leaders, whoever they may be, prove themselves worthy to associate with the other nations of the world. Until that time they must be reduced to an agricultural nation. Their fields, forests, sources of fertilizer, all remain relatively unimpaired. They must be permitted to manufacture, but they must produce no more than they require for domestic peacetime uses. Their steel manufacture must be greatly curtailed, their production of light metals stopped altogether.

After the last war, we forced them to stop the production of airplane motors. They produced gliders instead, and with them trained an army of pilots and parachute troops. Now they must not be permitted to produce anything that flies through the air. It is harsh treatment. It will deprive them of world trade, but they have proved themselves unfit to participate in the community of nations.

I believe, however, that we must first create in Germany an atmosphere in which reformation is possible. German labor should rebuild Germany. Free schools must be opened. The churches must be restored. Good leaders must be carefully selected from all walks of life. But there must be no coddling, no conniving, no succumbing to the wiles of German industrialists, who almost proved once that they were the smartest men on earth.

Above all, we must make a serious, permanent, and well-planned peace with the German Government when there is one. Today there is none. Hitler became the state. The state and all of its leaders perished with him. This peace must make it impossible for German industry to rise until Germany has reformed. It must provide the curtailment of the production of all instruments of war, directly or indirectly. It must provide for the policing even of German laboratories. But it must make it possible for the German people to be educated to the ways of peace.

In the meantime, our Government must unceasingly track down all private and public assets of the German people and ruthlessly expose all cartel and cloaking schemes. To do the job, we must have honest and efficient administrators of the highest caliber, trained in the subtleties of high finance, and avowed enemies of the cartel system.

This is not a criticism of the excellent work already done in this direction by Government agencies. It is merely a reminder that, after the first great war, we failed. It is so easy to forget, to fall back into the happy indifference of peace, to forget the world and its problems. We must remain vigilant and awake. We must be willing to back a world-wide investigation of the ramifications of German big business and be willing to foot the bill with appropriations.

To accomplish this investigation expeditiously, I think the Government should create a special agency to do the job. It should not be a temporary mushroom organization, but a highly specialized long-time agency, charged with the one task of digging out every root of the German industrial tree. While those now investigating are most competent, the operation is too diffused, spread as it is among various departments of the Government—State, Treasury, War, and others. The job should be done by one group, even if it takes years to do it.

Already suggestions are being made in high places to let Germany find her own way to normalcy. Our experience of the last 25 years should convince us that normalcy for Germany means one thing only—making war. She can't make war without the war lords—the German industrialists. We've still got them to lick.

---

## Time for the Question

EXTENSION OF REMARKS

OF

### HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Sunday Star of Sunday, November 18, 1945:

TIME FOR THE QUESTION

If members of the Senate Judiciary Committee were deciding for themselves whether or not they should have representation in the United States Government as voting citizens, there is no doubt about how they would answer. No man worth his salt is willing to forego without protest the exercise of a right that in this country is so closely linked with the dignity of the individual.

The fact that members of the Senate Judiciary Committee are not deciding a question which concerns them or the people whom they represent nearly so much as it concerns the people of the District of Columbia should make no difference in their approach to the basic issue of the right or wrong of voting representation in the American Government.

Nor is the responsibility which rests on them narrowed to the point where their own votes will decide the matter. All they are asked to decide is whether the question of voting representation for the people of Washington should be submitted, first, to Congress and, later, to the people of the United States. How can anybody oppose putting such a question.

Some friendly skepticism has been expressed as to whether the people of the States would be willing to admit the people of the District to equal representation with themselves in Congress. Even if the people of the District had equal representation in Congress, however, they would not be on an equal status with the people of a sovereign State—for Congress, representing the people of the States, would remain in exclusive control over the seat of government. This is as it should be.

But there is no reason to believe that the people of the States would oppose the pending Sumners-Capper resolution if they understood it. It merely empowers Congress, representing these people, to give the people of the District such representation in Congress and the electoral college as Congress may consider wise, so long as it does not exceed the representation of any State. How can any American citizen object to that? The people of the District, at any rate, are willing to submit the question to Congress and to the States for decision. Let us have an answer to this question, an answer given in accordance with the procedures laid down in the Constitution for determining the popular will. Let us have an answer in the open, where men stand up and make known their views so that all may hear them. All the people of the District are asking now is for a day in court.

## Universal Military Training

EXTENSION OF REMARKS
OF
### HON. WALTER G. ANDREWS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Charlotte (N. C.) Observer:

REPEATING AN ANCIENT FOLLY?

Hardly had the sound of President Truman's voice died away after he had asked Congress to effectuate General Marshall's sane and pertinent recommendation for universal military training before the pacifists began crying aloud their arguments against any kind of military protection for this country.

If this outcry came mainly from a few politicians with their eyes on the next election, it could be dismissed as merely politics.

But the chief opposition is coming from educators and ministers who ought to know better: educators who have seen their campuses almost depopulated of male students and their physical equipment converted into military laboratories; and ministers who have had to console hundreds of bereaved families and have watched their young people's organizations become almost exclusively feminine.

If the catastrophic events of the last decade have not taught these pacifists the plain truth of General Marshall's observation that a display of weakness has never yet kept this Nation or any nation out of war, they are certainly incapable of learning.

The person who never learns anything by experience is the worst possible adviser on matters of public safety.

After the First World War we tried the pacifist plan of making an open exhibition of our weakness in the naive hope that this display of helplessness would persuade avaricious and predatory neighbors to let us alone.

We sank the best of our naval vessels, disbanded the greater part of our Army, let our Air Force go to pot, made no effort to keep up with technological advances in warfare, and reduced our Military Establishment to a ridiculous little constabulary drilling in outmoded tactics with antiquated and rusty equipment.

This, we innocently thought, would convince the world that we had no aggressive intentions.

It did, and what did it get us?

It got us the most agonizing war in human history.

It prolonged that war for terrible, unnecessary years while we retreated across a half a world of land and ocean, trading space for time to repair the damage done by the pacifist doctrine; and before it was over we gave up 270,000 of our sons as living sacrifices to the folly of disarmament in an armed world.

And now these pacifists would have us do it all over again.

And what arguments do they offer in support of this counsel of folly?

Only these: That universal training is against our democratic traditions, that it will interfere with the education of the young men, and that it will create a spirit of militarism among our youth.

As to the first, democracy means nothing if not that each person should do his part. Nothing could be more democratic than a requirement that all young men, without favoritism, take their regular turn at training.

The expressed attitude of many Members of Congress is that some provision will be made for the boys to keep on with their education while they are in training.

And, as to the third objection, that the training will create a spirit of militarism among our youth, if the educators who persist in mouthing this absurdity will only open their eyes, they will see their arguments discredited within their own profession.

Land-grant colleges in every State in this Union have, for nearly 50 years, required military training of their students. If such training were ever going to create the militaristic spirit among our young men, certainly a half a century has been plenty of time to engender it.

Yet you would have to look long and diligently through the alumni lists of North Carolina State College, or Clemson, or a hundred other reputable schools, both public and private, in which military training is a regular part of the curriculum, before you could find a single militarist who got that way by wearing a cadet uniform.

Mere technical study of military science never made a militarist of anybody. Militarism is a thing of the spirit and not of the mind. It is generated by indoctrination begun in kindergarten and continued relentlessly throughout the educative period of youth.

A young man who gets his first contact with military training after these impressionable years are past and he has begun to use his own mind is very poor material for militarism.

---

## Lithuania's Independence

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. DINGELL. Mr. Speaker, under unanimous consent, I include in the RECORD for preservation and edification of all the address by His Excellency, P. Zadeikis, Minister of Lithuania, delivered at the banquet of Americans of Lithuanian descent held at the Statler Hotel, Washington, D. C., November 16, 1945, in support of the Kelly-Willis congressional resolutions on Lithuania's independence:

Mr. Chairman, distinguished Members of the United States Congress, ladies, and gentlemen, in connection with the introduction of the resolutions in the House of Representatives and in the Senate of the United States, which favor the restoration of Lithuania's independence and which recommend appropriate action on the part of the executive branch of the United States Government, I wish to express to Senator WILLIS, of Indiana, and Representative KELLY, of Illinois, my sincere thanks for their interest in Lithuanian affairs and for the fine spirit in which those resolutions were conceived. I also wish to thank the various Lithuanian-American organizations whose members have come here to manifest their support of the ideas embodied in the said resolutions.

However, I have no intention of discussing this evening those resolutions; instead I wish to take this opportunity to address you concerning my country's situation and her future as I see it from here.

Though Lithuania, in the course of World War II, officially remained neutral, she suffered three foreign military invasions and occupations—by Soviet Russia in 1940, by Nazi Germany in 1941, and again by Soviet Russia in 1944. Lithuania has suffered immensely at the hands of both the Russians and the Germans. However, time does not permit me to describe those monstrous persecutions and the staggering sufferings of my people. As an illustration, I wish to make reference to the recent letter of the Lithuanian Catholic bishops addressed to the bishops of the Christian world, from which I quote:

"On June 15, 1940, with false accusations as a pretext, and in violation of the treaty of mutual assistance and of all other treaties still in operation, the Soviet Government addressed an ultimatum to Lithuania. In total disregard of all its solemn promises, Russia ordered the occupation of Lithuania by a strong contingent of troops, enforced the dissolution of the country's legal government, and abrogated the sovereignty of the nation. Within only a few weeks, the Union of Soviet Socialist Republics had perfidiously annexed Lithuania, together with the other two Baltic republics."

The United States Government on July 23, 1940, made a significant statement, which I quote in part:

"From the day when the peoples of these republics (Lithuania, Latvia, Estonia) first gained their independent and democratic form of government the people of the United States have watched their admirable progress in self-government with deep and sympathetic interest.

"The policy of this Government is universally known. The people of the United States are opposed * * * to any form of intervention on the part of one state, however powerful, in the domestic concerns of any other sovereign state, however weak.

"The United States will continue to stand by these principles."

The above statement was made in connection with "the devious processes whereunder the political independence and territorial integrity of the three small Baltic republics—Estonia, Latvia, and Lithuania—were to be deliberately annihilated by one of their more powerful neighbors." It was a clear warning to the Soviet Union to avoid unilateral and arbitrary acts and to leave the independence of the Baltic States alone. However, the Moscow dictatorship, with Hitler's concurrence, thought otherwise and the illegal acts of the annexation, based on fraudulent elections which were conducted in an atmosphere of threat and compulsion, followed on August 3, 5, and 6, 1940. The Lithuanian people would be relieved and Russia would gain much in a moral sense if the acts of the annexation of the Baltic States were made void by supreme Soviet authority now, in accordance with the requirements of the Atlantic Charter. I again quote from the Lithuanian bishops' letter: "Although the first Soviet occupation did not last long (June 15, 1940–June 22, 1941), it was quite sufficient to dislocate the life of our people and to ruin our religious, cultural, economic, and political life. This evil year of terror, a year of tragedy and bloodshed, will be forever remembered for its toll of human lives."

The methodical extermination of the Baltic peoples, premeditated by the U. S. S. R., was in full swing when on June 22, 1941, the German armies pounced on the Russian armies through the Lithuanian and the Polish borders. Three years of German occupation of Lithuania followed. Because of the stubborn resistance of the Lithuanian people to the Nazi rule, Lithuania was treated worse than an enemy country and suffered greatly; about 150,000 Lithuanian citizens were forcibly deported to Germany as slave laborers; hundreds of Lithuanian intellectuals were tortured and put to death in Gestapo prisons and concentration camps of Stutthof, Dachau, Buechenwald, and others.

In 1944, the Russians, greatly aided by American-made instruments of war and by the establishment of the so-called second front in western Europe, reappeared in Lith-

uania again. Panic fear of a second Soviet occupation caused nearly 300,000 Lithuanians to leave their homeland. The Lithuanian people, of course, could not acquiesce in such a state of affairs. They did not accept the German enslavement and they will not accept intolerable Russian domination. The Lithuanian people with all means at their disposal are resisting all attempts to deprive them permanently of sovereignty rights, of self-government, and of independence. The Lithuanian people, though they possess the rights of sovereignty in the sense of law and of justice, in fact are now deprived of their independence, temporarily at least, by their "more powerful neighbor," the present "liberator."

Because of the Soviet and the Nazi occupations, Lithuania was prevented from joining the United Nations in the beginning of this war which has now ended. The Lithuanian nation deeply resents the continued attempts of Soviet diplomacy to sell to the western powers the idea that the destruction of the independence of the Baltic states (coupled with the violation of valid treaties) is a prerequisite to Russia's security.

The Lithuanians believe in the soundness of American policy, so forcefully restated by President Truman, and they see in it a new encouragement in their crucial efforts to regain their extorted freedom. America refuses to deal with puppets: "We shall refuse to recognize any government imposed upon any nation by the force of any foreign power," stated the President. Lithuania's case nevertheless appears to be an extraordinary exigency, especially when Soviet policy (as evidenced by Soviet Foreign Commissar Molotov's recent speech of November 7, 1945) continues to be that of imperialistic aggrandizement at the expense of her smaller neighbors, a policy characterized by brutal persecutions of democratic and patriotic elements, by mass deportations, and property expropriations.

As stated by the Honorable James F. Byrnes, Secretary of State, in his speech of October 31, 1945, "The position of the United States will continue to be that the nations, large and small, which have borne the burdens of the war must participate in making the peace," and that "the world system which we seek to create must be based on the principle of the sovereign equality of nations." Lithuanians, therefore, hope for a strong helping hand from the United Nations, and they believe that the lofty principles of American policy will be applied universally and straightforwardly.

The Lithuanian people, who have suffered so greatly under the German and Russian occupations, are looking forward to real liberation of their country and to the establishment of a democratic government of their own choosing, and they confidently expect:

1. That Lithuanian citizens everywhere be now treated as nationals of one of the United Nations and that Lithuania be admitted into the family of the United Nations.

2. That Lithuanian organizations, forced to reside abroad, be accorded a greater degree of recognition and liberty of action.

3. That Lithuania be given an opportunity to participate officially in the peace conference.

4. That the Soviet military forces and the Soviet administration in occupied Lithuania be replaced with international control and with a legitimate Lithuanian administration so that free and democratic, and not regimented, elections may take place there.

In conclusion may I express the conviction that the military might of the United States, dedicated to self-defense and to world peace, and that the foreign policy of the United States, designed to promote good will among nations and to serve justice, freedom, and peace will bring desirable results before long and will help to adjust the exigencies of this uncertain world. As for the future of Lithuania, let there be no doubt that the Lithuanian people resolutely repudiate the present totalitarian puppet regime, imposed upon them by the Moscow dictatorship, and that they demand the restoration of their independence for which they will continue to fight until that goal is realized.

## History Lesson

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. PATMAN. Mr. Speaker, an editorial in the Washington Post of Monday, November 12, ably points out that we learn little from past experience. Too rapid removal of governmental controls took place after World War I with disastrous results, as the editorial so appropriately points out. I commend the editorial in question to the Members of the House as grounds for sober reflection. It reads as follows:

HISTORY LESSON

The more it changes, the more it remains the same thing. The present pattern of off-again, on-again controls, for instance, repeats the pattern after the last war. The businessmen of that period, like their present-day successors were sick and tired of Government interference and wanted to be freed from hampering restrictions. A clamor arose for a return to the system of free competition on the ground that, if left alone, industry would work out its own salvation. There was more excuse then than now for underrating the difficulties of the transition period and discounting the need for Government guidance, since we had had no experience in dealing with economic problems of the magnitude that confronted us. Moreover, our direct participation in the First World War lasted a very short time and did not produce the distortions in our economy to which the present war has given rise. Nevertheless, we had cause to regret bitterly the precipitancy with which the Nation tried to effect a return to so-called normal practices.

The hard lessons that were taught, but unfortunately not learned, at that time have been pointed out in a very instructive study of the Bureau of Labor Statistics dealing with postarmistice industrial developments in 1918–20. The study was published in January 1943; so conclusions have not been colored by the events of recent months. That makes all the more arresting the striking similarities between the disorders that followed the armistice of 1918, and those that have followed the collapse of Japan in 1945. Strikes for higher wages held up production and in the needle trade there was agitation for the "44–54 program"—that is, for a 44-hour week with wages for 54 hours. The similarity to current demands of CIO automobile workers is obvious. Congress, too, acted true to form by making the United States Employment Service the target of ill-directed economies. Its appropriations were so slashed after World War I as to reduce it to impotency. Congress likewise compelled the premature dissolution of the War Labor Board and attempts at price control by war agencies were discontinued after the armistice, industries being left to work out their price problems as best they could. The Government tried with little success to support voluntary stabilization agreements.

As most of us know, the result of this hands-off policy was at first a period of hesitation, retarding recovery and resulting in a rather pronounced temporary depression. That was followed by an unbalanced speculative upturn, bringing with it inflationary advances in wholesale and retail prices, and necessitating reimposition of controls. State fair-price committees were set up and legislation against profiteering and hoarding was passed. The President even asked Congress to continue and broaden the food control powers which had been dropped, and made abortive efforts to set up an industrial conference for labor relations to take the place of the defunct War Labor Board. The threat of a coal strike led to revival of the Fuel Administration, while the Secretary of the Treasury, reversing his earlier stand, urged resumption of aid to Europe.

By that time, however, it was too late to avert catastrophe. The period of inflation ended abruptly with a smashing drop in prices, to the accompaniment of industrial stagnation, severe declines in farm income and spreading unemployment. We pulled out of the depression of 1921 with surprising rapidity, considering the drastic readjustments that had to be effected. Nevertheless, the Nation experienced several years of turmoil that would have been made less tempestuous, or might even have been years of comparative stability, had the transition from war to peace been less abrupt. The lesson drawn from our own recent history is too obvious to call for elucidation. Equally obvious is the fact that we have learned little from past experience.

## Can the Tiger Lick the Shark?

EXTENSION OF REMARKS
OF
### HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. WICKERSHAM. Mr. Speaker, this concise editorial from the Washington Times-Herald clearly expresses the opinion of many clear-thinking Americans:

CAN THE TIGER LICK THE SHARK?

The shark and the tiger are both elegant fighters, but not against each other. That is because they can't get at each other.

We are speaking, of course, of the United States and Russia. The United States in this simile is the shark; being just now the world's greatest sea and air power; and Russia, as the world's greatest land power, is the tiger.

A war between these two nations, we have long believed, would be madness, and it would be ridiculous. The Russians could not invade us successfully, so long as we maintained our sea and air superiority. They could not even hold the Kurile Islands, which they grabbed in the last hours of the Japanese war, if we wanted to take the Kuriles from them. On the other hand, we don't suppose there is a man in this country who would like to see American land armies try to get to Moscow to spend a winter. That has been tried by experts and it doesn't work.

OLD DIPLOMACY, NEW DIPLOMACY

Since the German war ended, however, and more especially since the Jap war ended, a lot of high-octane diplomatic talk has been sparking back and forth between Moscow and Washington. There has been so much of it

that many people fear a United States-Russian war is being cooked up behind the scenes.

Most of this provocative chatter has come from Moscow. The old czarist diplomats were smooth, suave fellows, who threw delightful parties, and who got results. A historical atlas will show you Russia getting bigger and bigger from century to century. The new proletarian Russian diplomatic technique is to climb aboard a microphone, throw the word "fascism" around at random and without regard to its true meaning, and make extreme, irritating demands.

At the moment, for example, the Russian Government is demanding a veto power over MacArthur in Japan. It is hinting through its press megaphone, the publication Red Star, that it wants a share in control of Iwo Jima, Saipan, Tinian, Guam, and other Pacific bases which our men took so bloodily from the Japs, because Russia "can't feel at ease with exclusively United States controlled islands on its Pacific flank."

Both of these demands are ridiculous. Russia had no part in beating Japan; we did that job almost single-handed. And Russia will always have somebody on its flanks, unless it extends all around the world.

Our answer to both of these demands should be and go on being a flat "No"—delivered in tones as brusque as Russia's spokesmen use.

Presumably both demands are being put forward as makeweights, so that by eventually dropping them Russia will seem to have made a generous concession, and then can advance some lesser demands.

Russia also has been filing urgent claims to the secrets of atomic bomb manufacture held by the United States, Great Britain, and Canada.

President Truman and Prime Ministers Attlee and King have now put their heads together and come up with a 1,000-word statement, couched in tactful and polite language, but boiling down to the one word "No." We are not releasing these secrets, to Russia or anybody else. We are holding on to them until they are bribed or stolen from under our guardianship, or until we are satisfied that the rest of the world can be trusted with them.

This is the correct answer.

THE CORRECT ANSWER ON THE ATOM BOMB

Russia, of course, will scream bloody murder about it. Its followers in this country, who love Russia first and the United States a long way second, are already tuning up a series of yells that Truman, Attlee, and King have betrayed humanity, set the stage for World War III, etc.

We can't see it. Russia knows that we do not dream of dropping any atom bombs on Russia, or of starting a war with Russia. We know we couldn't fight a victorious land war in Russia, even if Russia had anything we wanted, which it hasn't. Russia knows it could not make an invasion of the United States stick as long as we remain the world's greatest sea and air power.

While that state of affairs prevails—while the shark and the tiger continue to realize that a knock-down and drag-out fight is not for them—the world should remain free of major wars, which is what everybody is praying for. Unbreakable world peace can be won and maintained only if some one nation conquers and rules the whole world, as ancient Rome conquered and ruled the then known world. But it is highly improbable that either Russia or the United States is going to do that.

An arm's-length peace between these two giant nations is the next best bet. We can have that if we will, and for a long time. The way to preserve that peace is to remain strong, and to turn down all extreme Russian demands with the good old blunt and unmistakable word "no."

## Speed Up Return of Servicemen

EXTENSION OF REMARKS
OF
## HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, the young man who sent me the following clippings air mail headed it "No boats, no votes." I am satisfied, Mr. Speaker, that there has been some unnecessary delay in getting the men back from the several theaters of war.

The Army testified before a Senate committee last week that by December 1 they would have either discharged or have eligible for discharge about 5,000,000 men since VE-day. They also said that there would be about 1,483,000 men who would be eligible for discharge but still in the service. In other words, we would have approximately 5,000,000 men in the Army December 1 which does not include all the men taken in through inductions since VE-day nor does it include the voluntary enlistments. It is estimated that approximately 450,000 men have been taken into the Army, either through inductions or enlistments since VE-day. This latter figure has been rather hard to verify. In any event, it would seem that the Army would still have 5,500,000 men under arms at Christmas time unless something is done to speed up demobilization. The clippings from the Pacific Mail Bag follow:

WHAT TO DO

EDITOR: The GI wants to get home. As usual, he is doing everything he can to support an avowed program. He is willing to give his free time to convert Liberty ships into troop transports. But he doesn't quite understand the reason for the shipping shortage. He wonders why the powers that be are suddenly interested in his comfort in the matter of transportation. Things appear a bit confusing.

But the GI is using .30 caliber ammunition where he should, and can, use 155 mm.

The War Department and GHQ in this theater will get the GI home only when and if they are forced into doing so. Converting half a dozen Liberty ships or writing to the Pacifican won't do the job. Quit playing with the office boys and go to the boss. That boss is Congress. Tell the Member of Congress that if he wants to keep his job he'd better "Get these troops out of the sun." The GI can't tell the War Department what to do; he can tell Congress.

The war is over. The American soldier, thank God, is going to do the telling instead of the listening. Have your families and your friends keep the "heat" on Congress. Tell your Representative and your Senator that his continued tenure of office depends on how fast you get home. Tell him today, tell him tomorrow, keep telling him. You may not like him, but he certainly likes your vote. Turn on the heat where it counts.

For results use the club, not faith or hope.

HENRY H. BUCKMAN III,
*APO 75.*

HOME

EDITOR: The authorities tell us that the Jap PW's are being sent to their homeland to alleviate the shipping and manpower shortages in the Philippines. But in contradiction to this they tell us that the same type of ship which brings in food and clothes to those PW's cannot be used as transports. As for the statement that when there are no longer any PW's here the guards can be sent home, I suggest that all PW camps be turned over to the Filipino Army. This should be done until all eligible Army men are shipped home. When the shipping situation is normal again is time enough to send Japs home. Until then I see no reason why Jap as well as American transports should not be used exclusively for the transportation home of the American servicemen.

Name withheld.

## The Law of Supply and Demand

EXTENSION OF REMARKS
OF
## HON. ALFRED J. ELLIOTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. ELLIOTT. Mr. Speaker and Members of the House, I want to call to your attention the rules and regulations prescribed by the Office of Price Administration that are actually driving butter away from the American dinner table. The following information has been received from the Challenge Cream and Butter Association of California:

In October 1942, the first month after the start of price control, the Challenge Cream and Butter Association received from 35 member and associated creameries, 3,159,225 pounds of butter. In October 1945, the association received from 14 member and associated creameries only 1,568,204 pounds of butter. Also, in October 1942, they were able to purchase 416,635 pounds of butter from the Central West. All such sources dried up as far as the association was concerned, soon after price control was inaugurated, because butter price ceilings applicable to the Pacific coast do not justify shipment of butter from the large sources of supply in the Central West to the Pacific coast, unless under the black market.

This downward trend is becoming progressively steeper, so that the Challenge Cream and Butter Association may lose practically all of its supply within a short time, unless there is a change in conditions. All of the larger creameries now supplying the association are considering making plastic cream. The situation would not be so serious for consumers were it not that other receivers of butter in this area appear to have suffered the loss of an even greater proportion of their butter supply than the association has.

You may wonder what has become of all the butter. A small part has been diverted into market milk. By far the greater part has gone into manufactured products which were favored with much higher price ceilings. Among these are evaporated milk, dried whole milk, dried ice-cream mix, cheese, and plastic cream. If it were necessary to penalize the churning of cream to win the war, that is one thing. To continue to penalize butter in time of peace is quite another

thing. The Challenge Cream and Butter Association asks that the ceiling prices on butter be raised at once to levels competitive with those for all other manufactured dairy products. Objection may be made to permitting butter prices to advance until in line with other manufactured products, that this would tend to increase the cost of living. How will the cost of living be benefited by pricing butter so low as to drive it out of existence?

In closing, here is a statement on the law of supply and demand, and also a resolution passed by the forty-sixth annual meeting of the California Creamery Operators Association:

THE LAW OF SUPPLY AND DEMAND

At the outset of the war, the balance which normally existed between prices for various dairy products was destroyed. Under price control, butter has been at the bottom of the list of edible dairy products. If this was necessary to hasten the days of peace, well and good. But there is no justice in such continuance now. As to that minor part of our butter supply which moved into market milk we have no complaint. But we submit that fine butter and the products of skim milk are just as necessary and wholesome in the human diet as if converted into those products favored in OPA price ceilings. Sweet cream is being trucked for upwards of 1,000 miles into California and plastic cream, almost identical in composition with unsalted butter, and really not so well suited for the same purposes, is freighted in frozen state all over our country without hindrance of OPA price, or ration restraint.

California's former butter industry of 70,000,000 pounds annually has been priced out of existence. Other Western States are rapidly following. Regional price ceilings prevent the import of any large amounts of butter from the Central West except under the black market. Therefore, in view of the foregoing, we offer the following resolution:

"Whereas present OPA price ceilings are depriving consumers on the Pacific coast of their accustomed supplies of butter; and

"Whereas many consumers are able and willing to pay for butter what it costs to produce it in comparison with other dairy products and prefer to do so rather than to enjoy prices below cost of production with attendant scarcity: Now, therefore, be it

"*Resolved*, That in the event OPA will not immediately restore the law of supply and demand for all dairy products, that it at least act at once in relief of the butter industry; and be it further

"*Resolved*, That the Secretary be hereby authorized and directed to transmit a copy of this resolution to President Truman and to the Honorable Chester Bowles, Administrator of Price Administration, and to Hon. Clinton Anderson, Secretary of Agriculture."

NOVEMBER 12, 1945.

## To an Athlete Dying Young

EXTENSION OF REMARKS
OF
**HON. JAMES M. MEAD**
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Monday, November 19 (legislative day of Monday, October 29), 1945*

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most outstanding sermon which was delivered by the Reverend Allen Pendergraft, of Buffalo, N. Y., on November 4, 1945. I consider it to be a remarkable address, very timely and very appropriate at this particular period.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

We are in the octave of all saints for the first time since the conclusion of the most deadly war in history. It is fitting that we should pause to remember the mortal sacrifices made during the last 6 years, especially fitting because we profit from those grim oblations on the altar of the world's sin. For a text, I have taken the following:

"The race is not to the swift, nor the battle to the strong; but time and chance happeneth to them all." (Ecclesiastes 9: 11.)

Thus spoke Koheleth the preacher in the Book of Ecclesiastes: "The race is not to the swift, nor the battle to the strong; but time and chance happeneth to them all." He seems to mean that those most fit for survival are the ones who go down to death first. It's another way of saying, "Those whom the gods love, die young." You see the truth of this observation in the death of our strongest men during the recent war. Millions of the finest and bravest of men in the world died. Included are some of the world's strongest leaders. Doubtless it was the pressure of the war that took from us Dr. Temple, perhaps the greatest Archbishop of Canterbury since the Reformation; it was the strain of the war that shortened the lives of Franklin Delano Roosevelt and Wendell Willkie, two of the most gifted public leaders our country has produced in a long while. More important than these, was the grievous loss of millions of the finest young men of the world, the potential leaders of the future. What better government, what uplifting religion and poetry and philosophy, what great literature and beautiful music has been lost to the world through their death cannot be estimated.

First, let us pause to pay tribute to the memory of Dr. Temple, a fellow churchman. On the occasion of his enthronement as Archbishop of Canterbury in 1942, Time magazine observed a fact recognized throughout the world that "he was the nearest to an acknowledged leader that world-wide Protestantism has had since the Reformation." He was not only a great religious leader; he was also a great social leader; he outdid even Beveridge in his crusade for the little man's world order. During the two short years he was in office he performed a feat of prestidigitation unequaled in the history of English-speaking people. He translated an office of elevated austerity into a vital agency for one man's crusade on the side of the little man against two ogres: Money and profit. He exemplified better than any other man in England the ideal of St. Paul to be all things unto all men.

Second, let us recall to mind another fellow churchman of great vision who also was undoubtedly a war casualty—Wendell Willkie. In contrast to Dr. Temple, carefully groomed for his responsibilities, Mr. Willkie was an amateur in his field, politics. He stepped straight from a lawyer's office in lower Manhattan to a position of international influence, and for the rest of his foreshortened life, he remained a power for good opinions. He came to the front at a critical time and his message was tremendous: The message of human freedom. In the souring political atmosphere of the early 40's, he was like a breath of fresh air, even to his opponents. Here was an honest businessman who was not ashamed of his profession, who had a clear and progressive set of beliefs, and who did not consult a public-relations expert before uttering them. He wrote an electric declaration beginning with these words "We the people, we say to you, give up this vested interest that you have in depression, open your eyes to the future, help us to build a New World." His nomination to the Presidency gave millions a sense of release, no matter what their party. It was proof that America is not a racket, that courage and honesty and freedom are still great forces in the world. He asked us to lift up our eyes unto the hills ahead—the greater heights to which we can reasonably aspire. Sometimes the people respond to a man of vision. But whether they respond or not, to keep the vision unremittingly before the people is the final task of greatness.

Third, think with me for a moment on the loss of Franklin Delano Roosevelt. Leaving politics aside and looking at him as an historical figure and a fellow churchman, we can agree, I think, that he was a political genius. The fact by itself that he was elected to four terms in the White House is enough to command respect. Much of his genius was wrapped up in two great qualities: First, he knew what the common man needed, what the hopes and dreams of the voiceless masses are; and he did his earnest best to help the underprivileged groups in this country, such as the Negroes, and he did it in a time of deepest need, during the dry agony of a cruel depression and later during a catastrophic war. Second, he carried an inherent authority when he tackled a problem, because of the personal handicap he himself bore like a cross. For he was a cripple. Most men with a private income would have given up and retired when they found themselves bedridden and half-paralyzed. But he was a game fighter, a human being with superb courage who did what he did not have to do, who took pain he did not have to take, to try to help his country. How far he succeeded only the distant result will tell. Whatever we may think of his political choices, our hats must be off to his kind of personal courage.

Other world leaders have been war casualties, but the loss of these three churchmen—Temple, Willkie, and Roosevelt—stand out. All of them died young, in the sense that they had not finished their work. They were young in their political and religious points of view, young in hope, young in the way they lived for the love of people. They rejoiced as strong men to run a race. But time and chance took them before their race was finished. Let us pay each the tribute that belongs to an athlete dying young.

Finally, and most important of all, it is fitting that we should remember all the young athletes who died in the struggle for a better world but who, because of their countless number, their obscurity, their youth, are nameless to the world. We think especially of the nine who went forth from this parish never to return. God help us if we forget them. They knew brief moments of triumph in school, among their friends, in jobs landed and begun in the business world, in positions demanding courage with the armed forces all over the globe. They died suddenly at Tarawa, at Monte Cassino, at Leyte, in Germany. And you and I are the benefactors, whether we face it or not, of their helpless sacrifice. They gave us, on a purple pall, another chance—perhaps our last chance—to build a better world, to live up to the will of God for the kingdoms of this earth.

They rejoiced as strong men to run a straight race. They died in the innocent faith of youth that we who remain would win that race, time and chance permitting. We owe each of them the loving oblation that belongs to an athlete dying young.

Over the gate of the American cemetery on Tarawa have been inscribed the verses of the English poet, A. E. Housman, written "To an

Athlete Dying Young." Housman puts it this way:

"The time you won your town the race
We bore you through the market place;
Man and boy stood cheering by,
And home we brought you shoulder high.

"Smart lad, to slip betimes away
From fields where glory does not stay.

"Now you'll not live to swell the rout
Of lads who wore their honors out,
Runners whom renown outran,
And the name died before the man.

"But round your early-laureled head
Will flock to gaze the strengthless dead
And find unwithered on its curls
A garland briefer than a girl's."

I cannot say anything to comfort the world which has not already been said. I only know what all can see, that too often the race is not to the swift nor the battle to the strong, but that time and chance happeneth to them all. We know, too, that there are worse things than dying young. It is worse to live longer than your reputation.

We also know this profound fact. Their sacrifice puts us under bond. For each of us now owes to each of them a sacred duty—the solemn responsibility to try to finish the race which they began. We have much to do. We dare not fail to do it. What are you going to do about it yourself?

Wherefore, seeing we also are compassed about with so great a cloud of witnesses, let us lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race that is set before us, looking unto Jesus, the author and finisher of our faith.

## Limitation Upon Length of Term of the President of the United States

EXTENSION OF REMARKS
OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Committee on Election of President, Vice President, and Representatives in Congress in opposition to resolutions limiting the terms of the office of President:

I oppose any attempt to place a limitation upon the length of service of the President of the United States. The tenure of office of the Chief Executive of the Nation has been established by the Constitution, the highest law of the land. Expressions of restriction by congressional resolution, inconsistent with constitutional provisions relating to the office of president, are futile. Constitutional lawyers know that a limitation upon the number of terms the Chief Executive of this Nation may serve must be set forth in the Constitution. Therefore, the delimiting of the office of President to two consecutive terms, other than by the expressed will of the people, must be by a constitutional amendment.

It is my purpose to discuss resolutions dealing with a constitutional amendment relating to the limitation upon the term of office of the President of the United States on the merits, and not from a political angle. The question of the length of service of the Chief Magistrate has been debated since the inception of these United States. I think it can be safely said that the age-worn controversy flared anew in the last decade as a result of the election of Franklin D. Roosevelt as President not only for three but for four consecutive terms of office. It is highly significant, however, that neither platform of either of the major political parties in this country mentioned this problem. Neither the Democratic nor the Republican Party advised the people of the United States that it was intended to impose limitation upon the term of the Chief Magistrate of this Nation. Congress has not, therefore, been mandated by the people to take any such action as is proposed by the resolutions under consideration. Any action taken by this committee which would favor a restriction or term of service would be but the consensus of personal opinions of voting members uninstructed in fact by the American people who, at the last two Presidential elections, decided against such limitation. The political campaign of 1940 and 1944 were replete with reference to the time-honored custom against a third term. Legal argument was advanced, specters of dictatorship were raised, and prognostications of the dire consequences to follow filled periodicals, press, and the air waves. The American people gave their answer.

I believe in the intelligence of the American electors. I trust the integrity of the American citizen. The hope of our republican form of government lies in our freedom of choice to elect our Chief Executive in accordance with the right given by the Constitution of the United States, untrammeled by any statutory-attempted limitation upon free elections which would deprive the American voter of his right to choose his President.

The Constitution of the United States in article II, section 1, paragraph 1, states: "The executive power shall be vested in a President of the United States of America." This article was amended in 1803 by the twelfth amendment of the Constitution which provides that the qualifications of Vice President should be the same as those for a President. The constitutional provision, which states that the President shall hold his office during the term of 4 years, was not adopted by the Constitutional Convention in 1787 without thought. It was adopted after a lengthy debate in committee which considered numerous resolutions providing for various methods of election, various terms of office and the question of reeligibility of a President who had once been elected. From 1800 to the present date, various resolutions recommending constitutional amendments for a third term have been considered by Congress. In 1803 a resolution, that no person who had been successfully elected President shall be eligible as President until 4 years elapse, when he may be eligible for 4 years and no longer, was rejected in the Senate by a vote of 4 to 25. In 1804, when the twelfth amendment provided for a separate election of the President and Vice President was ratified and adopted, no attempt was made to provide for limitation of reeligibility of the President. In 1824, the Senate proposed a joint resolution that no man should be chosen President for more than two terms, but no action was taken on this resolution in the House. In 1826, a great many joint resolutions, recommending amendment to the Constitution on the method of election of the President and the Presidential term, were introduced. One of these resolutions, recommending a limit of terms for the President, passed the Senate, but nothing was done in the House. In 1826, Andrew Jackson, in this annual message, recommended the abolition of the electoral college of the President by direct vote and the limitation of the term of service of the President to a single term of either 4 or 6 years. This recommendation was repeated by him in his second annual message to Congress. During his administration 21 joint resolutions on this subject were introduced in Congress but none of them was acted upon.

In 1836, during Van Buren's administration, 10 joint resolutions were presented in Congress and no action was taken. In 1865, Johnson suggested a single term for President following the assassination of Lincoln, and during his administration 12 joint resolutions, recommending single Presidential terms, were introduced in Congress, but no action was taken upon them. In 1872, following the nomination of Grant, agitation demanded that the best interests of the Government imperatively required that no President shall be a candidate for reelection. In 1875, Grant stated that the Constitution did not restrict the Presidential term to two terms, and that under certain circumstances it might be unfortunate to make a change at the end of 8 years. On December 15, 1875, on a resolution introduced by William M. Springer, of Illinois, the House adopted, without a debate, "that, in the opinion of the House, the precedent established by Washington and other Presidents of the United States in retiring from the Presidential office after their second term has become, by universal concurrence, a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions." In 1876, President Hayes recommended an amendment to the Constitution limiting the President to a single term of 6 years. In 1877, Representative Springer offered another resolution embodying President Hayes' recommendation as to a single term, but no action was taken. In 1884, Grover Cleveland, in accepting the nomination as President, pointed to alleged dangers in the eligibility of a President for reelection, but, however, in 1888 was renominated and defeated but reelected in 1892, during which period 13 amendments were introduced in Congress to limit the Presidential term in various ways. In 1894, William Jennings Bryan proposed three single-term amendments, one making a President ineligible to succeed himself. In 1896, the Democratic platform contained a plank that no man should be eligible for a third term.

Theodore Roosevelt, after his election in 1904, stated that under no circumstances would he be candidate or accept another nomination, and yet in 1912 stated that he would accept the nomination if tendered. On June 13, 1912, the House Committee on the Judiciary submitted a favorable report on a resolution proposing a constitutional amendment limiting the President to a single 6-year term. No further action was taken on this resolution. During the period 21 amendments were introduced in Congress proposing a limitation on Presidential terms without congressional action. In February 1913 the Senate passed a joint resolution providing for a constitutional amendment limiting the President to a single 6-year term, but no action was taken on the resolution in the House. In February 1927 Representative Beck, of Wisconsin, Republican, introduced practically the same resolution as the Springer resolution of 1875, suggesting a constitutional amendment against the third term. Representative Fairchild, of New York, Republican, on February 21, 1927, offered a constitutional amendment limiting the term of office of the President. On February 22, 1927, Senator LA FOLLETTE introduced a corresponding resolution in the Senate. No action was taken on any of these resolutions in the Sixty-ninth Congress. In 1928, the La Follette resolution was reintroduced, amended, and passed by the Senate on February 10, 1928. No action was taken by the House thereon. This was the last consideration in Congress of the third-term question before it arose in connection with Franklin D. Roosevelt's plans for a third term.

At least 150 resolutions have been introduced in Congress to limit the Chief Executive's tenure in one way or another. Never has there been concurrent action upon any of these resolutions by both sides of the Capitol. Many statesmen, who have seriously pronounced that the term of office of the President should be limited, have failed to practice their preachments. Andrew Jackson, in spite of his constant effort through messages to Congress recommending a one-term limit, accepted a second term. Cleveland was favorably inclined toward a third-term invitation. Theodore Roosevelt accepted a third-term nomination. George W. Norris, who opposed the third term until late in life, supported Franklin D. Roosevelt for his third term. Thus many of our statesmen have, at one time or another, been both for and against the limitation of the Presidential term of office. The entire history of Congress, since the ratification and adoption of the Constitution of the United States, has been against any interference by Congress with the right of the American people to elect the President.

There is apparently a prevailing but mistaken belief that opposition to three or more consecutive terms as President originated with George Washington. Historians agree, however, that Washington declined a third term for purely personal reasons. The historian, McMaster, wrote concerning Washington's retirement, "No scruples about the third term troubled him in the least. He went back to private life solely because he was tired of the Presidency and because the state of the country did not demand a further sacrifice of his comfort." George Washington himself on April 28, 1788, wrote to the Marquis de Lafayette:

"Guarded so effectually as the proposed Constitution is, in respect to the prevention of bribery and undue influence in the choice of President, I confess I differ widely myself from Mr. Jefferson and you, as to the necessity of expedience of rotation in that appointment. The matter was fairly discussed in the Convention, and to my full conviction, though I cannot have time or room to sum up the argument in this letter. There cannot in my judgment be the least danger, that the President will by any practicable intrigue ever be able to continue himself one moment in office, much less perpetuate himself in it, but in the last stage of corrupted morals and political depravity; and even then, there is as much danger that any other species of domination would prevail. Though when a people shall have become incapable of government themselves, and fit for a master, it is of little consequence from what quarter he comes. Under an extended view of this part of the subject, I can see no propriety in precluding ourselves from the service of any man, who on some great emergency shall be deemed universally most capable of serving the public."

Thomas Jefferson was the first to express an objection to a third consecutive term on principle, but even he, in writing to his friend, Colonel Taylor, of Virginia, under date of January 6, 1805, stated:

"My opinion originally was that the President of the United States should have been elected for 7 years, and forever ineligible afterwards. I have since become sensible that even 7 years is too long to be irremovable, and that there should be a peaceable way of withdrawing a man in midway who is doing wrong. The service for 8 years, with a power to remove at the end of the first 4, comes nearly to my principle as corrected by experience; and it is in adherence to that that I determine to withdraw at the end of my second term. The danger is that the indulgence and attachments of the people will keep a man in the chair after he becomes a dotard, that reelection through life shall become habitual, and election for life follow that. General Washington set the example of voluntary retirement after 8 years. I shall follow it. And a few more precedents will oppose the obstacle of habit to anyone after awhile who shall endeavor to extend his term. Perhaps it may beget a disposition to establish it by an amendment to the Constitution. I believe I am doing right, therefore, in pursuing my principle. I had determined to declare my intention, but I have consented to be silent on the opinion of friends, who think it best not to put a continuance out of my power in defiance of all circumstances. There is, however, but one circumstance which could engage my acquiescence in another election; to wit, such a division about a successor as might bring in a monarchist. But that circumstance is impossible."

In other words, Jefferson, according to his own statements, would have run for a third consecutive term in order to prevent the election of a person whose views or principles Jefferson believed prejudicial to the interest of the country. Such a Jeffersonian attitude does not support the contention that Jefferson was unequivocally opposed to a third term.

General Grant went to the Republican Convention in Chicago on June 2, 1880, with more votes than any other single candidate. He was defeated for nomination on the thirty-sixth ballot, but the third term issue was not the cause of his failure to win the nomination. The historical and constitutional background of the third term tradition does not support the argument advanced by the proponents of the resolutions under consideration that the retirement from Presidential office after a second term was prior to 1936, and is now a part of our republican system of government.

The argument principally advanced in favor of the placement of limitation upon the number of terms a President of our Nation may serve is that continuity of leadership under one Chief Executive for more than 8 years means the sacrifice of freedom of political action and democracy. There is no substance of this assertion of the proponents of restriction upon freedom of voting choice. In the early days of our national existence, advocates of limitation cried, "Beware of a monarchy, beware of caesarism." Today the same cry has been raised in different words, "Beware of dictatorship." We are warned against absolutism in government. We are told that long tenure in the office of the President leads to totalitarianism. We are threatened that a dictatorship would result. The best answer comes from our recent national experience. The United States of America has had a President for three successive terms of office. More than that, he was elected for a fourth term only to fall in the performance of his duty as our Commander in Chief in war. America did not become Fascist. America has not become nazified. America suffers not from absolutism in government. It did not become totalitarian. The people of this Nation today enjoy more freedom than any other people in the world. They enjoy their lives free from those restrictions upon thought and action which have, from the beginning of time, led only to unholy dictatorships. They have been led to know that freedom from fear, freedom from want, freedom of speech, and freedom of religion are the bulwark and cornerstone of happiness in the democratic way of life.

Do these "four freedoms" proclaimed by a President, who magnificently led America through three consecutive terms of office, during which our national ship of state was threatened by storms and crises and from east and west sound in monarchy or totalitarianism. There will be no dictatorship in this country as long as America has freedom of religion, a free press, freedom of speech, and freedom of elections. But the American people must remain free to choose their Chief Executive without restriction apart from the Constitution. They have a right to resent, and will resent, any attempt to interfere with their constitutional right to vote for the man of their choice for the office of President. Any congressional attempt to impose the will of Congress upon the voters of America in a manner contrary to, or inconsistent with, present constitutional provisions for and guaranties of freedom of election for President will be met with justifiable protest against unjustifiable paternalism in government. I am of the firm conviction that the will of our citizens should not be denied opportunity of free choice in national elections until the people of this Nation unqualifiedly state, through the orderly process of government, their belief that our present constitutional provisions for the election of President are outmoded.

The failure of any President save one to run for a third term had been, prior to 1936, a custom of American politics. There is, however, a wide chasm between custom and restrictive legislation. The custom which existed prior to 1936 only became a custom by virtue of the will of the American voters. History does not portray any picture of any American being defeated for the office of President merely because he was a third term candidate. This statement merely followed the reasoning of other Presidents who had preceded Grant. Whatever the custom prior to 1936 relative to a third term, the tradition, if such it was, has now been broken by the voters of this country. If voters desire to return to such custom or tradition, they should be allowed to do so of their own will without the compelling force of legislation, which at this time they neither seek nor demand.

The third term issue in 1940 in reality revolved around the personality of the candidate for the third term. The best evidence of this truism lies in the campaign utterances of his opponent who attacked, not the Democratic Party, but its leaders. Roosevelt was laughed at as the indispensable man and jeered as the tired old man. An examination of history will show that each time the third-term issue has raised its head, the cause of controversy lay in the character and personality of the President who would, if a candidate, have been a third-term candidate. The people of America, without the aid of legislation, can be relied upon to analyze and choose the personality and character they desire for the office of Chief Executive.

The supreme power of government in the United States lies in the governed. The whole body of the American people control our national elections. Today, due to radio, airplane, and press, the voters of this country are better informed than ever in the history of the Nation. They will not be beguiled into false ideologies. The specter of usurpation of absolute power wielded by one man over a hundred-and-thirty-odd million people who are protected by constitutional guaranties is but the created image of selfish interests.

The experience of this Nation under a President who served three successive terms of office and was elected for a fourth term proves conclusively that the supposed evils lurking in the third-term custom have been considerably overestimated. The principal objection that the President, through extended service can perpetuate himself in office by political patronage is a mythical phantom under present-day conditions. The power of the voter, appreciative of not only domestic but international problems, completely controls the means to prevent such perpetuation in office. The present constitutional provision allows the people to send back to private life, at the end of every 4 years, any President who does not meet the American ideal of a Chief Executive, and I

recall in 1940 the fallacious argument that if Franklin D. Roosevelt was elected that it would be the last election in the United States.

The American people have taken full advantage of this provision when we consider that only 8 Presidents out of 33 have completed two full terms of office, and 5 of these held office before the Civil War. Political dynasties through patronage are more apt to be born when a President is limited to a given term, or series of terms, rather than under conditions wherein his term of office is entirely dependent upon the free vote of a free people. It can be truly stated that a President, knowing that his time is short and defined as to limit, would more likely feel the power of his office and for reasons of expedience or opportunism, looking to the time when he must return to private life, resort to theories and practices far removed from considerations of the public good or national weal. A limitation of the term of office of President would make for independence of action in the same magnitude and degree as would a life term. The pressure of public opinion is helpful and needed by our Chief Executive as he molds the course of our Nation. Public opinion is at once corrective and advisory. Limit the term of office of President and public opinion might well lead to the attitude of the person and party in power, "The public be damned." The seeds of social revolution might then grow into the red flower of communism.

Some of the resolutions before this committee call for a constitutional amendment limiting the term of office of President to a single term of 6 years. The same arguments advanced to limit the tenure of two successive terms apply with equal vigor to such a proposal. As has well be pointed out during the century-old debate on these proposals, 6 years is too long to ask the people to wait to recall a bad, though unimpeachable, President. Public policy may well change during a much lesser period of time. A single term of 6 years would hamper and embarrass the President in the performance of his duties. He might well miss that cooperation of political leaders with his national program which is necessary for good government.

I believe that there is no power as trustworthy in the election of a President as that possessed by the people. I repeat that I have faith and confidence in their educational qualifications, their integrity, judgment, and justice. The people of America in these years, and those beyond the horizon, want as their President a man who will be faithful and efficient. They expect their President today to be their leader in thought in time of peace, their Commander in Chief in time of war. The world today looks to our President as the symbol of American thought and the essence of American ideals. A limitation upon the term of service, practical politics being what they are, would remove both the incentive and the opportunity to fully determine the thought of the people which a President could express with confidence as the voice of America.

The Constitution of the United States is the character of a free people. Few amendments have been made thereto. Restrictive amendments should be cautiously approached. Any amendment which would interfere with the unqualified right of freedom of voting choice should not be authoritatively passed unless there is an inexorable demand for a limitation of such choice arising from the people. There is no evidence today that the people are asking to be saved from their own actions. There is no compelling cry for relief against a constitutional provision under which this Nation has progressed and grown to be the strongest and greatest Nation in the world. America is growing in international stature. Let us not impede that growth by unnecessary restrictive constitutional amendments. Let us not forget the fiasco of prohibition.

Any legislation or constitutional amendment limiting the tenure of the Presidential office would deprive the Nation of the invaluable experience gained in the exercise of his office, particularly in time of a national crisis. Any restriction to one or more terms might well destroy stability and continuity in international and foreign relations. A single term or two terms might only deprive America of a President when the continuation of his policies and personality is imperative for the public welfare.

Alexander Hamilton in a letter to the people of New York on March 21, 1788, pointed to give ill effect of a scheme of continuing the chief magistrate in office for a certain time and then excluding him from it, either for a limited period or forever after. He stated these effects would be for the most part rather pernicious than salutory. The following arguments of Alexander Hamilton against limitation ring as true and forceful in 1945 as they did 157 years ago.

1. A resultant diminution of the inducement to good behavior.

"There are few men who would not feel much less zeal in the discharge of a duty when they were conscious that the advantage of the station with which it was connected must be relinquished at a determinate period than when they were permitted to entertain a hope of obtaining by meriting a continuance of them."

2. The temptation to sordid views, to speculations, and in some instances to usurpation.

3. Depriving the community of the advantage of experience gained by the Chief Executive in the exercise of his office.

4. Banishing men from stations in which, in certain emergencies of state, their presence might be of the greatest moment to public interest and safety.

5. Exclusion at a fixed time would operate as a constitutional interdiction of stability in administration.

Balance against these evils greater independence of action and an alleged, but not proven, greater security of the people, the conclusion is compelling that there should be no limitation upon the tenure of the office of President nor restriction upon his reeligibility. I wholeheartedly agree with the conclusion expressed by Alexander Hamilton:

"There is an excess of refinement in the idea of disabling the people to continue in office men who had embittered themselves in their opinion to approbation and confidence, the advantages of which are at best speculative and equivocal and are overbalanced by disadvantages far more certain and decisive."

This is not a political problem. We consider in these resolutions not a measure of today but a policy for the Government of future generations. Does anyone see in the present-day attitude of man a desire for further restriction of freedom of action or independence of thought? The answer is obvious. Restrict free election and we gratuitously insult the American voter.

We deny that the American people cannot be trusted in the exercise of their right of franchise. We force the citizens of this Nation to retire from office a man in whom they have faith and hope because they through experience with him have come to know him and to trust him—and thus force upon the American electorate, at a time they may not choose, a man neither known nor tried in national office. Such an edict shocks common sense. We have faced national crises in the past. Crises more acute and critical may arise in the future. This country will never be barren of statesmanlike leaders. There is no indespensable man. However, future crises may demand the continued service of a particular man as President who has gained national confidence through faithful, efficient, patriotic leadership. The choice must be left to the people to continue such a man in office. If we cannot trust the American people to make this choice, then no matter what the length of term of office—God help America. We should not tie the hands or put into a strait-jacket future generations of Americans in the election of President. We should not impose upon them the tied hands of a past generation. No one can fortell the future, as what situation might confront a future generation of Americans after we are dead and gone.

There can be no serious danger to the liberties of our citizens under present constitutional guaranties in allowing more than two successive terms for a President. The theory that courage, loyalty, fidelity, and ability should be made constitutionally or by statute unavailable at any given date is unsound and to be deprecated. The framers of our Constitution recognized such an absurdity. The passing of time conclusively proves the soundness of the judgment of the signers of the Constitution in rejecting such a political principle as contrary to the first principles of sound reasoning.

I prefer to be counted with those who believe that the third-term question is an artificial, superficial contrivance designed to frustrate the will of the American people by preventing the renomination of a popular President; if adopted it could stop the election of a needed President. Democracy in America is vital—living. Let us not hamper or destroy our republican form of government in petty contraptions or devices to foil the American will to live the American way—under a President freely chosen, freely elected, by a great and free people.

The reasons against limitations are so logical and sound that the pending resolutions should receive nothing further than the dignity of a hearing.

---

## Problems of American Business

EXTENSION OF REMARKS
OF
### HON. ROBERT RAMSPECK
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Moley from the Washington Evening Star:

SEES BUSINESS TOLERANT OF GLOOM RACKET—COMMENTATOR DISCOVERS PARALLEL TO PRACTICES OF MIDDLE AGES

(By Raymond Moley)

The problems before American businessmen never were more complex, perhaps they never were more serious. But there seems to be a tendency among members of the managerial group to seek the advice of those who paint only pictures of gloom.

I wonder sometimes, when I attend a meeting at which businessmen listen to discourses by one of their own members or to someone brought in for the purpose, what strange passion possesses them. For they never tire of hearing about their own horrible end. I feel certain, moreover, that the most pessimistic of those who lecture them are not of their number, but are secretaries of business associations, counsels on public relations, experts, company economists, or journalists who are in some way their employees. This cannot be because those people who perform services on the periphery of production are

by nature pessimists, for their own businesses seem to find plenty of customers. It must be that those who minister to business find a tremendous and unsatisfied demand from those who go to meetings and conferences for flagellation of a cruel and quite illogical sort.

In the thirteenth century great processions of the citizenry of northern Italian towns—thousands of them—marched around the country beating themselves with whips. Later, in the Teutonic nations, the flagellant business changed. Specific orders or societies were established, the members of which officiated at ceremonials. Those who craved spiritual uplift submitted themselves to being beaten for days. The master administered a beating, after which the patrons beat themselves for a while. Later the master read a message supposed to have been brought by an angel, and everybody felt better. Then the professionals went on to other towns and found new penitents. The point, it seems to me, is that this beating business became a profession—a paying profession apparently, for the masters toiled not and neither did they spin. They just made people feel unpleasant.

Something of this sort is happening at gatherings of businessmen. They are told that communism is sweeping the world, including the United States, that we are to have war with Russia, that military training is a scheme to regiment the Nation, that the Nation is bankrupt and the business never can prosper again.

Great names are part of the substance of these discussions, including Friederich Hayek's who seems to say in his very dull book, The Road to Serfdom, that if the village takes title to the town pump we will end up in communism. The argument repeatedly is made that any encroachment by government on private enterprise will progress until there is no liberty left. The plain facts of social evolution are ignored, which tell us over and over that the line dividing government and business is constantly changing. Sometimes it moves one way; sometimes another.

The humor and the hope are that these same willing consumers of the gospel of doom leave their seances, go back to their plants, roll out the blueprints, sign contracts for new machinery, pep up the sales force and prepare for a big year. Their actions have little to do with the words they hear and little more to do with what they say themselves. They know America is going places and they are going along. But they hate to be told so.

Meanwhile, a large and flourishing business is created whose purpose is the purveying of pessimism. To the extent that this business keeps a large number of organizers, statisticians, orators and writers employed, the problem of unemployment is partially solved. But this is about all that can be said for the gloom racket.

## Mrs. Francis P. Tarnapowicz—A Great American

EXTENSION OF REMARKS

OF

### HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. WEISS. Mr. Speaker, there have been many outstanding heroes in World War II. Many of them have been awarded the Congressional Medal of Honor; many have received various battle decorations. Yet there are also many unsung heroes both on the battle front and on the home front who have unselfishly helped bring final victory over a ruthless foe. One of these unsung heroines is Mrs. Francis P. Tarnapowicz, of Pittsburgh, Pa., an outstanding American of whose record we in the great Pittsburgh industrial area are all proud. She is the chairman of the Nationality Groups Division, Fort Pitt area, War Finance Committee for Pennsylvania. She served in the same capacity during World War I—and without 1 cent remuneration—in order to help raise the billions necessary to pay for the terrific cost of a global war. Her success has been heralded throughout America, for hers was the difficult task of molding together the men and women of the nationality groups of western Pennsylvania—composed of 101 different nationalities—who sold $269,985,000 in War bonds over a period of approximately 4 years. This figure does not include the sales for the final Victory bond drive.

Mrs. Tarnapowicz has served her country faithfully and ably in two world wars, and I believe, is deserving of every honor and praise accorded heroes on the field of battle. As a representative of the greatest and richest industrial district in America, I salute Mrs. Francis P. Tarnapowicz—a great American.

Typical of her unselfish character is a letter written me by her on October 9, 1945, which I include as part of my remarks, wherein Mrs. Tarnapowicz gives complete credit for the outstanding war-bond sales to the patriotic men and women of the nationality groups:

TREASURY DEPARTMENT,
WAR FINANCE COMMITTEE,
PENNSYLVANIA,
*Pittsburgh, Pa., October 9, 1945.*

HON. SAMUEL A. WEISS,
*Pittsburgh, Pa.*

DEAR CONGRESSMAN WEISS: I am happy to pay tribute to the men and women of the nationality groups of the war finance committee as volunteer workers they have given endless hours of patriotic service. The record showing $269,875,000 in war-bond sales in almost 4 years is deserving of praise—truly they remind me of a large orchestra each group playing a different instrument, thereby harmonizing a beautiful symphony of war-bond selling, always successfully reaching their goals.

Contrary to the general idea the nationality groups are composed of fine American citizens, the common bond that brings them together is that they possess traditional customs that are interesting and lovely, and therefore worthy of preservation. There has been no inclination to cleave to political lines of any kind.

There are at present 100 different units (as per list attached) each committee has a chairman and cochairman and each church and organization has captains and lieutenants, making a complete working unit. These units have not only worked to sell bonds during the regular bond drives, but have maintained a continuous sales effort * * * in between drives as well as during drives. The office of the nationality groups division is open from morning till night and special meetings and rallies are held in the evenings, Saturdays and Sundays and it can be said that the work never stops.

Some of the special projects which have been sponsored and completed by these groups are also listed on a separate sheet.

Some of the groups are so enthusiastic about the work that they have become issuing agents for the United States Treasury Department and thus are able to issue bonds in the evenings and Sundays, or any time we need them.

Hundreds of meetings, teas, luncheons, dedications, and christenings have taken place and to attempt to estimate the hours of time that have been applied to this work * * * well, all I can say is that for almost 4 years I have done nothing but war-bond work every day, that's how busy they have kept me.

The nationality groups have cooperated in many ways with the other divisions of the war finance committee. They have assisted the community division, the pay roll division, the sports committee, and the school division. On many occasions they have used their traditional costumes, adding color, luster, and interest to the occasions. A list of the events in which the groups have cooperated with other divisions of the war finance committee is attached.

At one time the groups had their own radio program known as the Let's Go America program and the interest was great and much good was accomplished.

We have just completed the drive for the two veteran hospitals, one to be built in Pittsburgh and one in Greenville, with the fine total of $18,900,425 and now we are on a fresh start, all out for the Victory drive, and I am sure that they will cooperate as they have cooperated on previous war-bond drives, they will give us full cooperation.

Sincerely,

MRS. FRANCIS P. TARNAPOWICZ,
*Chairman, Nationality Groups Division, Fort Pitt Area.*

## Loans to Great Britain and Russia

EXTENSION OF REMARKS
OF
## HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. RIZLEY. Mr. Speaker, the Enid Daily News and Eagle, a newspaper published at Enid, Okla., with both morning and evening editions and which has a wide circulation throughout northwestern Oklahoma and in the southern counties of the State of Kansas, has just conducted a very interesting poll on the question of loans to Great Britain and Russia. The results of the poll and the comments of the editor speak for themselves. Under permission granted, I insert the same in the RECORD, and I trust that Members of Congress will read the article and take heed as to how the people in this progressive and substantial agricultural and industrial section of the United States feel about the matter:

CRUSHING "NO" IS VOTE ON LOANS TO BRITAIN, RUSSIA

In an astounding and unequalled expression of public opinion and by a truly overwhelming majority, the people of northwest Oklahoma and southwest Kansas oppose the huge multibillion dollar loans sought by Great Britain and Russia from the United States.

This is the startling result shown by the tabulation yesterday of the News and Eagle ballots on the subject. On no other public question of recent times has the opinion been so solidified or the interest apparently as great; and the following tabular results show clearly how their readers reacted to the opportunity to vote on the question offered them in the ballots published in these newspapers:

FIFTY-NINE TO ONE AGAINST LOAN

*Loan of three to five billion dollars to England to help nationalize her industries*

| | |
|---|---|
| Approving | 41 |
| Disapproving | 2,375 |

ONE HUNDRED AND FIFTEEN TO ONE AGAINST LOAN

*Loan of $6,000,000,000 to Russia to help her restore her heavy industries*

| | |
|---|---|
| Approving | 21 |
| Disapproving | 2,403 |

That is a truly overwhelming and utterly convincing majority of public opinion against such loans in the great two-State area in which the News and Eagle circulate. It shows that 98.3 percent of the people of this area oppose lending England billions of dollars to help nationalize her industries. It shows that only approximately 1.7 percent favor such loans. It means that the opinion against such a loan in this great Southwest area is 59 to 1.

TWENTY-FOUR HUNDRED AND THREE TO TWENTY-ONE

In the case of the loan sought by Russia, the adverse opinion is even more overwhelming. Only 21 persons out of the 2,424 who voted on that question in the News-Eagle balloting favor loan of $6,000,000,000 to Russia while 2,403 oppose such a loan. That is an adverse opinion of 115 to 1. Ninety-nine and six-tenths percent of those voting opposed the loan.

It was the purpose of these newspapers in presenting this ballot opportunity to secure the opinions of their readers in order that the Oklahoma Members of Congress, the entire Congress, and the President might be informed of the thought of the people of this area on these vital questions, involving such huge sums in a Nation already staggering under the greatest public debt ever known by any nation at any time in history.

The response was immediate and unexpectedly large, probably representing the greatest such vote ever had in Oklahoma under similar circumstances. For this vote was purely voluntary. It was without any personal solicitation, without any solicitation at all other than the mere offering of a ballot to readers in the News and Eagle. It required that the reader who wished to express his opinion must cut out the ballot, mark it, mail it at his own expense or bring it into the office of these newspapers.

VOTE SHOWS BIG INTEREST

And the result shows the astounding interest taken in the subject by these readers. Ballots came in from practically every community in northwest Oklahoma and Kansas. Many persons drove into Enid from distant points especially to bring their ballots and express their opinions in person, as well.

And among the truly significant things about this poll is that it was taken in an area which the census shows has the highest percentage of literacy, of native-born citizens, of any similar area in the United States.

That alone is something for Congressmen, for the administration, for commentators, to ponder in considering this overwhelming ballot against these huge foreign loans.

The ballots cast in the voting are now on file in the News-Eagle office. The results will be sent to Members of the Oklahoma delegation in Congress, to the President, to the chairmen of the appropriate congressional committees which will consider the loan proposals. They should prove truly revealing to these public officials, and leave no faint doubt but that the people of this section of the Nation are so nearly unanimous in their opposition to such loans that they scarcely would seem to deserve consideration at all.

AN ASTOUNDING BALLOT RESULT ON FOREIGN LOANS

If there ever was any doubt as to the position of the citizens of northwest Oklahoma and southwestern Kansas on the question of lending England and Russia huge multibillion dollar sums now that the war is over, that doubt should be thoroughly resolved by the results of the poll on this question conducted by the News and Eagle through their columns in the past 2 weeks. The vote as detailed on the front page of this issue of the News shows 2,403 ballots cast against a six billion loan to Russia, as against only 21 for such a loan. It shows 2,375 opposed to lending England three to five billions for nationalizing her industries, as against only 41 favoring such a loan.

No such an overwhelming ballot against any public proposal in recent years comes to mind. The voting was wholly voluntary. The News and Eagle, as a public service only, offered their readers the opportunity of expressing their opinion on the subject through a ballot form published in the papers. There was no personal solicitation. Those voting had to clip the ballot, mail it at their own expense. And the ballots poured in from practically every community in northwest Oklahoma and southwest Kansas, an area where literacy is the highest in the United States * * * with the result of a 115 to 1 vote against the Russian loan proposal, a 59 to 1 vote against the British proposal.

Such a result is highly significant; it shows the strong public feeling against such loans; and it should be informative and serve as a guide to Congress in acting on the loan proposals. Certainly Congressmen from this southwest area should note it and vote accordingly if they would represent their constituents' wishes. And it was the principal

idea of the News and Eagle in presenting this ballot opportunity to gather information to guide the lawmakers as to real public opinion on further lending of our taxpayers' money at a time when the national debt approaches $300,000,000,000.

## The Promotion of Peace

EXTENSION OF REMARKS
OF
**HON. ALVIN F. WEICHEL**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. WEICHEL. Mr. Speaker, under leave granted, I include herewith the editorial of Spencer Canary, editor of the Daily Sentinel-Tribune, of Bowling Green, Ohio, on the promotion of peace and our retaining the secret of the atomic bomb against possible aggressors:

PREVENT OR PROMOTE?

It is pretty discouraging to those who hope for world peace to hear statesmen talk mostly about how to prevent war instead of how to promote peace.

Was the charter of peace adopted at San Francisco last May simply as a sop to peace-lovers?• Was its principles then considered unattainable and not something by which to square the relations of one nation with another?

Why should our chief attention at the present time be drawn to disposal of the atomic bomb, to formation of a permanent navy of half a million men and to universal military training instead of to how to make the Nation's peace charter direct our ways?

How silly it is to approach the question of peace in a negative way. Success in everyday lines is not attained that way. Youth is not taught how to keep out of jail but how to act toward his fellows as to promote his own and their satisfaction. People are not asked to tax themselves for improvements to prevent something but to promote the general welfare. Why should not our statesmen stress the benefits of peace in all their public comments instead of stressing the need of individual national defense to prevent aggression?

This is not to say that disposal of the atomic bomb and efficient military and naval establishments are not proper and important questions for discussion. It simply is a protest against statesmen not making the World Peace Charter the first thing on the agenda of every international conference. What effect on world peace will such and such imposition of terms on Germany and Japan have? What effect on peace will fixing boundary lines on nations have? What effect on world peace will be the decision on raw materials, on shipping, on air routes, on import and export tariffs, on migration and immigration, on fixing rates of exchange and stabilizing currency, on international loans and debts, on freedom of the press, the radio, and worship? What will be the effect on world peace of laws governing labor and capital? What will be the effect on world peace of decisions that touch all phases of human relationships?

If the San Francisco Conference means little or nothing to nations of the world, let us withdraw from it, keep the atomic bomb hovering over the heads of nations which persist in thinking only of their temporary selfish advantage, maintain our great lead in military and naval supremacy, and quit trying to be nice to other nations who think only in terms of selfish aggrandizement.

If the San Francisco peace pact does mean what it purports to mean, play it up as the important factor in any equation that is sought. That nations' charter of peace seemed to mean something 6 months ago. It provides the military force to prevent aggression and to discuss freely the controversial matters that might lead to war and ways in which peaceful means of settling them may be used. Its chief weakness is the provision that enables any one of the five big powers to veto action. Those five are the United States, Great Britain, Russia, France, and China.

Perhaps our statesmen are too much aware of this weakness. Perhaps they look upon this San Francisco Peace Conference as merely a sedative for peoples of a nation, like a sleeping pill taken to lull one into the land of Nod.

It is time for the average American to awake and to demand that the charter of peace be activated. It is time to make our representatives in Congress and President Truman understand we want a showdown on whether or not the signatories of that peace pact mean to try to carry out its provisions.

If they look upon it as "a mere scrap of paper" which may be ignored, as Mussolini ignored the old League of Nations by shelling the Greek Island of Corfu and by invading Ethiopia, and as Hitler did by invading Austria, Danzig, Sudetenland, Czechoslovakia, Poland, and France, let us learn the facts now; and let us then use our own present "big stick" to force conditions that will assure us peace for at least another 25 years; and let us arm ourselves to the teeth and ally ourselves only with those nations that desire lasting peace and are willing and able to maintain it by force.

Let us then keep the secret of the atomic bomb as long as possible as a menace to possible aggressors and study it by ourselves. Let us then cease trying to placate any nation but to act as tough as any dare act toward us. Let us either demand that the world charter of peace be earnestly tried now or else frankly tell the world we have no confidence in it. Let our statesmen talk the peace charter.

## A Hero Dies

EXTENSION OF REMARKS
OF
**HON. THOMAS J. LANE**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Evening Tribune, Lawrence, Mass., November 14, 1945, concerning a great naval hero, Commodore Dixie Kiefer, United States Navy:

A HERO DIES

Commodore Dixie Kiefer, USN, and six Navy colleagues, officers and enlisted men, died Armistice Day in a mountainside crash.

Commodore Kiefer, one of the most colorful men in the annals of Navy aviation, one of the outstanding heroes of naval warfare in the Pacific, beloved by all who served with him or under him, died in harness as he would like it, and his death brings sorrow into the hearts of men in every State in the Union who served with him.

Kiefer, hero of the U. S. S. *Yorktown*, of which he was executive officer, and also later of the great carrier the U. S. S. *Ticonderoga*, a big figure in six major Pacific naval engagements including the great battle of the Coral Sea, was referred to by Secretary of the Navy Forrestal as "the indestructible man," as he decorated him with the Distinguished Service Medal for his Pacific heroism. Others referred to him as "the greatest ambassador of good will for the United States Navy."

The brilliant naval officer served his country well from the date of his graduation and commission from Annapolis in 1918 until the hour of his death. His last and current assignment was commanding officer of the First Naval District Air Bases, stationed at Quonset, R. I., naval air station. His body was found close by the wrecked plant. His splint-bound arm stretched over a pile of soggy brown maple leaves. It had been in a cast since it was shattered when Jap suicide planes hit the bridge of the carrier *Ticonderoga* during a battle off Formosa and when he was in command. With 65 pieces of shrapnel in his body he lay on a mattress on the bridge, giving orders and refusing removal to the sick bay until the last of his wounded and dying men had been given care.

Commodore Kiefer came to Lawrence a few weeks ago and won the hearts and the admiration of the several hundred persons who were fortunate enough to meet him and hear him talk. At that time his right leg showed the effects of the shattering that it suffered, his left arm hung limp and lifeless and his right arm was carried in bandages and splints. His modesty with reference to his own heroism and his generous magnanimity in paying tribute to others was most impressive. His reference to the personnel under him as "my boys" and "my babies," telling how they bravely suffered and died under terrific Pacific action, brought tears to the eyes of his listeners. There was no trace of anguish from pain as he talked but rather smile after smile of pride in a job well done, not by himself alone, but by those who served with him and under him. He had already earned the love of Lawrence men, those who served under him in the past, and several of them came to see him that evening.

Commodore Dixie Kiefer was a great man, a great hero, and his death is a distinct loss to the Navy and his country. It is sad that he had to die so young. His wracked body might not have permitted further fighting service but his noble mind and personality would have been of great value to the naval service. He earned his way and left much behind. May God grant him eternal rest.

## Speaking Program of the Hall Canteen Clubs

EXTENSION OF REMARKS
OF
**HON. EDWIN ARTHUR HALL**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speaking program for the fourth annual benefit dinner dance of the Hall Canteen Clubs, Endicott Johnson Diner, Endicott, N. Y., Saturday evening, November 3, 1945.

MASTER OF CEREMONIES. Members of the Hall Canteen Clubs, the Hall Veterans League, Congressman HALL, ladies and gentlemen, as chairman of the committee selected to arrange this occasion, I have the pleasure of welcoming you here tonight.

Twelve long months have elapsed since we gathered in November of last year to pledge ourselves to total victory. Since then we have seen that victory realized and we have had reason to be happy indeed.

But this evening we are assembled to dedicate ourselves to perform a task fully as

difficult and monumental as that which we have already accomplished. We are assembled to determine a course to follow which will guarantee to the people of America a secure, lasting, and blessed peace and a century of future progress for the benefit of all mankind.

We are assembled to join with the thousands of veterans of the recent war in the continuation of the glorious fight which our leader, Mr. HALL, long ago started and which we have ever since kept up. That fight is for the boys of our armed forces and for you veterans of this great section.

The size and impressiveness of this dinner exceed all our anticipation: We knew many would come out of sheer affection for Congressman HALL. But our hopes are more than fulfilled tonight and we want you to know how much we appreciate your attendance.

I want to publicly thank the members of the program committee for the painstaking effort they put forth to make this affair the success it is.

We know you want to see action and we have provided it for you. Among the fine, representative veterans' group here, there are several who have consented to speak for their comrades. It goes without saying that we want to hear what their impressions are and what they have to suggest for the future.

I deem it a special privilege, then, to call upon Mr. Stanley Cachowski, whose record in the service of his country bespeaks his love and devotion to this cause. Mr. Cachowski.

Mr. STANLEY CACHOWSKI. Madam Toastmaster, members of Hall Canteen Clubs, fellow veterans, Congressman HALL, friends:

First of all, I want everybody to know I am having a wonderful time tonight. You ladies of the Hall Canteen Clubs certainly know how to put on a party. You have my thanks and the admiration of all of us.

Then, I want to say this is the first time I've been any place since I been back where it really looks like a crowd that knows what it wants to do. People here seem to want to help the veteran and God only knows he needs help.

I'm sick of listening to a lot of tripe that we usually hear about how much is being done for the returned soldier. I'm not saying folks haven't been nice to us. They have. But nobody seems to have any program or any plan.

I've always had a lot of admiration for Congressman HALL. Why, single-handed, he's had to battle down there in Congress for us when we were in service. He carried the ball alone and was opposed by a lot of reactionaries in Washington who sneered at his honest efforts. If we had a whole Congress of men with Mr. HALL'S friendly feeling for soldiers in the ranks, we would be a lot better off today.

And Congressman HALL, I came here with one idea tonight. I am looking for a leader with a program. I'm looking for a leader who isn't afraid of being called names because he fights for the veteran. I believe you're that leader and I'm here to listen to the plan you've promised to outline tonight.

The man who digs this country out of the doldrums, and helps all us Americans build a new Nation of Peace is going to be needed in the days to come. Congressman HALL, I'm banking on you; I hope you're the man and I wish you the best success in the world.

Thank you.

MASTER OF CEREMONIES. Next, I wish to call on Mr. Kenneth Dean, recently home from foreign service. Mr. Dean.

Mr. KENNETH DEAN. Madam Toastmaster, members of Hall Canteen Clubs, veterans, soldiers, Congressman HALL.

Let me echo the sentiments expressed by my friend and fellow veteran, Mr. Cachowski, in saying you ladies have done a grand job, not only with this party but throughout the war.

Whatever front the fellows from Broome County happened to be on and wherever it was, we could always count on receiving some nice packages from the Hall Canteen Clubs. They might contain candy or magazines or a dozen other nice things. And they sure were welcome. We got so we knew the label on your bundles and looked forward to getting them. You've all done a great job and a patriotic one which the home folks ought never to forget.

And as for Congressman HALL, well, all I can say is, I feel toward him just like every other right-thinking American of this district feels about him. He's taken a lot on the chin for all of us. He's had an uphill fight simply because a lot of wrong-way men are in power down there in Washington. But he hasn't wavered. I'm for him and I don't see how any veteran who wants to see his rights maintained can be anything else but for him.

I am anxious to hear from Mr. HALL tonight so I'll close.

Thanks.

MASTER OF CEREMONIES. Another veteran, here tonight, who is a typical GI and has come back to our fine cities, is Mr. James Clark. Mr. Clark.

Mr. JAMES CLARK. Madam Toastmaster, ladies of Hall Canteen Clubs, men of the Hall Veterans League:

Although I've heard you boys pass a lot of bouquets tonight I haven't heard a word about the best project this Hall outfit ever had. Yes, I'm talking about the Hall Canteen up at the Erie Station in Binghamton. One of the girls told me a few minutes ago that the canteen has served since it started in December 1944, over 25,000 men in uniform.

If you can beat that record, you're going some. I'd like to see credit go where credit is due and I want to pay my respects to the girls who have put on this canteen. I think they ought to have public recognition like the Red Cross, the USO and other such organizations and I don't understand why we haven't been able to read more in the papers about their wonderful activities.

I have a word to say about Congressman HALL. You people here are his friends. He has a lot of your kind. The overwhelming majority of the people in his district are his friends, even though most of them only get a chance to express themselves in his favor every 2 years at the polls.

Since I've been home I've had a chance to learn from folks why they're for Mr. HALL. He's done a lot for them. There hasn't been a mother, or wife, or sister, or relative of a serviceman who has written to him that hasn't received prompt and ready attention. The requests he gets cover a wide range. Some are beyond his power to grant, but most of the people who go to him get results. At any rate he tries to help you.

As I said before, I don't have to tell you people these things. You know them. But I want to know why Mr. HALL isn't getting support he deserves from some quarters in this community. Why aren't certain people backing him up? Why don't they join with you people to help Congressman HALL help the veteran?

Those are the questions every veteran has the right to ask. A man who fights for our cause can expect our support. Let's pledge to Congressman HALL that support tonight in the trying days ahead.

Thanks.

MASTER OF CEREMONIES. In addition to the speakers you have just heard, all of whom are now wearing civilian clothes, since they are officially back home for good, we have another treat. Johnny De Serio has been a hero of Bataan and Corregidor. He has a long string of medals and ribbons which he won by long service overseas. He is still in the Army, about to go back on termination of his furlough.

He is here tonight and I am going to call on him for a few words. Sergeant De Serio.

Sgt. JOHN DE SERIO. Madam Toastmaster, I have but little to say this evening, except that I wish to pay my respects to you ladies of the Hall Canteen Clubs, and to you, Congressman HALL. We soldiers on active duty depend on you to fight for us. We ask you to look out for what we need and for the welfare of our families.

Thanks for everything.

INTRODUCTION OF CONGRESSMAN HALL

MASTER OF CEREMONIES. We have placed our faith and our confidence throughout the dark years of the recent war, and now, in one who has been close to the hearts of all the people of the Triple Cities for a long time. While our beloved husbands, brothers, and friends were scattered all over the world in the battle for freedom, one voice was raised in unfaltering devotion to their cause.

That voice is Mr. HALL'S. Sometimes he has called alone in the wilderness. But his position has been consistent for he challenged all who were against such a position.

Now serving his fourth term in the House of Representatives, Mr. HALL has proved that our American way of government can work. He is ready at all times to help the people of this district and the good work he is doing is a tribute to the freedom and liberty we cherish.

Fellow Americans, it is with great pleasure and anticipation of a message of hope for America that I give you the friend of the people of our section, your Congressman and mine, Hon. EDWIN ARTHUR HALL. Mr. HALL.

SPEECH BY CONGRESSMAN EDWIN ARTHUR HALL

Madam Chairman, members of the Hall Furlough and Canteen Clubs, the Hall Veterans League, friends, as on previous meetings of this great organization, I wish to greet you with the friendliest of outstretched hands. There will be little argument with the statement that here is by all odds our most successful gathering.

This, however, is only a prelude to the future activities of our friends, and because such a beginning is so important I wish to emphasize several points tonight which we can carry with us in the days to come.

But, first, may I express to you ladies who have worked so hard and so bravely since our clubs were first conceived my heartfelt thanks for your support and your loyalty. In the face of hidden but persistent opposition from those with un-American attitudes and with intolerance in their hearts, you have fought the good fight on the home front for your men at the fighting front.

The struggle has not been an easy one, but it has been worth while. It is worth while because it is a fight for a righteous cause. Those who would thwart you have no place on the American scene, for they would sabotage your sincere efforts for our heroes, who deserve so much.

The Hall Furlough Clubs have continued to grow. By your service to the soldier you have made life sweeter for many a boy in khaki or in blue who has so enjoyed the good things you sent afar to him or the coffee and doughnuts you handed him at the Erie Station.

Yes, ladies, with backing like that here at home, you boosted the morale of countless thousands of men who might have been otherwise unhappy or depressed.

And to you valiant members in the Hall Veterans League I say you can thank God our fair section had such patriots as these good women here assembled.

So one and all of you, my dear friends, will find strength for the future in the common affection and admiration you have for each other in the glorious cause of protecting the rights of our veterans the country over.

Tonight I wish to devote my humble efforts to pointing a path which will lead our Nation safely through the darkness of the

despair still gripping many of the American people.

The first, the very first step that will have to be taken before America is once more on her feet is the complete rehabilitation and reemployment of the veteran. Until that is accomplished there can be no success in any program.

I regret to say that the policies laid down by the Congress in the GI bill of rights last year are not being carried out with the vigor and thoroughness that Congress intended they should be.

Too many stumbling blocks have been placed in the way of the veteran for him to be able to help himself out.

Too many obstacles have been placed in the way of those of us in Congress who have striven to cut the red tape which harasses the veteran on every side.

The same forces of reaction who stood between the veteran and his rights after World War I are already raising their ugly heads to make life miserable for the veteran of World War II.

I say to you that these forces of reaction must be wiped off the face of the earth not only for the sake of the veteran but for the sake of America.

Probably the biggest farce that ever stalked the returning soldier of this war is the loan provision in the GI bill. Did you ever try to get a loan? Did you ever get any satisfaction out of one after you did?

The answer is that the country has failed to abide by the law that Congress passed which guarantees a $2,000 loan for every GI with an honorable discharge. But how many of you find yourselves eligible for such a benefit? Yet Congress intended you should all be eligible.

The mockery of the veteran going to a lending agency and being given the cold shoulder when he applies for that $2,000 is becoming too much for me. I am sick and tired of all this double talk and double dealing when veterans are concerned. I want to see things made so simple that the soldier can get his hands on the money the minute he gets out.

I suppose there are those who will holler to high heaven at the proposal I am going to make tonight. I imagine a lot of reactionaries will set upon me after I have submitted it to you. But I have stood all I am going to of seeing the very laws I voted for in the best interests of the servicemen bog down in the quagmire and fail their purpose. I want to see some action before it is too late.

I propose, therefore, an outright payment of $2,000 cash bonus to every veteran of World War II just as quickly as Congress can approve of it.

This would wipe out the loan feature of the 1944 act and enable every man to use the money as he sees fit with no strings attached.

Such a plan would accomplish two things. It would give every veteran the start he needs and it would discharge any and all out and out financial obligations which the country has to the veteran.

Probably the best effect it would have is to prevent forever happening again the disgraceful scenes of 1932 when veterans were fired upon by the Regular Army, when they marched on Capitol Hill, agitating for the World War I bonus.

There are some who believe the bonus issue will never come up again. They think the GI bill of rights offers the veteran so many benefits that he won't want any more. But that is where they're wrong.

In the first place, the GI bill isn't being carried out right, as I said before. In the second place, the bonus is going to be a tougher issue in 5 more years than it possibly can be now and the hue and cry will be five or ten thousand instead of $2,000.

I hardly think it necessary to say you fellows deserve this bonus. The fact we are all here safe and sound with the war you won over, in the most wonderful country in the world, is sufficient to cover that.

So I give you this plan tonight. It is the first time I have heard it discussed but we will all hear a lot more about it and we may as well be ready.

Thank you so much for meeting here with us tonight. Let us go forward together in firm determination to win the unfinished fight so that never again will our fighting heroes be compelled to look askance to a government that should be all too grateful for what they have done.

## Central Valley Project

EXTENSION OF REMARKS
OF
### HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to the following well-written editorial with reference to the Central Valley project in California. This appeared in the San Francisco Examiner recently and I think it expresses the views of a vast majority of the citizens of our State:

CALIFORNIA PROTESTS SOCIAL PLANNING

The California State Chamber of Commerce is currently conducting an energetic campaign to persuade—and if necessary, to compel—the Federal Government to live up to its original obligations and commitments with respect to a Federally financed water project that has been in process of development in this State for a number of years.

The campaign is not of exclusive interest to California, but is of very real concern to many other States, where similar Federal projects are being developed or contemplated, and where the same questions of ultimate Federal intention may be raised.

The great Central Valley water project in California, designed to develop the fabulous agricultural, industrial, and mineral resources of the vast Sacramento and San Joaquin Valleys, was originally undertaken by the Federal Government with the definite understanding that upon completion it would be controlled and operated solely under State authority—with reimbursement to the Federal Government out of water and power revenues over a period of 40 years.

Similar Federal projects have been undertaken in other States, with the same or similar understanding.

But now there are various bills pending in Congress, having as their purpose the creation of so-called regional authorities to rule permanently and totally over the areas in which such projects are located—the effect being, if the bills are passed, to forever deprive the individual States of all authority over the water and power and the infinite variety of other resources developed within their own domain.

The advocates of this policy of perpetual Federal power within the States are the bureaucratic, the communistic social planners in Washington and elsewhere who have a great appetite for a kind of power not ordinarily derived from water projects—namely, political and social power.

Their pattern is the extravagantly expensive and notoriously totalitarian Tennessee Valley Authority, which has reduced a good part of the American Southland to a virtual condition of political, social, and economic servitude.

The social planners have had their appetite for power whetted by this flagrant experiment in totalitarianism.

It is completely free of State authority.

It is even absolved of all responsibility to Congress in the matters of policy and expenditure.

It has created a new form of political and social domination in the United States that is alien to American democracy, and it has imposed a new form of slavery upon many Americans that is repugnant to all Americans.

Naturally and inevitably, the bureaucrats and totalitarians in Washington want more of that kind of power.

That is the reason behind the many bills now pending in Congress for the creation of more regional authorities patterned after the Tennessee Valley Authority, and designed to create permanent Federal powers in as many States as possible and probably in all States eventually.

California is protesting and opposing such a program in connection with the Central Valley project, as an unwarranted infringement upon the interests and rights of the people of California.

The other American States similarly threatened by the totalitarian scheme of regional authority should join with California in its protest and opposition.

As the California Chamber of Commerce says:

"Federal authorities like the Tennessee Valley Authority are a dangerous welding of economic control and political power which threaten interference in social and cultural activities.

"No proposed Federal regional authority is answerable to Congress for the expenditure of its revenues, and they are therefore dangerous instruments of government.

"When we surrender control over the spending of public money, we surrender control of Government."

## Ireland's Neutrality

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Boston Globe, Boston, Mass., of recent date:

IRELAND'S NEUTRALITY HAD ODD PHASES; NAZIS WERE INTERNED, RAF WENT FREE

(By Randolph Churchill)

LONDON, November 12.—Small countries which wish to remain neutral when all the great powers are at war have a difficult role to play. Pressure is brought on them by both sides, and their life is bound to be uneasy in the extreme.

De Valera's neutrality was based on two considerations. It was partly intended as a protest against partition and a proof to the world of the complete independence of Ireland.

Even more, Dev was animated by a sincere desire to spare his country the horrors of war.

Irishmen are not slow to point out that even great powers like Russia and the United States remained neutral until they were attacked; they are puzzled that they should be criticized for successfully pursuing a policy to which so many other countries, albeit unsuccessfully, aspired.

At the outset of the war, De Valera told the Germans he did not propose to allow Ireland to be used as a base for Britain to attack Germany or for Germany to attack Britain. For the rest, he intended to interpret Irish neutrality in such a way as best served Irish interests.

He made it plain that Irish neutrality was not based on hostility to Great Britain and his administration has consistently followed a policy of being as friendly and helpful to the Allies as was possible whilst remaining neutral.

This did not arise from any love of Britain, but from De Valera's recognition of Ireland's geographical and economic position. Ireland's safety was bound up in Britain's survival.

USED BRITISH APPARATUS

De Valera's pledge that he would never allow Ireland to be used as a base for attacking Britain was honored with scrupulous punctilio. The German Legation was forbidden to employ any wireless equipment, and the Irish authorities, provided by the British with direction-finding apparatus, kept a permanent vigil to insure that these instructions were fulfilled.

It was known, however, that a wireless transmitter was in the German Legation and, as D-day approached, the Allied military authorities were alarmed lest a leakage should occur and lest the German Legation might send out a message which might do irreparable harm to the Allied cause.

When the possibility was made plain to De Valera, he forced the Germans to hand over their transmitter, which was safely stored in the vaults of a Dublin bank on Christmas Eve, 1943.

The significance of this story is underlined by the fact that the British representative in Dublin, Sir John Maffey, had three transmitters in constant use throughout the war. He also, of course, had the advantage of direct telephone communication with London.

NEUTRALITY VARIED

De Valera's conception of neutrality resulted in widely different treatment of Allied and German airmen who force-landed on Irish territory. All German air crews who landed on Irish soil were immediately interned on the grounds that they had been engaged on operational flights.

The proximity of England to Ireland, however, enabled the convenient fiction to be maintained that all British and American airmen, even if bombs were found in their aircraft, had only been out on training flights. This valuable formula enabled many hundreds of British and American airmen to cross the border into Ulster and so return to England.

At a later date, RAF ground crews were allowed to cross the border from Ulster and repair damaged aircraft, which were subsequently flown to England.

Whilst always refusing to allow Allies the open use of the treaty ports of Beerhaven, Queenstown, and Lough Swilly, the De Valera government allowed the British to station tugs there which were used for rescuing merchant ships which had been crippled by U-boats.

We were also permitted to base motor torpedo boats on the treaty ports for the purpose of air-sea rescue.

These boats were permitted to be armed for their own defense and, of course, if they met a U-boat, there was nothing to stop them from attacking it.

The De Valera government was also particularly vigilant in rounding up German agents landed by parachute or U-boat. All these agents were closely interrogated and the results of the interrogations were at once made available to the British authorities.

NOT PROPAGANDA

De Valera would be the last man to suggest that all this was done out of friendship for Britain. It was based on his view of the true interests of Ireland. Therefore I have recited the foregoing in no d sire to make propaganda for De Valera, but only so that the true facts of the matter may be known.

Whether De Valera's neutrality served Ireland as well is another question. If De Valera had declared war on Germany in 1942 or 1943, he might well today be nearer to his goal of a united Ireland. For a declaration of war would have been the one decisive gesture that could have convinced both Ulster and Britain that we had nothing to fear from Irish hostility or neutrality when next we are at war.

## An Epitaph for the St. Lawrence Seaway and Power Project?

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. PITTENGER. Mr. Speaker, I am an optimist and I have just as much faith as ever in the St. Lawrence seaway and power project. That project is needed by the American people and the forces of the opposition can prevail against it only so long. Of course, it cannot stand too many mistakes on the part of well-meaning people, because mistakes are dangerous, delays are costly, and lip service never avoided a crucifixion. Like truth, the value of this project stands out as one of the virtues.

One of my friends suggested the other day, however, that the project needed an epitaph and he recited this verse:

Round and round, this old world goes,
Any kind of weather
Kiss your hand to all your foes
Soon you'll be together.

Sorrow, and a world of woes,
Reckon care a feather,
Yonder where the grave grass grows
Soon you'll sleep together.

The idea, of course, is that if we can delay things long enough, everybody will be dead and the St. Lawrence seaway and power project will not make any difference, anyhow. This, Mr. Speaker, is just the wrong kind of philosophy, and I vigorously protest against having any epitaph written at this time or any other time for a project that is of such tremendous value to the American people.

Those of us in the House of Representatives who are sincerly supporting development of the great St. Lawrence seaway are wondering just what is going on behind the scenes to hold up a vote, or at least hearings in another body. There the joint resolution so illustriously introduced some months back now rests. There can be no question that the seaway resolution originated in another body, backed as it is by some of the leading figures of that body. I have waited, along with others, with considerable patience to see if any attempt will be made to bring this matter to a head. I questioned the methods which were being employed from the very beginning, but because of the prominent men in civil life who were sold on that approach, I was willing to sit back and watch developments. Now I am one of those who fears men of importance, sincere men who believed they were using the best technique to win legislative favor for this great project, were hoodwinked with honeyed words by those with ulterior motives.

In the past, the St. Lawrence seaway bill has been fought in the open in the Senate. It has won favor in the House, and I do not doubt that the House stands ready to support this legislation again. This time, the bill enters another body surrounded with so much sweetness one wonders if it is not being killed with kindness. If there is no basis of truth in the reports that are now trickling into my office, to the effect that the joint resolution will be neatly tucked away in a dusty file tc repose until judgment day, then I challenge those who are presumably supporting this measure to step forward and demand action. I am not in the habit of predicting the fate of a measure which has not even reached the floor of either House, but I stand ready to make predictions today on the St. Lawrence waterway joint resolution. As it stands, I forecast every attempt will be made by its enemies to keep the bill buried in committee. I contend that its glorified language will never come before the other body in such a way that it will receive approval. It will be delayed and delayed until hearings can be started in committee at an appropriate time. That appropriate time will be in the middle of 1946 when it will become lost in the congressional and senatorial election shuffle. Can you imagine the attention that will be given those hearings next year when everyone is busy seeking the support of an electorate back home? I am told that there are two types of men now presumably supporting this measure. First, those who sincerely believe in its accomplishments and are giving their time and energy to see it become a reality during our lifetime. Secondly, those who, fearing this time it has too good a chance of passage, are pretending to favor the development, but in reality are sitting so hard upon the bill it will smother from lack of fresh air.

## Address by Secretary of Agriculture to Southeastern Agricultural Conference

EXTENSION OF REMARKS

OF

### HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Tuesday, November 20 (legislative day of Monday, October 29), 1945*

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an informative and instructive address delivered by the Secretary of Agriculture in Anderson, S. C., to the southeastern agricultural conference. The address was published in the Anderson Independent on Thursday, November 15 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It gives me a great deal of personal satisfaction to be in Anderson County today. And when I say that, I'm not merely trying to be polite. First, it isn't often that an Anderson like myself gets a chance to talk to so many Andersonians. So, as one Anderson to another, this is a real treat.

And second, I have been hearing many things about Anderson County—things that seem to me to be highly significant not just to this one county alone, but to the South and to the country as a whole. So I'm glad to see first-hand just what you folks are doing.

I have heard so much about Anderson County because you people seem to have a special knack for studying your local problems, digging up a lot of facts, and making common-sense plans to meet those problems. As a result, a number of your studies and plans have passed across my desk in Washington and from them I have learned quite a bit about your community, its people, its agriculture, its business and industry.

Now I don't propose to try to tell Anderson County people what they already know about themselves. My point is that this county, along with other counties that are making realistic postwar plans, is getting right to the roots of the South's long-time problems. Basic facts are being brought to light, and those facts are being interpreted honestly and impartially—even though local pride may be hurt in some cases. An honest appraisal of a situation is half the battle. When we know just what we are, how our assets compare to our liabilities, how our strengths compare to our weaknesses, then and only then can we do a sound, strategic job of planning ahead.

That is why I have been so impressed by the candid self-appraisal in that most constructive survey, Anderson After the War, published by your chamber of commerce. This report does not content itself with puffs or recital of mere symptoms, but seeks out basic truths. It grasps clearly the interdependence between Anderson County's industry, business, and agriculture. It states boldly the need for full productivity and efficiency in the factory and on the farm—and I quote: "The full economic possibilities of the community have not been realized until every person willing and able to work has a regular full-time job or a combination of jobs which will give him full employment." This study recognizes the problems of low-income groups, who cannot be good customers of business or agriculture, who cannot contribute a fair share to community progress, until they have a chance to earn a decent living. It acknowledges that many adjustments must be made in the pattern of farming, and that nonagricultural employment must be found for people who now are or will be underemployed on too-small, crowded farms.

Anderson County has done a good fact-finding job and is to be congratulated for that accomplishment. But more than that, I deeply admire the manner in which the county is building wise plans on the sound foundation provided by these facts, how it is developing a rural-urban pattern for progress in the years ahead, and how it is displaying the imagination, inventiveness, and cooperation—so typically American—needed to convert so-called problems into positive opportunities for better living for more people.

It is this pattern of industrial-agricultural development that I want to talk about today. I deeply feel that this same pattern holds the key to the future of the South.

According to all signs—unmistakable signs—the cotton South is on the threshold of an industrial-agricultural revolution that will shake its economy right down to the cotton roots. The world, the United States, and the South are moving into a new age; in fact, we already are beyond its frontiers, brought there by scientific and economic discoveries of recent years. What were miracles a few years ago are now everyday operations. We are in an age of such things as atomic power, round-the-world air transportation, and greater mechanization of all lines of work—including farming. This is an age of new concepts, new understandings of the economic rights, obligations, and opportunities of mankind. It has brought us realization that to live well and peacefully, we must be increasingly productive, more efficient, and must provide useful work for all. We must develop and conserve our natural resources. And we must distribute the fruits of our increased productivity fairly among all our people who contribute to that productivity.

These broad goals are not generalities without substance. They point the way to such concrete accomplishments as soil conservation, diversification of farming, replacement of poorly paid, inefficient stoop labor with efficient machinery, and development of new industries to provide more production, more jobs, and more income. These aims look toward the time when every worker in the United States can afford a truly adequate diet for himself and his family, and can buy all the clothes they need; when the farmer will be kept busy—very busy—turning out all of the food and fiber his customers demand.

Yes, we are on the brink of great change, and that change will touch the lives of all of us, particularly those who live in the South. Just exactly how this tremendous industrial-agricultural revolution will affect the South remains to be seen. Undoubtedly, it will bring great pressures and great problems. At the same time, with forethought and planning, it can be made to bring great progress toward what the South hopes to become.

To be specific: I believe that the whole broad story of the past, present, and future of southern agriculture can be told in terms of what is happening right here in Anderson County.

Going back into the history of this county, I learn that your farmers for generations relied on cotton as the one big crop for cash income; that even in recent years nearly two-thirds of all farm income has been produced by cotton. King Cotton has been hard on the people and hard on the land. Cotton demands clean tilling, and soil erosion has become a major problem. Your lands can grow a wide variety of grains and forage, fruits and vegetables; but in the past all of these were subordinated to cotton. Food crops and livestock were produced only in small amounts on land not well suited to production of lint. Not enough milk, eggs, or meat were produced even to supply your farm families adequately, much less to develop a steady commercial output.

King Cotton hasn't been a benevolent despot—he has been a thoroughgoing tyrant. He hasn't even been dependable in performing his supposed main function of providing needed cash income. The season's price for this one commodity has spelled either feast or famine—and too often the latter. Furthermore, the exactions of this monarch, who until recent date required much slow hand labor, has resulted in a pattern of small farms carrying a staggering weight of people engaged mostly in seasonal work. Even with high cotton prices, the earnings per farm family generally average less than required for a decent living. This low limit on the earning capacity of many of your farmers and farm workers has denied them a truly American standard of living with good homes, telephones, automobiles, and electrical conveniences. Consequently, they have not been as good customers of industry and business as they should be.

What has been true in Anderson County has been true in the whole cotton South, where more than half of the Nation's farm population lives, tilling about one-third of the Nation's cropland, but receiving for their labors only one-fourth of the national farm income.

Now don't misunderstand me. I have nothing against cotton as a crop; in fact, I regard it as one of the most valuable plants in the service of humanity. But in my scale of values, I put people first, and crops second. If the South is to share fully in the benefits of the age we now are entering, King Cotton must be promoted to a good and useful servant, efficiently produced, and contributing to, not obstructing, development of a well-balanced, diversified and prosperous southern farm economy.

Furthermore, we might as well face the fact that cotton, as king, is in serious trouble. And, as long as this crop stays in the exalted position as dictator of an economy, instead of an obliging servant, there will be continual crises. Considered on a strictly crop-price basis, and leaving the human element out of it, cotton's difficulties arise from oversupply, artificial prices, increasing competition, and inefficient production methods. These elements are inextricably intertwined; each contributor to the other.

Even before the World War II, American cotton had lost nearly half the world markets it held in the 1920's. We raised our domestic prices above the world price to prevent bankruptcy of growers; this in turn encouraged cotton production in other countries. After the First World War the rest of the world produced only 7,000,000 bales of cotton yearly, but this swelled to a high of 18,000,000 bales in 1936, then dropped to 15,500,000 in 1939. During the period 1932 to 1939, when these world production changes were in progress, the consumption of American cotton abroad declined by 46 percent.

Furthermore, cotton acreage in this country has been declining steadily, and now is far less than half of what it was 20 years ago, but yields per acre have shot up. The average yield of lint in 1944 was more than 100 pounds higher per acre than in 1934. Here in Anderson County I understand that yields now average around 300 pounds of lint per acre, and that you expect yields to reach 400 pounds within 5 years.

During World War II our great military needs, plus civilian demand boosted domestic demand for cotton from 6,500,000 bales to 11,000,000. Still, despite that huge consumption at home, we produced about as much cotton as we sold. In fact, the cotton surplus now stands at more than 11,000,000 bales—two or three times what we formerly considered a normal carry-over.

At the same time, science has produced a number of fibers that compete with cotton—products like rayon, nylon, spun glass, and paper, which are bidding enthusiastically for the privilege of clothing our persons and decorating our homes, and for use in industry. Rayon now is produced in the United States in an amount equivalent to 1,700,000 bales of cotton, and rayon filament yarn is now cheaper than many of the better quality cotton yarns. Also, rayon has moved into industrial fields, such as in production of tire cords, which for years has been one of the most important industrial uses of cotton. Nylon played an important part in the war and doubtless will find its way into many peacetime products in addition to the sheer stockings that are so dear to the feminine heart. Paper has cut into the market for bagging, towels, tissues, napkins, window shades, and twine; even before the war it was equal, pound-for-pound, to a million bales of cotton a year in these products.

And lastly, King Cotton has demanded expensive, antiquated hand care while its competitors utilize low-cost mass production methods. In a world of jet airplanes, automatic assembly lines, and robot bombs, the

symbol of cotton farming still is the man and the mule, the field hand and chopping hoe. It takes little foresight to see that such a system cannot weather the years ahead. Terrific readjustments are bound to come. Cotton, too, must be produced with machinery; and then far fewer workers will be able to turn out all the cotton we can possibly use at home and sell abroad.

Now, how can cotton become a good and useful servant of southern agriculture? How can it be made to serve its highest purposes for the people and the land; to fit a pattern of diversified, mechanized farming?

I believe that Anderson and many other southern counties are building and working rapidly toward the pattern of the future; that they are, through the process of farsighted planning, turning the problems of cotton into positive opportunities for healthy progress. Anderson County's postwar report sums up one of the problems that is basic in the South, in this way: "It is to the advantage of business and industry, as well as agriculture, that nonagricultural employment at good wages be provided for all farm people who are not needed to produce raw materials on the farms." Anderson County is seeking to provide such employment and to broaden the base of its whole economy by encouraging the expansion of its present industries and the establishment of new business. This county is doing a splendid job of pointing out to businessmen the prospective markets that exist in its trade area for sales of new homes, new automobiles, new farm equipment; that capital is available to finance sound enterprises, and that this area has many workmen with a wide variety of skills. This sort of planning lays a foundation for the solution of the cotton problem in human as well as economic terms, because the South cannot achieve a well-balanced use of its lands, and cannot assure the well-being of its people, unless it can find off-the-farm work for perhaps 3,000,000 workers who won't be needed in a mechanized agriculture 5 or 10 years hence. Full industrial activity and employment throughout the South will speed and ease the desirable farm and human adjustments that must be made to mold the pattern of the future.

It is evident that farmers in Anderson County, in South Carolina, and through the whole South, are moving as rapidly as possible, under their own steam, toward the kind of agriculture they believe the future demands. They are redoubling their prewar trend toward mechanization. The Anderson County survey tells me that farmers in this county alone plan to buy more than 1,100 tractors in the next 2 years—just one item in their long list of unfilled wants—as compared to 300 purchased in 1939 and 1940. The same demand for tractors and other machinery is being exhibited all over the Cotton Belt.

Livestock raising, dairying, grain production, and raising of food crops are making giant strides in the South. I understand that Anderson County is one of the leaders in this respect, with more than 75,000 acres of grain, and an expanding production of cover crops, legumes, and fruits and vegetables. During the past 10 years this county has become one of the leaders in the State and in the South in the production of beef cattle. Your State experiment station believes that wtihin 5 years the number of dairy cattle in South Carolina may increase by 65 percent—and that they will be better cows, capable of producing possibly 58 percent more milk than at present. Where you now produce only 27,000,000 dozen eggs in South Carolina and import more than half of the eggs you eat—it is believed that by 1950 the State's poultry flocks will be shelling out 48,000,000 dozen eggs, and that your thriving broiler industry will have doubled its output.

The remarkable thing about this great potential expansion in Southern agriculture is that it won't have to "steal" its markets from other areas—these are right in the South, if the South can develop its industries as it would like to. The diversified products will supply great wants that are not yet being fully supplied. Practically all of the food and feed the South can produce is needed right on the farms and in the southern cities. For example, we estimate that it would have taken 2,000,000 more dairy cows in the South in 1940 to bring milk production up to the minimum needed in southern cities—and now the need is even greater.

One of the most vital tasks for the future of the South is being tackled with a will in South Carolina and Anderson County. That job is saving and improving the soil. This morning I had the great pleasure of seeing myself the excellent work that is being done by farmers in the Upper Savannah soil conservation district, one of the 21 districts which completely blanket the States. A high point in my tour was the presentation of certificates of award to 45 of your farmers who have made outstanding progress in soil conservation farming. I learned that more than 1,700 farms and more than 180,000 acres in this district are being protected and restored by terracing, rotation and strip cropping, contour farming, cover cropping, pasture improvement, and reforestation. That is a wonderful beginning, just as the whole State is making a determined start with conservation plans on 13,000 farms covering more than 2,000,000 acres. But I look forward to the day when every farm and every acre in the South is under similar plans. The Chinese from their ancient wisdom on the land, have a creed that "He who neglects the soil is unfaithful to himself." We must keep faith with ourselves and our future.

All in all, we can look ahead and see a pattern for southern agriculture brought by rapidly improving farm technology and full utilization of the South's magnificent industrial opportunities. More and better fertilizers will be used; improved varieties of crops and livestock will be grown in larger quantities. Better feeding and breeding will bring far greater production of livestock, dairy, and poultry products per pound of feed. Cotton and hay, the last strongholds of hand labor, will be conquered by new machines. In our hay fields the one-man pick-up baler is at work. Under conditions favorable to mechanized operations, tractors, mechanical cross cultivation, and mechanical picking can cut the man-hours required to produce a bale of cotton to one-fifth of old requirements.

These powerful economic forces will not be denied. They mean that southern farms will become larger and fewer, although not large scale on the average. There will be fewer farm operators, sharecroppers, and hired hands to divide the farm income—and that income can be much larger in total. Cotton will still be an important cash crop, but not the dictator of the farm economy. Indeed, on many farms where cotton now is the one and only source of cash income, there will be five or six cash-producing projects, such as dairy products, beef, poultry, eggs, truck crops, and woodland products. And some of these other products promise to bring more cash income, per enterprise, than cotton does now. What we want to shoot at is a diversified conservation type farming that is easy on the land, beneficial to the people who farm, and capable of supplying the food the South needs for good nutrition. We want a farming in which cotton produces a smaller part of a much larger farm income, instead of a third of a too-small farm income, as in the past.

Such a progressive southern agriculture, as it develops, will itself bring into being many off-the-farm jobs, and would stimulate—in fact require—the expansion and development of Southern industry and business in many lines. This isn't a guess. We have seen it happen in many communities and regions that developed a productive, well-balanced agriculture; we are seeing it in the South right now. Like a transfusion, the new farm dollars, coming steadily throughout the year and not just at cotton harvest, will course vigorously through southern business. A higher farm productivity, a larger variety of products, will call for more manufacturing and sales of farm equipment and machinery, and more processing industries, more transportation, and more services industries. We know that progress toward a well-rounded agriculture and industrialization brings a balanced, healthy growth of all parts of a region's economy.

Now I want to make this clear: Cotton production under such a pattern of industrial-agricultural development may be just as large, and, in fact, might be larger, than it is today. But cotton would be grown on those lands to which it is best suited, where it can be produced most cheaply by machine methods. Our ultimate goal must be to produce cotton so efficiently that it can compete in quality and price with foreign growths in the world market and with synthetic fibers in the home market.

Can that be done? Not only can it be done; we have to do it. Not just to save cotton, but to enable the South to move into the safe, stable, modern industrial-agriculture economy I have been talking about.

We are now doing much about it—and by "we" I mean all of us, farmers, communities, States, and the Federal Government. But I believe we should more clearly define our respective obligations and goals all along the line, just as you folks have done in your postwar planning.

Most important, I believe, we should distinguish carefully and clearly between short-range and long-range methods. Nothing can bring disaster more easily than relying on short-range palliatives for an ailment to the exculsion of long-range treatments that lead to a cure.

Frankly, the Nation has used many short-range devices to meet the serious problems of low cotton prices and shrinking demand in the past decade and a half. I'm not apologizing for those methods. They did meet the immediate problems; they saved the cotton South from bankruptcy; they enabled cotton growers and those dependent on them to keep going. We are still using and will have to continue to use many short-range prescriptions to avert critical situations that may arise. Right now, for example, we are trying to help American cotton compete in world markets through the export subsidy program of the Commodity Credit Corporation.

But we must honestly recognize such temporary expedients for what they are, and not mistake them for permanent solutions. That is just good common sense. It would be disservice to cotton and to the people who produce it to freeze it indefinitely to a rigid price. To do so in the long run will encourage inefficient production, build up competition, and destroy its markets. Let us be farsighted enough to keep temporary expedients and look in the long run to basic improvements and adjustments.

The real challenge is in the long-pull improvements needed in cotton and cotton growing. These promise the greatest pay-off. Many of the improvements can be made on the farms by the farmers themselves; others require wholehearted community cooperation; still others arise from the initiative of industry; and many others depend in part on State and Federal research and action.

The quality of American cotton is an example. The grade of our cotton isn't what it used to be. Fifteen years ago 40 percent or more of our total output was Strict Mid-

dling or better. In the 1941-42 season, it was less than 8 percent. Obviously growers should adopt varieties and methods that result in higher quality, and a more uniform product. This is the fundamental idea behind the United States Department of Agriculture's one-variety area plan. Under this plan the growers in a market area agree to plant only one good variety. This enables the ginners to limit their ginning to one variety of cotton, making it easy to maintain pure seed stocks and to assemble large even-running lots of cotton of the same variety. This is just good business. Records show that ginners in Georgia and Alabama who adopted this plan have averaged an extra income of $6 to $11 per acre.

Research has been busy developing new and better cotton products, and thus widens the market for cotton. During the war it was feared we might run into a shortage of jute from India used for bagging. As a result of exhaustive experiments in United States Department of Agriculture laboratories, we have developed a cotton fabric for sandbags, a most durable material that will not rot or mildew even though buried for a year in ground where ordinary cloth would fall apart in a week. This process gives cotton a tremendous advantage in goods that must stand weather. We have a new method of flameproofing cotton cloth without altering its flexibility or laundering ability. And we now have cotton cords for tires with heat resistance and tensile strength far greater than the best of those used in the past. These are just a few samples of the way in which cotton is being improved for increased service in the modern world.

The greatest challenge of cotton is the cost of producing and distributing cotton. It must come down. This is a basic problem to which all of us must turn our heads and our hands. In achieving this low-cost production we can expect to see further adjustments in land use—further shifting of cotton to lands that produce the highest yields per dollar of cost, which will be the most fertile lands suited to machine methods of production. Great strides are being made in the improvement of cotton machinery toward complete mechanization of all cotton growing. It will require better use of fertilizer, superior varieties of cotton, and all-around improvements in farm management. Low-cost farm production must be accompanied by increased efficiency and lower costs in ginning and in all marketing steps from the farm to the ultimate consumer, I firmly believe we can do this.

Some may warn that I must not have my head in the clouds. But we all know that we must keep our feet on the ground—on ground like that of Anderson County—a typical southern county where a long-range program toward a progressive modern agriculture is on its way. For all who want to see them, the signs of the future are here.

## Continuation of Employment Service as a Federal Service

EXTENSION OF REMARKS
OF
### HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

*Tuesday, November 20 (legislative day of Monday, October 29), 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by the International Association of Public Employment Services giving their reasons why the Employment Service should continue as a Federal service.

President Truman has recommended to the Congress that the Employment Service remain as a Federal system until June 30, 1947. In addition, several bills are now pending before the Committee on Education and Labor providing for basic changes in the existing legislation relating to the Employment Service. I urge Senators to read this statement by the State and local offices of the Employment Service before rushing to take action on any bill or proposal to return the Employment Service immediately to the States. The views of these State and local officials who operate the Employment Service—and who oppose the return of the Employment Service to the States—should be given very careful consideration.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INTERNATIONAL ASSOCIATION OF
PUBLIC EMPLOYMENT SERVICES,
*Providence, R. I.*

*To Members of Congress:*

The attached report from the International Association of Public Employment Services officials is being forwarded to you for the purpose of furnishing pertinent information in connection with the question of continued Federal operation of the employment service during the emergency. The association has no quarrel with any State or Federal agency. Our organization is purely technical and professional and we exist for the purpose of maintaining high standards in the employment service. We feel, however, that the association has an obligation to present the facts to those who feel that a federally operated employment service cannot continue to discharge its responsibilities to workers, veterans, employers, and the American public.

We understand certain Members of Congress have received protests against men or women drawing unemployment compensation when there were jobs available. If benefits are being paid to workers who have refused suitable work offers, they are being paid as a result of administrative determinations of the unemployment compensation agencies in the States, themselves, and after notice of job refusal by the employment service. Obviously correction of such administrative action cannot be obtained through a return of the employment service to State administration. It is their responsibility and prerogative to correct this condition now. Whether the employment service remains Federal or State has no bearing on this matter.

The problem of employment Nation-wide during this trying period of reconversion deserves intelligent handling by individuals well informed on the facts. It is with this thought in mind that this brief report is being furnished.

THOMAS H. BEILE,
*Chairman, Legislative Committee.*

INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES

STATUS OF THE EMPLOYMENT SERVICES

The announced transfer of the WMC and the USES to the Department of Labor was immediately followed by a move within the United States Senate for the return of the Employment Service to the States 90 days after final passage of the jobless benefit bill.

The Labor Department is earnestly desirous of improving the status of the USES as a public service agency and of the individual employment service employee. Judge Schweilenbach has indicated a lively interest in the organization and a determination to give it its rightful place and importance in the reconversion effort. The transfer of the USES is a most practicable move for the agency at this time.

At this writing the Lucas amendment has been added and the jobless benefit bill has been passed by the Senate. As an association the IAPES is not directly concerned with the general provisions of the jobless benefits bill, but is vitally concerned with the Lucas amendment, and it is the consensus of IAPES opinion that the Employment Service should not be returned to the States at this time.

The proponents of return to the States want State operation, but almost complete Federal financing of the Employment Service. Not one has suggested that the States bear the cost of the service. They have consistently based their advocacy of immediate return on the following points:

1. The State services were loaned for the emergency, and so with the emergency ended the repayment of the loan falls due.

2. That between a federally operated USES and a State operated UC, no effective coordination can exist.

3. That a labor exchange must be operated on a basis of local option and local control, and that the Federal operation of the Employment Service is an infringement of State's rights; and

4. The State operation of the ES is essential to, and a determining factor in, the effective administration of a State unemployment agency.

Back of these contentions are the real issues, never openly stated, of (1) the fear of an early federalization of the UC agencies, with (2) the fear of an increased employer UC tax rate.

As regards the first point of the proponents' argument, the emergency still exists both in form and in actuality and will legally continue until Congress or the President formally announces its ending.

In connection with point 2: the USES under WMC administration has operated, insofar as State UC agencies are concerned, in exactly the same manner as it did as a State agency under the Social Security Board. The UC agencies are currently informed on all job refusals and have the opportunity to determine who shall receive benefit payments and who shall not in every instance. It can be shown that in any instances of alleged lack of cooperation resulting in payment of benefits not due, the UC agencies have taken action on payment or nonpayment with the full facts before them. With their action in paying, or refusing to pay, the IAPES has no fault to find. The responsibility of determining eligibility for benefits is theirs and theirs alone. The ES has the responsibility of furnishing the UC the facts on job refusal, and that responsibility is being discharged in the same manner as it was discharged from the very beginning of benefit payments in this country.

As for point 3: Operation of the ES at the grass roots and on the basis of local conditions has been observed by the WMC in much greater degree than it ever was under a State controlled agency, as a result of WMC's constant policy of full use of local labor-management committees.

And, finally on point 4: Under present conditions the USES and the State UC agencies are still housed under the same local office roof, procedures practically identical with those promulgated by the State UC agencies themselves as far back as 1937, are still followed; local ES and UC personnel are still used interchangeably regardless of pay roll, and only with regard to office load. A legal responsibility of the UC is to determine what in any individual cases is deemed "suitable employment." The ES has the responsibility of locating jobs, and offering jobs to UC claimants—or potential claimants—solely on the basis of job specifications and worker qualifications. When a claimant refuses any such job offer, the ES simply reports the

facts to the UC. The UC investigators and examiners are required to determine whether the work was justified in such job refusal, or was not justified, and to allow, or to disallow benefits at their discretion. The merging of the ES with the UC will in no way alter these responsibilities, nor will it improve the internal operations or effectiveness of any State UC agency which may now be ineffectively operated.

Listed below are a number of reasons why the Employment Service should continue as a Federal service.

1. With millions of dischargees from the military, and millions of displaced war workers a national employment problem will exist greater than that of 1918, 1933, or 1942.

2. Veterans will constitute a highly mobile part of the labor force. They have traveled over the world and State lines will not concern them. They have a right to know where the best jobs are. They will need employment counseling. The GI bill established a veterans' placement service board to cooperate with and assist the USES. This Board's service to veterans would be greatly impeded if Federal operation of the Employment Service was abandoned.

3. Millions of workers have moved during the war. With peace, another shift of population will occur. Workers will be seeking jobs across State lines. These workers need information and advice on location of job opportunities. They will want to know where the best jobs are for them—without regard to what State they may be in.

4. State lines frequently cut across local labor market areas. Splitting them up with local offices operating under different laws and procedures established in two or more State capitals leads to confusion and ineffectiveness.

5. All the local labor markets in the country add up to one national labor market. A national employment service is needed to assist men seeking jobs and employers seeking workers to get together.

6. Modern industry is no respecter of State lines. Organizations representing management are national organizations. Labor unions are national. Farm organizations are national. These organizations can best coordinate their activities through cooperation with a national employment service.

7. Full employment is a national problem which requires a uniform index on all communities, and labor market reporting must be standardized.

8. Balancing of labor supply and demand between States requires a national system for channeling migration of workers between distress areas of unemployment and communities having labor shortages.

9. A national system of reporting demand and supply areas would reduce misdirected and aimless migration of job seekers.

10. During the war period and to present, unemployment compensation agencies have been advised on job acceptances or refusals of jobs by unemployment compensation claimants under the same procedures that were in effect during period employment service was part of unemployment compensation—with no lessening of effectiveness.

11. Unemployment compensation is primarily a tax-collecting, insurance-paying, and auditing function.

12. Employment service is primarily a placement function—if full employment is to be achieved, it will be aided through the prompt placement of workers in jobs. The placement function is of major importance, and should not be operated as a subordinate unit of the insurance agency which pays temporary benefits to workers between jobs.

13. Unemployment compensation and employment service offices are housed in some buildings, now, as in 1938, still work effectively together.

14. Unemployment compensation and employment service personnel in most States are trained in claims taking, and taking of applications for work, and this personnel of both agencies work interchangeably, regardless of pay roll.

15. No question of States' rights or local option, as federally operated employment service is a community service, with all problems other than basic policy resolved at grass roots.

16. Every time during past 30 years when a national employment crisis arose, the need for a national system of public-employment offices has been clearly demonstrated. (1918, USES; 1933 USES under Department of Labor with NRS; 1942 USES under WMC.)

17. A national agency is required to continually analyze trends in employment opportunities so as to advise vocational training agencies on forthcoming changes.

18. Employment Service employees deserve the protection and standards of pay and working conditions provided uniformly only under Federal civil service.

19. Under State administration there would be 48 different systems, 48 different pay scales, 48 different organizations, with no means of exchanging personnel, ideas, or solutions to mutual problems.

20. Who would finance State administered employment services? The States have never contributed more than $3,000,000 per year against an operation cost of approximately $54,000,000 per year. If the Federal Congress must make the operating funds available for an employment service it seems reasonable that such service should be federally administered.

21. This would allow for a national agency capable of providing sufficient uniformity in its rules, procedures, and reporting services to prevent confusion, and at the same time to provide sufficient decentralization in administration to permit adaptation to local needs.

The association has no quarrel with Unemployment Compensation as a State agency. It does have an obligation to present the facts to those who feel that a federally operated employment service cannot continue to discharge its responsibility to workers, veterans, employers, and the American public.

## Address by Hon. James M. Tunnell, of Delaware, Before Conference on Atomic Power and Public Policy

EXTENSION OF REMARKS
OF
### HON. CARL A. HATCH
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

*Tuesday, November 20 (legislative day of Monday, October 29), 1945*

Mr. HATCH. Mr. President, on the 17th of November, in New York City, before the conference on atomic power and public policy, the Senator from Delaware [Mr. TUNNELL] delivered an address on the subject of atomic power. The address is a most interesting one, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Perhaps no discovery in the history of mankind has so aroused fear as the discovery that atomic power could be harnessed. Fears of world destruction and dreams of new industrial worlds have vied with each other. Hundreds of speeches have been made about this discovery. Many have claimed that it is no longer necessary to have trained armies or naval ships. They state that from this time on, all acts of war will be by the atomic energy route. Many believe that a destruction of a very large proportion of the world's population is not only possible, but probable. One portion of our population is demanding that there be no further preparation for war, as the atomic bomb is all that we need to use. Another great sector of the people is attempting to pledge the United States not to use the atomic bomb. If both of these elements succeed, we shall be as defenseless as the Chinese Empire.

This is one of the great dangers of the present situation. We may be put in the same frame of mind as after World War I. Our people may object to more ships, to more Army training. They may object to more submarines and more airplanes. The short-sighted view of the average citizen is to assume that since this war has been won there is no preparation necessary to prevent or win any other war. Those who are conscious of the atomic bomb situation are devoting their time to pleas that we agree with all of the great nations of the world not to use it in time of war. Many believe that the Nation which first attacks will be a certain winner. Many believe that all the power used in civil life will have its origin in this new discovery. Electricity is to be discarded because it is considered out moded and feeble. Steam power is to be forgotten as belonging to the dark ages. Atomic power to which is ascribed all the powers of magic is in the opinion of these people to be the sole reliance of the civilization of the future. Scientists are telling us, however, that the use of atomic power for civilian purposes is not economically feasible at this time. Its cost is too great. Perhaps there may be discoveries of the future which will make its use a possibility. That time has certainly not yet arrived. Undoubtedly the developments which will follow this discovery will make it possible for mankind to use it for something other than purposes of destruction. When we realize that the stars, moons, and planets are kept in their orbits by some mysterious power, man will eventually use the same power for his prosperity and happiness. There are innumerable angles to the possible use of atomic power in either peace or war.

Since it was first used in war, man's first thought of it is as a weapon of war. Much of the discussions thus far have been as to who can or will use it in war. The United States, being the Nation that first developed it and first used it as a weapon of war, it is naturally interested in all plans and suggestions for its use. Knowing that the people of America are peace loving, we may assume that the United States will never attack an enemy with atomic power until it has itself been attacked with this power, if it agrees to this course. Our American citizens are so scrupulous about the use of this power for war that there are those who criticize its use at Hiroshima and Nagasaki. There are Americans who criticize the United States for using this terrific power as a war weapon, even though it may have saved a million American lives.

It is perhaps beside the point and useless to ask whether or not the Axis Powers would have used it against the Allies if they had been the first to discover and harness it. There was a time when war was directed principally against armies and military installations. In recent wars all this has been forgotten or at least ignored. Ask the women and children of London as to whether the Axis powers used their bombs against the civilian population of Great Britain. Ask the Poles and Russian civilians as to whether their civilian population, including women and children, were free from attack in the scourge of war. The days of war according to "gentlemen agreements" have passed. Nothing but power is effective in modern warfare. In fact international morality is seldom practiced. This virtue is left for in-

dividuals. There are those who inquire as to the outlawing of gas as a weapon of war. It was effectually prevented in World War II. Nations agreed not to use poison gas as a weapon of war. It was virtually outlawed. The outlawing of gas had very little connection with the fact that it was not used. Gas was not used during World War II for the reason that the antagonists knew that if they should begin the use of gas it would be used against them. The result was its effective elimination as an instrument of war in World War II. It is also a fact that at this time that scientists agree that there is no known defense from the use of atomic bombs in time of war. The future may disclose some method of excluding the atomic bomb by some proximity discharge method. Perhaps the men of science may discover some greater force which will lessen the fears of the atomic power or overshadow its might. At this time no such relief is hoped for by scientific men, and a defenseless world should not wait for such discovery. We are told that Mr. Einstein, in discussing the great power of atomic force, says he does not believe that all of the world will be destroyed by the atomic bomb, but that two-thirds of it may be.

Scientists have proven that there not only is the atomic power which they had long known to exist, but they have proven that it can be harnessed and used as an instrument of destruction. This having been done, there is no known method of preventing its discovery and use by other powers or even by individuals. In fact we are told by men of science that there is very little secret about atomic power. Its use may be difficult and expensive, but not impossible. Neither is a bomb the size of a football of such dimensions as to cause it to be certain to be discovered. The outlaw of the future may use the atomic bomb instead of the less powerful infernal machine. The nation which desires to make war in the future may attack with the atomic bomb, and in such numbers as to totally destroy its enemy. This is particularly true as to city dwellers. A small nation can use the atomic bomb as effectively as a large one. Therefore, our possible enemies of the future are much more numerous than those of the past. The size of the army will no longer be a criterion of the danger to us from an enemy. The size of the navy will no longer be conclusive of an enemy's power. The number of airplanes and the number of submarines may not determine the contest. One time bomb concealed in New York may destroy the city. One bomb dropped from an airplane may make of any of our largest cities, bits of wasteland, or one large bomb crater. Its widespread use might not be feared to the same extent if we could know that the bombs to be used by our enemies would cost $2,000,000,000 each to perfect. We have no way of knowing that the inventive genius of the future may not lessen this cost so that it can be used more generally. At present we must think of the atomic bomb as something which might become fatal to civilization, unless regulated or prevented. The question then arises as to how its possible use could be prevented. Since we receive no encouragement from science as to any defense against it, we can only turn to the possibilities of a defense through governmental precautions. There are those who advocate the release of all knowledge as to atomic power by the United States to the other nations of the world by some sort of treaty or agreement between our Nation and each of the other nations of the world as to its use for war purposes. It is very probable that every other nation in the world would agree not to use this power in time of war, since practically all of the other nations are now without either the knowledge or facilities for its use.

This idea presupposes the validity and sanctity of such agreements. One does not have to wonder what a nation like Japan would have done with the knowledge and facilities for the manufacture and use of the atomic bomb had such knowledge and facility belonged to the Japanese Nation in July of this year. What would Germany have done even during the early months of 1945, if it had had such knowledge and facilities. Of what value would an agreement not to use such power with either Germany or Japan have been? Could America have slept and eaten with any degree of satisfaction if we had known that they had such an instrument of death, and that the Allied Powers did not have such an instrument? It is not easy to believe that any treaty or series of treaties would be sufficient to prevent its use by an enemy of the United States in the future if we have such, and have no method of defense against it. There are those who suggest that our cities be depopulated and our people scattered to country districts making it impossible for large numbers of them to be destroyed at one time, or at least withone bomb. This is not feasible. Our economy and our civilization are based on at least a portion of our population being centralized in cities. While our agricultural products must necessarily be produced in rural areas, our automobiles must be manufactured in localities where the population is more dense. There are those who have suggested underground life for the Nation of the future. This method would be almost as vulnerable. Without knowing the depth to which an application of atomic power could penetrate the underground, one wonders what would happen to such an underground system if atomic power should be applied from within. The scattering of our urban population is not the answer to the atomic bomb problem. The underground system of living is not the answer. There are those who say that the United Nations Organization is the answer to the problem. They tell us that we should turn over to the United Nations Organization all facilities and all knowledge as to the discovery of the bomb and its use. I am not opposed to this with proper safeguards. What would happen in case one of the five great powers should veto any attack on the power which had manufactured and stored a large amount of atomic energy instruments is a problem of great difficulty.

At any time in the future by our system of inspection, we might learn that one of the five powers, having the veto power, had manufactured and stored sufficient instruments for the use of atomic energy to destroy our Nation. What would be our immediate relief? Before we could manufacture ready for use a store of atomic bombs, our prepared enemy would probably destroy our plants. However, we are told that if this is done all we shall have to do is to inspect the world to see that no atomic power is manufactured or used by any nation of the world. What size police force, or detective agency, or military force this plan will require has not been seriously considered. The United Nations Organization cannot prevent either the manufacture or use of atomic bombs by inspection. The job is too great, the territory is too large, the number of nations that might become interested in transgression of any regulation is too large. What size force would be necessary to inspect and keep inspected either Soviet Russia or the British Commonwealth of Nations? Perhaps this matter should be taken over by the United Nations Organization. What would be the next step of a nation that was manufacturing atomic bombs after it should learn that its manufacture had been discovered? Might it not turn loose its storehouse of bombs on civilization at once? There are those who object to any suggested method of meeting this terrible threat which may smack of force. Yet, it is doubtful if any nation in the world would be willing to trust the future of its homes, its women and children, its methods of sustaining life and health, to the integrity of any nation which might care to violate its agreement as to the use of the atomic bomb. This is what we shall be doing if we fail to prepare ourselves for the defense of our country by a stock of these same bombs. Knowing that atomic bombs might be manufactured by its enemies, what great security could any nation feel? What would our Nation do if its existence depended on the use of any instrument which it might have in a time of emergency? We probably should use whatever instruments we had. Then what would a future Germany or Japan do? If our cities were being destroyed, our homes blasted, our Nation on the verge of being destroyed, to what length might we go, especially if we were being attacked by atomic bombs?

The President of the United States, the Prime Minister of England, and the Prime Minister of Canada have written and executed a statement with reference to the atomic bomb. In paragraph 1 of that statement, it is admitted that there can be no adequate military defense to the atomic bomb. It is further admitted that in the employment of this bomb no single nation can have a monopoly. The three nations announced (a) their willingness to consider the possibility of prevention of the use of atomic energy for destructive purposes. (b) To promise the use of such energies for peaceful and humanitarian ends. In paragraph 3, it is set out that the only complete protection for the civilized world from the destructive use of scientific knowledge lies in the prevention of war. It is further admitted that no system of safeguards can be devised which will of itself provide an effective guaranty against production of atomic weapons by a nation bent on aggression. The three nations expressed their willingness to exchange fundamental scientific information and scientific literature for peaceful ends with any nation that will fully reciprocate. In paragraph 6, the three nations stated, "We are not convinced that the spreading of the specialized information regarding the practical application of atomic energy, before it is possible to devise effective, reciprocal, and enforceable safeguards acceptable to all nations, would contribute to a constructive solution of the problem of the atomic bomb." The three nations proposed to create a commission under the United Nations Organization to prepare recommendations for submission to the Organization. The commission is asked (a) to make specific proposals for extending between all nations the exchange of basic scientific information for peaceful purposes. (b) For control of atomic energy to the extent necessary to insure its use only for peaceful purposes. (c) For the elimination from national armaments of atomic weapons. (d) For effective safeguards by way of inspection and other means to protect against hazards of violation and evasions.

Let us not surrender to any nation the favorable position which we occupy by reason of our having discovered and first used this great force. Let us not agree that we shall not for our defense or in case of attack use this weapon. Let every aggressor on the face of the globe know that we have the greatest stock of atomic energy in the world. Let us make treaties with all other nations of the world that we will not use atomic energy except in self defense, or after we have been attacked. Let us train for defense and fortify for defense, not relying entirely upon agreements with any or all nations. Let us treat as sacred our agreement not to use the atomic bomb unless it is necessary for us to do so in self defense, or after we have been attacked. This agreement will be kept by America. A sufficient stock of atomic bombs properly distributed with available airpower nearby will enable us to use the atomic bomb if we are attacked, or in self defense. No nation will dare to attack us if it knows that that

is our position. No enemy can destroy all of our bombs, or all of our bombers, which might be prepared to carry this death-dealing weapon to any treacherous enemy's home land. No nation will attack us under these conditions. This may be the gospel of force. I say that it is the gospel of the preservation of the species of the nearest security which is possible under the present condition of international relations. Steps of this sort by the United States, and sensible dependence upon the United Nations Organization will ensure peace to the world. Let us raise the standard of living of all the nations of the world. Also, for ourselves, let us continue to have powerful fortifications, trained men in armies, a powerful Navy, treaties with all the great nations of the world promising to refrain from the use of atomic energy as a weapon of war. Let us back the United Nations Organization, and let us have a store of atomic weapons to be used only after attack, or in self defense. Let us not trust our families or future generations to promises of aggressor nations, or nations that may become aggressors on slight temptation. Will America from the advantageous position which the atomic bomb has given her assume the leadership in compelling and maintaining world peace? This discovery makes it necessary for us all to use every honorable and possible means of defense against the very weapon which we have given to the world. Let us not attempt to become dictators, let us not attempt to conquer the world, but let us take every step possible to prevent being ourselves made the victim of our own handiwork.

## Surplus-Property Disposal as It Relates to Veterans

EXTENSION OF REMARKS
OF
### HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
*Tuesday, November 20 (legislative day of Monday, October 29), 1945*

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter, dated November 9, 1945, from Mr. Stuart Symington, Surplus Property Administrator, dealing with the subject of veterans and surplus property. I ask that the enclosure with the letter be also included in the insertion.

There being no objection, the letter and its enclosure were ordered to be printed in the RECORD, as follows:

NOVEMBER 9, 1945.

Hon. JOSEPH C. O'MAHONEY,
*United States Senate,*
*Senate Office Building,*
*Washington, D. C.*

DEAR SENATOR O'MAHONEY: You will recall that at our executive conference with your subcommittee on October 27, 1945, at your suggestion, it was agreed we would submit a report on the problem of disposing of surplus property to veterans, together with any suggestions that we might have for dealing with this problem

As you know, the Surplus Property Act of 1944, the law under which this Administration functions, reads as follows:

"DISPOSITIONS TO VETERANS

"SEC. 16. The Board shall prescribe regulations to effectuate the objectives of this act to aid veterans to establish and maintain their own small business, professional, or agricultural enterprises by affording veterans suitable preferences to the extent feasible and consistent with the policies of this act in the acquisition of the types of surplus property useful in such enterprises."

The problems that have arisen in administering this section of the law may be classified under two headings.

In the first place, there is the problem of outlets. This is probably the basic problem that arises in disposing of surplus property to the veterans. We all know that to sell merchandise it must be presented first to the customer. There must be places where the veteran can see the merchandise prior to its purchase, or at least find out about the property and arrange to buy it.

Our particular problem in this connection is complicated by the fact that surplus property can never be presented with full knowledge of the condition it is in, because no disposal agency has any control over the condition of the property declared surplus.

At the beginning the Department of Commerce had been assigned the task of selling all consumer goods. It had only 11 regional offices from which the veteran could purchase. That meant, for example, that a man in Bismarck, N. Dak., had to go to Chicago, Ill., to obtain details about, or to look at, surplus property. Actually, he might have to go considerable farther if he wanted to inspect prior to purchase such an item as a truck which was located in the southeast, say, at Atlanta, Ga.

In an effort to deal with this problem of outlets, the Surplus Property Board had worked out an arrangement with the Smaller War Plants Corporation, which had 110 outlets over the country. The SWPC has been cooperative in every way in attempting to help the veteran to acquire surplus property, but for obvious reasons these offices of the SWPC were not equipped to and could not operate as disposal outlets.

Our belief that it was absolutely necessary to have more outlets if goods were to be available to the veterans was one of the reasons that led us to recommend the transfer of the disposal of consumer goods from the Department of Commerce to the Reconstruction Finance Corporation. As the RFC has 31 regional offices, this transfer will alleviate to some degree the problem of disposal outlets.

We are sure, however, that even the 31 outlets of the RFC will not be adequate and that we are still going to be faced with the problem of devising the means to make surplus property available to veterans. In an attempt to solve this problem, we have prepared a plan entitled "Every Veteran a Dealer," copy of which is attached to this letter. This plan is designed to improve the distribution of surplus property among veterans by making it possible for them to exercise their preference directly through the normal channels of trade.

In presenting this plan to your subcommittee, we should emphasize that it is a result of weeks of work and thought that we have devoted to this problem. It is the best solution that we can devise for dealing with the problem of distribution. We are not convinced that the plan will be successful, although we think it should be tried, and we are going to make every effort to make it work.

In the event the plan is not successful, however, we think that we and your subcommittee must face the fact that there is only one alternative left if the present provisions of the statute are to be administered properly, and that is to establish veterans' stores all over the United States, that is to say, retail outlets. This would involve the expenditure of hundreds of millions of dollars.

If Congress is not inclined to authorize the expenditure of millions of dollars for this purpose, then we must face the question whether it would not be better to express the gratitude of the country to the veterans in some way other than a preference in the purchase of surplus property.

In this connection we call your attention to the fact the Canadian Government decided there was no way the veteran could receive a true preference or priority in the acquisition of surplus except by allowing him a straight cash bonus to be used in the purchase of surplus or other goods. A suggestion of this kind of course falls outside the scope of this agency and we make this comment only to call to your attention the fact that one country believed this was the only way to handle the problem we are now discussing.

So much for the problem of outlets which, as we have said, is the basic problem that we face in this field. But there is a second set of difficulties which arise because of the provisions of the statute, which we think we should call to your attention. The statute does not give the veteran an absolute priority but merely a preference. That is to say, before the veteran has any claim there are two priorities ahead of him. The first is the priority of the States and cities and other political subdivisions and of tax-supported charitable and educational institutions. It is estimated that there are some 285,000 priority claimants of this kind ahead of the veteran.

Furthermore, the veteran has no preference except for the purpose of establishing and maintaining his own business, agricultural or professional enterprise. The veteran may not buy simply for his own personal use. For example, the veteran can buy office furniture but he cannot buy dining room furniture in the exercise of his preference. Finally, the business which the veteran seeks to establish must be small.

We mention these particular aspects of the statute because we fear that neither the public nor the veterans in general understand the limitations that the Congress has placed upon their rights. It would be a comparatively simple matter to amend the statute so as to provide that the veteran had a priority ahead of all other dispositions except those to Federal agencies and to provide that the veteran could purchase for his own use.

We should like to emphasize, however, that amending the statute in this way would not touch the basic difficulty which is one of having adequate outlets through which the merchandise may be distributed directly to the veterans. That is a practical and administrative problem which no amendment of the details of the statute will touch. Until that problem is solved we fear that there can be no adequate and satisfactory distribution of surplus goods to veterans in any way that will give them a true preference.

We hope that we shall have an opportunity to discuss this report with your subcommittee and to receive the benefit of the views of its members. We assure you that we wish to do everything we can to give the veteran a real chance to obtain surplus property, and that we are prepared to entertain and to put into effect any suggestions or plans that seem designed to accomplish this result.

Sincerely yours,

STUART SYMINGTON,
*Administrator.*

EVERY VETERAN A DEALER IN SURPLUS PROPERTY

I. The Surplus Property Act of 1944 reads as follows with respect to veterans:

"DISPOSITIONS TO VETERANS

"SEC. 16. The Board shall prescribe regulations to effectuate the objectives of this act to aid veterans to establish and maintain their own small business, professional, or agricultural enterprises, by affording veterans suitable preferences to the extent fea-

sible and consistent with the policies of this act in the acquisition of the types of surplus property useful in such enterprises."

Congress intended therefore to help every veteran of World War II who wanted to start or maintain a small business, and has directed the Surplus Property Administration to treat the veteran as a preferred customer whenever the veteran desired to purchase any surplus property which would be used in establishing or carrying on such a business.

II. Complying with these instructions, SPA has now ordered that all veterans who are in business for themselves, or who will open up in business in the future, shall be classified as large dealers.

III. Under this classification, every veteran may purchase any surplus property offered for sale in the United States at as low a price as that paid by any dealer—no matter how large—in the country.

IV. In order to carry our this plan, the following procedures will be established at earliest opportunity:

(a) Whenever any surplus property is sold to wholesalers, it will be sold with the understanding that the wholesaler recognizes the classification established by the SPA insofar as it applies to veterans; and that will be part of the sales agreement.

(b) An agency (presumably the Veterans' Administration) will be designated to take the place of the Smaller War Plants Corporation. This agency will classify veterans into one of two groups, namely:

1. Veterans who are employees, but who need certain tools or equipment to carry on their work.

2. Veterans who actually operate a business or intend to start a business.

(c) After classification, the Veterans' Administration shall issue to the veterans a book of coupons in an amount equal to cost of the surplus property which the veteran desires to purchase.

(d) The veteran would then be in a position to go to any wholesale establishment in the United States which handles surplus property and purchase any surplus property of any kind up to the amount covered by his coupons.

(e) The wholesaler would then return the coupons to the disposal agency.

(f) The returned coupons will be an index of sales to veterans and records can be compiled by tabulating the coupons to show not only the volume of surplus property distributed to veterans but also a rough estimate of the kind of property purchased by veterans.

(g) The coupon plan limits the dollar preference right of purchase of each veteran. Veterans in class 1 to purchase $1,000 in preference merchandise, those in class 2 to $20,000. In addition, this $20,000 figure to be raised to $50,000 to purchase an individual unit, say an airplane.

This plan seems to have several advantages:

(a) It eliminates the great expense and delay incident to handling the veterans' business on a direct basis.

(b) It gives wide publicity as to the type and kind of surplus which is being offered for sale from day to day, this through wholesale advertising.

(c) It makes it possible for the veteran to examine the goods before he makes a purchase.

(d) No matter when the goods appear on the market, the veteran can always buy up to the limit of his coupons.

(e) The veteran can take advantage of surplus wherever offered, this by dealing with wholesalers through the mails.

(f) The veteran can buy in small quantities.

## Abolition of the Poll Tax

EXTENSION OF REMARKS
OF
## HON. CARL A. HATCH
OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

*Tuesday, November 20 (legislative day of Monday, October 29), 1945*

Mr. HATCH. Mr. President, last night the Senator from Pennsylvania [Mr. GUFFEY] and the Senator from Louisiana [Mr. ELLENDER] discussed very ably, I am sure, the proposed poll-tax legislation in radio addresses. I ask unanimous consent that both addresses be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

REMARKS OF HON. ALLEN J. ELLENDER, OF LOUISIANA, DELIVERED ON NOVEMBER 19, 1945, OVER THE AMERICAN BROADCASTING CO., STATION WMAL, ON THE SUBJECT OF POLL TAXES

Ladies and gentlemen, I am against the payment of a poll tax by any citizen of any State, as a prerequisite to voting. However, I am unalterably opposed to the abolition of the tax by an act of Congress, not only now, but at any time in the future. My objection to such a procedure is fundamental in that it violates the plain and unmistakable language of our Constitution.

The question of suffrage was always treated as a local prerogative, and jealously guarded by the men and women of the Colonies. I venture the assertion that if the right to determine the qualifications of voters had not been left to the States by the members of the Convention who drafted our Constitution, that great document would never have been ratified by a majority of the Thirteen Original States.

May I remind you that Congress has no authority to pass laws on matters which have been specifically reserved to the States. Or, permit me to put it this way, Congress has no right to pass laws affecting the internal affairs of the States unless our Federal Constitution gives it such a right.

I challenge my good friend, the senior Senator from Pennsylvania, Mr. GUFFEY, to quote to you any language in our Constitution which gives the right to Congress to abolish poll taxes, or in anywise to fix the qualifications of voters in the States.

Listen to what our Constitution provides in article 1, section 2:

"The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature."

Why, ladies and gentlemen, any school boy knows that the States have the undisputed right to fix the qualifications for those who vote in the election of the members of their respective legislatures. That provision of our Constitution guaranteeing that right has never been modified, but, on the contrary, it was reaffirmed when our Federal Constitution was amended to permit the election of United States Senators by a direct vote of the people. The identical language was used so that today we have two similar provisions in our Constitution providing that the qualifications of electors or those who vote for Congressmen and United States Senators shall be fixed by the States. The provisions are specific. They are direct as light, and subject to no other interpretation.

Such unqualified language should end all arguments, except possibly for some gullible politicians who are willing to trample on our sacred Constitution in order to appease certain pressure groups and who fear reprisals at the polls unless they lend their support to such pernicious legislation.

The question of qualifications of voters was interpreted by our courts in many cases involving the fourteenth and fifteenth amendments. In the case of *United States* v. *Cruikshank*, the Court declared "that the fifteenth amendment does not confer the right to vote. That is the prerogative of the State laws. It only confers the right not to be excluded from voting by reason of race, color, or previous conditions of servitude, and this is all the right that Congress can enforce." I quote further from the same decision: "The States may establish any other conditions and discriminations it pleases, whether as to age, property, education, or anything else."

Susan B. Anthony, the great suffragette, was sentenced to jail because she attempted to vote at an election, contrary to a State law which made it unlawful for women to vote. Our Supreme Court held in *Minor* v. *Happersett* that a State had the right to exclude women from voting. Why? Because, as the Court said in that case, and I quote:

"The United States has no voters in the States of its own creation. The elective officers of the United States are all elected directly or indirectly by State voters. The Members of the House of Representatives are to be chosen by the people of the States, and the electors in each State must have the qualifications requisite for electors of the most numerous branch of the State legislature."

Can any language be more specific?

Although the bill before Congress to abolish the poll taxes has no merit in the light of our Constitution and by reason of the interpretations on the subject by the highest court of our land; although it is a direct encroachment on States' rights, many are willing to foster such legislation in order to satisfy a few groups who in my opinion, are being misled.

Such an issue tends to shatter our national unity; it revitalizes sectionalism; and in the wake of the long debates that will certainly occur in the Senate, bitterness, hatred, animosity and the like will be engendered to an alarming degree. My hope is that State governments will continue to function within the sphere prescribed by the Constitution and that no section of the country will be permitted to force its misguided viewpoint upon another.

---

REMARKS OF HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA; MADE OVER THE AMERICAN BROADCASTING CO. NETWORK, NOVEMBER 19, 1945, ON THE SUBJECT OF POLL-TAX LEGISLATION

The legalistic arguments of those who oppose the Federal repeal of the payment of poll taxes, and I appreciate their sturdy honesty and courageous intelligence, do not appeal to me.

It seems to me that their arguments are thin. They say that enactment of H. R. 7 lies beyond the constitutional power of the Congress. House Resolution 7 is a bill which just says that a man or woman otherwise qualified may not be kept from voting in a Federal election for failure to pay a tax.

Against this bill our legalistic opponents bring up a single paragraph of the Constitution.

That's their story, and if we're not careful, ladies and gentlemen, we'll be stuck with it.

We have a lot more arguments. We say that H. R. 7 is constitutional. We say the poll tax itself is not constitutional.

And to prove it we bring before you, the people, at the bar of public opinion, the entire United States Constitution except a single sentence; the readmission statutes of 1870, clearly violated by the poll tax; the majority report of the Senate Committee on the Judiciary, composed entirely of the outstanding lawyers of the Senate who have declared three times that H. R. 7 is constitutional; the tremendous majority given to the Federal antipoll tax bill three separate times by the House of Representatives, most of whom are lawyers, and very good lawyers; and the written opinions of the foremost authorities in the United States on constitutional law.

Insofar as the legal side of this poll tax issue is concerned, the whole issue of constitutionality rests upon the statement that: "The poll tax is not a qualificaton of voting."

Congress has the right and an imperative duty to protect the Constitution against inroads by the States against Federal Government. The poll tax is a wholly unconstitutional tax laid on a Federal function. It is a condition to be met by the voter before he casts his ballot. It has nothing to do with his qualifications as a citizen.

No less an authority than Gov. Chauncy Sparks, of Alabama, where the poll tax law is so severe that it can and does cost some citizens $36 to cast their first vote, tells us that the poll tax is not a qualification of voting, but "a condition prerequisite to voting." The poll-tax levy is part of the tax laws of the poll-tax States.

In short, the poll tax violates the Constitution by taxing a Federal function. The Senate Committee on the Judiciary says so. I hope that you will get a copy of the committee report on the Federal anti-poll-tax bill, and that you will take note that only 4 Senators, out of a total membership of 18, signed a minority report.

Now, Senator ELLENDER and I have been taking positions regarding the legalistic aspects of the subject of our discussion. We haven't said much about one thing which I think we agree on absolutely: That is, the poll tax must go.

The poll tax has no place in a modern system of government. It is undemocratic and discriminatory. It's a throw-back to the Middle Ages. Worst of all, it is in a pattern with the Nazi theories of government against which we have fought all over the world in the most terrible war of all history. The Nazi idea was that only a select few are entitled to rule, and that everybody not a member of the Nazi Party was a zero, without rights and without a voice in government.

The American way of life dictates that the Government is the people's Government. We say that public business is everybody's business. We say that it is not only a privilege and right of every American citizen to vote; it is also the first duty of citizenship.

In my own State of Pennsylvania we spend thousands of dollars every year to get the people out to vote. It makes no difference whether the voters are Democrats or Republicans, the candidates and the newspapers and the radio tell them to register and vote, and the political organizations send cars out to take the voters to the polls.

The result is that in my great State of Pennsylvania, with the second highest population of any State in the Union, 58 percent of the voters turn out and vote.

Ladies and gentlemen, it's been only 15 years since we got rid of the poll tax in Pennsylvania. We were glad to get rid of it. The poll tax resulted in one of the worst election scandals in our history. The poll tax is a standing invitation to corruption and bad government wherever it exists.

I have a high regard for my colleagues from the poll-tax States. They are gentlemen and statesmen. But sometimes I feel just a little sorry for them. When they get up on the Senate floor to speak I sometimes wonder whether they are speaking for the sovereign people of their States or just the 10 or 11 or 15 percent of the people who had the money to pay a poll tax. I think of that Virginia farmer who said, "A dollar ain't much * * * ef you got it." There are 10,000,000 American citizens in the seven poll-tax States who, as my farmer friend would say, "jist ain't got it."

There are almost 25,000,000 people in those States; but in the 1944 Presidential election less than 3,000,000 of them voted. Why, in Pennsylvania, with only little more than a third as many people, that many votes were cast.

The poll tax not only disfranchises 10,000,000 American citizens completely; it cuts down the voting power, in Congress, of every free voting citizen.

I say that there is not the slightest difference between most of my opponents and me on getting rid of the poll tax. The only argument is on how. I say that the Federal anti-poll-tax bill is simple, quick, easy, and constitutional, and should be passed. I say that the constitutional amendment proposed is slow, cumbersome, and unnecessary.

I hope you agree with me, and will make your opinions felt. The National Legislature must get busy and abolish the poll tax—right now—and not permit a filibuster or a threat of filibuster to stand in the way. I pledge myself to that purpose.

SUMMATION

I have stated my position on this question.

The opposition bases its position on the legalistic question of constitutionality. Congress should take cognizance of the question of constitutionality of legislation. A majority of the legalistic minds of the Congress claim that the proposed anti-poll-tax legislation is constitutional. We have a Supreme Court whose duty it is to pass upon constitutional questions. I suggest that the minority opposing this legislation step aside, permit the legislation to pass, and then let the constitutional question be determined by the highest court of the land.

---

## Universal Military Training

EXTENSION OF REMARKS
OF
## HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Tuesday, November 20 (legislative day of Monday, October 29), 1945*

**Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD a statement on universal military training by Deane W. Malott, chancelor of the University of Kansas, Lawrence, Kans., and published by the Kansas City Star. In this statement Chancellor Malott raises the question of why all the hurry about military conscription, which may or may not be a necessary part of the national defense, in view of the age of the atomic bomb, secret robots and rockets, and radar controls. I suggest to my colleagues that this statement is well worth study, and also that more and more people are coming to appreciate the views stated by Chancelor Malott.**

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNIVERSAL MILITARY TRAINING

(By Deane W. Malott, chancelor, University of Kansas)

This week in the Nation's Capital hearings are being held on the proposal, advocated by the President of the United States and the top Army and Navy officers, to establish universal military training. The plan thus urged upon us is to take every able-bodied young man, at or around the age of 18, for a year of training. It does not involve the actual enlistment in the armed forces or serving as a fighting man either in this country or overseas. Apparently what is envisaged is a program of military and vocational training and education.

Upon this proposal both the President and the military appear to base their plans for our future security. The proposal, however, seems to be hastily formulated—and to represent an ineffectual attack on a major problem facing the Nation.

WHY 1 YEAR OF MILITARY TRAINING?

The present war was fought by highly skilled technical men. Some GI's were prepared in a few weeks of basic drill and discipline, but it required several years of education to produce the engineers of the Ledo road. The Medical Corps was composed of doctors with years of scientific study behind them; the bomber pilots were generally in training for 2 years at least; radar technicians received nearly a year of specialization. Both the Army and Navy specialists—and a very large proportion of the armed forces consisted of specialists—were given programs of training varying in length from a few weeks to several years. Basic training, however, never extended over more than a few weeks. What then will be done in the proposed 12-month period? Will basic training be stretched out for some three times its wartime length? If to this training there should be added (as seems likely) work in vocational education, the taxpayer would be asked to duplicate in part the already complex public education system of this country. Such a duplication would seem to be neither necessary nor desirable.

Rather than superimpose on a purely military program studies and techniques which are commonly found in civilian life, and which in civilian life can be integrated with continuing work, it would seem wise to utilize the curricula of existing educational institutions and add to them any needed work in military training, thus effecting a saving not only in money but in time. This step seems especially desirable in the light of the present importance of scientific and technical studies in warfare. To take a premedical or engineering student, for example, away from his studies for a year would mean withholding him from his greatest military usefulness for that period of time, because it is only as a physician or qualified engineer that he is of maximum use to the armed services. He would not be thus held back if kept at his regular curricular routine and at the same time given the necessary military drill and instruction.

WHY THE HASTE IN URGING MILITARY TRAINING LEGISLATION?

We now have trained men to the extent of more than 10,000,000. Considering the size of our potential fighting force we have little to concern us for a period of several years. During that time do we fear attack from England, seriously drained of men, materials, and money, as she is, by the war? Or from Russia, which certainly at the very least needs time for reconstruction and some semblance of naval power, before she could possibly attack our shores? Or do we fear Bolivia, or Costa Rica?

Or do we simply fear ourselves and our inability to make bold and purposeful decisions once the emotional stimulus of World War II has disappeared? Is that the real reason for the haste shown by our leaders? If so, what a sad commentary on our democratic processes. How disturbing to learn, if we should, that we can determine on positive action only if urged on by our emotions—the emotions of the moment. Surely a more sensible course is possible.

WHY NOT ATTACK THE WHOLE PROBLEM OF NATIONAL DEFENSE?

In our day of the atom bomb, of secret robots and rockets, and of radar controls, what is the whole picture of our defense needs? Obviously, those needs have changed overnight as the result of the work accomplished at Oak Ridge and elsewhere. On the basis of the techniques prevailing at the time of the blitz of London, it has been established that perhaps 30,000 bombs would be required to level New York City. In employing the techniques made inevitable by the destruction of the Hiroshima, an enemy might conceivably effect the same destruction by using six atomic bombs. Surely there must be some relation between this appalling lethal development and our manpower requirements. What that relation is, and specifically how atomic energy will change methods of warfare has so far been only superficially considered. How much of an army and navy do we need, and what will, in the future, be their tasks? The seasoned military man will probably continue to insist, as in the past, that only great masses of infantry can win a war. Imaginative and speculative men, however, will no longer be satisfied with this stock contention. The lad with the rifle and the bayonet is only one of many elements in the complex problem which those who plan against an attack upon us must face. The mobilization of industry and material, the dispersal of highly concentrated and exposed industrial areas, the continuance of a broad program of scientific research—these are equally as important as amassing bodies of troops. Furthermore, our commitments in the light of the yet undetermined peace treaties and of the actions of other major powers in armaments, as well as the responsibilities which we shall face in the yet untried United Nations Organization, are related to the problems of our country's protection. We need an integrated plan, not alone an isolated manpower program. We should not attempt to put any part of a defense plan into operation until we have envisaged the whole.

WHAT OF OUR OCCUPATION FORCES?

An illustration of our haphazard dealing with military affairs is found in the troubled state of our occupation forces in Germany and Japan. Is the President or any of our military leaders prepared to tell us how universal military service would presumably affect, or be affected by our troop requirements abroad?

There is an ominous quiet on the problem of occupation. Where are the troops to come from for the occupation? Will voluntary enlistments be enough? What is the situation at the moment, or dare it not be revealed until after the attempt has been made to pass universal training legislation? The pressure to return our boys is enormous; hundreds of them have long ago earned the right to come home. Yet American troops must be found to carry on. We must not lose the war by agreeing to a soft peace. Occupation may be desirable, if not essential, for a dozen years. But on what basis? Youngsters of 18 are still being drafted and under the present point system they face years of service. The curtain of the war is going down, but our young people are still being called into wartime training camps, where the business of fighting, not that of occupation, engrosses their attention. Is 18 the proper age for occupation troops? How long is the minimum training for occupation purposes, and what should it include? What would be a fair period of duty for occupation forces? These questions must be answered before we can formulate any full-scale military plans for the American people.

AN ALTERNATIVE SUGGESTION

No sensible American is presumably willing, under present world conditions, to withdraw to continental America, jump into bed, and pull the covers over his head. National defense, as opposed to mere universal manpower training, is a major and difficult problem, worthy of our best thought and effort. Let us, then, instead of offering emotional support of hastily proposed legislation, ask the President of the United States to appoint a small civilian commission, composed of distinguished scientists, civic leaders, and spokesmen for labor, industry, and agriculture, to study, promptly and fully during the coming months, the whole broad problem of our national defense. The Commission should seek the aid of the military high command and of others who have acquired intimate knowledge of modern warfare. It should try to determine the proper distribution of industrial plants for war purposes and the feasibility of their mobilization in case of attack. It should consider the changes in military techniques which are likely to be found in future warfare; and it should study the probable size of our future fighting force and the particular types of fighting men to be needed. It should, finally, attempt to learn what are the best methods of securing and training these forces for the Nation's protection. Then, if we will pass legislation based upon a study such as this, America may realistically, intelligently, and confidently prepare for the eventualities of an unknown future. Only then shall we have a fair chance of making secure our dearly won peace.

## Relations Between America and Russia

EXTENSION OF REMARKS

OF

### HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

*Tuesday, November 20 (legislative day of Monday, October 29), 1945*

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Can America and Russia Stay Friends?" written by the senior Senator from Utah [Mr. THOMAS], and published in the November 1945 issue of Pageant magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN AMERICA AND RUSSIA STAY FRIENDS?

(By Senator ELBERT D. THOMAS, chairman of the United States Senate Military Affairs Committee)

Winston Churchill once referred to Russia as "an enigma inside a riddle wrapped up in a mystery." To this, your average American, groping for light on today's most pressing international business, would murmur a fervent "amen."

Oddly enough, the key to the riddle has been right under our noses—a body of fact that reveals why we suspect Russia and vice versa, and the major compromises both nations must accept if they are to get along.

Reviewing our relations with Russia, one can only conclude that the forces binding the two nations together must be powerful indeed. For each has done everything imaginable to insult, antagonize, irritate, and thwart the other.

Russia has fomented civil strife in America, ridiculed ideals our citizens hold dear and, on three occasions, formally associated herself with our mortal enemies. We have libeled the heads of Russia's Government, invaded her territory, aided an insurrection against her Government, helped blockade her.

The highlights of the hysterical history, seen from both sides of the fence, appear on following pages. Such things have happened because both nations have been in mortal fear of each other. It is well worth the effort to understand how these fears arose and how they can be removed. For in the long run the citizen, not the diplomat, decides our future with Russia. If there is understanding and a desire for peace in the hearts of the two great peoples, nothing can prevent their attaining it.

THE CAPITALIST SCARE IN RUSSIA

The fear of capitalist countries that has colored so much of Russian policy goes back past the beginnings of the Red revolution. Like our own Revolution of 1776, the Bolshevist revolution had its dogmas, among them:

"A socialist state can exist only in a socialist world * * * democratic procedures are only tools of the ruling classes, and can never yield justice for the workers * * * capitalism is already tottering, and a small but disciplined cadre can overthrow it * * * capitalist powers will invariably join forces against a socialist state."

The old Bolshevists were cynical about liberal gestures of the ruling classes. To them it was laughable to imagine that the masses could obtain justice merely by asking for it.

But Russian suspicion of America had begun even before the Red revolution. During the Russo-Japanese War America was strongly pro-Japanese. Theodore Roosevelt found the Japanese victories bully and exuberantly wrote that "Japan is playing our game."

Too, before the Bolshevists came to power, the American Ambassador had denounced Lenin and Trotsky as German spies. When Lenin became the hero of the revolution, to the American Ambassador he was still a scoundrel who had betrayed his country for foreign gold. The Red regime was a disgrace to civilization. He urged revolt, clamored for Allied seizure of Petrograd and Moscow to wipe the scourge from the face of the earth.

It was 1918. The Germans on the eastern front were advancing relentlessly. The civil and military organization of Russia was in chaos.

Wilson made an impassioned plea to the people of Russia over the head of the government, urging continuance of the war. Millions of copies of this appeal were distributed by Americans in Russia. But still no help was forthcoming for the battered Russian armies. After a long delay Russia signed a separate peace at Brest-Litovsk.

The Allied world raged. Military occupation and destruction of the Red Government were everywhere demanded.

With Allied help the counterrevolutionary Admiral Kolchak established a rival government at Omsk. Allied, including American, forces landed at Archangel and Vladivostok and pushed inland, supporting anti-Bolshevist elements everywhere. While the Allies prepared a blockade of Red Russia, Kolchak established the notorious White Terror to exterminate Red resistance, and advanced on the citadel of Red power. However, the Red Army, reorganized by Trotsky, destroyed the White Army near the Volga, captured and

shot Kolchak. Bolshevist rule was now firmly established, and the gigantic task of building a modern socialist state on the ruins of feudal Russia got under way.

It was useless to look to America for aid. Our Secretary of State made this quite clear in 1919: "It is impossible," he announced, "to consider any dealing with the Red regime." For the next 14 years this was the prevailing American policy.

By 1935, Russia was well aware that the rise of fascism threatened world peace. She repeatedly urged a united front against fascism.

The answer of the capitalist world was soon forthcoming. As Hitler renounced the Versailles Treaty and built a huge army, the United States passed isolationist-neutrality laws denying aid to all comers. As Franco, Hitler, and Mussolini ravaged Spain, and Mussolini, Ethiopia, the great western powers remained largely inert. The climax came when England and France, pointedly excluding Russia, surrendered to Hitler at Munich. Russia decided that her dogma was right, that democracies were saving their own hides by diverting Hitler toward Moscow.

Russia now did her best to turn the tables. She signed nonaggression pacts with Germany and Japan, asked Finland for better defensive positions along her borders, and, being refused, took them. She moved into Bessarabia, Latvia, Lithuania, and Poland. This brought indignant howls from America, an embargo of American aircraft shipments to Russia and United States' cash and supplies to Finland. Russia was unimpressed. She had observed that, though Roosevelt had delivered a vigorous anti-Axis "quarantine" speech in 1937, his opponents made substantial gains in the congressional elections of 1938.

From the Russian point of view, the significant thing is this: Up to the outbreak of the war in 1939 almost every important point of Bolshevist dogma apparently had been borne out by history. As the fathers of the revolution had predicted, Russia seemed alone in a hostile, capitalist world.

THE RED SCARE IN AMERICA

American political philosophy rests on certain dogmas laid down during our own Revolution.

The first week of Bolshevist rule in Russia outraged every one of these sacred American precepts. Finding they lacked a majority in the elected assembly, the Bolshevists dissolved it. Finding resistance, they crushed it. Unreasonable searches and seizures were the order of the day. They even proposed that this should happen in America, too. It was to be a world revolution.

Americans had learned to prefer their revolution in the bucolic, colonial manner and a safe century or so in the past. The facts of modern insurrection were too gamey for them. The Red terror, bloody enough in fact, was fully reported in America. The White terror, also a grim piece of business, was practically unknown here. There was reason for this—it was wartime and the Whites talked of continuing the war with Germany while the Reds talked peace. We wanted to keep the Germans occupied in the east. Russia, however, signed that separate peace.

The Bolshevists continued to pour on hot coals. In 1919 the Third Communist International was announced, setting forth its aim to produce a world revolution. The American Communist Party became its official affiliate.

At this American blood pressures hit new highs, and with reason. We were demobilizing our armies, reconverting our industries; millions of people were at loose ends and therefore edgy. Besides, we had a tremendous unassimilated foreign-born population, and were not sure how Communist agitation might affect it.

When, in 1921, the Russians asked us to open diplomatic and trade relations, our officials could only scratch their heads in exasperation. How, exactly, did these Russians' minds work? On one hand they were doing everything to abolish our government, and on the other hand they want to make friends with it. The proposal was, of course, rejected.

After a bitter political struggle in Russia, Trotsky, advocate of world revolution, was deposed. Stalin, concentrating effort on building up the Soviet Union, took the helm. In theory, this should have allayed our fears of revolutionary agitation. Actually, it intensified suspicions. The old party line was at least consistent: it always stood for trouble. The new party line shifted with Soviet foreign policy. It lost even the pretense of being a spontaneous movement of American workers.

The year 1928 brought a peak load of strikes and labor unrest in America. Whether or not this was attributable to the third international or to less remote causes, our Secretary of State, in a blistering and widely publicized statement, denounced the Comintern.

To our other misgivings about Russia was added our innate abhorrence of the dictators' way of doing things. Just as we had begun to find excuses for some of the bloody goings-on of the Red Revolution, a new reign of terror swept Russia. Her development program was in full stride, and nothing was allowed to hinder it. From 1929 to 1931 the Red terror was revived and the kulaks (rich peasants) were liquidated. The repercussions here were hostile.

In 1933, President Roosevelt was inaugurated and events took a dramatic new turn. On Russia's promise that she would not support, or even allow on her territory, any organization preaching the overthrow of the United States Government, diplomatic relations were resumed.

As early as 1935, Russia had urged a united front against fascism. At that time, however, communism seemed a far more immediate menace. Neither the Fascist rape of Spain nor of Ethiopia roused us to the indignation we felt when Russia assaulted poor Finland. We saw that, not as preparation for the coming Nazi onslaught, but as an unprovoked attack on a helpless people.

When, in 1939, war finally came, and Russia signed nonaggression pacts with Germany and Japan, most Americans were resigned to the fact that the dictators had joined forces to carve up the world.

From the American point of view, the significant thing is this: Russia has fought a magnificent war and has been very friendly to us since peace came, but, up until the war, she had done nothing to convince us that she had abandoned plans for world revolution, including revolution in America.

NOW FOR THE FUTURE

Up to 1940, the 22 years of Soviet-American relations were bad. Now they faced the supreme crisis—world war. The cards were down. The whole structure of apparent motives collapsed. When real motives were revealed, Russia and America awoke to find themselves world partners. In 4 years of war, every major obstacle to successful Russo-American relations has broken down.

On the Russian side, the dogmas laid down by the fathers of the Red Revolution toppled:

The dogma that a socialist state could not exist in a capitalist world was refuted by the convincing existence of the Soviet Union itself.

The belief that capitalist states would gang up on Russia collapsed before the facts: several capitalist states joined with the Soviets to destroy other capitalist states.

The prophecy that capitalism was tottering proved false. America and Britain never have been more vigorous.

The tenet that the masses were being exploited by democratic methods did not hold up. The democracies showed an ability to adjust to the needs of their people that the old Bolshevists did not believe possible.

On the American side, the course of events put many of the Russian "outrages" in a new light.

The adjustments made in the Finnish border probably saved Leningrad, northern anchor of the whole Russian defense. Finland turned out an Axis collaborator.

Though memory of the purges was still unpleasant, it had to be admitted that there were no fifth columnists in Russia in 1941.

And though Russia's dictatorial methods were as unsavory as ever to American, they found mitigating circumstances. They reasoned: A nation so full of zest for the future has not had its spirit broken; a people which has fought so magnificently for its country must love it. True, Russia had compaigned against the churches, but the Russian churches seem to be back in business.

Even that perennial embarrassment, the Comintern, turned out to be more of a wasp than a dive bomber, for it never came close to decisive political power.

Suppose, now, we draw a line under all the breath-taking plusses and minuses of our experience with Russia to see what we have.

The difference in political philosophy seems to be permanent. Russia is a socialist dictatorship. Having survived in the days of its desperate weakness, it is not likely to be abandoned in triumph.

America is a capitalist democracy. Its tradition of free government under civil liberty has weathered a century and a half of strife and emerged stronger.

Can two such different ideologies live and work together in the family of nations? Obviously they can, because they are doing so. But can they continue to do so?

Here we venture into the realm of opinion. I think they can.

Each nation has a hard streak of realism in its thinking that saves it from pursuing even its most cherished ideals to dangerous extremes. Russia tried world revolution for 20 years. It didn't work. So, when she says she no longer intends to "reform" the United States, it seems reasonable to believe here. America, once morally insistent that all countries must have democratic rule, seems about ready to deal with the fact that some countries don't want it.

Both nations has sufficient opportunities at home to keep them occupied for all the foreseeable future. Both desperately desire peace. Both seem ready to throw dead-weight dogma overboard if necessary to get it. Russia has made several tentative moves toward greater civil liberty and private incentive. America moves toward extracting a greater social usefulness from her resources.

But the essential thing for the future is that the two nations stop fearing each other. We know well enough that Russia has nothing to fear from us. As long as we make democracy work, at home, we have little to fear from communism.

---

## What's Wrong With Congress?

EXTENSION OF REMARKS

OF

## HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Tuesday, November 20 (legislative day of Monday, October 29), 1945*

Mr. LA FOLLETTE. Mr. President, the able Senator from New Hampshire [Mr. BRIDGES] has written an interesting

article entitled "What's Wrong With Congress?" which appears in the October issue of Pageant magazine. I feel certain that those who are giving thought to this question will find the article of great interest, and I ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S WRONG WITH CONGRESS?

(By STYLES BRIDGES, Senator from New Hampshire)

"The trouble with Congress is, briefly, Congressmen. Their two main interests—getting reelected and lining their pockets—shut out everything else. They are lazy and overpaid; they have it soft. The lobbyists write our laws, and, in a way, that is fortunate, for Congressmen are numbskulls. They are windbags. Obstructionists. And worse. Only a vigilant press deters them from looting the Treasury."

These charges against Congress are voiced on all sides and by all kinds of people. They are very interesting. But they are not true.

Something is wrong with Congress—radically wrong. So much so that one Congressman has publicly expressed doubt that "Congress can much longer function, or even survive, if it goes on the way it has been going in the past decade."

But the charges many people make against Congress are based on lack of knowledge. As an example, during a recent speech, I was interrupted by a booming voice from the rear of the auditorium. Would I please report the present status of the bill known as H. R. 7509? I replied that I was not familiar with the bill or its status.

"I always thought you fellows in Washington didn't know what you were doing," boomed my heckler. "Now I'm sure of it."

Now the fact is that during the last Congress nearly 9,000 bills and resolutions were introduced and nearly a thousand became law. No Congressman can be familiar with more than a hundred or so.

Not long ago a returning soldier visited the Senate, expecting to witness the clash and fire of debate. Instead, he said that he found a half-filled Chamber of grayheads doing nothing and that one was droning about Senate etiquette; the rest read, doodled, dozed, or gabbed. The soldier left in disgust. "So this," said he, "is what we've been fighting for."

Our disillusioned veteran did not know that most of the important business of Congress is handled in committees meeting at the same time as the regular session. On an average day little happens on the floor of either House except formal voting and housekeeping routine. Interesting and spirited debate takes place only on occasion.

Now let's face this matter of congressional caliber. I admit that Congress has its quota of blowhards, dullards, snoops, self-seekers, publicity hounds, soreheads, and crackpots. So has your town council, probably, and your lodge or your sewing circle. So has any sizable group of people.

Human nature is a factor we can't do much about. We may as well turn our attention to faults we can attempt to cure.

But the caliber of Congress as a whole needs no apology. Its ethics and abilities are far higher than the general run of folk can boast. This statement is not mere self-congratulation. It is the opinion of as objective a body as the American Political Science Association, rendered after study.

"We have been most favorably impressed," the association reports, "with the integrity and intelligence, the conscientiousness and courage, of the Members of Congress with whom we have conferred in the course of our inquiry."

What, then, is wrong with Congress? Plenty.

Congress is in the position of an overworked traffic cop, with some of the heaviest legislative traffic in history coming down the pike—world security, price control, reemployment, taxation, reconversion, and the international bank.

A legislative traffic jam of appalling proportions is possible.

Representative A. S. MIKE MONRONEY puts it this way: "Congress is trying to run the world's largest establishment as its board of directors. * * * Yet this mighty business, about 100 times as great as Ford, General Motors, and General Electric rolled into one, is being run by directors who are obliged to sit on an old-fashioned high stool and in an antiquated ledger scribble notes with a quill pen. Not even a board of geniuses could possibly run General Motors without modern mechanical aids, a thoroughgoing modernization, and adequate personnel."

Through its Joint Committee on Organization, Congress brings a damning list of complaints against itself. It is inexcusably slow. Its lack of teamwork with the executive branch sometimes interferes with the conduct of the Government. Congress is poorly informed, lacks leadership, has no over-all program. Its committees overlap and contradict one another. Its legislation is often vague, difficult to administer.

Why? Mainly because the system conceived in 1789 is inadequate to the needs of modern America. The Congress of 1789 served 13 States with about 4,000,000 people, and ran the whole Government for a year on $426,000. Our dealings with foreign nations were, by today's standards, negligible. Domestic problems were scarcely more complicated. During the next 160 years, America multiplied her population by 35, her Budget by 200,000, and stretched her borders across a continent. She assumed world leadership in diplomacy and fought two World Wars.

Few steps were taken to help Congress keep pace with the times. As Congress grew to an unwieldy body of 96 Senators and 435 Representatives, most of the constructive work was transferred from the floor to committee rooms. Committees were appointed to cover each specialized field of government, and make recommendations to their House as a whole.

As government grew more complex, the number of committees increased. Finally each Congressman belonged to so many committees that specialization became impossible. Instead of introducing the research methods that made modern business possible, Congress clung to postcolonial procedures.

Does this mean that the ideals of the founders must now go by the board in a sweeping reorganization? On the contrary, it means that reorganization is necessary to preserve those very ideals. Successful representative government demands well-informed representatives. As matters stand, the average Congressman simply hasn't time to be as well-informed as he should.

A Congressman's day usually begins before 9. From the time he arrives at his office, his phone is almost constantly a-jangle. Most of these calls require his personal attention—so many that he can scarcely carry on more than 10 minutes of uninterrupted work. There is usually at least 1 caller in the anteroom; sometimes there are 20 or 30.

Between the phone and the visitors your Congressman must make time for his mail. It is a rare congressional office that finds fewer than 5 letters in the morning mail; important public issues may boost this to 1,000 or more.

The mayor of an important city reports a coal famine—will the Congressman take steps? A manufacturer will go to the wall unless his ceiling price is raised—what can be done? A passport must be expedited; a naturalization case must have attention; a Federal building back home needs repair—what, dear Mr. Congressman, can you do for us?

Some Congressmen resent such errand-boy work; national legislators, they feel, should tend exclusively to national legislation. Others argue that citizens are entitled to the services of a friendly ambassador in Washington. One thing is certain: such work now consumes between half and three-quarters of a legislator's time.

The social life of Washington has been called frivolous, but much of it is in line of duty. Visitors from home and overseas have information vital to the Congressman's job, and they must be decently entertained. As absence may be interpreted as a snub, a Congressman several times each week must attend luncheon, reception, or meeting.

He must, of course, attend sessions of the branch to which he was elected, and participate in its business. His committee work is of first importance, for Congress often acts on committee decisions with little or no further inquiry. Your average Senator serves on five or six committees, your Representative on three. The more important committees deal with matters of great importance. Somehow your Congressman must cram into his head the salient facts on each of these questions, digest them and arrive at a statesmanlike decision.

Let me hastily add, in the light of certain lunatic performances, that there are committees and committees. Almost any resourceful Congressman or Senator can get a special committee or subcommitee appointed, and use it to ride his own pet hobby. Sometimes this result in outstanding public service, as in the case of the famous Truman committee. Sometimes it end in a wild witch-hunt—and the level-headed majority of Congressmen deplore the fact as whole-heartedly as anyone else does.

The real legislative work is done in the standing committees. It is hard, sober, unspectacular. It absorbs your Congressman's best thought and effort.

Time, in Congress, is always too short. "As a lawyer in public practice," one Congressman said, "I'd put months of study into an important case. Here we must decide issues sometimes after an hour or two of hearings. I'm amazed we do as well as we do."

This murderous pressure of time, combined with the lack of an expert congressional permanent staff of investigators, plays into the hands of pressure groups. To make up his mind, a man needs facts. These the lobbies are always willing to provide. But they are their facts. Members of Congress do not have proper facilities for getting or checking their own facts.

The pace is literally killing. During the past few years we have lost some of our ablest legislators to chronic overwork. Francis T. Maloney of Connecticut, Charles L. McNary of Washington, Pat Harrison of Mississippi, Alvah Adams of Colorado, and Joe Robinson are among the men who have been stricken by the excessive demands of their jobs and their own conscientious efforts.

Unless a Congressman or Senator has an independent income he is chronically broke. Of his $10,000 a year, the Government takes back about 25 percent as income taxes. On the remaining $7,500 he must maintain a home in his State, another in Washington and live in a manner fitting his position. He pays for his own long-distance phone tolls, and for the frequently necessary trips (except for one round trip home each session).

If, through Spartan economy, he gets by, his position is still less secure than that of any other occupation demanding comparable ability. When a man enters Congress he loses contact with the business world. The most fruitful years of his life go to Government service. When they're spent, he has in sight neither a job nor (alone among Government employees) a pension.

This leads sometimes to pathetic extremes. A well-known and respected former Member of Congress was recently picked up by police, apparently drunk. Taken to a hospital, it was found that he hadn't been near alcohol, but was suffering from acute malnutrition. A Member who had served Congress more than 20 years recently died not leaving sufficient funds to ship the body home.

Men who work under such conditions do not do their best. Moreover, there is danger that the Senate will become a millionaire's club and the House a coupon-clipper's lounge, simply because no one else can afford to take such jobs. This would be a severe blow to American democracy.

But while the outlook is gloomy, it is not by any means hopeless. Most of the needed remedies could be applied by Congress itself.

The first group of suggested reforms aims at facilitating the business of Congress as a whole. The committee structure should be reorganized. The present eighty-odd committees (in both Houses) should be reduced to about 30, roughly 15 to each House. Each committee should be planned to coincide with an opposite number in the other House and a major department of the executive branch. This would enable responsible Members of the Senate, the House and the Executive to plan together in each field of government.

Each committee should be provided with its own staff of investigators and other specialists, at salaries that will attract first-rate brains. Part of this staff should be hired and directed by the minority members of the committee, since a vigorous and well-informed opposition is essential to a democracy. The legislative legal staff should be enlarged.

Members of the Cabinet should appear before the Senate and House at stated intervals, and on special request, to report on the work of their departments. These sessions would be to exchange information and not to heckle.

Government outgo should be correlated with Government income. Today one set of congressional committees spends money and another set collects it, with no effective collaboration between the two. Appropriations are voted piecemeal; nobody ever knows our total expenditure until all appropriations bills are in. Joint meetings of committees and agencies concerned with spending money, and those concerned with raising it, would do much to put our national finances in order. Streamlined in organization, richer in facilities and relieved of nonessentials, Congress would soon become a far more effective tool of the people's will.

A second group of proposed reforms aims to unburden the individual Congressman of the needless harassments that now beset him. Tax deductions for professional expenses should be allowed Congressmen, as they are allowed other businessmen. The Civil Service Retirement Act should cover Congressmen. Salaries should be raised to at least $15,000.

President Truman, a congressional veteran, is emphatic on this point, asserting that Congressmen should receive between $15,000 and $25,000 a year. He tells how, as a Senator, he had to make his wife his secretary to assist him and to meet his bills. Though she was a good secretary, neither of them liked this resorting to subterfuge.

Each Senator and Congressman should have an executive assistant who could relieve him of the "errand-boy" functions which constituents demand and expect.

If these reforms are all that is necessary, and if most of them can be achieved by act of Congress, why, it may be asked, hasn't Congress already put them into effect?

There are two reasons. One is the inertia of tradition. People, including Congressmen, resist change. As Jefferson put it, "It takes time to persuade men to do even what is for their own good."

The second reason is congressional sensitiveness to publicity. Early in 1942 Congress did amend the Civil Service Retirement Act to include its own Members. The public, which had never been told the circumstances, was up in arms. Newspapers whipped out at the "outrageous pension grab." Congress, instead of explaining itself, retired to nurse its injured fingers, and for 2 years took no further steps to rescue itself. Members of Congress take pride in their patriotism and devotion to duty. They are now beginning to realize, however, that even patriots are more effective when solvent.

Any economy objections to congressional streamlining are spurious, for Congress, financially speaking, is the poor relation of government. The entire cost of Congress is less than half the cost of the Department of Indian Affairs. The Department of Agriculture has 600 lawyers in its employ; the Senate has 4, the House 6.

For months the Joint Committee on the Organization of Congress, under the inspired leadership of Senator ROBERT M. LA FOLLETTE, Jr., as chairman, and Representative A. S. MIKE MONRONEY as vice chairman, has been receiving testimony. It is my hope that the committee's recommendations will be promptly translated into action.

---

## Universal Military Training

EXTENSION OF REMARKS
OF

### HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. SPARKMAN. Mr. Speaker, on November 18 I participated in the Columbus, Ohio, town meeting in a forum on the subject of universal military training. I include my opening remarks, as follows:

SHALL WE HAVE UNIVERSAL MILITARY TRAINING NOW?

(Opening remarks of Congressman JOHN J. SPARKMAN on Columbus town meeting program, November 18, 1945)

Within our generation the United States has had to fight in two terrible wars. The First World War involved a great part of the civilized world. The one which we have just recently concluded victoriously touched practically every known spot of the globe. Both of these wars were won by the manpower and industrial might of America.

In the First World War we had more than two and a half years within which to take notice and to get ready. Even then we went into that war woefully unprepared.

In the recent war we had more than 3 years from the time of Munich in which to get ready to fight the fire that was coming nearer and nearer day by day to our shores. We went into this war better prepared than in 1917, and yet we were knocked off our balance by the suddenness of the attack on Pearl Harbor and were dangerously near defeat many times after that attack.

Had we been in front of the German blitz, I am not at all certain that our fate would have been in any way different from that of Poland, France, and the Low Countries.

Twice we have been extremely fortunate. Time has been our great ally. We cannot gamble on that being true again. In fact, general opinion seems to hold that the next war, if there is to be one, will come with a suddenness that will surpass that of Pearl Harbor. Most likely we shall never again have 2½ years in which to get ready.

The objective of universal military training is national security. I know that many people argue that other benefits are to be derived from such training, benefits to the boys themselves and benefits to the country as a whole. The fact remains, nevertheless, that these benefits are incidental and that the real objective is national security.

Under a properly conceived universal military training program, we would have at all times a large reserve of our trained young men ready to take their places immediately in case of an emergency and to do their respective jobs in defending our shores, our homes, and our institutions. The long period of training that has heretofore been required by us to put units in the field would be eliminated.

When I speak of units, I do not mean simply Infantry divisions. I mean every kind of unit that may be required to fight in the wars of the future regardless of what weapons we may have or what the requirements for defense may be.

Because of the discovery of atomic energy and the manner of using it for explosives in the closing days of the recent war, many people argue that military training is a thing of the past. I think there could be no more dangerous thing than for people to feel that because we have the secret of the atomic bomb we are safe for all time to come. Such a feeling is one of false security and tremendously dangerous to the safety of the Nation. The same is true of the other extreme. The atomic bomb may change the type of warfare just as did the ironclad ship in its day, the airplane more recently, and the blitz adopted by the Germans to show the way in the recent war. However, scientists best prepared to know do not envision a total destruction of a nation or its people by atomic bombs. Certainly, a nation as big as ours cannot be destroyed at a single blow. We shall need our young men trained in such a way that they can arise to any emergency. It is for that reason that universal military training has now become a necessity.

Much of the distrust in universal military training arises from confused thinking or a lack of proper conception. Many people can see only the old militaristic type of training such as various European nations have used. I certainly agree that that kind of a program will not work in America and I for one would never advocate or support it.

It is my idea that we can work out a training system in this country that will be truly American and acceptable to the American people. To do this, I would recommend the following requirements:

I. A minimum of military control. Of course, the program must be developed in such a way that it will meet military requirements, but in order to steer clear of militarism, which is wholly unacceptable to Americans, the program should be prepared and, insofar as practicable, administered under civilian control.

II. It should be set up in such a way as to provide a minimum interference with the normal life and schooling of a boy. This can be done by making the age for training flexible in order that the boy himself may have a certain option as to the time of taking his training.

III. The training should be integrated with the normal educational program. This can be done without losing effectiveness as to military preparedness and yet in such a way as to prevent the loss of a year from a boy's life and schooling.

IV. The greatest care must be exercised to make certain that sufficient numbers are trained in all of the various skills and techniques of modern war and modern weapons. As a corollary, we must keep abreast of the times in the development of weapons and in the designing of methods of warfare. This calls for continued scientific research

and development. It calls also for the maintenance of a plan of industrial mobilization whereby the great industrial might of America can be converted quickly, if need be, to the production of materials of war.

V. The civilian components of our National Army, that is, the National Guard and the Reserve elements, should be used fully for the purpose of affording a place in which the boys after completing training may fit.

Adoption of a program such as I have outlined does not mean that we are getting ready to fight any nation. As it happens, we are now the mightiest nation of the world. We have made commitments under the Charter of Nations and have agreed to do certain things through the Security Council. The nations of the world looked to us once before for carrying out similar commitments. We failed miserably then. The great nations of the world are wondering if we shall fail again. The only way in which we can convince them of our good faith now is by staying strong enough to carry out whatever obligations may be ours as one of the United Nations Organization and as a member of the Security Council.

I yield to no one in my advocacy of and confidence in the United Nations and the Security Council. I think it is the hope of the world in maintaining peace in the years that are ahead and I am optimistic enough to believe that it can be made to work. I believe, however, that in order to get it started, we must be prepared to back it up with armed force if necessary. The great weakness of the old League of Nations was that no one had power to enforce its mandates.

Many people think that a universal military training program would obligate us forever. My own view is that it need not be permanent. Personally, I look with much hope toward the establishment of a commission within the Security Council with the right of full inspection, not only as to the production of the atomic bombs and weapons capable of mass destruction, but of all weapons of war and with a right to propose to the Security Council a reduction from time to time in armaments. If we can work this out, we can look forward to the time when it will no longer be necessary to maintain a large reserve of trained men. Then, we can do without universal military training. Until that time, however, the safety of the Nation requires it.

It is interesting to read the Gallup Poll on this subject published on November 18, 1945, as follows:

GALLUP POLL RESULTS—MILLITARY TRAINING SENTIMENT RISING

PRINCETON, N. J., November 17.—Public approval of peacetime military training for young men has reached an all-time high.

The latest survey conducted by the institute, covering the period November 2 to 12, finds that 3 out of every 4 persons (75 percent) polled from coast to coast say they approve the idea of a training program.

This compares with 70 percent approval in a poll in late October, shortly before Presiden Truman sent a message to Congress in which he asked for a training bill.

Opposition to the proposal, the survey finds, totals a little more than one-fifth of the voting population sampled. However vocal and articulate, this minority is small, while opinion approving the measure is of even more overwhelming proportions now than it was during the war.

The vote in the poll follows:

"In the future, do you think every able-bodied young man should be required to take military and naval training for one year?"

| | *Yes (percent)* | *No (percent)* | *No opinion (percent)* |
|---|---|---|---|
| Late October | 70 | 24 | 6 |
| Today | 75 | 21 | 4 |

The 75 percent vote today for peacetime military training is higher than the vote in favor of a selective service draft was just before that bill was passed in the summer of 1940. A poll then found 68 percent in favor of selective service.

Today's survey is the tenth in 3 years to find a substantial sentiment in favor of the peacetime training measure. The trend through the years, as shown in polls on a question similar to that reported today, follows:

| | Yes | No | No opinion |
|---|---|---|---|
| | *Percent* | *Percent* | *Percent* |
| December 1942 | 66 | 27 | 7 |
| November 1943 | 63 | 29 | 8 |
| September 1944 | 63 | 23 | 14 |
| December 1944 | 70 | 25 | 5 |
| February 1945 | 69 | 22 | 9 |
| May 1945 | 70 | 24 | 6 |
| July 1945 | 69 | 24 | 7 |
| September 1945 | 65 | 29 | 6 |
| October 1945 | 70 | 24 | 6 |
| Today | 75 | 21 | 4 |

A new survey is under way to test the effect upon public opinion of testimony being heard for and against the bill by the House Military Affairs Committee.

The majority of voters favoring peacetime training—which would involve personal sacrifices for many—have not marched on Washington to present ultimatums to Congress or staged rallies on the steps of the Capitol—any more than did the majorities who favored the selective service draft in 1940, which called for sacrifices while the Nation was still at peace, or the levying of taxes on a broader scale in wartime, or any of the other far-reaching measures of recent years.

It is not the custom for citizens to go down to Washington to demand that they be made to sacrifice. But—and it is an important but—that does not mean they are unwilling to accept what is asked of them.

Two arguments often raised in connection with peacetime training are that it might give rise to a dangerous military caste in this country, and that with millions of trained fighters in reserve the chances of our getting into a war might be increased.

Both these ideas were tested on the public in today's poll, with the following result:

"Do you think that giving military training in this country will result in a group being formed of military men who will try to have too much power?"

| | *Percent* |
|---|---|
| Yes | 21 |
| No | 62 |
| No opinion | 17 |

"If the young men of this country receive this training, do you think the chances of our getting into another war are increased or decreased?"

| | *Percent* |
|---|---|
| Increased | 12 |
| Decreased | 59 |
| Would make no difference | 23 |
| No opinion | 6 |

In commenting on public opinion in a democracy, James Bryce, the historian, observed:

"Such is the din of voices that it is hard to say which cry prevails, which is swelled by many, which only by a few throats."

The function of the institute is to determine what the sentiments of the voting public are. As a fact-finding organization it has no interest in the question of whether a youth training law ought or ought not to be passed.

Another interesting poll was published just yesterday, taken by the Des Moines Register, covering Iowa. It follows:

THE IOWA POLL—MILITARY TRAINING SUPPORTED BY BOTH YOUTHS AND ADULTS

DES MOINES, IOWA.—Compulsory military training as proposed to Congress by President Truman is favored by 66 percent of Iowa's adults and 79 percent of Iowa's 15- to 17-year-old boys, a recent Iowa poll reveals.

About 69 percent—10 percent less than the whole sample—of the youth whose families include World War I and II veterans are favorable to the plan.

The following questions reflect favorable Iowa opinion on compulsory military training:

"Should Congress pass a law requiring military training for all young men between ages 17 and 20, as recommended by President Truman?"

| | *Men (Percent)* | *Women (Percent)* | *Boys (Percent)* |
|---|---|---|---|
| Yes | 68 | 63 | 79 |
| No | 28 | 32 | 20 |
| No opinion | 4 | 5 | 1 |

"Regarding the ages for military training, which would be better—requiring training between 17 and 20 or between 17 and 24?"

| | *Men (Percent)* | *Women (Percent)* | *Boys (Percent)* |
|---|---|---|---|
| 17-20 | 73 | 79 | 82 |
| 17-24 | 21 | 18 | 16 |
| No opinion | 6 | 3 | 2 |

"Under Truman's plan for military training, only those physically disqualified would be exempt. Do you approve or do you feel there should be other exemptions?"

| | *Men (Percent)* | *Women (Percent)* | *Boys (Percent)* |
|---|---|---|---|
| Approve | 66 | 62 | 66 |
| Should be other exemptions | 27 | 29 | 30 |
| No opinion | 7 | 9 | 4 |

"In his message to Congress Truman said we must have reserve strength on land, on the sea, and in the air because of our obligations under the United Nations Charter. Do you agree or disagree?"

| | *Men (Percent)* | *Women (Percent)* | *Boys (Percent)* |
|---|---|---|---|
| Agree | 82 | 86 | 91 |
| Disagree | 11 | 5 | 5 |
| No opinion | 7 | 9 | 4 |

Iowa's opinion on military training is about the same as last June when 65 percent of adults and 77 percent of the youth approved some sort of postwar military training.

## Texas Editor Points to Rank Speculation in Home Prices—Asks for Home Price Control To Tide Nation Over Building Crisis

EXTENSION OF REMARKS

OF

### HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. PATMAN. Mr. Speaker, more and more the American people are crying out against the increasingly wild speculation in the sale of new homes. This indignation has been voiced by many editorial writers recently, but none have expressed it more clearly than the editor of the Bryan (Tex.) Eagle. Under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to insert the following editorial from that newspaper:

NEW HOME PRICES

Admittedly there is danger, for a time at least, of rank speculation in the sale of new homes constructed by builders of a speculative turn. To prevent this Senator ROBERT F. WAGNER, of New York, proponent of much social-security legislation, and Representative WRIGHT PATMAN, of Texas, are reported ready to introduce a bill designed to curb speculative builders' profits.

The position is taken that many returned veterans are in the market for homes, as they go back into civilian life, but are dismayed at the prices asked for these structures—prices so high that they more than tax the ability to pay and so high, also, that eventually they will represent a poor rather than an even fair investment.

There is some control of building materials prices, now coming on the market in larger quantity, and price control on used lumber will go into effect early in November. Until these materials are in a supply more nearly equal to the demand, there is some reason for price control unless there is to be a more or less runaway speculation in this field. But no matter how closely the building material prices are controlled this will not mean any control of the completed home price, as the builder who is in a position to secure scarce materials and finance the construction will be free to ask any price he may decide to ask.

The worst of the situation is that the demand for homes is so great—there has been no new home construction since the outbreak of the war—that in desperation many will scrape the bottom of their resources in an effort to secure a home from which they might not be ordered to move at any time. The fact that rental properties also are so scarce in many communities increases the demand for home ownership.

A fair profit should be permitted for the builders of new homes, but exploitation of a normal desire to own a home as a shelter for one's family should not be permitted. Some such legislation as the New York and Texas solons propose should be regarded in order at least until building materials are in greater supply.

## Navy's Beneficial-Suggestions System Results in Tangible Saving and Increased Efficiency—Encourages Independent Thinking and Volunteer Expression

EXTENSION OF REMARKS
OF
**HON. CLYDE DOYLE**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 19, 1945*

Mr. DOYLE. Mr. Speaker, the great United States Naval Drydocks at Long Beach, Calif., are a most inspiring and instructive place to visit. This short summer recess when I was home in Long Beach I was privileged to be a guest at the great ceremony when the Navy E was awarded the workers of these great drydocks, on account of the surpassing excellency of the workers there employed. Another one of the volunteer bulwarks of efficiency and patriotic endeavor and achievement there is the splendid newspaper which is published weekly and which is distributed without charge to all officers, men, and employees of the United States naval drydocks. This great naval installation is all within the city corporate limits of my home city of Long Beach, Calif. And, needless to say, the personnel there in command and all the employees thereof are a very strengthening and welcome addition to the community life of Long Beach and the other cities and towns in which they live.

The following editorial appeared in the United States Naval Drydocks Digest under date of November 7, 1945:

[U. S. Naval Drydocks Digest, volume III, Terminal Island, November 7, 1945, No. 43. Editorial office, building 151, extension 465. Capt. George T. Paine, USN, commanding officer; Lt. Comdr. W. A. Andrews, Jr., USNR, personnel relations officer; Lt. (jg) Mary V. Wells, USNR, supervisory editor. Staff: Margaret Anne Yandell, Elsie Krohn, Verna Smith. The Drydocks Digest, an authorized Navy publication, is printed weekly at a commercial print shop with appropriated funds and in compliance with SecNav Ltr. EXOS:AD (Pub) WBW:bmcd, May 28, 1945. The Digest is distributed without charge to all officers, men, and employees of the United States Naval Drydocks, Terminal Island, Calif. The Digest receives camp newspaper service material. Republication of credited matter prohibited without permission of CNS, 205 East Forty-second Street, New York City, 17]

The beneficial-suggestions award ceremony to be held at the bandstand Friday when 49 employees will receive cash awards for their ideas is a tribute to the Navy's beneficial-suggestions system. The system, developed during the war period, has proved highly successful and has received such approbation from high Navy officials that it will be continued during peacetime.

Recently Under Secretary of the Navy Artemus Gates, in a statement concerning the Navy's suggestions program, voiced his desire that the submission of constructive ideas be continued, and stated that ideas such as the thousands submitted during the war period will enable the Navy to operate at the highest level of efficiency on a peacetime budget.

Here, at the naval drydocks, an estimated annual savings of $517,550 has resulted from the adoption of suggestions during the period from January 1 to October 31, 1945. During that time, 258 employees have been awarded prize money for their suggestions.

The employees who have received awards have done a great service to the Navy and at the same time have had the opportunity to capitalize on their ingenious ideas.

It is being urged that each employee turn in his suggestions to the committee on awards to civilian employees. Let's hope that the beneficial-awards ceremonies of the future include larger and larger numbers of employees whose ideas have increased the effectiveness of the naval drydocks.

## The Inner Working

EXTENSION OF REMARKS
OF
**HON. MAX SCHWABE**
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. SCHWABE of Missouri. Mr. Speaker, it is interesting to note that Walter Lippmann, who has carried the ball in behalf of the New Deal for 13 long years, now takes occasion to severely criticize the administration. I submit herewith his column appearing in today's issue of the Washington Post.

TODAY AND TOMORROW
(By Walter Lippmann)
THE INNER WORKING

If the President realizes how great is the danger into which he is being drawn, he shows no sign of knowing which way to turn in order to prevent it. The ship of state is adrift upon ever more perilous waters, and, being the captain, he will not avert a disaster by reiterating his good intentions or by complaining that the sea is rough, the storms are violent, the rocks are many and treacherous. The fact of the matter is that there is no navigator, there is no helmsman, and the captain is not setting the course.

For the trouble is at the White House in Washington, and only Mr. Truman can cure it. Whatever the United States can do about the Soviet Union, the continent of Europe, the conflict in China, the disorders of southern Asia, it can do only if the Government in Washington knows how to use the influence and power of the United States. Mr. Truman is not using the immense influence and power which was entrusted to him when he became President of the United States. He is dissipating and squandering that influence and is allowing that power to disintegrate.

As the President is now conducting his administration, there is no prospect whatever of his becoming again, as he was 4 months ago, invested as few men in history have ever been, with the opportunity to shape events because he was the leader of a mighty and victorious people wanting above all things a decent and lasting peace. There is no prospect, as the Truman administration is organized and conducted today, of its recovering the control of the situation. Only a radical change in the inner working of the administration can now prevent the situation which is not under control from becoming uncontrollable.

Mr. Truman's trouble is that neither he nor his chief Cabinet officers, who conduct our foreign relations, are devoting enough of their time, their energy, or their minds to the great issues. They are all very busy men. But they are too busy to think seriously and constructively about the great decisions on which hang the vital interests of their country and the fate of nations.

If this seems astonishing and unlikely, let some energetic reporter collate the facts on these two points: in the past 90 days how many hours out of each day has the President devoted to little 15-minute interviews and conferences with a vast assortment of people? How often and for how long has he conferred with his Cabinet; how often and for how long have Messrs. Byrnes, Vinson, Patterson, and Forrestal—the key men in foreign affairs—conferred with him collectively about our relations with Russia, Britain, China, Germany, and Japan?

The daily diaries of the President and his four principal lieutenants would show objectively and conclusively—I have no doubt whatever—that each is caught in a daily routine of appointments, correspondence, telephone calls, which prevents any one of them from bringing an unhurried and fresh mind to bear upon the great questions. Down below in the departments there are men who manage to find some time to think. But at the top, while there is a good deal of fret and worry, there is really no time reserved for the full consideration of high policy. They are all much too busy with everything but the main things.

The President alone can cure this inner trouble of his administration—this failure to think out the great decisions because individually the top men fritter away their best energies and collectively they do not really take counsel together at all.

The President can cure it, but only by a drastic alteration of his own habits of work. The foreign relations of the Government cannot be conducted by any President—and certainly not by one who lacks background and experience—through spasmodic and hurried contact with his departmental chiefs separately and individually. The cure is obvious. It is to institute a regular daily meeting, lasting as long as may be necessary to finish its business, of the President and his four chief Cabinet officers concerned with foreign affairs, and to decide at that meeting, and nowhere else, all military, political, and economic questions of policy. That meeting should be held every morning until the present developing crisis has been mastered. It should have priority for the President, the Secretaries of State, Treasury, War, and Navy over all other engagements. There is nothing that they have to do, no matter who telephones for an appointment, which compares in urgency and importance with their need to take their decisions together.

Nothing less than this can begin to cure the trouble—no amount of separate conferences with this or that official, no amount of interdepartmental committees, or casual, spasmodic meetings of high officials. Nothing will do any real good except the habit of regular, prolonged daily meeting of these high officials collectively. But that will do good. They are able men: it would be hard to find available men who individually are more experienced or more qualified. But as the administration is now conducted, they are disorganized departmental heads and not statesmen, and their time and the President's time are, measured by their responsibilities, being wasted.

This is the kind of remedy that President Truman, like most of his recent predecessors, will find reasons, sufficient unto himself, for avoiding. It is inconvenient to change a regular schedule and to reform a habit of work. But in the art of government no other remedy is known when a state is in danger except for its leaders to sit in council until they have dealt with the danger and the emergency is over.

Later at least, if the degeneration of our affairs brings us to the crisis which is impending, Mr. Truman will wish he had adopted it sooner.

---

## United States Navy Is Trustee for Morals of American Youth Under Its Control as Well as Physical Well-Being—American People Will Not Tolerate Any Encouragement of Lessening of Emphasis on High Ethical and Moral Conduct of American Sailors—Statement of Policy of United States Navy in Relation to Open Practice of Attendance on Japanese Prostitution Is Demanded

---

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. DOYLE. Mr. Speaker, assuming that many other Members of this great House also have received memoranda in regard to a report of a United States naval chaplain that American sailors are encouraged to patronize the Japanese houses of prostitution I will state that I am immediately sending the following letter to the Secretary of the United States Navy on that subject. The letter hereafter set forth manifestly sets forth some of my immediate thinking in the premises. But I wish to state, Mr. Speaker, that if our great Navy—for any cause—is so little concerned with the manhood, character, and ethical conduct of the American lads in Japan—and other foreign nations—that any of its commanding officers and personnel tolerate, countenance, or approve—either directly or indirectly—such moral filth and degradation as is reported by the United States Navy chaplain—then it is high time that whoever it was who was responsible for such violation of all precepts of American progress and Christian citizens, should be dispelled, and the Nation made to understand that the American Navy does not intend to win the war of powder and shell and then lose the war to maintain decent, clean, morals, as well as physical conditions surrounding its personnel. My letter to the Secretary of the Navy follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., November 19, 1945.*

Hon. JAMES FORRESTAL,
*Secretary of the Navy, Washington, D. C.*

Re American sailors and prostitution in Tokyo, Japan.

MY DEAR MR. SECRETARY: Knowing that you have no doubt been heretofore in receipt of at least one copy of the advices of United States Chaplain Lawrence Lacour about what he saw in Tokyo, Japan, directly relating to the conduct of United States Navy personnel in connection with attendance upon Japanese houses of prostitution, I respectfully ask you to immediately advise me whether or not there is anything substantially inaccurate or incorrect in his reported communication which was printed recently in the Des Moines Register and in the Christian Advocate—and more recently in certain newspapers here in Washington.

Especially will you kindly advise me whether or not it is a fact that it is on order and approval of a responsible officer of the United States Navy that this practice is encouraged and facilitated. I will say, sir, that to the extent to which it is encouraged and facilitated—and to the extent to which it is approved—I strenuously protest such policy by the United States Navy, or any officer or representative thereof in command.

I consider that when the people of the United States are compelled to place their sons and daughters in the custody and control of the United States Navy, or Army, that the United States Government thereupon accepts these young people in terms of an avowed trusteeship. That trusteeship extends at least to the point of a sincere and determined effort to return these young folks to their homes and their Nation not less lacking in moral and ethical concepts of conduct, as well as in good physical and mental conditions.

In other words, Mr. Secretary, the American people place upon the commanders of the armed forces the trusteeship which extends to the morals of the youth who are conscripted for war as well as their physical well-being.

Furthermore, the people of this Nation are about to consider and determine whether or not universal military training shall be adopted as a matter of military policy in times of peace. While it is true that this report comes of this terrible condition being in Tokyo, Japan, and therefore is not on the Continental United States, no doubt you will agree with me that the responsibility for the safety and security of the men and women in uniform extends to their safety and security in foreign lands as well as within our domestic borders. And, inasmuch as one argument given in favor of universal military training in times of peace is the need of having available and trained men in other lands, to keep the peace if need be, it would now appear that what the fixed policy of the United States Navy is, with reference to its trusteeship of the morality of the United States sailors, as well as to his apparent well-being, is a matter of immediate and deep concern to the American people.

I am very sure that the people of America do not think in terms of having any naval officer—or any Government officer or representative—either sponsoring approval or encouraging such misconduct as set forth in terms of deliberate intentional moral turpitude as is set forth by this naval chaplain.

In communicating this letter to you, I do it on two assumptions in which I believe I have a right to indulge in, to wit:

1. That the communication referred to by Chaplain Lawrence Lacour is substantially correct and accurate.

2. That you will know that this communication by me refers to that communication, of which you no doubt already have first-hand knowledge and report.

I do not have in mind that the United States Navy is expected to keep its personnel on a so-called "apron string," but I respectfully remind you that men and women in the United States under age of majority are still children under the law. This fact, then, cannot be ignored—in how or in what manner—the young men of the United States Navy are allowed or encouraged to do.

I am sure some Members of Congress, in addition to myself, have received copies of the letter which was written by Chaplain Lawrence Lacour. No doubt you have, also; therefore, I do not by this letter again communicate to you a copy thereof—as it has been so generally circulated by this time that you must have more than one copy thereof.

Awaiting your very earliest and fullest advices and statement of policy in the premises, I have the honor to remain, sir,

Yours sincerely,

CLYDE DOYLE,
*Member of Congress.*

---

## W. Frank James

---

EXTENSION OF REMARKS
OF
### HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, I rise to announce the death of W. Frank James, a former distinguished Member of this House, on Saturday, November 17, who for 20 years represented Michigan's Twelfth Congressional District.

Mr. James was first elected in 1914 and served continuously until 1934. He was a member and later chairman of the House Military Affairs Committee where he served with distinction. During his service here he was noted for his independence, his devotion to the duties of his office, and his high regard for the Constitution of the United States and everything that implies.

One of his many close friends in the House of Representatives was the distinguished Senator LISTER HILL, of Alabama. At this point in my remarks, Mr.

Speaker, under unanimous consent, I insert in the RECORD a letter I have just received from this Member of the other body who as a former Member of this House served on the Military Affairs Committee with Mr. James, and who through his constant contacts with Mr. James knew of the splendid character and ability of our colleague:

UNITED STATES SENATE,
OFFICE OF THE DEMOCRATIC WHIP,
*Washington, D. C., November 13, 1945.*

Hon. ROY O. WOODRUFF,
*House Office Building,*
*Washington, D. C.*

MY DEAR ROY: At the time of the retirement from the House of Representatives of Hon. W. Frank James, of Michigan, the House Committee on Military Affairs under the chairmanship of Hon. John J. McSwain, of South Carolina, was engaged in the investigation of the procurement of aircraft, ordnance, and equipment by the War Department. A majority of the committee was composed of Democrats. Mr. McSwain, as you know, was the Democratic chairman of the committee. Under almost invariable procedure, the chief investigator for the committee would have been a Democrat. However, the membership of the committee, both Democrats and Republicans, had such great confidence in Frank James, his integrity, his fairness, his fine ability, and his indefatigable devotion, that he was unanimously selected by the committee as chief investigator for the investigation.

As chief investigator, Mr. James did a remarkable job. He put an end to certain loose practices in the War Department, stopped waste, made helpful exposures, offered suggestions of the greatest value with reference to changes in the procurement system, and made many splendid contributions to the procurement by the War Department. I do not believe that any investigation has ever been carried on by a committee of either House of Congress in an abler or more satisfactory manner than the investigation carried on by Mr. James. He won the gratitude of the committee and the thanks of the War Department.

I might say that in all my more than 20 years of service in Congress I have never known a finer, more conscientious, more indefatigable public servant than Frank James. He labored incessantly and with unremitting toil for the public welfare. He was a great servant of the people.

Sincerely yours,

LISTER HILL.

It is needless to say that I and every other Member who knew Mr. James concur in the splendid tribute of Senator HILL. I know every Member who knew Mr. James will join with me in extending our deepest sympathy to his wife and children.

## William Elbert Orr, Home-Front Soldier

EXTENSION OF REMARKS
OF
**HON. KARL STEFAN**
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. STEFAN. Mr. Speaker, someone has said that old friends are the best unless you can catch a new one that is fit to make an old one out of.

I wish to address my remarks today about an old friend. He is William Elbert Orr, the brother of my new friend, Arthur Orr, who has seen so many years of service with the House Committee on Appropriations, of which I am a member.

Elbert Orr was my neighbor for many years in my home town of Norfolk, Nebr. He and his fine wife and their children represent a true American family which was greatly missed when the family moved from Nebraska to California. During my long acquaintance with Elbert Orr, I found that he typified that brand of American neighbor who lingers in memory because of his great faith in the Almighty and his homespun philosophy that "by the sweat of your brow you must earn your daily bread." He came to Nebraska as a contractor, a builder of homes. He had great skill and a determination to do well that which he could find to do. He was known to do his work with enthusiasm, and he usually did things a little better than anyone else could do them.

He was the first-born son of John Henry and Elizabeth Ann Orr, who married and began farming in Fremont County, Iowa, when the Middle West was just emerging from its primitive, backwoods condition, and who had an honorable and glorious part in the hewing of a nation from the wilderness and in the building of one of the world's mightiest inland empires. He was the idol of his younger brothers and sisters, who still regard him as the grandest brother any family of "kids" ever had.

Elbert Orr will celebrate his seventy-fifth birthday anniversary on next Sunday, November 25. Although he was retired from actual work when World War II broke out, because of his great patriotism and love of country he joined the forces of workers in a war plant on the western coast. Even though he was over 70 years of age, he took his place at the side of younger and more vigorous men. For nearly 3 years he performed meritorious work, and during those years missed but 4 days of labor in his determination to stay on the job and see it done.

Mr. Speaker, men like Elbert Orr must be recognized when the final word of praise is given for a job well done. To him and men like him this country owes a great debt of gratitude. As one of his old neighbors, I feel it an honor and a privilege to pay to Elbert Orr this word of praise:

Creation's cry goes up
From age to cheat age;
Give us the men who do the work
For which they get the wage.

## While Labor Asks for 30-Percent Increase in Wages Farmers' Income Will Be 15 Percent Lower in 1946

EXTENSION OF REMARKS
OF
**HON. CHARLES A. PLUMLEY**
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. PLUMLEY. Mr. Speaker, under and by virtue of unanimous consent, I am including as an extension of my remarks an address which I delivered before the Eastern Milk Producers Cooperative Association, Inc., at Syracuse, N. Y., on November 8 last.

The audience I addressed was largely composed of farmers, but there were a few representatives of labor organizations present. It is at the insistence of members of the latter group that I am placing this speech in the RECORD.

They urge the fact that the average laboring man who belongs to a union is as helpless against the racketeers as he would be on a Monday morning with both hands caught in a wash-wringer.

The hope and the safety of America is found in the genuine Americanism of these folks who belong to these unions, tongue-tied only because they have to do and be so in order to work. What a situation in free America! And do not forget it; a great majority of these real American people so subjected to the serfdom imposed by the highjackers and racketeers are about ready to assert their independence. One thing they need is moral support by and from the public and the assurance of a job separated from mandatory contribution to support these people who foment strikes to make money for themselves. That is their language. They told me it was a graft and a game in which the American people are played as suckers. It might be so.

They cheered when I said: "The handwriting is on the wall" and that "labor is at a dead line."

These folks just cannot speak out in a union meeting, but confidentially, they told me I spoke the truth. They thanked me for it. So here it is in toto. They told me I was a real friend of the laboring man. That is good enough for me.

The address follows:

It was made plain to me in the invitation extended that I was not to talk about milk, although I come from a State that has a cow population exceeding in number its citizens. It was suggested that after your several sessions you would be too tired to listen to anything very serious, and I was asked if I could afford a restful 20 minutes to a tired group. What an assignment!

Let me disillusion you now. I am not going to talk about milk or cows. I am going to take advantage of an opportunity suggested by your susceptibility and your alleged tired and weakened state of mind to try to put across a couple of things I propose to make you go home and talk about and give some serious thought to.

It is a psychological fact that absence of occupation is not rest. A mind quite vacant, it is said, is a mind distressed. So, in order to relieve a situation in which you ought not to be or to find yourselves, and of which burden I should relieve you, and in order to improve an opportunity seldom afforded me, I propose to visit seriously with you for a few moments, as nonpartisanly as a Vermont Republican ever can, with regard to a situation which confronts all Americans today.

Your troubles as milkmen and dairymen, producers and distributors, are more than skim deep. Your troubles stem from a disease in the body politic which, if not eradicated or cured by you as voters by the use of the antidote of united action on the part of all 100-percent Americans against the germ of destruction which has boiled out of the melting pot, will result in the death of the once greatest and strongest body politic the mind of man ever had the vision to create. That is no exaggerated statement. The facts

confront you. Can a minority run this Government? Will you tolerate it?

We have gone—or as somebody has said, "we have went"—too d—n far in affording opportunities to groups to come to our shores whose sole purpose has been to disrupt our established economy. It is time somebody said so. They were sent here to do a job. Will you let them do it to you?

So I am going to talk to you about our capitalistic system which these groups deliberately intend to destroy, and I emphasize what you already know—that its destruction is not to be contemplated and at all hazard must be prevented. We will prevent it.

Like you, I am for America and for its form of government because of what it has demonstrated its ability and capacity to be. It has shown the ability of a people, though unprepared and unwisely so, eventually to win a war greater than any conflict in which the civilized world has engaged, and demonstrated the fact that without us the war could not have been won. Nobody can successfully deny our capacity.

The contribution to victory made by the people of the United States of America has so far exceeded everybody's wildest dreams that it is the perfect answer to why our system of government should be preserved and continued.

The victory which was won was only made possible because of the contribution we made, due to our form of government and our desire to be independent. That needs no proof. What has been done is the answer. Of all the so-called democracies which have ever decorated or desecrated the face of the earth, this representative democracy of the United States of America is the only one which has ever survived for so many years and through so many wars as have we.

I do not intend to minimize the contribution made by our allies; yet I still insist that without us and the contribution we made the dream of Hitler might have come true. So why should a hundred million of us Americans let a helpless minority of restless, socialistic-minded agitators run our business? Why should we let the tail wag the dog? Why should we surrender?

If we had the intestinal fortitude and the ability to win a war for freedom internationally, why should we not get together to stabilize such freedom continentally, for ourselves? Why should we let the highjackers and the privateers and the racketeers scare us into submission and inactivity at a time when, if ever, we should fight to preserve our blood-bought liberties? We should organize and unite in our opposition to the communistic, anarchistic, socialistic efforts made by all the un-American groups who would Russianize this Government. And now.

If we could and would only unify and unite, we could almost overnight wipe them off the face of the earth, clean the page of history of the blot of this attempted socialistic revolution they contemplate, and reestablish and guarantee another 150 years at least of such a standard of living as has been enjoyed here thanks to the wisdom of the founding fathers. Are we too weak to do it?

It is time we got busy.

The idea that a minority group of selfish agitators can run your country and mine is too absurd to deserve anything more than our consideration of the fact that we will not allow it, as we get busy to prevent it.

Self-respecting labor leaders and laborers are not for it. They know it spells the ruin of organized labor. They are not for such demonstrations as those to which they and we have had to submit up to date. They need our help.

The situation really is terrible so far as the ordinary laborer is concerned. It certainly is time for 100,000,000 people to assert their independence of an organized group of some thirty millions who jumped out of the "melting pot" to try to socialize our Government and to run our affairs. Unless we do organize and unite, the end of the greatest God-given opportunity man has ever had to be an individual and to live in a Government respecting free enterprise without governmental regulation and interference will have gone. Nobody will be to blame except ourselves.

Believe it or not, it is so. The handwriting is on the wall. It needs no Joseph to interpret it. It is no dream. Either we, the people, will maintain our rights or lose them. The time has come for us to act, to unite, to organize, to fight the insidious octopus which is stretching out its tentacles in order to strangle you and me and all that for which you and I, the founding fathers, and America stand. Do not be fooled. This crowd which is un-American in concept is out to bring an end to the theory that a man has a right to make a profit out of his business. It is out to destroy capitalism.

"No experienced thinker," said the president of the Bridgeport Brass Co. the other day, "seriously questions the right of labor to organize and bargain collectively; no sensible person questions the right and responsibility of management to manage and to formulate policies. Furthermore, labor knows that industry can't hire people at all, much less pay substantial wages, unless it makes profits."

Martin Durkin, president of the United Association of Plumbers and Steamfitters, speaking on the same program, said that while collective bargaining was now accepted "it has not yet received a full and fair trial; the war intervened just as collective bargaining was gaining a foothold in many newly organized industries, and for 4 years emergency Government arbitration took the place of normal bargaining.

"Now that the war is over, the wiser leaders in labor and industry alike recognize the danger of continued Government intervention. It may appear convenient and efficient to have the Government decide thorny questions like wages and working conditions and union security. But the price is too heavy to pay. Nazism and fascism appeared to be efficient, too. But the people of Europe learned that they had to pay for government regimentation with their precious liberties."

So what is capitalism? What does it require?

There should be enough descendants of original Americans—and I do not mean Indians, though we could use a few—to help save America from the pirates of greed who are running organized labor into the hole of innocuous desuetude. The line which real Americans have drawn as the limit to tolerance will soon be reached.

The Smith-Connally Act is disintegrating and now in process of repeal. If the strikes continue and congressional sentiment remains as it is at present—and actually it will grow stronger—the legislation which will be enacted will make the Smith-Connally Act look like a zephyr.

The regulations to be substituted would include penalties to be imposed upon labor in several ways. It would among other things deprive unions so violating the provisions of the antistrike law of their collective bargaining rights for a year.

The bill also would prevent unions from entering primary campaigns, from making contributions or even printing literature to help out a candidate, nor could labor organizations levy assessments on members for political purposes. This would penalize and perhaps outlaw organizations like the CIO Political Action Committee.

While it is true that Congress often acts in haste and repents at its leisure, it may be said that it is more than possible that if the strikes now threatening in the auto and steel industries do materialize and are long drawn out, such restrictive legislation as that to which I have referred would be speedily enacted and enforced.

I hope most intensely that as the result of the management-labor conference held this week some of these very critical questions may be ironed out, but nobody expects all of the troubles can be cured that fast. We cannot expect the conference to accomplish the millennium or wipe the slate clear of all troubles between management and labor at one swoop or to solve the Nation's economic problems alone.

If it establishes the machinery to settle industrial disputes, it will have gone a long way. The difficulties facing the conference are vital and extreme, but the penalties of failure are colossal.

If nothing worth while comes of it, our revolution will be bloodless, but more effective. The pity of it will be that those who should suffer most have already padded their nests. The hoi polloi who have contributed the padding would starve and freeze, except for the fact we will not permit it. That we will not permit it is one of the levers the big pressure boys are using to establish themselves. We had better get busy, and now.

We had better save something while there is something to be saved.

As someone said, and it was put in the CONGRESSIONAL RECORD by Representative RICH, of Pennsylvania:

"Unless capitalism can regain the faith of young America, it will inevitably be defeated by totalitarian socialism. All the strength and power and wonder of free enterprise will avail it nothing if it has lost the belief of thinking Americans under the age of 30.

"How fantastic it seems that the American commies could take over the country. And how fantastic it seemed, 12 years ago, that a funny little man with a tooth-brush mustache could take over Europe.

"Capitalism has got to stop laughing at itself, has got to stop apologizing.

"Using its whole giant machinery of persuasion, capitalism must sell the truth to the Nation's youth.

"Youth must be shown that through its own lack of faith in a free way of life it stands in peril of living in a rationed world.

"Amusingly and dramatically, free enterprise must tell its story to the young people of America—tell it in all the mass-appeal mediums of which it is master.

"Capitalism must create an ideology to tell the truth about itself; a young and vigorous ideology managed, planned, and promoted by young men who are master mechanics in the vast apparatus of opinion and amusement.

"Capitalism has the voice. It has only to find the words."

Why should there be any argument? Are you for or against the theory on which our Government is founded? And have you or do you not have the courage to fight to maintain its fundamental privileges?

It is true we are the melting pot of the world. We are to blame because we have not thrown the scum into the sewage. We have been too kind—but not to ourselves. We have tolerated the un-American activities of a lot of people who might better never have come to our shores, for that they never will be real Americans. They are unappreciative of the benefits they have enjoyed. They are now and for some time have been determined to inject worn-out Old World ideologies into our form of government as against those fundamental principles for which our forefathers fought. They are determined to try to replace them with their own principles, principles similar to those from which our forefathers endeavored to escape many years ago. They just cannot do that to us!

This is a time to call a spade a spade. It is no time to be afraid. It is no time to hide behind ideologies. It is high time for those of us who stem from the stock which

made America what it is to tell those who would make it over just where they get off. We have delayed that action already too long.

It is time to "skim the scum" and hereafter to limit the accumulation thereof to the extent that only those who can appreciate what America means shall be given an opportunity to enjoy what America is. It might as well be said, and it should be.

There is nothing original in my opposition to any attempt to appease minority groups which seek to destroy this Government. Under our system, which is known as the capitalistic form of government, which affords freedom of enterprise and the right of the individual to work for himself, we have saved war chaos, past and present.

The time has now come to save ourselves.

I am an admirer of the stamina of the people of that little island over whose power and authority it was always said the sun never sets, but while I realize and appreciate all they did to make it possible for us to save the world, and I am not forgetful of all that the Russians did to stave off an awful day until we could get into the fight, yet it is true and not to be denied that we saved civilization. Who says that is not so?

It is no great credit to us that we were found, as we were, so unprepared, by reason of our shortsightedness, that we had to have such allies in order to take advantage of such an opportunity which they perhaps made possible. We should see to it as self-respecting Americans, as people of the greatest Republic the world ever made, that we should never again be caught under such obligations to anybody, anytime, anywhere.

Never again should our state of unpreparedness prevent our being ready to demonstrate the fact that we are the world power that God has made us. Great God! Can any American speak any other than such language? We just cannot help the fact that such an obligation is imposed upon us and is ours. Are we equal to it?

Now labor never had any better real friend anywhere, anytime, than I have been, but labor is crucifying itself.

I am not for strikes against the people at any time or anywhere. I am not for the arraigning of class against class at any time. I despise the attempts of some people legislatively to involve us in a world-wide conflict with respect to racial equality. The time for that has not come.

Bigotry and intolerance and discrimination cannot be corrected or controlled by compulsion or proclamation, emancipation, or legislation. The Negroes were emancipated nearly a hundred years ago. For 1,945 years we have been trying to establish the Christian religion in which are involved all the features of equality sought but unattained.

It will take a long while to educate the coming generations. Every attempt to array class against class and race against race by suggested legislation to bring about that equality which only time and education will accomplish is futile and adds fuel to the fire of prejudice. The more fat you throw in the fire the more sizzling you see, and somebody is often burned.

As Louis Adamic says, the pattern of the United States is not essentially Anglo-Saxon, although her language is English. Nor is the pattern Anglo-Saxon with a motley addition of darns and patches. The pattern of America is all of a piece, is American. It is the blend of cultures from many lands woven of threads from all corners of the earth. Diversity itself is the American pattern, is the stuff and color of the fabric.

Or, says Mr. Adamic, let's put it in another way: The United States of America is a new civilization, owing a great deal to the Anglo-Saxon strain, owing much to the other elements in its heritage and growth, owing much to the unique qualities and strong impetuses which stem from the sweep of the continent between two oceans, the mixture and interplay of its peoples, the plenitude of its resources, and the skill all of us—Britons, Irish, French, Spaniards, Scandinavians, Italians, Germans, Slavs, Greeks, Negroes, Orientals; Protestants, Catholics, Jews—have brought here or developed here in the past 300 years.

This is America. I am for America. I am for the American idea. I am for the continuation of our capitalistic system. It has established its right to be considered as the latest but best development of any form of government ever devised by man.

It is time for all real red-blooded Americans who love their country to become aroused to a realizing sense of their individual responsibility. It is time to protect and to preserve this country and its ideals and its ideologies. If we are to save and to transmit the American idea for which credit should be given to the founding fathers, we have to follow after those who are responsible for it. Not to do so is to be traitors and to betray a trust.

I, for one, will not condemn myself to the ignominy of inability to carry on to carry out the plan established by the wise founders of this Government to make free people free and to establish the freedoms and to guarantee the liberties which are the right of all free peoples.

Our forefathers were well-read. They were experienced and they were determined. They sought to establish a government based on the concept and the foundation of the belief in the supremacy, the real equality of opportunity, and the right of the individual; they appreciated the inherent value and the dignity of man. They sought to insure a recognition of the inalienable rights of every citizen and to protect them from subservience to the state. Equality meant more to them and still means more than those who would subvert the Constitution undertake to assert.

I for one do not propose to let my forebears down after 150 years or more of experimentation which has determined the fact that the beacon light they lit for the world still beams.

Due to them, and not to our credit, we have established the highest standard of living for all the people which was ever developed in the history of the world. So far as I am concerned I do not propose to sell it for a siren's song or a mess of pottage.

It is up to us not to take this thing as a matter of fact. It is up to us to get fighting mad in our own behalf. It is up to us to show some intestinal fortitude. Those of us who will not fight for what America means have no business to be in America or to complain if all is lost because we are yellow.

Now, practically, capitalism means production and services for profit. Under such a system individualism and free enterprise are protected and encouraged. We might as well be regimented serfs unless we can work, to earn, to save more than we spend, in order to exist, and in order to support ourselves and our families and the bill for the future. That is what captalism means.

Because of that fact and all it means, we have enjoyed the highest standard of living the world has ever seen or known. Do you want to wreck it? Will you let somebody wreck it? Well, they propose to wreck it and you had better know it now. What are you going to do about it? The time has come for each and every one of us to realize that there is a group that is out to wreck it, and unless you and I and all of us keep on our toes they will wreck it because of our indifference.

Are we going to submit to a plan of economy that will relegate us to the place of regimented serfs, a plan which will destroy all those things which those who have preceded us have enjoyed as well as all those things which those who follow us might hope for, on the basis of the Government established in the wisdom of our founders? Or shall we go on with democracy as we mean it and as we know it, minding our own business, taking care of ourselves while we assume the terrific burden as the greatest power the world has ever known of making sure free people shall be free?

My idea is that we should put our own house in order first, and that we should not, while we undertake to be a Santa Claus to the world in trying to save others, sacrifice our right to save ourselves. How shall we do it?

There is no time here to even outline what needs to be done if we are to master all the problems that confront us but as Lewis H. Brown recently said:

First, we must decide that our Government is going to be the servant and not the master of the people.

Second, we must discontinue Government controls and planned economy devices as rapidly as practicable.

Third, we must create an atmosphere that will reestablish and stimulate the economy of the market place.

Fourth, we must reeducate our people in the principles fought for in the American Revolution.

Fifth, we must enlist every citizen in this effort to maintain our system so that it will continue to increase the standard of living of all our people.

Now you will say, "This is all very exciting and interesting, but what can any one person do about it? How can I, one person, affect the destiny of more than 130,000,000 Americans?"

Let me answer in the words of George William Curtis, who said long ago:

"While good men sit at home, not knowing that there is anything to be done, nor caring to know; cultivating a feeling that politics are tiresome and dirty, and politicians, vulgar bullies and bravos; half persuaded that a republic is the contemptible rule of a mob, and secretly longing for a splendid and vigorous despotism—then remember, it is not a government mastered by ignorance, it is a government betrayed by intelligence."

## You're a King in Arkansas

EXTENSION OF REMARKS

OF

### HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. TRIMBLE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the following article entitled "You're a King in Arkansas" by Judge Robert W. Lyon, which appeared in Coronet magazine for October 1945:

YOU'RE A KING IN ARKANSAS

(By Judge Robert W. Lyon)

Everybody is planning for the postwar future, and the big idea almost everywhere is to get away from the humdrum grind of big cities to the ease and comfort of rural living. Well, it's easier than you think to do just that in Arkansas' Ozarks.

The proof that city folk can make a living in the Ozarks is best demonstrated by the fact that a goodly number of them are already making a living here, and more are seeking locations every day. From close observation and the experience gleaned from 10 years of living in the Ozarks, I list below a number of ways by which a city man can not only make a good living, but some money besides.

If you are fed up with big-city crowding, high living costs, food scarcities, noise, and

dirt, you can escape those things in the Ozarks. If winter winds freeze you to the bone and shoveling snow off the sidewalk gives you a crick in your back, come to the Ozarks. Should you be a retired person with a modest pension that scarcely covers city living expenses, you can sit on the top of the world down here, or if you want to work a little and fish or hunt a lot you can do that in the Ozarks. Just take your choice.

The closest any man can come to absolute security for himself and family is to own a little farm in the Ozarks. I have never seen or heard of anyone suffering the pangs of hunger here. And no one ever will be hungry if he will work half as hard on an Ozark farm as he does on a city job. Forty good acres of land, two milk cows, a hundred laying hens, and a well-tended garden will support a family of five persons comfortably. From such a farm you will have ample pasturage for your cows, and all the milk, cream, and butter you need. The hens will supply your household eggs, with enough left over to buy the family groceries, and the vegetables grown in the garden will be eaten when fresh and canned for the winter's needs. Fuel from the wooded part of your farm is free for the cutting.

For those who may wish to farm on a more extensive scale I recommend sheep raising as a very profitable enterprise. Our soil grows excellent grasses for pasturage and hay, while the mild climate allows the flock to run on range practically every day in the year. The sheep raiser gets two crops per year from his flock, lambs, and wool, and he still has his original sheep. Eight head of sheep will keep fat on the pasturage required for one cow, and a well-cared-for flock of ordinary grade ewes will bear an average of one and a half lambs each per year, for many ewes bear twins. With choice lambs bringing $16.75 per hundred-weight and wool 50 cents per pound, one can readily see the profits are very good indeed. A neighbor of mine who raises sheep successfully informs me that his flock of 150 ewes on 160 acres made him a net profit of $3,375 this past year.

Raising beef cattle for market has long been one of the most profitable lines of Ozark endeavor. In many parts of this region free range is still available so that a cattleman may graze his herd over miles of country the year around. I personally know many men who have grown wealthy running beef cattle on range in the Ozarks and many are still doing it.

A comparatively new Ozark enterprise that is proving to be highly successful is raising special breeds of thoroughbred goats whose milk is made into Greek and Italian types of cheese. This enterprise is conducted by means of cooperatives. Fifty farmers in a locality band together to raise the same breed of goats. All the milk from these herds is sold to the goat-cheese factory which, likewise, is owned by the goat owners. The cheese is shipped to a ready market at high prices and is in constantly increasing demand. The widow of a former Chicago physician is the leading goat herd owner of one such cooperative, as well as being one of its officials.

Poultry raising is always profitable in the Ozarks because of the long summer seasons, mild winters—and, consequently cheaper cost of production. One Arkansas county specializes in the raising of choice broilers. It is claimed that more broilers are shipped annually from this county than from any other area of similar size in the Nation. Driving through this county one sees an appearance of prosperity on every hand and everybody seems to be in the broiler business.

Another crop that brings rich returns, with proper culture, is strawberries. One small area near our farm shipped more than 285 express carloads of strawberries this year, for which it received the price of $7.80 per crate—the highest price received in Ozark history for this fruit.

The price was determined by the Government. Well-tended strawberry patches will return normally from $250 to $500 per acre. A near neighbor of mine has 4½ acres of strawberries growing among the stumps and rocks. He received enough cash from his crop last year to build himself a modern 5-room home. Ozark growing seasons for strawberries come early enough to get them on the northern markets before the crops in Michigan, Wisconsin, and Ohio are ripe. Early berries command the highest prices.

Perhaps you are just not ambitious enough to grow berries and fruits. Well then, the good Lord has you in mind too, for he has blessed this Ozark country most lavishly by having it produce a variety of wild fruit in the greatest abundance. Wild dewberries, wild blackberries, wild grapes, and wild plums make the most delicious jams and jellies to be found anywhere and here they are free, if you will just take the trouble to pick them. I know a man (a former Chicagoan) who conceived the idea of converting these wild fruits and berries into delicious jams, jellies, preserves, and butters for the commercial trade. He started with less than $100 in a small cabin with one cook. He picked the berries himself. In 2 years this man was shipping his products to top-flight food establishments in New York City and Los Angeles and from Minneapolis to the Gulf of Mexico. At no time has he been able to come anywhere near filling his orders.

It may be that you are a mining man looking for new fields to explore. The Ozarks will be an excellent place for you to look. Not 30 miles from my farm is a newly discovered vein of zinc and lead located by a Baltimore mining company. It is claimed that this vein has the largest and richest deposit of these ores ever discovered in the country. The United States Government is said to be shipping in drilling machinery for prospecting on its own account.

Down near Jasper, Ark., I visited a brand new mill that was ready to commence mining operations the very moment the war was over and manpower again available. And did you know that in the State of Arkansas is one of the richest diamond mines in the world? Various types of ore have been discovered in the Ozarks, and this field of mining will take on much life in the future.

How would you like to get into the summer resort business on the absolute ground floor? You can do just that in the Ozarks. The Government has built, and is still building, a number of huge water-power projects down here. A large dam is built across a river which backs up the water for many miles, thus covering thousands of acres of bottom lands.

One such project, located in Baxter County, Ark., is named Norfork Lake. This body of water equals in beauty any lake I have ever seen. It has a shore line of more than 500 miles. It is shaped like a huge octopus whose tentacles reach out hither and yon, following every depression and every former creek bed on either side of the original stream. Nestling as it does in the lap of green-covered mountains that rise in imposing grandeur on all sides, it creates a setting spectacularly beautiful.

This lake teems with game fish—with large- and small-mouthed bass, bluegills, crappies, and others. I can personally attest these facts, having but recently covered the lake in a motorboat and having gorged myself for 3 days on bass weighing from 2 to 5 pounds each. Right now the Government is completing plans for leasing shoreline property on this lake for commercial-resort purposes, under certain restrictions. Climatic gentleness in this area will make this a resort location that may well be operated 9 or 10 months of each year. If you are interested in acquiring a resort location now is the time to act.

There are many other opportunities for making a living in the Ozarks, and the keen observer will quickly spot them. The Ozark area is the last remaining section of the Nation that has been unexploited, but with the ending of the war I predict a steady stream of people will head this way in search of new homes, new ways of making a living, and new and beautiful surroundings.

It is dinnertime now and I see that we are having fried chicken again with hot buttered biscuits and country gravy, new potatoes, creamed new peas, tomato and lettuce salad covered with chopped hard-boiled eggs and topped with plenty of homemade boiled salad dressing. Dessert will be wild blackberry cobbler covered to a depth of 2 inches with rich cream from our registered Jersey cows, and the whole washed down by copious glasses of ice-cold Jersey milk. In the center of the table is a brick of homemade butter, churned an hour ago from more Jersey cream. All the items on this menu are grown on our own farm. Tomorrow we'll have either breast of guinea hen or roast duckling or perhaps a couple of juicy squabs. We raise them all. Ah, me, city life must be terrible.

## The Suribachi Flag

REMARKS

OF

### HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. HINSHAW. Mr. Speaker, I would like to call the attention of the Members of the House to a letter concerning the Suribachi flag, which I am placing in the Appendix of the RECORD today.

The gentleman who wrote this letter, Lt. Alan S. Wood, of Pasadena, Calif., was communications officer on the U. S. S. *LST 779*, and it was he who furnished the flag to the Marine Corps which they raised over Mount Suribachi on Iwo Jima. It is one of the most beautifully written letters I think you have had the pleasure of reading and I commend it to your attention for reading in the RECORD tomorrow morning.

## A Proposed Peace Plan

EXTENSION OF REMARKS

OF

### HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, a very prominent constituent has forwarded to me a proposed peace plan which he has entitled "A Divine Command Regarding the Transformation of the World Order." It is indeed a novel and interesting exposition of a plan of world peace and, under leave to extend my remarks, I am inserting it verbatim:

Preamble: What became of civilization—the horror of war-suffering humanity all over this world—and when it is all over, what? The same old story? I hope not. But in God only can we trust.

He gives to the world this plan for a permanent peace.

God made this world for what is known as five continents. Let us have it that way. Only five nations, with the freedom of seas and equal opportunity of commerce, each to be unarmed, except to maintain a small militia. Possessing unity, the Universe will have peace; divided, it will ever face deceit, greed, and destruction.

A WORLD LEGION OF PEACE AND DEMOCRACY

We shall set aside the month of May as a period of time each year in which to promulgate world peace and democracy, and to honor the mothers who gave their sons to free the world—the Blessed Mother as I believe gave her Son for the same cause. He gave His life on the cross for the sins of the world.

A convention shall be held within the month of May, each year in a different part of the world, to foster constantly the cause of brotherhood toward men; to give thanks to God, our Creator, and to commemorate those who gave their lives in this world war and to dedicate their actions to the cause of world peace and democracy and of the freedoms of humanity: Religion, speech, and from want and fear.

ORGANIZATION

As a distinct organization, it shall operate as a function of all interested national organizations.

Our organization shall be headed by the President of the United States of America, as honorary president.

Our national committee shall consist of the heads of all national organizations—the heads of their State and local organizations to account to them for their respective memberships.

Other local organizations may take active part, so that the gospel of peace is preached to all. Although some people believe not in God or war, still when war has come, everybody is affected.

OBJECTS

1. The main object is to establish throughout the world the principles of the four freedoms, the cause for which we understood this present war to be fought.

2. This organization shall do everything possible to create a workable plan for world peace, making for world order and the peaceful settlement of all international controversy, and the permanent blacklisting of war, as it is man made and man can stop it.

3. To accentuate the tenets of democracy, so that the right shall be vested in the people to take part in national and world affairs—to foredoom dictatorship.

4. To introduce into schools the study of world peace, so that an understanding of the beauty of peace and the horror of war may be engendered in the mind of youth—an ideology to be nurtured with age and growing intelligence and to eventually materialize into permanent action.

5. To be constantly aware of this world peace plan, received by the State Department in Washington, D. C., on March 2, 1945 (file OA500 CC/3-145) as the result of a divine manifestation, which has served to awaken me to the need of an organization such as I herewith am introducing to the world.

PROPOSED PROCEDURE OF ORGANIZATION

1. Meeting of all local national organization representatives and form a local committee.

2. Each national organization to call their State chairman to meet in Kenosha with the committee.

3. The State chairman to send to their national president this plan of proposed organization for their approval.

4. Upon receipt of their approval, the local committee shall designate a temporary national committee, they to call a meeting of all national presidents.

5. At the meeting of the national presidents, they shall elect the national officers.

6. They, in turn, shall carry the organization first within our Nation and then through the world.

CONCEPTION

On the morning of November 1, 1944, at 2:20, while I was sleeping, a voice awakened me, saying: "You are chosen as an apostle of peace to write a plan, the preamble to be in words and music.

"The world to be only five nations: North and South America, each to be one nation; Europe, North and West Africa, all to be one nation; South Africa for the black race; and Asia for the yellow race. Three nations for the Caucasian race, two for the colored races.

"I set up the Christian religion in Rome, the place for future world peace in North America.

"When your plan is complete, go to the veterans' organizations and all other national organizations and the war mothers. They will help you for they all know the horrors of war. Go to Congressman SMITH, of Racine, Wis. He will work for the plan.

"The United States of America to have domination over Italy and its colonies, and to have all the bases that she now holds or will occupy, until this plan is put into operation.

"The world to have one universal language, based chiefly on the Italian, that God's will, it shall be done."

While all this was being said, there was a visitation of God in the form of a statue, its lips moving as a live person.

On the morning of November 23, at 5 a. m., while I was sleeping, a voice said: "You have not started on your mission. Are you afraid? This is the will of God. None of my apostles were kings; the Blessed Mother is your guide."

On November 23, 1944, I wrote this plan, and on December 27, 1944, I went to Congressman SMITH.

On the morning of December 29, 1944, at 5 a. m., a vision of a woman appeared and said. "I am the Immaculate Conception, your guide. You feel confused as to how you would set up the organization to proceed with the plan for future world peace. The United States of America Government will call all nations to a conference to work out with them this plan. When the plan is approved, a temporary organization, composed of all the present nations, will establish the five nations' boundaries and their temporary governments and the first World Congress, Senate, and the Court, according to your plan, will be started.

"State all that has been said to you as part of the plan. As soon as this is done the world struggle will end."

PLAN FOR UNITED WORLD IN FIVE NATIONS

The five nations to be a democracy, chiefly on the pattern of the United States of America Constitution; each to be divided into 100 states, each free to elect their national and state officials. Each state to have one representative and one alternate to a world congress. Also one representative and one alternate to a world senate. Only the world congress and senate would have an army to police the world and to preclude any nation from building implements of war, except upon sanction of the world congress and senate for the world army.

Each nation to furnish the same number of officers and enlisted men to be stationed the world over, on land and on sea, to protect all alike, according to the international law.

The world congress and senate would appoint a commander in chief and a vice commander in chief for the world army from the personnel of the world army.

On the request of the government of any nation to the world congress and senate, the world army would take over that nation for the period of the emergency. The world congress and senate would enforce the policy whereby each nation would be free from outside interference in its election of national and state officials; would have the supervision of all international airways and harbors, collecting from all outgoing and incoming international commerce so that 75 percent of the costs of maintaining the world army and the expenses involved in all other international affairs would be paid therefrom; 25 percent to be paid by each nation.

A world bank: The capital to be furnished from the five nations; the world congress and senate through this bank would regulate the currency so that all of the five nations would have a fair and just standard of living.

The World Congress and Senate would set up the world army, bank, the universal language, and effect the relocating of the black race and the yellow race to their respective nations, and establish a permanent seat for the world government, somewhere in North America.

The World Court: Each nation would send five justices. The duty of this court would be to approve all acts of the World Congress and Senate, mindful of the international constitution, and to take final jurisdiction in all matters concerning international law.

Language: Each nation may retain its present language or languages; but the entire world to have one universal language, based chiefly on the Italian, presuming because of its kindred relation to music, understood universally. Basically, the universal language would be restricted to the use of the most common simple words.

AN APPEAL

My brothers in God, in considering future world peace, do not forget the Ten Commandments.

United, the world will prosper in peace; divided, will have the horrors of wars again and again.

The United States of America, as a nation, is a shining example of the benefits of unity. Had it lacked unity, it could very well have been the bloodiest battlefield of the world.

I beg of the human race to think of this plan very sincerely, putting all selfish thoughts aside. We are not going to stay on in this world forever.

My only son has been killed over the Ploesti oil fields, in Rumania. He died May 5, 1944, while serving with the United States Army Air Forces. If he were living, I would not desire him to be even a king of any nation under the present or past conditions of universal deceit and greed.

I appeal especially to the members of the colored races who are born or have been living where peoples of the Caucasian race are in the majority. Although by law you possess the same rights, are you able to exercise them? You would be much better off with members of your own race making up one free nation, with equal opportunity in the united world.

Let me truly state the firm belief that I have in this plan supplants all my worldly concern.

1. That it has been given to the world by the will of God. Because I have had a very limited education, I could not so write and arrange this plan.

2. I further believe that the will of God has been toward this for many years. The forefathers of the United States of America got their successful ideas in forming this Union by God being with them to show the world what could be accomplished by unity. God stated to me that the place for future world peace is to be North America.

3. That this horrible war and destruction of the world is to bring the human race to a realization of our sins. Now, therefore, the need of a total world unity to escape the recurrence; and that all the transformation of the world order is to be done at one time by mediation of all the nations.

History tells of God's warning: It was to be expected, before the great punishment of God would come, that our Lord and Saviour,

through his church, would give some striking warnings. Did he do so? Indeed he did.

His representatives on earth, the different Popes, have given to the world a number of special encyclicals, warning the world of the dangers of the false teachings which would lead to modern paganism, with its sad consequences for families, societies and for nations.

They demanded reconstruction of social order that capitalism must give to the laboring classes a just, Christian deal.

They reminded the world of the sanctity and the dignity of matrimony, of the purpose and need of Christian homes which are the foundation and the pillars of a healthy, strong nation.

They condemned immorality in picture shows and in literature which undermines not only the morals of youth but forced the curse of Heaven upon nations. The church of Christ warned not only the world, she also offered sure remedies to overcome the evils of the world.

Other warnings: In 1823, the mystic Catherine Emmerich, in one of her ecstasies, got a warning for the world.

"I hear that Lucifer shall be set free for some time, 50 or 60 years before the year two thousand after Christ."

Stop, think, do a little figuring, and then you will also do some serious thinking.

Twenty-five years later, in 1848 Karl Marx began to poison human society with satanic, Godless principles out of which grew communism, Hitlerism and all other devilisms which rebel against God and try to undermine and destroy Christianity. What fools they are! Have they never heard of the divine promise and guarantee of our Lord, that even the gates of hell will not prevail against His church? Does 2,000 years of history not teach them that no earthly power can destroy a divine institution?

In 1858, our Lord sent His beloved mother, the refuge of sinners, the help of Christians, from Heaven upon earth to warn the world.

But the proud world ignored all warnings. They acted as the people did in the days of Noah's warning, they did not want to hear. They wanted to live their own lives, they ate, drank, and danced, having good times until the sudden flood made an end to their Godless lives.

4. Why five nations? Why did I get the inspiration of 100 states to each nation, and 1 representative to the world congress and 1 representative to the world senate? This would give the human race in every part of the world a democratic representation in the world's affairs by a person of their choice.

5. I am not an expert on world affairs, but the taxation of all outgoing and incoming international commerce would satisfy the cost of maintaining the world's arms and all other international expense. A just portion would be paid by each nation according to their outgoing and incoming commerce.

6. Why this universal language, as stated to me in this vision? That in itself will bring humanity more closely together and so to live in peace with themselves and the creator of life. The former peace treaties were made with self-interest and greed, as it was in the peace treaty of Versailles, concluding the last World War which was to end all wars.

Wake up, America. Do not let it happen again. We have been mobilized for a total war, now lets organize ourselves for total peace. Now is the time to do some serious thinking. Most of us are affected by the world struggle, especially those of us that have received the grim message from the War Department.

The future world peace plan is in the making for good or evil. If based on God, love, and laws, it will last forever; but if based on selfishness and greed all of the sacrifices of winning the Second World War are in vain.

Abraham Lincoln: "United we stand, divided we fall." How true it is. If the human race continues to allow each group to have an army at their disposal there will be no world peace. Do something for the future peace of the world. Write to our State Department, Washington, D. C., in your own way or in support of this God-given plan.

O, God of love, make wars throughout the world to cease. Let righteousness and justice reign.

Fellow Christians, let us, too, remember the Lord's Prayer.

Sincerely yours in God,

LOUIS C. GENTILE.

## Navy and War Shipping Administration Using Ships To Bring Boys Home—But Not Enough Ships and Too Many Boys for Ships—Parents Should Know Ships Are Being Used

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. DOYLE. Mr. Speaker, several times recently on the floor of the House I have heard some distinguished Members thereof, directly and indirectly, criticize and condemn the Navy and War Shipping Administration, in fact, inferentially the Commander in Chief, and the administration of this Government, for not using ships to get the boys home. So I made it my business to try to find out how many ships were in use for this purpose, and herewith set them forth. This is for the further information of the Members of the House and any other readers.

In the Atlantic service there are 47 passenger liners, 217 converted Liberties, 87 converted Victories, *Queen Mary*, 8 large and small aircraft carriers, 1 battleship, and 6 cruisers being used.

In the Pacific service they have 164 passenger ships, 4 large and small aircraft carriers, 6 battleships, 21 cruisers, 165 transports, 13 hospital transports, and 24 miscellaneous ships, and in general service there are 29 passenger ships.

War Shipping Administration has only two passenger ships which are not carrying troops and they are ancient coastwise steamers which would not be safe for ocean crossing. There is 1 British ship, 1 Norwegian, and 15 Dutch ships being used as troop carriers.

## Freight Rates and Wages

EXTENSION OF REMARKS

OF

### HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an interesting and thoughtful article by David E. Lilienthal, Chairman, Tennessee Valley Authority—TVA—on the relations of freight rates and wages. The article appeared in the magazine Ammunition for November 1945. It is as follows:

On May 15, 1945, the Interstate Commerce Commission issued an order that seems destined to have a far-reaching effect on the economic history and development of the United States.

On this date, the Commission ordered that a key group of freight rates be revised before the end of the year in order to bring closer to parity the freight rate levels in all the regions of the country east of the Rocky Mountains and laid the basis for eventual full parity of "class rates" throughout this entire area.

TO ELIMINATE "COLONIAL AREAS"

Thus a step was taken toward wiping out one of the artificial barriers which businessmen and officials in the South, and in other territories outside the Northeast, have long felt militated against the industrial development of these regions and have resulted in maintaining them as "colonial areas" of relatively low incomes. The order places manufacturers in the South on a more even footing with those of the Northeast, where industry has long been concentrated, in reaching markets which frequently are no farther away from southern centers—and often even closer to them—than from similar manufacturers in the Northeast.

The movement toward parity of freight rates can be viewed with alarm only by the few with little faith in America—those who believe that the country is not going on expanding and demanding, as time goes on, more goods and services which can only be supplied by increasing the total productiveness of the country. To a few, the encouragement to the development of industry in the South and other regions of the United States appears as an invitation to existing industry in the Northeast, where manufacturing has long been concentrated, to migrate to other regions. But any misguided efforts along these lines would be lacking in constructiveness, for a moving of existing plants would add nothing to the total productive enterprise of the Nation; and they are based on the false assumption that America is through industrially; that one region can gain only at expense of another.

But these are clearly narrow views of the case, particularly in view of the fact that all over the Nation today people are talking in terms of an expanding economy, of full production. This must mean more and larger manufacturing plants in all sections.

No region, economically speaking, can live to itself alone. If the people of the South prosper and raise their standard of living, if new industries based on new capital and on the South's resources are established and grow, if the land is made more productive and more secure against erosion and wasting—in short, if the general economic level of the region is raised and maintained—then the rest of the people of the country benefit. If the people of the South raise their economic level, then they have more to offer the rest of the country in terms of goods and services and also, by reason of their increased income, they have more money with which to buy the products and the services of other sections of the country.

Curiously enough, this fact is recognized on a world-wide basis, often by the same people who see in the development of low-income areas of the United States a danger to the more highly developed area in terms of industry and commerce.

A few months ago, a great American business leader returned after a trip through Soviet Russia to write with great enthusiasm about the potential benefits to the United States of continued Russian industrial development. He clearly saw that in the development of a Russian market for American goods lay an opportunity for America, and

he strongly recommended liberal American credits in order to speed up this industrial development of a far-off country. He is far from being alone in advocating this course.

And such a course has become national policy through the decision of Congress to participate in the Bretton Woods plan for the development of countries all over the world which, by increasing the development of their own natural resources and the skills of their people, will raise their incomes and standards of living and thereby make them better customers for goods produced in the United States and better contributors to world prosperity. Under the Bretton Woods plan, the United States becomes the heaviest contributor of funds to be loaned for such developmental purposes.

The same theory extends with equal if not greater force to regions within the United States; if the development of industry and higher standards of living in Soviet Russia, China, India, and other economically retarded regions is in the interests of the United States, as it undoubtedly is, then it follows that similar growth in the undeveloped regions of this country is also in the national interest.

AWAY FROM A RAW MATERIAL LOW-WAGES ECONOMY

Parity of freight rates for the South is a step toward such a development, for it will help open the way for the region to undertake to a greater extent the processing of its raw materials into finished or semifinished products with the consequent higher income and higher wages which such activities command. In other words, freight-rate parity is a step toward shifting the region away from the extractive, raw-materials economy, in which most of its effort is devoted to getting out timber, minerals, and other resources.

As the TVA pointed out in a report to the President and Congress in 1943, entitled "Regionalized Freight Rates: Barrier to National Productiveness":

"More abundant contribution by the South and West most definitely does not require a geographic redistribution of existing factories * * *. Hence there is * * * no real issue of region against region * * *. Every part of the country will benefit."

It should be made clear also that every segment of the population will benefit also, that labor will find its income, both individually and collectively, increased by the stimulation and growth of industry. Generally speaking, the wages in the extractive industries which provide the raw materials are not as high as they are in the manufacturing industries where higher degrees of skill are required with resultant higher earnings.

By the same token, wage earners who are paid relatively lower wages for their work in providing raw materials only do not have the buying power with which to purchase automobiles, radios, electric stoves, and countless other items. Higher labor income in the South means greater markets for the goods manufactured in all parts of the country.

The situation, which the changes in the freight rate structure are aimed at eliminating, is perhaps best pointed out by specific example. A stoker manufacturer at Gadsden, Ala., would in the past have had to overcome a rate handicap of $1.60 per stoker in shipping his product to Wilmington, Del., as compared with a Chicago manufacturer shipping to the same place, although the distances are approximately equal.

Ready-mixed paint produced at Montgomery, Ala., would have to overcome a rate handicap of 5.27 cents per gallon in competition with paint made at Peoria, Ill., in order to compete in the market at Baltimore, Md., which is about the same distance from both places. An electric refrigerator manufactured at Birmingham, Ala., would in the past have had to overcome a rate handicap of $1.31 to Battle Creek, Mich., as compared with a shipment from Philadelphia, Pa., about the same distance from the market.

Such unfair differentials, not justified by variations in the cost of providing service, have been one of the factors which have tended to discourage the development of manufacturing and industry in the South. And in cases where manufacturing has been undertaken despite the handicap, it is apparent that the difference had to be absorbed in one way or another—in lessened profits or lower wages.

In the above examples of freight-rate handicap, if the difference had come entirely out of wages they would have been reduced 6 percent in the case of stokers, 44 percent in the case of paint, and 9 percent in the case of refrigerators. If profits had absorbed all the difference they would have been reduced 12, 51, and 16 percent, respectively.

Liquid capital is more mobile than labor and therefore has more choice of location and kind of employment than labor has. For this reason it seems safe to say that capital, knowing the freight rate handicap, would not undertake to absorb it, but would either make sure of passing it on or locate in a more favorable place. Certainly, the consumer would not be expected to pay a higher price just because of the higher freight when he could buy goods shipped at lower rates. In these circumstances the burden would fall on wages and in this way the freight rate handicap of the South and West probably has contributed to differentials between northern and southern wages.

The freight rate order of the Interstate Commerce Commission is a hopeful sign, among other hopeful signs, that the South is on its way toward the development of its resources in a way which will raise incomes toward a parity with the rest of the country—making it a better market both for goods produced in its own plants and for those produced in other sections of the country.

The Nation has been made stronger in war due to the developments in the South; it will be stronger in peace, more productive and more prosperous. Parity of freight rates will help encourage the South and other industrially undeveloped sections to achieve higher standards of living and thus contribute to the national peacetime progress.

## Expediency the Rule for Action

EXTENSION OF REMARKS
OF
### HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. KNUTSON. Mr. Speaker, on a recent visit back to Minnesota I was impressed with the fact that an increasing number of our people are becoming interested in the Government, more particularly in the executive and legislative branches. They are at a loss to explain to their own satisfaction many of the things that are being done in the name of "expediency," which is fast becoming the rule for action. Under permission granted by the House, I desire to insert in the RECORD two letters, one from Charles W. Briggs to myself, the other from E. R. Hicklin, a prominent attorney living in Wapello, Iowa, to Mr. Briggs. I may say, for the record, that Mr. Briggs is one of Minnesota's outstanding lawyers who is also unusually well versed in government:

ST. PAUL, MINN., *October 3, 1945.*

Hon. HAROLD KNUTSON,
*House of Representatives,*
*Washington, D. C.*

DEAR HAROLD: I enjoyed my visit with you while I was in Washington. While there I embraced every opportunity to discuss problems that are uppermost in the minds of people today. I have been reading in the CONGRESSIONAL RECORD and in the printed reports of various committee hearings repeated references to the "little man" or the "little fellow." Perhaps I have the curiosity of a philosopher, but at any rate I cannot refrain from meditating upon the reason for such emphasis, and where it will eventually lead us.

If this emphasis springs from a motive to give every man his due, that is one thing. If it foreshadows a movement to afford preferential status to smallness, that is quite another thing. There is a vast difference between freeing the roads of life for the development of individual potentialities and routing traffic for the benefit of inefficient jitneys, no matter how much the movement of efficient vehicles may be blocked.

If this emphasis has as its objective permitting little men to grow big, or as big as they can, the purpose is certainly laudable. If it is to keep open the portals of opportunity, it is entirely justified. If it is to maintain a society in which the abilities of every citizen, big or little, shall have a chance to develop and claim a just and fair reward, it should receive universal approval. If it is to dissolve monopoly and unearned privilege, we may all say "amen." If it is to release every citizen from the exertion of power in any form that stifles hope and individual initiative and promote rewards commensurate with meritorious service, again we say "amen." If it is to nourish freedom of choice of a calling in life and opportunity to pursue it in fair competition, no amount of attention to the "little man" can be criticized. This is the very essence of sound enjoyment of life.

But if the aim is to equip the doors of opportunity with a lot of governmental door checks and trick locks to the end that inability and weakness is exalted above excellency and strength, an examination is certainly in order. Here sentimentality must not obtain mastery, and the stark realities and facts of human experience must be boldly faced. We cannot deny the existence of human inequities. Indeed, we cannot deny the inherent disposition of mankind ultimately and finally to demand and accord rewards proportionate to the value of services performed. Appraisement of value cannot be made by exact formula, but it is nevertheless made, and we cannot and do not ignore the fact that a man's earnings and accumulations in the long run are one test of his abilities. No amount of artificial regulation or manipulation can long prevent the appraisal of human character and worth. In truth, this appraisal has gone on through the ages. Envy and prejudice have impinged upon the process of judging a man's worth, but never have these traits obliterated the individual desire to get along and at the same time to give due credit to the man who does. Demonstrated ability and earned success have been constant parts of the scheme of things from the beginning. It has always been recognized that a man gets out of life what he puts into it.

Competition has always been the life of society—it is life itself. Men have been picked for their faculties, their prowess, their acumen—their ability to carry the ball. By and large they have advanced accordingly. How long could athletic games survive if the "little men" (speaking in terms of comparative abilities) were on the team, and the

"all-Americans" were on the side lines? How long could our marvelous industrial machine function if top men, specialists, and executives with the know-how were relegated to the assembly line, the mine, or the forest, or if left where they now are, their rewards were reduced to those of others with lesser capabilities? In the field of education, how long can excellency in training be maintained if competent educators are paid less than the janitors of the buildings in which they serve? The whole course of nature, evolution, and progress is based upon competition and the rewards that come to superior qualities.

But we hear it said that the aim is to raise the standards of living of the "little fellow" with no purpose to handicap his more capable brother. But what is actually going on and being proposed belies that statement. All disclaimers to the contrary notwithstanding, the tide of collectivism is running in this country. It is manifested by erection of barriers to opportunity, by discriminatory taxation that saps the strength and resources of those who fashion the wheels of economic and cultural progress, and by various devices to level off incomes and property holdings. No amount of rhetorical phrasing can disguise the fact that the plan to be pursued is an arbitrary and artificial distribution (or redistribution) of the total national income, regardless of comparative earning abilities or contributions. Where this will lead ought to be no mystery. It will lead to the discouragement of individual effort and the destruction of private property. Even before this leveling process is complete we shall have ushered in an authoritarian state.

The present plan seems to be to siphon off the avails of superior effort by ever-increasing wages and progressive taxation so arranged that incomes below $4,000 pay little or no taxes. Where, then, does the burden of taxation fall? Principally upon the middle-bracket earners, among whom are found the managers, the specialists, and the men who design and speed the whole industrial structure. Among these are also the men of science, of the professions, and men of small business, seeking expansion.

If this plan is followed, eventually the source of income taxes will be dried up, as the inevitable result of increased cost of doing business and the destruction of the will to persevere.

Scant attention seems to be paid to the principle that although a laborer in any field is worthy of his hire, giving him more than he is worth in the end destroys his usefulness. Gving him less comes to the same end. Mr. Stalin found out in the most advanced socialism of today that he could afford to pay men only for what they could do, and no more. While we do not subscribe to his coercive methods, it is fair to say that he probably saved his regime by paying people what they really earned. Acceptance of a principle is what is being pointed out. But we seem bent upon ignoring the teachings of painful experience. We seem determined, by a system of steeply progressive taxation, elaborate Government spending, and muzzling competitive effort, to erect arbitrary and artificial rewards for work done or not done. We are perilously near beginning to think that accomplishment is its own reward. In a practical world that is indeed unsound enough, but when we undertake to reward the lack of accomplishment we are on the brink of destroying the very basis upon which society must rest. Getting something for nothing corrodes and corrupts and demoralizes.

Favoring people merely because they are "little fellows" to the detriment of other people merely because they are big is a policy no society can adopt and long survive. Nothing but a dictatorship could enforce such a policy, even for a time. In the end, the unfairness of it, the inherent antipathy of mankind to it, will break it down, and people will again start back on the road to competition and life as it was meant to be lived.

There is manifest in certain tax proposals, including those of Mr. Vinson, ultimately to lift direct tax burdens from those whose incomes are less than $4,000, or reduce them radically, and to repeal most, if not all, of the taxes on corporate income. Scant concern is exhibited for individual incomes above $4,000 that are personally earned. The effect is clear—the burdens on this latter class must remain. There will be no opportunity for savings. These disproportionate burdens are cast upon middle-class earners who are not in the wage class, and not in commercial production, where the advantages in our economy apparently are to be conferred. It seems to be the intention to inflate the costs of living and of business which members of this class cannot escape, and coldly to require them to remit their balances in the form of taxes. They have no recourse for recoupment. These people are consumers, and the process seems to be to shift to them a killing load of the total cost of society. Any tax law, now that the war is over, that does not give at least a tax reduction of 20 percent across the board, is a rank discrimination against these personal earners. If existing accumulations of capital are rendered secure, even though taxes on the gains thereof are considerable, and it is made impossible for competent earners in our economy to accumulate any capital, no words are needed to portray the injustice and inequity done.

Personal abilities are a wasting asset. What can be the urge to expend them for nothing? Take away the incentive to earn and get ahead in productive years, and the mainspring of our system is destroyed. Mr. Stalin said he had to "liquidate a whole generation." Is that what we propose to do, or do we propose to permit the strong indivdual to enter in the race without hobbles and to enjoy whatever premium he can fairly win—in this generation and in the generations to come?

Shall we be able to say to our child as of old: "He rejoiceth as a strong man to run a race"? or shall we train him to say: "What's the use, I will get something anyway"?

This is a long letter, but I have strong feelings on the subject, and I know that an increasing number of people are intensely interested. In it is a note of frankness, but is it not a time for frankness in both thought and action?

With kindest regards, I am,

Sincerely yours,

CHARLES W. BRIGGS.

---

WAPELLO, IOWA, *November 13, 1945.*

Mr. CHARLES W. BRIGGS,
*First National Bank Building,*
*St. Paul, Minn.*

DEAR CHARLES: Thanks very much for your letter. I like to hear from you because your letters are so stimulating to thought, and I want to answer you right away because you have crystallized something that has been working in the back of my mind for quite a while. I should see you more often because your thoughts are always helpful.

I believe that the fundamental disease of the American people is that they have yielded to doctrine of expediency. Unless this is stopped it is a cancer which will destroy our Government. As you point out in your letter we are ready to discount expedients which are arrived at on account of war. Yet it is one further step to magnify other crises to similar proportions and to use them as excuses for expediency.

It occurs to me that we can cover the whole governmental illness which has descended upon us since the thirties in this category.

I myself sat in the aisle of legislature and saw passed act after act of revolting law which was made appetizing by the fact that it was called emergency legislation. The emergency never ceased. From higher and higher places of expediency came the excuse for departure from established principles of law and government. You are familiar with the decisions of the Supreme Court of the United States which were justified on the grounds of expediency. The whole New Deal philosophy was one of expediency. Bankrupting of the Government, the recognition, growth, and eventual triumph of labor racketeering was the result of expediency. I am not so sure that it has not pervaded our churches when we see that it has become a part and parcel of organized charity and Red Cross.

Perhaps the legal profession has contributed to this situation. The fact that it is often more financially profitable to settle disputed matters and to go on with business than to reckon with the violation of established principle in a conclusive manner has played its full part. Business has been entirely willing to do so, and of course the lawyers hired by business are prone to go along with their clients.

Men like Sewell Avery are as scarce as nails in a tree. Sewell Avery stood only for a principle and was almost the subject of ridicule. You have very few men like Sewell Avery in public life. Somehow they don't seem to last long.

I think the future of the Republican Party may depend upon an assertion against this condition. The difficulty is that we have sought to produce candidates who could get votes rather than who would abide by principles. We wanted them to attract away from the New Deal by exceeding the New Deal. We did not want them to carry out such promises, we wanted them to fool the people. Thus we were guilty of expediency, and I think we deserve to lose when I look back.

I don't know how it is going to be done, Charley, but I am convinced that people who are through with all forms of expediency must be the nucleus for a political organization. I believe this will cut squarely across both of the existing political parties. I am sure that our great Democratic leaders who must now be sufficiently puzzled that they would sigh with relief to be a part of such an organization if only it did not emanate from some Republican source.

To begin with, I think we have examples of expedient departure which should be cataloged so that people could be awakened. I should not blame them all onto politics nor political groups. Nevertheless I should hope to demonstrate that the survival of capital and that the independence of man in this country rest upon an about face in the moral conduct and philosophy of the Government and upon return to ways of thinking like old Sam Baird, who would sue the M. & St. L. Ry. for the death of a $15 shoat that would cost him $50 to do so.

Sincerely,

E. R. HICKLIN.

---

## Judaic Research at Yale University

EXTENSION OF REMARKS
OF
**HON. JAMES J. HEFFERNAN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article on the Judaic research at Yale University, which was made possible by the generosity of Mr.

Louis M. Rabinowitz, vice president of the Jewish Hospital of Brooklyn:

In the summer of 1944 Mr. Louis M. Rabinowitz of New York City offered to provide Yale University with funds for the purpose of promoting research in Hebrew lore and literature. The funds were designed to finance an initial, experimental period of 5 years of work. The task of defining a plan of procedure and of working out details was entrusted to a group of faculty members representing the Semitic-Judaic fields of oriental studies at Yale. Eventually, this group was appointed as the administrative committee of the project, with the undersigned as its chairman. The project, itself, was named Judaica Research at Yale University of the Rabinowitz Foundation. Room 321 of the Hall of Graduate Studies was assigned as its headquarters.

The committee decided at the outset that during the initial 5-year period its primary object would be to prepare and publish translations of outstanding works of Jewish literature, both ancient and medieval. It further realized that, as a matter of course, the translations should be done from the originals, whether Hebrew, Aramaic, Greek, or Arabic; that they should be assigned individually to the most competent scholars available; and that only such works should be considered as had not been translated before, or, at least, had not been translated before into English. It was further understood that the committee would take every precaution to guard against duplication of scholarly effort.

Early in the year, too, the committee proposed to President Seymour that it should be augmented by a number of advisers, Herbert Danby, Oxford University; Louis Finkelstein, the Jewish Theological Seminary of America; Judah L. Magnes, the Hebrew University of Jerusalem; Julian Morgenstern, the Hebrew Union College; Charles C. Torrey, Yale University, through whom it would maintain contact with other institutions of learning, both in this country and abroad, and who would help to avoid duplication of specific projects. It also proposed that the task of supervising and editing publications resulting from the plan should be entrusted to a board of editors. As a result additional appointments were made by the president, so that at present the personnel of Judaica Research at Yale University consists of (2) the administrative committee of five members, Julian J. Obermann, chairman; Provost Edgar S. Furniss, ex-officio; James T. Babb; Millar Burrows; Edwin R. Goodenough; and Carl H. Kraeling, with the provost of the university as member ex-officio; (b) the board of editors of three members, Louis Ginsberg, the Jewish Theological Seminary of America; Julian J. Obermann, Yale University; and Harry A. Wolfson, Harvard University; and (c) five advisers to the committee.

## Address of Gov. Thomas E. Dewey of New York

EXTENSION OF REMARKS

OF

### HON. CHAUNCEY W. REED

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. REED of Illinois. Mr. Speaker, it was my rare privilege to listen to the remarks of the Honorable Thomas E. Dewey at the convocation of the New York School of Industrial and Labor Relations, held at Cornell University, Ithaca, N. Y., and broadcast over a Nation-wide network by the National Broadcasting Co. from 12:45 to 1 p. m., Monday, November 12, 1945. It was an inspiring address, thought-provoking and profound. It gives new courage to all of us who believe in the ability of the American people to solve their industrial problems on a basis which is fair to labor, to capital, and to management. It renews our faith in democratic processes and American determination to preserve the American way of life and free enterprise under harmonious relationships. For the benefit of any of my colleagues who may not have been privileged to listen to the remarks of the distinguished Governor of the great State of New York, I include it in the RECORD as follows:

We are here to launch the New York School of Industrial and Labor Relations during the most serious period of labor difficulty in our history.

The best thing of all about this new school is that none of us regards it as a cure-all for every one of our troubles. It is a trail-blazing effort. We are pioneering in a vital field of human relations.

These problems of labor relations were important yesterday; they will be even more important tomorrow. Ten years after this Nation was founded, in 1786, the printers in Philadelphia struck for a minimum wage of $6 a week. Today the newspapers are full of reports of strikes to increase wages.

The biggest strike in our early days as a nation was a walk-out of house carpenters who quit work in 1791 to fight for a 10-hour day. We are all familiar with current strikes called to shorten the workday.

In 1877 a 10 percent pay reduction on the three railroads running west led to our greatest strike up to that time. There were pitched battles between workers and militia, railroad yards set afire, and scores killed in riots.

These strikes failed, but labor learned from them that its welfare could only be protected by organization and collective bargaining. Four years later, in 1881, there was founded the modern, indigenously American form of unionism we know as the American Federation of Labor.

As our transportation system grew it brought competition between the products of different localities in the same market. Stoves made in Albany were displayed in St. Louis right beside stoves made in Detroit. The Albany stove molder could no longer be indifferent to the wage scale of his fellow craftsmen in other cities. If labor costs in Detroit were too far below Albany scales, there would be no market for Albany-made stoves and no jobs for Albany stove molders.

So, as industry grew, the union movement grew and the clashes between labor and management were of greater and greater magnitude. Year in and year out, the battles on the labor front were fought over the same issues. Wages, hours, conditions of employment—these were the issues in colonial times; they remain the issues today.

In most cases these issues are settled peacefully without an interruption of work. Public attention focuses on those cases where collective bargaining fails and strikes result. Peaceful settlements do not make big news. Recurrent outbreaks of strikes underline the fact that labor relations are never static and that no formula can be devised within the democratic framework which will wholly wipe out disputes. Nor does anyone who values our way of life wish to end the continuing effort by both labor and management to advance their own interests. But the old rule of the tooth and claw is out of date and should come to an end.

Our labor movement is still young. It is only a very few years since the right to organize a labor union was a matter which had to be settled with bare fists, clubs, sticks, and stones. It was inevitable that undesirable characters and racketeers found their way into so many unions in days gone by. They were able to create unions for their own purposes where a union was needed and nobody else created it. We were entirely lacking in the kind of labor education long sponsored by the mature labor movement which existed in Great Britain and other European countries. Some of our union organizers were distinguished by their physical force rather than by their training in economics, industrial, and social relations.

In many respects the same was true with industry. Our great industries grew so fast that they had no time to learn the complicated business of labor relations. Many of our industries, too, were built by aggressive and dominant men who were impatient with the practice or even the idea of dealing with their employees as equals. Even now, there are some who have refused to learn the facts of modern, industrial life.

Today, the old rules of force and violence are as out of date as the posse which strung up a horse thief on sight. We are growing up. We must now attain the age of reason. One of the things of which I have been proudest during my 3 years in Albany is our splendid record in the relationship between capital and labor in the State of New York. During the war we led the Nation in avoiding strikes on the production front. We still maintain this leadership, thanks to the wisdom and understanding that business and labor leaders of our State have shown. Now, at this school, we propose to develop the trained leaders who will know how to solve our industrial and labor problems of the future.

We know now that the negotiation and debate involved in labor relations must be based upon a knowledge and understanding of the economic process, of the history of industrial development, of the effects of technological advances and, of course, of the complicated inter-relationship of prices, costs, and wages. We can no longer afford to have among our leaders of labor and industry men who do not know the economic effect of many factors in our financial system, of tariffs, of the myriad types of taxation, and the delicate balance between production and consumption.

Our whole future depends on the intellectual capacity and the moral determination to work out our problems peaceably at the conference table. But this capacity and this determination must be solidly based upon knowledge and training. The future leaders in this field must understand the broad fundamentals that men can only earn more in the long run by producing more with modern facilities; that business can exist and get the capital which creates jobs only if it makes a good profit; that no one piece of our economy can be happy or prosperous if it attempts to profit at the expense of the rest. Both sides must learn that the interest of the public at large is paramount and that the bargaining between capital and labor must scrupulously avoid putting a burden on the public too great for it to bear. Excessive wages or excessive hours of work can be such a burden. Strikes which interfere with the public generally can be such a burden. Too high prices can be such a burden. In short, a trained understanding of all the factors in industrial relationships must take the place of force. The yes or the no from either side of the conference table must be accompanied by reason and sound argument.

To serve the general welfare, the State of New York is establishing here at Cornell a unique educational institution to train the men and women who will deal with these problems of ours in the future. It is an adventure in broadening the horizon of the mind of man. It is an effort to expand men's knowledge in a field where too often pas-

sion and prejudice override judgment and truth.

This is no labor school where dogma will be taught, from which trained zealots will go forth. This is no management school where students will learn only to think of working men and women as items on a balance sheet. This is a State school under the sponsorship of our great, progressive land-grant university and under the direct control of a board of trustees selected from all walks of life—from education, from business, from labor, from agriculture, and from the professions.

It is a school which denies the alien theory that there are classes in our society and that they must wage war against each other. This is a school dedicated to the common interest of employer and employee and of the whole of the American people. It is dedicated to the concept that when men understand each other and work together harmoniously, then and only then do they succeed.

The State of New York will here provide the equipment to abate the fevers which rise from claims and counter-claims which are now the language of industrial relations. We will be applying the tested techniques of study, research, and analysis to the crucial, social, and economic problems of our time. The future leaders in industrial relations for both labor and management will learn here to do the sifting and winnowing by which alone the truth may be found.

Second only to the need for leaders of broad vision is the need for a community which takes an alert and informed interest in those problems which affect us all. Public opinion is often the final arbiter in a labor dispute and this school will seek to make the whole community better informed about the problems of both management and labor.

These, then, are the great purposes to which this school is dedicated. We entrust its destiny to a distinguished faculty under the leadership of a great public service who led the way in its creation—Dean Irving Ives. I know it will receive the support of men of good will everywhere.

I am happy and proud to dedicate this, the New York State School of Industrial and Labor Relations, to the increased productivity of our economic system, to peaceable relations between management and labor, to an ever higher living standard for all our people, and to the inner security of the human soul which can come only to freemen.

## Disposition of Surplus War Materials

EXTENSION OF REMARKS

OF

### HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. O'KONSKI. Mr. Speaker, the disposition of surplus war materials in our country has been not only a headache but a heartbreak. Not only is there red tape and confusion, which discourages the vast majority of the American people in the handling of surplus war materials, but there is also wanton waste which discourages humanity.

The destruction of many of our surplus war materials is so heartbreaking that the mail coming in from the people throughout the country ought to cause the Members of Congress to stop and consider. How can we, as Members of Congress, expect the taxpayers to have any respect for us if we permit the Federal Government employees to destroy surplus property which would be of great use to many of our schools and training centers?

To give an idea of just what is going on, I ask unanimous consent to include in my remarks a letter just received from a very outstanding citizen in Ashland County, Wis. How can we Members of Congress stand idly by and see this destruction of property going on? Would it not be better if such property were turned over to our schools free of charge?

OFFICE OF HIGHWAY COMMISSIONER,
ASHLAND COUNTY, WIS.,
*Ashland, Wis., November 17, 1945.*

Mr. ALVIN E. O'KONSKI,
*Representative in Congress,*
*Washington, D. C.*

DEAR MR. O'KONSKI: One of our truck drivers returned from Madison yesterday with a truckload of surplus war materials for the high school and the Ashland Vocational School and when in Madison he saw men destroying new tools; wrench sets, etc., by cutting them to pieces with acetylene torches. Being a mechanic of sorts, it made him feel sick to see this wanton destruction of tools, some sets he would estimate were worth fifty to sixty dollars new.

There are many vocational schools and county and city highway departments that could make good use of this material rather than have it made into scrap.

Assuming that you cannot know everything that goes on, I thought it proper to advise you of this so that you can do what you can to avoid such waste.

Thanking you for past favors and with best personal regards, I am,

Yours truly,
ASHLAND COUNTY HIGHWAY DEPARTMENT,
By FRANK ANDERSEN,
*Highway Commissioner.*

## A President on Trial

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. McCORMACK. Mr. Speaker, under unanimous consent to extend my remarks, I include herein a well-considered and timely editorial appearing in the Boston Post of November 17, 1945, entitled "A President on Trial."

The last paragraph of the editorial states:

Whatever else the Members of Congress may care to believe, they have President Roosevelt on trial, and they must not stain our history with an act of shameless partisanship.

Such an admonition is timely and appropriate and should be followed.

A PRESIDENT ON TRIAL

Long shuttered behind stern official silence, the baleful fires that smoldered in the Pacific before the attack upon Pearl Harbor have been fanned into blinding brilliance by the congressional inquiry into the military disaster to our strongest outpost, which ushered us into war.

All the facts have not been brought out, and probably all the facts will never be known, but, on the basis of the evidence presented to date, it appears incontrovertible that the late President Roosevelt, and a few of the higher officials surrounding him, were in some degree aware that Japan was moving rapidly toward an attack upon the United States, Great Britain's possessions in the Far East, and the Dutch East Indies.

President Roosevelt is dead, and he died without releasing men who were taken into his confidence from a pledge to remain mum on the controversial facts about Pearl Harbor. It is conceivable that the congressional inquiry may succeed only in lending support to the Japanese officials who have insisted that American policy and bellicose American actions forced them into an attack before they were cut off from raw materials by blockade.

In short, the late President would be blamed for plunging the country into war, and the Japanese aggressors would obtain amelioration of the harsh peace conditions and start planning another aggression.

To be fair and reasonable about Pearl Harbor the situation as it existed on December 7, 1941, must be kept in the foreground, and all that is learned about the Pearl Harbor disaster matched against that situation. Briefly, the people of the country did not want to go to war, and their reluctance was fortunate because we secured precious time in which to rearm.

Any public statement by the late President in the months before Pearl Harbor that Japan was preparing to attack would most certainly have been denounced by a large segment of the American people as warmongering and provocation.

The "wind" messages which were decoded from Japanese diplomatic code heralded an ill wind that by a paradox blew the Nation some good. We went to war with the bulk of our Navy on the bottom, our strongest outpost shattered, and it was this fact that spurred the tremendous production which in less than 4 years made the United States the strongest nation on earth.

None of this, of course, justified keeping commanders in the Hawaiian Islands in ignorance of the actual situation. If the late President and his advisers knew that such an attack was in the making, and deliberately withheld this intelligence from the commanders at their advanced base, they are guilty of an offense against the national security in violation of their most sacred oath. If they only feared such an attack and had no actual information beyond their suspicions, their error is one of omission. By the same token the war leaders in Great Britain, with Singapore, Burma, and Hong Kong at stake, must share the blame.

It is amazingly simple and requires no courage to place a dead man on trial and convict him in absentia, but when the man happens to be the President of the United States, who served longer and more momentously in the White House than any other President, more scrupulous care should be taken in weighing the evidence.

Whatever else the Members of Congress may care to believe, they have President Roosevelt on trial, and they must not stain our history with an act of shameless partisanship.

## Workable Plan Necessary To Sell Surpluses to Veterans

EXTENSION OF REMARKS

OF

### HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. HAGEN. Mr. Speaker, the handling of the problem of selling surplus

Government property to veterans and carrying out the intent of Congress to give preference and priority to war veterans seems to be getting more bungled up and complicated than ever as each day passes.

The various veterans' organizations are aware of the bungling done by the Surplus Property Administration and are taking action.

This is evidenced by a statement issued Monday by Joseph Leib, past vice commander and present service officer of the Vincent B. Costello Post, No. 15, of the American Legion, Department of the District of Columbia.

Mr. Leib now is in Chicago to attend a national convention of the American Legion, November 18, 19, 20, and 21, and he has presented the problem to the resolutions committee of the convention for consideration.

His statement to the Legion convention committee follows:

Discharged World War veterans seeking surplus Government property are being daily subjected to one of the grandest run-arounds that the National Capital has ever witnessed. This condition should be corrected immediately.

The high priority which the United States Government solemnly promised the veterans of World War II in these transactions has become nothing but a mirage of the first order.

Veterans armed with proper letters of authorization to purchase needy trucks or other vital and necessary commodities are finding Government doors literally slammed in their faces or else they are whipsawed by disheartening and buck-passing tactics.

When is the Congress going to take matters in its own hands and make it possible for the veterans to purchase surplus goods that would enable them to get into or allow them to set up a business of their own?

As this is written, veterans must make their purchases through either the Smaller War Plants Corporation or through the Reconstruction Finance Corporation. This cumbersome procedure is full of bureaucratic red tape and is extremely discouraging. In addition they are obliged to limit their purchases to $2,500 worth of goods. Restrictions are placed upon the use of such goods. Veterans under existing regulations are not given priorities as far as clothing, furniture, food, or other types of consumer goods are concerned.

No one in authority seems to know what it is all about. The veterans are becoming sick and tired of these long-winded promises and complete misunderstanding.

In the midst of this confusion the Surplus Property Administration on November 15, 1945, announced that it planned to propose that an estimated 30,000 wholesalers throughout the Nation be permitted an act as outlets for surplus goods.

This stupid scheme has been publicized as giving the veteran "the best possible break" under present legislation.

To buy under the new plan it was explained the veteran would be required to pay the dealer's price, whereas now he can buy direct from an RFC disposal agency at wholesale price.

The announcement of the new plan further added that all veterans who are in business for themselves or who plan to open up a business in the future will be classified as "large dealers." In this category, the Surplus Property Administration advised, veterans could purchase any surplus property offered for sale at as low a price as any dealer would pay. To top this off, wholesalers would be sold surplus goods by the Government with the understanding that they would accept certain classification of veterans as will be established by the Surplus Property Administration.

It must be obvious to very sincere thinking Members of Congress that there is something fundamentally wrong with the SPA. Unless some constructive action is taken the veterans will be blitzed in their hope of securing surplus products, and we can expect a new crop of millionaires in the near future—at the expense of the men and women who fought and won this war.

## President Truman Endorses the Purposes and Spirit of H. R. 3939 To Further Research for the Cause and Cure of Cancer and Other Dreaded Diseases

EXTENSION OF REMARKS
OF
### HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. STEVENSON. Mr. Speaker, in the President's message to Congress on yesterday President Truman said:

We must learn and understand more about health, and how to prevent and cure disease. Research well directed and continuously supported can do much to develop ways to reduce those diseases of body and mind which now cause most sickness, disability, and premature death.

And then the President went on to say:

Cancer is among the leading causes of death. It is responsible for over 160,000 recorded deaths a year, and should receive special attention. Though we already have the National Cancer Institute of the Public Health Service, we need still more coordinated research on the cause, prevention, and cure of this disease. We need more financial support for research and to establish special clinics and hospitals for diagnosis and treatment of the disease, especially in its early stages. We need to train more physicians for the highly specialized services so essential for effective control of cancer.

Mr. Speaker, that is the very purpose of my bill, H. R. 3939, which I introduced in this House on September 5 of this year. I am very happy that the President has endorsed the purposes and the spirit of my bill. In an analysis of my bill and to acquaint the public more fully as to its purposes I am setting forth a recent news release which I sent to the newspapers of my district regarding H. R. 3939 and the favorable reception it has received throughout the United States:

WASHINGTON NEWS LETTER FROM CONGRESSMAN WILLIAM H. STEVENSON

I am sure you will be interested in the bill I have introduced in Congress, H. R. 3939, which authorizes an appropriation of $500,000,000 to be used from time to time under the guidance of the Public Health Service of the United States to establish institutions and research laboratories throughout the country to find the cause or causes of cancer and infantile paralysis, thus saving untold suffering and the hundreds of thousands of deaths that occur every year from the scourge of these dread diseases. In 1942 cancer alone killed 163,000 people in this country. The total deaths in all our armed forces in the World War are less than twice that number. We built entire cities and employed 125,000 workers and scientists to develop the atomic bomb at a cost of two billions. We do not consider that money wasted. The National Cancer Institute has been conducting a research program in cancer for nearly 20 years without finding the cure.

The purpose of my bill is to make possible the construction of many more research laboratories and institutions throughout the United States, to be equipped with the most modern scientific machinery and apparatus, where the keenest brains of the entire world may carry on independent research, with the one purpose and determination in mind—the establishment of the cause and cure of cancer and infantile paralysis. If by the construction of laboratories and plants throughout the Nation equipped with the most modern scientific machinery our scientists were enabled to discover how to harness atomic energy, surely with the aid of many more modern research laboratories and with the concentrated attention of the best scientific brains in the world, the scourge of dreaded diseases likewise should be conquered. Is it not worth the effort and expenditure of a mere fraction of the cost of the atomic bomb to make much greater the possibility of discovering the cure for cancer and infantile paralysis?

During the past several months an epidemic of infantile paralysis has been raging in Wisconsin, as you know, striking down many young lives and causing several deaths. These epidemics have been plaguing the human race from time out of mind, with no cure having yet been discovered. Experience has proved that infantile paralysis has not been conquered by the means provided by the usual endowments and foundations established for that purpose, because it has not been possible to assemble the thousands of scientists and medical men and women necessary to make a concentrated attack upon this disease. The necessary scientific resources apparently have not been made available because of the limited funds at the disposal of scientists and medical men.

I have received letters from people and institutions from every State in the Union, including large corporations, insurance companies, women's clubs, farmers' organizations, and doctors endorsing my bill and my efforts to help eradicate these scourges of all humanity. The seventh district of the department of Wisconsin of the American Legion at their last district convention went on record as heartily endorsing my bill.

## It's Time To Start Saving

EXTENSION OF REMARKS
OF
### HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of November 14, 1945:

IT'S TIME TO START SAVING

Marooned vets in Hawaii protested because the aircraft carrier *Hornet* fetched 1,000 Federal civil employees home while they were waiting for ship space. They were not impressed by the plea that the civilians were under contracts providing for their return when their work was completed.

The reaction is natural and will evoke sympathy. It will also call attention to the lack of speed in demobilizing the civilian war agencies. Apparently no great part of

the civilians hired for war duties are under contracts that provide for terminating their jobs and salaries.

There are 23 "emergency" war agencies, with a total of 364 subdivisions. Expansion of these agencies must have been responsible for most of the increase of Federal employees from 932,953 in August 1939, to 3,649,769 now.

Of the total, 848,644 are outside the continental United States. That leaves a probable 1,800,000 civilians hired because of the war now drawing pay right here at home.

None of these 1,800,000 is a possible competitor for ship space with the GI's. The war has been over 3 months. But the home-front civilian war pay rolls just keep rollin' along.

If some politicians have their way, they will keep on rolling until next election day. And President Truman has asked that every civilian on the Federal pay rolls be given a 20-percent raise.

Congress has cut your next year's income-tax bill. To that extent your take-home pay next year will be a little more each pay day. Veterans will not have to pay income tax on their Army and Navy pay. That $5 Federal auto tax sticker will go off the windshield. Business will pay a little less taxes on the profits of 1945, if any. For that we are all grateful to Congress.

But all that joy is to come next year, not now. Meanwhile, take a look at your monthly bills. Are they going up?

They can go up quickly enough to offset on your family budget every one of those tax cuts, before next year is out. Not only can that happen, it will happen unless inflation by wasteful Government spending is checked and checked quick. Cutting Government expenses is more important to you than cutting your taxes.

The Government can shave taxes only by slices, and not very big slices at that. Even the $5,000,000,000 reductions voted for 1946 will put a strain on the United States Treasury. But prices can grow like mushrooms.

Labor and management are now wrangling over the rise in living costs since we got into the war. No one denies that they have risen sharply, and they are probably up by nearly a third. The experience of World War I and its aftermath suggests that most of the price rise from World War II is ahead, not behind us, unless the reins are pulled tight on Government spending.

Prices for items purchased by wage earners and low-salaried workers rose twice as high in the 2 years following the last war as they had risen in the 2 years the war was going on.

Government spending was the reason for the rise of prices then. It will be the reason for whatever price increases we have to pay from now on. Unless we cut Federal pay rolls, the upward rush of prices will be swifter this time because we had only 917,976 civilians drawing pay from Uncle Sam on Armistice Day, 1918, and we now have 3,649,769.

In the light of present facts and past experiences the place to start holding down the cost of living is to demobilize those 1,800,000 civilians working here at home for those emergency war agencies.

Unless we get that done, and quickly, we'll probably be in for some emergencies later.

## Our Federal Labor Policy

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Milwaukee Journal of November 18, 1945:

Mr. Speaker, in these difficult times it is well that we make a full appraisal of our situation to learn some of the basic causes for the strife existing in industry, labor, and the home.

In the Milwaukee Journal of November 18, 1945, appears a sketchy account of a recent study made by the Brookings Institution on this important problem. The editorial follows:

OUR FEDERAL LABOR POLICY

The Brookings Institution, which has a habit of investigating touchy subjects and reporting its findings regardless of where the chips may fall, has been studying Federal labor laws and policies. It finds the Government's attitude neither coherent nor integrated. The general effect, however, is to give labor full rein to act much as it pleases, turning down all methods of settlement when it desires and refusing to abide by the terms of settlements when they are finally and freely accepted.

Strikes, picketing, and boycotts are permitted, it is pointed out, even though the public interest is seriously affected. Fulfillment of collective bargaining agreements is not enforced. The result is that labor is free to follow paths of irresponsibility, with what amounts to Government protection in such a course.

The author of the Brookings study says that he did not consider whether present policy has an objective, whether it achieves it or whether the objective is wise. Perhaps others can be of help here.

Labor's freedom to do practically what it wants, and its choice of the ultimatum and the strike as its weapons, have led it at least toward the ways of a dictatorship. At a time when production is vitally important, unions have lowered production. In fields where cessation of production may seriously affect public health and welfare, walkouts have occurred, or have been threatened, without regard for consequences. Real collective bargaining has gone by the board, fair settlements have been summarily refused and when agreement has finally been reached there has been no assurance that its terms would be lived up to for more than a few days or weeks.

The economic consequences of such a policy may well be disastrous particularly in a period when the national economy is under the unusual strains of reconversion. The social consequences may also be disastrous.

The Nation is now concerned about an increase in juvenile delinquency and crime. Is it not at least possible that part of that increase is due to the fact that youngsters and others see labor using to the full strange license it has to defy order and the conventions to enforce its demands?

## Go Back to San Francisco

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following constructive, and at the same time challenging, article written by James Morgan and appearing in the Boston Globe of November 18, 1945:

GO BACK TO SAN FRANCISCO—AMERICAN FOREIGN POLICY STALLED AND CAN REGAIN LEADERSHIP ONLY BY BUILDING UP UNITED NATIONS AS A BASE FOR ALL OUR INTERNATIONAL DEALINGS, INCLUDING LOANS AND ATOMIC BOMB

(By James Morgan)

As happened to their fathers before them in World War I, the veterans of World War II are coming home to find the peace they won at great price being kicked about like a football. A similar spectacle drove the iron of bitter cynicism into the soul of one generation of our youth. Lest we poison the minds of our returning youths today with a like sense of betrayal, we must hasten to convince them that they are not coming back to the America of 25 years ago, heedless of what her warriors had fought to win.

By every test of public opinion, the American people today are ready to throw the whole great weight of this country into the scales on the side of preserving the victory purchased by the daring and sacrifice of our young men and of saving their sons from having to endure a worse ordeal in a third world war. Yet, the homecoming soldiers and sailors are greeted with clamors for universal military training in preparation for "the next war," and for strategic bases. They hear many voices raised in favor of putting our trust in a "secret" weapon. Such a secrecy could be protected, if at all, only by suppressing free scientific research into atomic energy for the discovery of a power that might revolutionize the industrial revolution itself and bring in a warless world of plenty for all.

The most welcome proposals agreed upon last week by the President and the Prime Ministers of Britain and Canada are that the problem raised by the unlocking of the atom should be referred to a commission under the United Nations and that the three Governments which cooperated in developing the bomb should extend that cooperation to all the United Nations as soon as assured of complete reciprocity in such sharing.

The veterans will mark with satisfaction the contrast between this Washington Conference and the London Conference of Foreign Ministers which was broken up by a chip-on-the-shoulder, small-boy quarrel over piffling questions. They read of our troops and transports messing in what may become a civil war among the Chinese, possibly with Russia on the other side. They note the protests of the Indonesians against our lend-lease supplies being used by the British to crush a struggle for the independence of the Dutch East Indies. They wonder at the sight of our being drawn into the old war-breeding game of power politics in Europe. They find us busy-bodying in the tinder box of the Balkans and in Palestine.

A TOO-INNOCENT BYSTANDER

The boys with the shining new discharge buttons are no more bewildered than the American people as a whole are as they watch this Leviathan among nations seemingly helpless to steer a course of its own and drifting like a cockboat, as John Quincy Adams said, in the wake of others. When we sit in with the Old World powers at their own game on their own grounds, we lose before we start, for the very good reason that we hold no cards in our hands and have none up our sleeve.

We can only take sides; to be a "me too" in disputes that are none of our business. We become a buffer in the collisions of interests among trans-Atlantic nations, in the conflicts of their outworn policies and in their immemorial blood-feuds, which had been ravishing Europe no one knows how many centuries when the Romans first introduced them to written history more than 2,000 years ago.

It is proverbially dangerous to be an innocent bystander in other people's brawls.

THREE CHOICES FOR AMERICA

There are three courses open to us. We could relapse into isolation. Emotionally, most Americans, I think, would like to do just that. But the minds of an overwhelming majority of them have been convinced by this Second World War that isolation is a fool's paradise, in which we would be led blindfolded into the hell, perhaps the everlasting hell of an atomic war waged by robots.

Or we could get into the played-out game of imperialism and its armed alliances. Emotionally, not a few of our isolationists are imperialists. But I, for one, cannot take seriously the fear that we shall go in for empire, because I was an eyewitness to what happened in 1898, when an attempt was made to drag us in that direction. Over the protests of the anti-imperialists, the McKinley-Hanna administration grabbed the Philippines and Puerto Rico in haste, but we have been repenting it at our leisure ever since.

The Philippines are a monument of our final renunciation of imperialism. In the American way, we sent school teachers and public health experts out to the unwanted islands, instead of carpet-bag politicians and commercial exploiters. We trained the Filipinos in self-government, and soon they are to have their independence. President Truman now has indorsed the proposal to permit the Puerto Ricans also to exercise self-determination as to whether they shall go on their own or stay with us.

The one other course that remains for our choice is a world organized for peace and against war. The United Nations will not work? We cannot know that until we have tried to make it work. The League of Nations might have succeeded if we had not rejected the leadership which the other World War brought us. It never had a chance without our backing.

Opportunity now is knocking at our door a second time. Leadership has come to us again. VJ-day left us in the position of the most powerful Nation. Let us stop wasting that prestige and the world-wide hope and confidence we inspired in a measure never enjoyed by any other nation. Let us stop being the tail to anyone else's kite.

BIG THREE NOT BIG ENOUGH

"Just how big are the Big Three?" was the question asked in this place on the eve of the Yalta Conference last winter. Subsequent events have answered that they were not big enough. Yet, there were giants in the earth in those days.

Of the triumvirate who met on the Crimean shore of the Black Sea in February to wrestle with global problems, Roosevelt now lies at rest in his garden, Churchill is retired to his easel, and Stalin? The Big Three served a purpose in the war by umpiring on the spot any differences among the Allied general staffs on questions of strategy. But we have learned that this world is too big to be run in secret by any three men sitting at a table behind locked doors at Yalta or Potsdam.

By trial and error, we have found that we are unable to develop a consistent and understandable American foreign policy in the old balance-of-power system. And why? Because we alone among the great powers have not and cannot have an exclusive or distinctive national objective. We need and we want beyond our shores only what all nations alike need and virtually all the peoples want, if their governments don't. This simply is to do business in a peaceable world, free from special nationalistic privileges and discriminatory barriers.

BACK TO SAN FRANCISCO

The one alternative left us is to go back to San Francisco and revive the April hopes raised by the Golden Gate Conference. Too long we have been indulging in the double talk of diplomacy and attempting the impossible feat of riding two horses headed in opposite directions, one toward a united world, the other away from it toward a world divided by alliances.

To be sure, we have not neglected meanwhile to build the structure of the United Nations Organization, but we have yet to move into it. We have yet to make it the home base of our foreign policy and strengthen it by insisting that all our postwar international relations, including loans and the subject of the atomic bomb, shall be fitted into its framework.

It is cheering to have the President and the British and Canadian Prime Ministers at Washington pledge whole-hearted support of the United Nations Organization, promise to consolidate and extend its authority.

We should serve notice that henceforth we will do business only through the Security and Economic Councils and the Assembly of the United Nations, or the Bretton Woods and other established agencies. The problems of this one world never can be solved piecemeal.

The San Francisco Charter was ratified by an almost unanimous Senate. The members of the Foreign Relations Committee of the Senate now have voted, without a dissenting voice, to put teeth in the Charter by giving the President authority, through our delegate on the Security Council, to commit American military support for the decisions of the Council. The United Nations is our one and only avowed war aim. Nothing else is understandable by our people, and they will uphold no other policy.

It is time we disentangled ourselves from a situation where we cannot make a move without risk of having it interpreted as anti-Russian or anti-British. To be either is to be anti-American. To be either is to belittle the one great detached and disinterested power, whose free spirit and independent leadership a sick world needs for its healing.

## Minimum Wage

EXTENSION OF REMARKS

OF

### HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial that appeared in the Washington Post on November 7, 1945.

This editorial very clearly points out the desirable effect that the raising of the minimum wage from 40 cents an hour to 65 cents an hour would have on our national economy.

MINIMUM WAGE

If a man works for 40 cents an hour, the present minimum wage under the Federal Fair Labor Standards Act, he can bring $16 home to his family at the end of a 40-hour week. Price Administrator Chester Bowles is quite right in calling such a wage "a national disgrace." It affords no chance for decent housing or even for reasonable standards of nutrition. And, of course, it rules the families limited to such an income out of consideration for the purchase of all the luxury goods—automobiles, radios, household appliances, and the like—which American industry is seeking to sell and which go together to make the high living scale in which we take pride as a nation.

It is this latter consideration which makes the proposed lifting of the wage floor to 65 cents an hour "imperative," as Mr. Bowles put it, to the health of the national economy. "Right here at our feet," he declared in a letter to the Senate Committee on Education and Labor, "lies our greatest undeveloped market—a market which can be tapped to improve income and employment opportunities for everybody simply by raising the level of minimum wages." Farmers and manufacturers will find new customers if purchasing power is put into the hands of this undeveloped market. With new customers they can provide jobs for more workers.

Mr. Bowles, whose task it is to hold the line against inflation, has little fear that such an increase in minimum rates of pay for workers engaged in interstate commerce would be reflected in higher prices. On the contrary, he argued persuasively that in the long run prices would probably be lowered rather than increased by the assurance of a more decent living standard. "The increase in output per worker, which I believe would surely result from the proposed increase to 65 cents," he asserted, "would in itself go far to pay for the higher wage bill." There is not much efficiency in sweatshops. Indeed there is a close correlation between high productivity and high wage rates.

It was one of the tragic ironies of the great depression that at its very height billboards boasted that America enjoyed the highest standard of living in the world. So it did—for those who shared in the enjoyment. But there were millions whose standard of living was pitifully inadequate; gradually they depressed the living standards of all. An economy must be judged not by what it produces for its most fortunate members but by the kind of life it affords for the least of those who share in it. We can reasonably claim again a high standard of living for America only when all Americans have within their grasp the necessities of life and at least the elementary comforts.

## Dorothy Thompson Faces the Basic Issues

EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. VOORHIS of California. Mr. Speaker, once again, under consent, I include in the RECORD a column written by Miss Dorothy Thompson. In my opinion, she has penetrated to the very heart the problems which our country faces along with the rest of the world. I recommend the reading of this column to every Member of Congress, and only wish I could put a copy of it into the hands of every American citizen:

ON THE RECORD

(By Dorothy Thompson)

In my previous column I spoke of the fictions which are being disseminated as a substitute for policy by statesmen speaking on the atomic bomb and the future of scientific weapons in general. It is amazing how they dismiss as impossible control measures which, in comparison with the fabulous genius of mind which created the incredible modern instruments of war, are child's play. Mr. Attlee, for instance, has been quoted as saying that he regarded as impractical the possibility of any formal international inspection, since it would involve the detailed investigative efforts of thousands of top-flight scientists.

With all due respect to the British Prime Minister, this seems as exaggerated as it would be to say that to investigate the accuracy of individual income-tax returns would involve the detailed investigative effort of thousands of top-flight bankers. It doesn't take a top-flight scientist to find out what is going on in a factory, or where uranium ores, etc., are going. Any skilled worker could be fitted for the job. If formal international inspection would not be acceptable to one or another of the great powers, the difficulties are not bureaucratic but political.

The peoples of the world must know where the difficulties really lie, and who is responsible for them. The peoples of the whole world are peace loving, all, without exception. No mother on earth wants her son slaughtered on a battlefield, or her children blown to bits in a cellar. The peoples of the world have laid mandates on their governments to stop war. Every government gave a solemn agreement in the form of a treaty, long before this war, not to "resort to war as an instrument of national policy." Every person who can add two and two and make four out of it knows that such treaties, unimplemented, are useless.

On the other hand, no peoples anywhere are ready for one world at the cost of their own way of life. After all, Hitler was for one world, too—one world of domination and tyranny. The people want one world, free, cooperative, and associative, with liberty and security for all.

That one world can be created without the sacrifice of a single sovereign right except the one which was formally renounced years ago—the sovereign right to make war. And they are awakening to the fact that the United Nations Charter is, as it stands, worthless to accomplish the only thing for which it was created.

To make it work, three basic reforms are needed. First, the Security Council must be made more democratic and representative. The great powers should be balanced by collective representatives of the small nations, who, altogether, contain more people than any one of the great powers, and it should be supplemented by a real international supreme court of justice. The veto right should be abolished.

Secondly, while national states should retain their own armed forces, for home defense, the Security Council should be empowered strictly to limit the national production of heavy armaments of all kinds, according to reasonable quotas, and it should have full rights of inspection.

Finally, the Council must establish and maintain a true international professional force, recruited by preference and certainly in the majority from the smaller nonimperialist states, which force should be equal to the greatest force of any one of the great powers. Violation of the quota limitations agreed on, or production of any weapons outlawed—which certainly ought to include all weapons based on the use of atomic energy—should be regarded as an act of aggression per se.

Under such regulations, the people in every country—the workers in every factory—would have a personal, direct, citizens' interest and responsibility in seeing that their country did not become an aggressor by breaking the rules.

All the newer weapons of war are, by their nature, offensive, and are driving every general staff to plan to take the initiative in case war seems likely. Every country will plan to attack first. Under these conditions the old definitions of aggressor are useless.

It is certainly possible so to design an international police force that it cannot become, in itself, an instrument to bring down states, and an international system that will both give self-protection to nations and mutual protection. It is a far less difficult intellectual problem than how to effect the fission of uranium. Nor is the failure that of the peoples. It is the inadequacy of the men who compose their governments and listen to the militarists.

## The National Science Foundation

EXTENSION OF REMARKS
OF
### HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal of the American Medical Association for November 10, 1945:

THE NATIONAL SCIENCE FOUNDATION

For some weeks hearings have been held by the subcommittee of the Committee on Military Affairs of the United States Senate on the proposals to create a National Science Foundation, a Government agency to be charged with encouragement of scientific research. Several measures have been presented to the Congress to effectuate this objective. Their number and diversity indicate the difficulty of finding the best possible formula. Care is necessary if the objects sought are to be achieved without permitting domination of research by a Federal bureaucracy and inhibition of private initiative or the spending of vast funds without adequate return. The work of the Committee on Medical Research and of the Office of Scientific Research and Development during the war proved that funds can be used satisfactorily to encourage research and to coordinate and intensify the speed with which the results of research can be applied. Much was accomplished toward diminishing the lag between the introduction of a new remedy and the determination of its toxicity and its field of usefulness.

Fundamental to the creation of the National Science Foundation is its structural organization. With but few exceptions, leaders of science who appeared in the hearings approved an organization which would be under the control of a directing board which would have as an executive officer a director whom the executive board would nominate to the President. The director would be responsible for administration of affairs of the National Science Foundation, but policies would be determined by the directing board and it would have the responsibility for selecting the universities, hospitals, institutes of research, and other agencies to which grants could be made.

Under the directing board would be a number of subsidiary boards dealing with such subjects as the national defense, medicine, and the basic sciences. Possibly there might be, in accordance with the recommendation of President Truman, a division for the social sciences, although the point has been made that much research in the field of the social sciences is developed and promoted primarily with a view to securing political and legislative action. The social sciences are themselves so young and their techniques at present so experimental and so poorly controlled as to indicate some doubt as to whether or not their development has proceeded sufficiently to warrant incorporation at this time in the proposed agency.

Great care must obviously be exercised as to the technique by which various Federal agencies, such as the War, Navy, United States Public Health Service, maternal and infant welfare and similar groups are coordinated with the National Science Foundation.

Again the question of patents is introduced by some of the legislative proposals for the creation of the National Science Foundation. A majority of those who participated in the hearings are convinced that the whole question of patents requires far more study than is now being given to it and that patents might well form the subject of subsequent action, perhaps with the recommendation of the directing board once the agency is established.

Among the best possible activities to be conducted by the proposed National Science Foundation is the creation of fellowships, residencies, traveling scholarships and similar positions to be subsidized with the aid of Federal funds. By this technique young men of promise may be given opportunity to show their worth and thus far more competent scientists mobilized in the field of research.

Another function is the encouragement of national and international exchange of scientific and technical information. Unquestionably progress was intensified during the war by the interchange of medical information between the medical research councils of Great Britain, Canada, and our own country. In the postwar period a similar organization might involve inclusion of all the nations of the world, perhaps with the aid of a suitable health section developed under the organization of the United Nations.

By the system which prevailed during the war, invaluable time was saved in extending the uses of penicillin and in promoting its manufacture on a large scale and its availability at a small cost. The number of lives thus saved is tremendous, indeed incalculable. Similar investigations in the uses of the sulfonamide drugs, in the development of the uses of blood and the various derivatives of blood and investigations in the treatment of burns, in the control of malaria and many tropical disorders, in diet and in nutrition have brought fruitful results by the utilization of a well coordinated and intensified program of study.

The board of trustees of the American Medical Association and a special committee representing the American College of Physicians, the American College of Surgeons, and the American Medical Association through the committee on postwar medical service have recommended enactment of a suitable measure for the creation of a National Science Foundation. As Torald Sollmann has said, "Research is a bird that sings only when it is free. Discovery requires the broadest possible liberty to search in as many places as possible, by as many competent scientists as possible, in any manner and any means that they themselves consider possible." In the structural organization of the proposed National Science Foundation the recommendations of the Magnuson bill (S. 1285) seem to approach more nearly the type of structure that would achieve the objective sought and conserve the factors of private initiative and liberty that have given the United States a place in the sun where scientific research is concerned.

## UNRRA

EXTENSION OF REMARKS
OF
### HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. RIZLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter about UNRRA as soldier over there sees it. His

name I have eliminated for security reasons:

OCTOBER 3, 1945.

Hon. ROSS RIZLEY,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. RIZLEY: Everyone is interested in the discussion now taking place in Congress about UNRRA. Of course, all I know about the discussion is what we can hear over the radio BBC, and occasionally an American broadcast. Recently the Thirty-fourth Division newspaper in Italy carried an article concerning it. It seems that some of the Members of Congress are not exactly satisfied with the supervision set-up of UNRRA, and there are other phases of it that probably are under discussion.

Since the United States has been asked for another 1 percent of its national income, certainly every thinking person should be interested in where the money is going. Is it doing the job that we think it is doing? Is it being properly supervised, etc.? Yugoslavia is one of the nations receiving aid under UNRRA and I have had an opportunity to discuss the matter first-hand with the UNRRA officials in charge of the aid going to Yugosalvia. I talked to the supervisors, visited with the "hired help," most of them Italians, some of Yugosolvene extraction, visited the "battle line" where the Yugoslav troops are on one side and the Allied troops are on the other, and saw a part of the equipment being turned over to them, but most of what follows, in fact all of it, is the views of the persons talked to. Certainly it is not the view of the writer. He has no views, since he did not have time or opportunity to make a thorough investigation of the situation. The items which follow are merely notes taken down from various persons interviewed, without giving their names. Since Trieste, Italy, is the main receiving center for all the UNRRA materials for Yugoslavia, I violate no confidence in stating that the information was gathered between the 23d of September and the 29th of September while there.

There is a mild revolution going on in Yugoslavia. Tito has charge and the government is a one-party communistic form. Yugoslav persons are hired locally to help the UNRRA officials. People are forbidden in Yugoslavia to talk to UNRRA representatives. In Split (Splitano), Yugoslavia, the office manager of UNRRA disappeared a month ago and has not been heard of since. This is not an isolated case. It happens often—a knock at the door at night and whole families disappear never to be heard of again. The Yugoslavs have left Trieste officially, but there is a battle line about 4½ miles from the city up in the mountains. The Yugoslavs, armed, are on one side and the Allied troops, also armed, are on the other side. In the city of Trieste there are still about 10,000 Yugoslav armed troops roaming in civilian clothes awaiting orders. In Yugoslavia, Tito has his own version of GPU which functions day and night.

There is more terror and fear among the Yugoslavs today than during the period when the Germans and Italians were there. Terrorist groups are operating; people are forbidden, as stated before, to talk to UNRRA officials, and the officials have been refused cooperation by the central government in Belgrade. They have been told they could not have a free hand. In Kastel, one of the UNRRA officials was taken into custody by the Yugoslavs and kept from 8:30 p. m. to 1:30 a. m. the next morning although he had his official documents and was wearing an American uniform with the UNRRA insignia on it. They refused him permission to talk to anyone or to call anyone.

Where is the food going? They say to Tito's army and not to the people, although under the agreement none is to go to the army. During July and August 1945 the people of Split received only one ration of food, 8 kilos of wheat (a kilo is roughly 2⅛ pounds), three-fourths kilo of canned meat and one-fourth kilo of lard. During that period the warehouses were loaded to capacity and the docks also. If food that came into the Dalmatian area from UNRRA during those 2 months had been distributed it would have fed 7,000,000 people with a bare sustenance. Since July and August the program has been stepped up between 25 and 40 percent and enough food has been received to feed about 12,000,000 people a bare sustenance.

At present UNRRA is buying from the United States Government—anyhow it is coming from the War Department—5,000 trucks equipped with trailers and winches. These are now in the process of being turned over to Yugoslavia. These trucks are coming from all over Italy. Some of them were used in the African, Sicilian, and Italian campaigns, and also against the Gothic line. Most of them are being driven from Leghorn up to Trieste and taken by UNRRA out to the border line 4½ miles, and upon being receipted for are turned over. Up to September 29, 1945, about 2,500 trucks and trailers had been turned over, with some 2,500 yet to arrive. My informant said that the trucks were sold to UNRRA, $1,500 for the truck and $500 for the trailer and winch. I went out with an UNRRA official to turn over a convoy to the Yugoslavs. We drove out to the line and couldn't find anyone to deliver them to, so we drove down into Yugoslav territory a couple of miles on a country road. We came to a sentry who stopped us and turned us around. We were not permitted to go on down to their encampment to talk to a superior officer about getting someone to take charge of the trucks. Going back to the line, just over in Yugoslav territory, there were five trucks that had been turned over to them the day before. In the back of one of the trucks and trailer were about a couple of thousand brand new fan belts, and dozens upon dozens of electric drills, new car tools that had never been used. Upon inquiry we were informed those things had just been thrown in; that UNRRA wasn't paying the Army for them. There were easily three or four thousand dollars' worth of electrical equipment and tools in the trucks there, such as drills, punches, electric grinders. Some of them were old and may have needed repairing, but it is equipment that couldn't be purchased back in the States for love or money.

Only one UNRRA official that I talked to thought he was receiving proper cooperation in his territory, and that cooperation was coming, so he stated, only from the local officials, not the central government. He was assigned to the area of Slovenia. He said the people there are more progressive; that the official news agency Tanjung had given UNRRA credit through the papers for foodstuff coming in; that the people from peasants to high officials know it is coming from UNRRA. He agrees, however, that it is impossible to find out where the food is going although some food is being given to the people in his area. Outside of this one investigator, the stories told by other investigators were different. He also stated that the food is being used for the army and being stored to be used for political purposes.

Notes at random: No political party will be out against Tito; either the people will vote for him or they won't vote because they will be afraid to oppose him. Mikhailovitch collaborated with the Nazis and has no following in Yugoslavia. Partisan propaganda is that Mihailpvitch is in London being protected by British as is King Peter. The government restriction appears to be loosening up somewhat. The people want to look to the West for leadership rather than Russia but know that with Tito in power their destinies and those of the Soviet Union will be linked. Tito is doing a good job of propaganda with the press and especially with the radio. I talked to a captain, John A. Blatnik, One Hundred and Twenty-fourth Street SW., Chisholm, Minn., not about UNRRA, but about conditions generally in Yugoslavia. Captain Blatnik had performed a special mission for the Army, being employed in strategic forces during the last 9 months of the war, with the partisans in Yugoslavia. His job was to locate German forces and material and relay the information back behind the lines, then planes would come over and destroy them. After the war and his mission ended he spent about 14 days in Yugoslavia visiting his relatives. He can perhaps throw more light on what the people think of Tito and the chances of the unification of the country, etc., than any other person I talked to. I talked to him for only a few minutes and his name is not included in connection with UNRRA. He is at the present time en route to the States for a well-deserved rest.

At present the person in charge of UNRRA for Yugoslavia is a Russian, as head of the mission. UNRRA needs a general housecleaning in procuring competent investigators to find out where our millions and millions are going. The local men admit this.

During the months of July and August, although the food was coming in regularly (up to September 15 there had been 103 ships carrying over 285,000 tons come in) the UNRRA officials, when they finally put the pressure on, could not find out where it was going or how it was being used. The ships are unloaded on the grounds at the dock in Trieste, Split, and other Yugoslav ports. The goods are turned over to the Yugoslavs at the dock and a receipt taken therefor but the UNRRA officials couldn't find out where it was going. UNRRA is certainly to blame for the personnel hired. There are about 20 investigators in this Dalmatian area (this refers to all the Yugoslavia territory where the goods are going). Six of these men are fairly competent investigators; 14 are less than mediocre and either don't care or are just generally incompetent. The least salary an investigator receives from UNRRA funds is $6,000 per year with a per diem of $7 per day, and in addition is allowed some other expenses which the writer didn't go into in detail.

The assignments are made in the following manner: An investigator is given an assignment to cover 12 to 14 Yugoslav towns with a certain space of time within which to bring back reports. It is his job to go into the area assigned, talk to the people and see what foods they are receiving from UNRRA, etc. Too many reports are collected by visiting only one town in the area, visiting the local person having charge of the disposition of UNRRA materials, asking him if everything is O. K., spending the time visiting over a cup of coffee and turning in a favorable report. Not all reports are made in such a manner, but most of them are. Some of the towns are not even visited and generally the reports are taken merely from the Yugoslav official in the town.

Propaganda is going the rounds that the goods are coming from Russia. The wheat sacks generally have been made in Wichita, Kans., or Minneapolis, Minn. That is explained away by stating that the sack comes from the United States but that the flour comes from Russia. Of course the sack, as I understand it from them, has something about UNRRA on it so not all the people are fooled, but those who can't read are, and even some that read swallow the yarn about only the sacks coming from the States.

Eighty-five percent of the people don't want Tito; they want a democracy. They don't want to live in terror from day to day. They say they'd rather take the Germans or Italians back than have what they have today. Tito has about a million men under arms. To say that it is hard to get into Yugoslavia to investigate anything is true. Recently the official government at Belgrade asked that a tractor man and a Ford ma-

chinery man be sent into the area to assist them. Two were sent from the Ford Motor Co. in England. They arrived in Trieste and it took exactly 30 days for them to receive clearance papers from Belgrade. In the meantime the experts who had been asked for cooled their heels in Trieste. The visas came through on September 23d. Every person applying for visa permit is checked and double checked; many are refused visas. Recently a secretary to UNRRA in Split waited 60 days for a permit to leave the country. When it didn't come through the UNRRA official there put her on an American Liberty ship that was ready to sail back to the States. She was removed by Tito's soldiers.

One of the UNRRA representatives is a Yugoslav by birth. He spent 7 months in Split and made many attempts to be permitted to go into the country to investigate conditions but permission was refused him and recently the government asked that he be removed from duty for UNRRA in Split. Today he is working in Trieste. He told the writer that the Yugoslavs feared him more than any other person on the UNRRA investigation staff because of his knowledge of the language and the people. In fairness it should be stated that the Yugoslavs accused him of having something to do with some coffee or other foodstuffs that the Yugoslavs claim came into the country illegally. However, he was not accorded a hearing by his superior officer in UNRRA but was summarily removed from his post at the request of Belgrade and sent to Trieste. This man, before leaving Split, had talked to several hundred persons there.

UNRRA personnel cannot go outside of the specific territory assigned to them without special permission from the Government at Belgrade.

That something should be done immediately to see that the food and clothing and other materials are going where they should go is also a fact. Of course, as long as the United Nations turn over the materials with no questions asked it will be stored, hoarded, and used for political purposes within and without Yugoslavia. For instance, there are a lot of Yugoslavs living in Trieste and its environs that is a part of Italy. Politically speaking, as a matter of jurisdicton, those persons are Italians, and under UNRRA are not entitled to receive any of the foodstuffs going to Yugoslavia, yet it is coming back into Italy for the Yugoslavs. About 2,000 persons a day come from Fuime, Italy, to Trieste, Italy, by train. It is estimated that they carry home with them 500 tons of flour per day.

A Negro soldier that had driven a truck from Leghorn, Italy, to Trieste to deliver to them stated it about as well as anyone could when he said, "It's a helluva note when you can't get into a man's country to give him something." It is a helluva note that the American people are asked to give another billion and a half dollars and not know where it is going. It isn't that we shouldn't help feed those less fortunate than ourselves; we should. But when it isn't going where we want it to go, then we should have the right to say "no" and that no more will be forthcoming until we know and can see that it is going to feed the hungry. What we want to do is to send it directly to the people, not through a middleman. Who ever heard of spending such fantastic sums of money on the say so of so few who investigate and find out so little and who receive no cooperation from those who tell them nothing.

One other thing I'd just like to mention and that is censorship in Trieste and environs by the United Nations. The folks back home have been taught that Americans are entitled to a free press and they read daily in the newspapers about the Russians restricting the reporters from coming into certain areas dominated by the Russians. The only newspaper reporters today reporting what is happening in Trieste are reporters employed by the Department of State of the United States and United Nations. There are no newspaper reporters other than those. Where is the free press we so loudly proclaim? The British and the Americans alone are in charge of matters in Trieste at this moment. Perhaps because of the seriousness of the situation our reporters must be excluded.

The UNRRA needs an overhauling and investigation by Congress, not Mr. Lehman and the high-ups. The men in the field, the small fry that work in the offices, the clerks and interpreters (local folks) know more about what is going on than anyone else. Anyhow I'm interested as a citizen in having it made as right as it can be, and I feel that Congress and the folks back home should know so that you may be made aware of what is happening in UNRRA in Yugoslavia. Certainly it is something which vitally affects each of you. And another thing, if the present UNRRA contract doesn't give us the right to direct where it should go and the power to see by investigation that it reaches the persons for whom it is intended, then the contract should be amended.

I hope your secretary will permit you to read this letter.

Very truly yours.

---

## UNRRA

EXTENSION OF REMARKS

OF

## HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I made in the House on January 24, 1944:

(By unanimous consent, Mr. REED of New York was granted permission to revise and extend his own remarks.)

Mr. REED of New York. Mr. Chairman, this proposed UNRRA is an anti-Christian approach to a traditional Christian problem. I am sure that the overwhelming sentiment of the American people, true to a long and honorable tradition, is favorable to rendering aid to the sick, hungry, and suffering men, women, and children of Europe and Asia. I dare say that of the 2,000,000,000 people in this world, that of this number the 700,000,000 adherents of the Christian faith wish to give concrete expression to that faith by rendering aid and mercy to the suffering, hungry victims of this devastating war. Believing, as I do, that such is the sentiment of the Christian people everywhere, I stand ready at any and all times to vote the necessary funds to the extent that reasonable assurance can be given that such funds will be used for the high and noble humanitarian purpose which our traditionally generous people have in mind.

I do not intend to permit myself, under the pressure of the hysteria of the moment, to give support to legislation clothed in the habiliment of human sympathy as a means of obscuring from public view the world political power of Frankenstein concealed within.

It is not the amount of money involved in this bill that is important just now because it is a matter of recorded history that as a nation drifts and finally faces insolvency the most plentiful and cheapest product of that nation at such a time is money. This Nation is surfeited with money, borrowed money. In every step taken by the New Deal in its all-inclusive program of enforced scarcity, money is the one thing that has become increasingly and dangerously plentiful.

Is it necessary to set up this UNRRA machinery for becoming extangled in a new world order of power politics to effectively distribute $1,350,000,000 to starving men, women, and children throughout Europe and Asia? Are there no existing Christian organizations with long and honorable records of humanitarian achievement, fully equipped in every way to administer the desired relief? Of course there are such organizations, ready and prepared to act. They are now operating in the field. What is wrong with the National Red Cross, the Society of Friends, and others? Who objects to utilizing the facilities and personnel of these great agencies of mercy?

I will tell you who they are: They are the alien-minded power politicians who seek to build a new world order, who see in this fund of $1,300,000,000 and other billions to follow the very elements of political domination of starving populations. No tears will be shed over the ghastly victims of starvation by those who will control the organization set up by this legislation. The alien-minded manipulators of our declarations of policy do not favor, but instead desperately fear, the adoption of a plan by which distribution of food and clothing will be made by Christian agencies. What has been the excuse given by some of our allies in justification of letting little innocent, starving, potbellied, moaning babies starve? Why, they say: "What if the Nazis should steal it and thus prolong the war?" But does the evidence show that this danger exists? Dr. Howard E. Kershner, director of relief in Europe from 1939 to 1942 for the American Friends Service Committee, stated that not a mouthful of food sent to the people in other occupied countries ever reached the mouths of the enemy. Does not our State Department bear witness to the fact that the enemy forces or populations have never had access to the 19,000 tons of food going to Greece each month?

This piece of legislation, like so many New Deal proposals, has set forth in it a worthy objective, but concealed within its provisions are commitments to further alien intrigues in the field of world power politics.

The printed pages of the hearings on this resolution (H. J. Res. 192) are as barren of facts pertinent to the real issues involved as the Sahara Desert is destitute of fertile soil and moisture to produce food.

It was not until pressure was applied to Russia that she let her people know that help was being furnished to her by the United States. If the United States is to raise the morale of Europe and Asia through benefactions, then let it be distributed through the channels of charitable agencies already organized and equipped to render such a service, and do it free from political manipulation on the part of any one or all of our allies. I am not in favor of voting $1,300,000,000 under the alien terms of this resolution to enable any part of the fund to be used to undermine the Christian concept of religion. I do not believe it will be sacrilegious or unpatriotic to show some concern now and then for the welfare and protection of our own people, especially when passing on these potential postwar hand-out proposals.

With an estimated future debt of from $300,000,000,000 to $500,000,000,000, and a postwar peacetime budget of from $20,000,000,000 to $30,000,000,000, our appropriations for world-wide charity must have some limit if this Republic is to survive the drain that will be made upon it.

I want to say further that this war will not end famine, pestilence, revolutions, nor war. There will still be the menace to this Republic from within and from without from the impact of fascism, communism, or collectivism in one form or another. There will

be unemployment here and abroad and political master minds will be on hand to play upon the discontented and the revolutionaries. The witches' kettle of class hatred will be well stirred as a means to political power.

Let us not by this unwise, un-American legislation arm the international political manipulators with an instrumentality of power with which they can exercise control of life and death over the starving victims of war.

## Buy Victory Bonds

EXTENSION OF REMARKS
OF
**HON. THOMAS J. LANE**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech which I delivered over radio station WLAW, Lawrence, Sunday, November 18, 1945:

The other seven, we called war bond drives. This, the eighth, is the Victory loan drive.

The fighting is over and the war has been won but the Nation cannot change from all-out war to all-out peace overnight. First we must go through a period of reconversion. Millions of soldiers must be demobilized, millions of war workers must seek other jobs, thousands of plants must change their machinery to fit the new needs of peace. This takes time and money.

The United States Government is calling upon you and me and all of us, as partners in that Government, to follow through and complete the job. The hardest part of the job is over: the sacrifices on the battle front, and the sacrifices you made on the home front to win the victory. Here we stand, a Nation geared for war. Now we must change from war-ways back to peace-ways. And that takes time and money.

There are two solid reasons why you should buy Victory bonds and keep Victory bonds. The first, is to help your Government. The second, is to help yourself.

Why does the Government need your help? It must pay bills for munitions and material already delivered and used. It must keep the lid on prices to avoid inflation. It must pay the cost of guarding Germany and Japan. It must pay for the care of our wounded and disabled. It must pay off and provide benefits for 8,000,000 or more veterans to be discharged by next July or earlier. There it is in a nutshell. Let's spread it out and see what it means.

You know that prices have gone up, which means the purchasing power of your wages has gone down. This will continue unless cash is put into savings. There is more cash in circulation in this country today than ever before. The temptation is to go out and buy when there are so few things to buy. Everyone wants a new refrigerator, a new radio, a new car, and hundreds of lesser items. We'll all scramble to get the first few items of civilian goods which come back on the market. We'll bid against each other to get those first few items, and that will send prices up. We'll do this to ourselves unless we realize that we're all in the same boat. Teamwork is just as much needed now as it was during the war. Your Government wants to see that money safely invested by you in Victory bonds, earning money for you, instead of competing for an increase in prices. In connection with this it is well to remember that Uncle Sam always pays his bills. Bonds guaranteed by the United States are the best investment in the world, barring none.

The Government needs these loans from you to pay the cost of guarding Germany and Japan. Until order is restored throughout the world we must protect our victory. Occupation forces, their equipment, their supplies, their pay, these are needed to insure our victory. The Army estimates that as late as July 1, 1946, some 1,400,000 of our men will be doing this job, backed up by 1,100,000 in this country. The Navy will have 550,000 in service. Both services have a big police job to do so that you may live in peace.

This war has cost us 1,000,000 casualties. The families of the 250,000 who gave up their lives to save us must be provided for. Hundreds of thousands of other men are disabled. When we sent our men forth to do the toughest and most dangerous job in all of human experience we said, "Nothing is too good for you. We shall not forget."

Remember?

Now these wounded are coming back, disabled in our service, having given up sight and limb and health and mind for us. Common decency demands that we shall not fail them now. They did a job for us. Now it is our turn to do a job for them. These men need help and hospital care. Your Government is determined to stand by these men—your men—to heal the terrible wounds they suffered in protecting us from harm. Your bonds will provide that merciful care.

Eight million or more veterans will be coming home in the months ahead. We want them home as quickly as possible but that is easier said than done. Many are in Europe, which is 3,000 miles away; others are in the far Pacific, ten to twelve thousand miles away. It took money to get them out there; it will take money to bring them home. But this is an expense we'll gladly pay by purchasing Victory bonds.

These men must be paid. For $60 a month these men fought and bled for us, who were earning many times this paltry sum in the security of America. These returning soldiers and sailors must have a stake to start again in civilian life. The law provides up to $300 per man. If our reduction in armed forces goes as per schedule, this item adds up to something like $2,000,000,000 in the next year.

Your Victory bonds will finance the GI loans which will help veterans establish themselves and their families in civilian life. Your bonds will give some kid who dropped his books to fight for you, a chance to resume his education. He is 3 or 4 years behind his stride, but we are going to give him a chance to try and catch up through the Victory bonds we buy.

We shall not talk about the suffering he went through so that this Nation of ours might survive, because we, the stay-at-homes, can never match the sacrifices he made. We can, however, talk about bonds and how these kids, on $50 and $60 a month bought bonds. Think of it. In addition to all his other contributions to victory he bought bonds. God knows he was entitled to spend all of the $12 to $15 a week he got and more, to get away for a few moments from the drudgery and the agony of war. Instead, he and millions of his brothers and sisters in uniform bought bonds.

What is our answer to this?

Buy bonds and more bonds.

It is the only way to maintain our self-respect as we face these homecoming men. For they will ask the question: "What did you do to keep the home front strong while we were away?"

Your Government needs these loans from you to pay for contract cancellations so that industry may change over to peacetime production just as soon as possible, so that the millions of war workers and millions of returning veterans may all have new jobs without delay.

I have given you some of the reasons why you should buy Victory bonds to help your Government. Here are some of the reasons why you should buy them to help yourself.

In the first place, if you don't loan this money to your Government, it may be forced to take it from you for keeps through taxation.

In the second place, when you buy bonds, you are not giving up anything. Money in your pocket earns nothing. Money invested in bonds, if held to maturity, will obtain 2.9 interest for your money. Just look around. Where else can your money earn as much interest on such a sound basis? Some private investments are risky, not so the Government of the United States. Behind it stands the total wealth of the Nation. Government bonds are the best investment in the world.

If an emergency arises, these bonds can be turned into cash immediately. Furthermore, if your bond is lost or destroyed, a substitute bond, bearing the same date of issue as the original bond, will be issued to you, without charge, upon proper identification.

These bonds spell victory for you, so that some day you will be able to buy that home you've dreamed of, or travel, or retire, or to give an education to, or create a business opportunity for your children.

If you keep the money in your pocket, you will surely spend it in the mad rush for things at high prices. You will not be getting your money's worth. The wise man puts that money into bonds. He knows it is safe there. When reconversion is complete and consumer goods are plentiful again and prices come back to normal, he can then spend with a free mind, knowing that his money, in Victory bonds, has been earning for him—earning extra dividends in thrift and security.

Here is a chance for all of us to do good and to earn money while doing it. Truly, it is a victory opportunity.

Buy bonds today.
Put them away.
You'll find they pay.

## Independence of Lithuania

EXTENSION OF REMARKS
OF
**HON. EDWARD A. KELLY**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include an address made by me at a dinner of the American Lithuanian Mission, held at the Statler Hotel, Washington, D. C., November 16, as follows:

Mr Toastmaster, Your Excellency, the Minister of Lithuania, distinguished guests, assembled here this evening is a representative group of American people who believe that the freedom of small nations shall be retained—nations which, because of their size and location, have been and are now being used as buffer nations for the protection of warring nations.

This is the condition that Lithuania finds itself in today.

It struck me, as I listened to Mr. Olis, that he made a singular point in his reference to the atomic bomb.

It used to be that in discussion of the rights and defenses of nations, the question of control of certain so-called buffer states was frequently raised, and in many cases the justification on a basis of defense through buffer states was recognized.

Today, the atomic bomb has indeed made obsolete the whole consideration of the buffer state.

For no nation can be used as a protection against another in the atomic age, and the only certain guaranty of peace is a general, firm, and fast agreement among the nations, to keep the peace—a peace based on the fundamental rights of man.

We are all familiar with the recent address of the President of the United States on Navy Day—setting forth the 12-point foreign policy of America, in which he emphasized our belief in the eventual return of sovereign rights and self-government to all peoples who have been deprived of them by force, and further stated that we shall refuse to recognize any government imposed on any nation by force of any foreign power.

I recently introduced a resolution in the House, and Senator WILLIS introduced one in the Senate, referring to those principles and to secure for the people of the Republic of Lithuania a restoration of their independence, that they may in the future enjoy the blessing and happiness of peace.

Knowing the Americans of Lithuanian descent, I know no greater patriotic group of Americans, whether this be the land of their birth or the land of their adoption, who have steadfastly fought for independence.

No man can know a Lithuanian without discovering that a never-dying passion for the independence of his country is eating into his soul.

Out of the depths there comes a cry from this Nation which for centuries has been forced to be inarticulate.

It is not a demand for privilege, for territory to which it might have only a historical claim; it is a cry for life, and if we really believe in our own profession, if the traditions of 1776 have not been effaced, if the definition of self-determinism with which President Wilson sought to change the evil systems of lust and avarice in Europe and the rest of the world, after the First World War, we Americans must listen to this cry from the core of the hearts of the Lithuanians.

We cannot close our ears to it.

## A Foundation of National Power

EXTENSION OF REMARKS
OF
**HON. FRANCIS E. WALTER**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Assistant Secretary of the Navy H. Struve Hensel at the San Francisco Commonwealth Club, San Francisco, Calif., November 9, 1945:

After our recent war experiences, I trust that not much time need be spent in arguing the need for national power Once frank discussions of that subject were regarded as indiscreet. The term "power-politics" was a reproachful term. Fortunately, there has been a very healthy change in our thinking. After war spilled its hot fire all over us, we needed no inspired dialectician to demonstrate the absolute necessity of national power. The lesson was taught to us one Sunday morning in December 1941 with surprising suddenness. Our lack of power at that time likewise sharpened our intellects. We knew we had to win this war and no one more than you on this coast realized the gravity of our situation. Our past, present, and future were at stake. Power was the price of survival. We had to have it at any cost.

I hope that such realism will continue throughout the peace. The ostrich has no place in world affairs. Continued power in our hands is absolutely essential, if our ideals of justice and freedom are to have a prominent place in this world. If power passes to other hands, we cannct be sure of the aspirations of the next possessor. We must remember—only the strong can enforce justice—only the strong can insist upon freedom—and only the strong can afford tolerance.

In the past we have failed to recognize the extent to which power is the ultimate sanction in political relations. That error has, in my opinion, been the basic reason for our past ineffective attempts to outlaw war and to establish an international form of government. The success of the United Nations Organization, launched so auspiciously in this city, will depend on the retention of power in the hands of the just.

We all know the type of weapons through which power is exerted. We have seen segments of our military power in being. Everyone is familiar with the struggle of this Nation to build and support that power. From our war experiences, we have discovered that the thread of power runs down through almost every sinew of our industrial and social worlds. We also became aware of the need for a healthy and intelligent citizenry not only to man our ships and staff our armies, but also to produce the materials and agricultural products upon which our armies, navies and supporting population had to live. All of the activities required to exert power have been known to our leaders and to us for some time. Furthermore, we always had at our disposal the necessary raw materials, man-made tools and individual skills to produce and maintain such power.

Yet before 1940 we did not have any semblance of present power. We were definitely living in the future and relying upon our potentialities We risked our entire country in the hope that, if called upon, we could somehow generate enough power in time to save us. We were the flabby fat boy with the candy. We had no military force worthy to be called by that name in the world of Hitler and Tojo. Our sea power had been decimated by the Washington Conference of 1921-22. Military research and development were hardly noticeable. Money was not available and scientists were not interested. Does anyone have any doubt that if we had been suddenly attacked in 1939, this great Nation would have gone down in the dust with a suddenness and ease that would have made the Polish resistance seem stubborn and rugged?

I attribute our weakness of the twenties and thirties to the thinking of our people—my thinking and your thinking. It was obviously not the result of any lack of materials or manpower. As a matter of fact, we then had more resources than later when we had lost access to our sources of tin and rubber and had our sea lanes restricted by enemy submarines. We were weak because we wanted to be weak. When our thinking changed, we became strong.

A brief analysis of our underlying thinking in those days might be profitable. You will recall that we were extremely sophisticated. We knew all the answers. We had lived a long time. We knew better than to indulge in that patriotic emotionalism which leads to sacrifice and service. We believed in little except the search for the maximum of creature comforts and creature luxuries. The intelligent man was expected to turn his attention to the furtherance of his own interests without any concern as to others or as to his country. Patriotism was tagged as provincialism. Public service was looked upon as a second-grade endeavor, reserved for those who did not quite have enough vision to do better for themselves. Sacrifice for the Nation at large was regarded as downright foolishness. We might have talked about national needs, but we never let ourselves be carried away too far. We had our own affairs to look after.

That sort of thinking was, in my opinion, the fundamental cause of our weakness. We did not want to stir ourselves. Of course, we developed a number of mental salves or defense arguments to screen the basic tenet of faith. There was the oft-repeated maxim: "War never settles anything." With that mumbo-jumbo we tried to convince ourselves that no one else would start a war and that we could dismiss that phenomenon from our planning. Yet we really knew that war had settled many countries. The passing through military attack of Carthage and Rome, never to rise again, was known to all. The collapse of Spain had occurred within the lifetime of many. We knew we had to be strong and secretly thought of ourselves as strong. All of the sophisticated twaddle was used to fool the young and cover up the fundamental yearning—freedom from care about the state and freedom to think only of oneself. It was an animal emotion which for long masqueraded as an intellectual masterpiece.

The contagion of lack of belief in our Nation and in ourselves spread fast. Our governmental administration suffered. National problems went unsolved. Dissensions among our people multiplied. We degenerated into a collection of warring tribes, each intent on securing the maximum for itself. We no longer thought and acted as a great country. That is what our enemies saw when they called us "soft." They did not think we could ever pull ourselves together.

Just as thinking made this Nation weak, so we have examples of thinking which made weak nations comparatively strong. Before this war Germany and Japan were weak according to all standards of power. Most school boys could explain with clarity their lack of resources and their inability long to wage war. Yet they very nearly conquered the world. Their primary source of strength was belief in themselves and in their states—a belief so strong and pervading that they were willing to sacrifice all to attain it. It almost seems that the mere fact of really believing—rather than the character of belief—is the source of strength.

The strength of Russia is also grounded in the spirit and service of her people. For a long time she carried on without much more. Today she has achieved power.

Our escape from destruction may be attributed to three circumstances. First, our potential power—as distinguished from power in being—was firmly grounded in our natural resources and the aptitudes of our people. Second, the inner belief of our Nation in itself and the will to serve was kept alive by a small group, of which our military profession formed a large part. Third, the final impact of war upon us was delayed over 2 years by distance and the sacrifices of gallant allies. When war finally came to us we had started up the road. We had acquired some beliefs. Yet complete conversion did not sweep the country until December 1941. When we regained our beliefs service and sacrifice came to us naturally and the restoration of the giant to health and strength was irresistible, although slow.

Our national thinking is clearly fundamental. That is why the present rush to demobilize physically and thus to embrace weakness is disheartening. We seem to be trying to emulate a punctured balloon. What is most terrifying is that we have already demobilized our thinking. There is a startling resemblance in our expressions of thought to those of the thirties. There are the clichés to the effect that we fought for the right to avoid fighting again. There are the suggestions that everyone now should look out for himself. The country is not

even paced on a par with self—much less above self. It is said that we have devoted enough time to the affairs of the Nation—now is the time for us.

Scarcely a vestige of our war attitude prevails. We may still realize that there are problems to be solved if we are to remain secure. But we want an easy solution—a stroke of magic. We are completely enchanted with the thought hat our security may be preserved by the simple sweep of the pen, such as a revolutionary merger of the armed services. We are carried away by the suggestion that future wars will be fought with push buttons. That will mean nothing for us to do. There does not seem to exist any longer the sturdy belief that trained men, mobilized materials, applied brains and patriotic self-sacrifice are the essentials of strength. Such elements never made anyone rich. The importance of research is admitted, but thoughts of economy spring up when the research budgets are presented. We concentrate on reducing taxes rather than the national debt. We have a thousand reasons for our actions. All of them are sound from the individual point of view. Whether we want to face it, our thinking has turned away from country to self. That is the path which leads to weakness and not strength.

A foundation of power is crumbling. The base of the pyramid—the spirit, purpose, and psychology of our people—is showing signs of decay. Armies, navies, and research—the air corps and all other elements of military strength—are only the apex of the pyramid. They cannot exist suspended in midair. Important though the apex may be, I submit that we must turn our attention to the base—a solid belief in ourselves and our particular ideals, sufficiently compelling to engender action.

It is up to our generation to lead this renascence of national spirit. For a short time only will we be able to influence national thinking and to guide our destiny. We have a tremendous advantage—not available 20 years ago. It is also a danger. There is about to be pumped back into our blood stream the richest fluid ever known—the men of our fighting forces. They are already turned in the desired direction. They have the needed beliefs. If their present spirit can be retained and built upon, they will furnish the greatest strength imaginable. If we fail them and they turn to cynicism about their comrades' sacrifice, we are due for lowest depths. We have in our hands the bricks and mortar for a foundation of national power for all time.

I can speak with some positiveness on this subject. I saw these young men in the field while the war was still in progress. When I went to the Pacific last August I had expected to be impressed with our material strength. I was, but I was not fully prepared for the calm distilled spirit of Americanism which gave real force to our might. I did not expect the full measure of vitality, unselfishness, and comradeship which I saw displayed. These men were aware of being Americans and as a part of that awareness displayed a pride in association with comrades equally aware. They were intent on furthering the interest of their country and utterly unmindful of the price which might be exacted from them as individuals. I have never been so proud of being an American in my whole life. Identification with the same country to which those men belonged was obviously the highest reward obtainable.

From the harassed flight-deck crews to the lonely guardians of the desolate atolls, the spirit was the same. I never believed that men could accomplish so much. Flight-deck crews worked continously from dawn until late at night moving planes in preparation for launching and receiving flights. Our men built roads through swamps and jungles. The tangle and growth of those swamps and jungles cannot be adequately described. Doctors stripped to the waist cleared the jungle and erected hospital buildings themselves because of the shortage of other help. Crews of ammunition ships cheerfully piloted cargoes of destruction across the seas to service the fleet. Battleship crews stood for hours at general quarters throughout the day and night.

Great as were their accomplishments, the spirit which animated them was even more magnificent. Their movements were easy and confident, displaying complete satisfaction in their jobs. They cheerfully rose above all hardships. I remember being shown over a particularly dusty and barren strip. I had been told of the wonderful climate, the good swimming, and the strategic advantages of the atoll. Riding in a jeep, I was almost blinded with dust. I finally asked if it were not a bit dusty. "Yes," admitted my guide, but quickly added, "but it's nice clean dust." For such spirit all things are possible.

Theirs is the spirit which we must cultivate. I cannot define it precisely. It springs from that pride of being an American which engenders an irresistible desire to make America great. It involves a realization that some of our time must be spent on the Nation's business and that our actions must be dictated as much, if not more, by unselfishness with respect to the Nation as by personal interest. It is the direct opposite of the sophisticated self-indulgence and self-worship which led us astray before. It is a real belief which strengthens, inspires, and solves difficulties.

If we can tie into that central theme, not only will our national thinking return to sound lines but all things will be possible. I am sure we will find a ready response in the men returning from across the seas. They will be searching for a leadership to meet the aspirations developed under fire.

No matter how much I may emphasize the importance of sacrifice and service, there is little, if any, idealism in my approach. I am animated by the coldest realism I know. This country must remain strong. Of course, we need universal military training, retention of sea power, conservation of natural resources, inventories of critical materials, augmentation of scientific research, preservation of our productive capacities, the maintenance of a healthy population, and intelligent and forceful foreign relations. Those are essentials of power. Our country must possess them. Proper national thinking is, however, the primary source from which all such trappings of power will flow.

From the power angle alone, we cannot afford the luxuries of discord and internal strife. Our Nation is now a sorry picture—bleeding at all seams of productivity with strikes and industrial disputes. The losses in production we are now suffering will never be overcome. Rich in resources though we be, we cannot continue this bleeding for long. International competition is as keen as it ever was, even if the combat phase of war has ended.

There are many other maladies which weaken our national body and which could be cured by nationalized and unified thinking. There is the confusion bred by our vague antitrust statutes, the interpretations of which are uncertain to say the least. There is the restrictive influence of an unscientific tax system which threatens, if it does not restrict, initiative. Antiquated banking approaches make it doubtful whether private enterprise or Government credit can supply our financial needs. There are other less fundamental but equally vexatious troubles—such as the proper governmental organization for national security, the pay and other rewards to be offered the men who make the military service their careers, the efficient method of public purchasing, and other administrative problems.

The ideas, clear thinking, and moral courage to solve all such problems lie dormant. The group which today constitutes Government is too restricted a field to do all the thinking for the Nation. Furthermore, that group does not have any monopoly of ideas nor more than its proportionate share of our intelligence. As a matter of fact, our best brains gravitate often to business, industry, and the professions. The necessary new thinking and new ideas will follow the new spirit of being proud of America and ready to serve that pride.

This is not a call for anyone to enter a contest for elective office. It is ideas rather than candidates which are needed. As a matter of fact, most of our problems are economic and social. They should never have become involved in party politics. The difficulties of our labor relations and our banking procedures should be solved without recourse to the polls. We ought to be able also to generate ideas as to antitrust legislation, taxes, and similar problems. We are all a part of this country and we must make our ideas felt.

Of course, many of us should go beyond that and participate actively in the administrative side of government. Our administration needs help in many ways—ideas and services. For America's sake, you should supply both. Believe it or not, you can afford it. You cannot afford to miss it. Had anyone in 1940 suggested that I spend the next 5 years in the Government service, I would have sadly explained my inability to afford it. Since then I have frequently been complimented for my sacrifices. But I have made no sacrifice of any kind. I have enjoyed every moment and I have been well rewarded. I would not have missed the experience for anything.

In addition to the personal satisfaction at the time, service by you in government would also mean that government, business, and labor would get to know each other better. There will be more general knowledge of the individual problems of each and their relation to the strength of the whole. That is of inestimable value and will feed our beliefs and pride.

We stand today at a crossroads. We can slip back into the doldrums of the twenties. In that direction lie risk, dissensions, and weakness. On the other hand, we can easily maintain the sound thinking and patriotic emotion of the war, when our country and its survival received a fair share of our working hours. That psychology will lead to a retention of our strength and a solution of our problems. No difficulty can remain unsolvable if approached by our collective genius in that frame of mind. I submit that in our own thinking and in our own spirit lies the foundation of national power.

---

## The Honorable James W. Mott

EXTENSION OF REMARKS
OF
**HON. AUGUST H. ANDRESEN**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I take this opportunity to express my thoughts in regard to our late colleague, the Honorable James W. Mott. He was my neighbor on the fifth floor of the new House Office Building. He was a good neighbor, the kind of a man any good American would like to have live beside him. "Jim," as most of his colleagues called him, was a hard-working and loyal American, who rendered outstanding service for his constituents and his country. As a neighbor, I learned to

respect Jim Mott for his many outstanding qualities. He will be missed by all of us, and remembered as a colleague whose life and character upheld the highest traditions of a faithful public servant.

In memory of our late friend from Oregon, Mr. Horace C. Carlisle, a long-time employee in the office of the Architect of the Capitol, has written the following verse, which I am sure appropriately expresses our feelings over the sudden passing of our colleague the Honorable James W. Mott:

REPRESENTATIVE MOTT

When Congressman James W. Mott
From heaven heard the call
Of Death, he hesitated not,
Nor questioned it at all—
Methinks he'd been expecting it
Awhile before it came—
And he was ready to submit
When Death called out his name.

In this dread age of strain and strife,
Amid its toils and tears,
He lived a great and useful life,
Revered by all his peers—
Yet, he was everybody's friend—
For charity he stood,
And loved to be spent and to spend
For other people's good.

That warm hand-clasp and good-will smile
Of his we'll miss down here,
But we, in just a little while,
Will meet him over there,
If we, too, walk the narrow path
In which he ever trod,
And win the love, and not the wrath,
Of his most gracious God.

—*Horace C. Carlisle.*

## Experiments in Socialism

EXTENSION OF REMARKS
OF
## HON. THAD F. WASIELEWSKI
OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mr. WASIELEWSKI. Mr. Speaker, with many of the countries of the world going hog wild for socialism as if it were a new found panacea for all the ills and troubles experienced by the peoples of the world, it is well that we examine the success and failures in recent days of countries that have given a full and fair trial to the Marxian theories by putting them into practice. May we profit from their example.

The following article, which appeared in the Milwaukee Journal of November 20, 1945, gives Australia's experience with the nationalization of vital industries and public utilities, as written by one of Australia's leading newspaper publishers.

The account of Sir Keith Murdoch follows:

Except for the hydroelectric supply in Tasmania and the brown coal electric supply in Victoria, both of which are Government monopolies and which charge all the traffic will bear, Government adventures into business in Australia are marked by ugly deficits, losses of capital, and inefficiencies.

Australians are not the race of socialized paragons that Mr. Atlee, British Prime Minister, has conjured up. They are, alas, so very human that, when governments have gone into industry, those concerned have used their unions and their pressure politics, their votes and their influence to get personal advantage.

Actually, the list of Government enterprises is really not large. And one wonders how Australia got its name for advanced socialization.

It is advanced in pension schemes, childhood endowment, arbitration systems, and a genuine desire to protect workers from bad bosses.

But when scanning the list of Government businesses one must remember that Australia has seven governments—one sovereign government for each state and one for the federation—and that all have been, sometimes all together, Labor governments.

LISTS GOVERNMENT BUSINESSES

Railways: Services are sound in Victoria and South Australia, two conservative states; but elsewhere pressure politics have been much too strong for cleanliness, modernity, or efficiency.

The annual money losses have been fantastic since 1915. They reached a zenith of £10,000,000 in 1931, and in the year before the war were still £2,750,000. And this, it should be noted, was without adequate depreciations and after scores of millions of pounds of capital had been written off. (The Australian pound at present is worth $3.23¼.)

We have no idea at present of abolishing government ownership of railways, because there are advantages from a national as well as a profit-taking viewpoint. But we may find a way to incorporate both, by lease or conditioned concessions.

Although the managers have been first-class, skillful men, able to take their place in any country—as indeed, have been the superintendents of other government enterprises—they have been powerless against constant political interference, leading to overdevelopment, overcapitalization, and faulty finance.

There are dirt, slovenliness, and slackness. In quietness, comfort, speed, and service the British railways eclipse our best.

QUEENSLAND LOST MUCH IN SEVERAL VENTURES

Water supply systems: These irrigation systems are state owned. The deficits in Victoria alone in 10 years were £5,400,000. Other states had similar experiences, and huge capital losses were written off.

Shipping: The commonwealth government established an overseas shipping line. The government charged the same as other people, but in 6 years lost £2,500,000 and then sold out at a great capital loss.

Queensland, for a time, really got going with socialism. It lost: £1,669,804, plus £324,000 uncharged interest, on cattle stations and closed them down (private owners made good money); £28,014, plus £3,396 uncharged interest, on butchers' shops; £18,686 on a produce agency; £143,000 on a cannery; £52,000 on a fish supply venture; £68,000 on cold stores; £375,000, plus £110,000 uncharged interest, on five coal mines; £89,000 on an arsenic mine; £1,196,347, plus £385,000 uncharged interest, on zinc mines and smelters; £75,000 on some metal treatment works; £44,000 on a gem pool; £37,000 on an iron and steel project; £45,000 on a trawler; £34,000 on a trading steamer.

In the midst of all these failures—and the great money drain of the state railways drifting back all the time—the government had two successes, the Babina Hotel, out of which in 13 years £62,000 was made, and some metropolitan sawmills which showed a profit.

SOLD IN DISGUST

Everything was finally sold in disgust, and Queensland, like other states, is now out of the trading business, except for the railways and a new wartime shipbuilding yard.

At one time she had 111 shops, stations, and other government trading shows. They all went west. She has nothing now.

Coal mines: The commonwealth has taken over two coal mines and some States own a mine or two.

My first observation must be that strikes occur in them as frequently as elsewhere. The miner, in other words, does not really care.

Victoria's mine, Wonthaggi, although its product is absorbed by the railways, has accumulated losses of more than £1,000,000 in 11 years. In 1941 it was still losing £2,337 a week.

A township has been built upon it, so it must be kept going.

The New South Wales Government's mine at Lithgow charges the state railways 2 shillings 6 pence a ton above ruling prices, but in 1941 was losing £300 a week.

In western Australia the socialistic enterprises are an implement works, with an accumulated loss of £343,334; state sawmills with losses of £44,566, and state brickworks, which lost £1,266 in the last year for which I have figures.

In the 1920's the New South Wales labor government also had bakeries, state fish shops, quarries, brickworks, and timber yards, including one on which £314,000 was lost.

Where are they now? All gone, sold at job prices because they gave neither service nor profit.

PRIVATE ENTERPRISE CAME OUT ON TOP

Australia is, in fact, stripped of her socialist enterprises, except such major concerns as railways, some water services, some electric undertakings, and her recent ventuers into banking and broadcasting.

All the others faced the competition with private enterprise and—although private enterprise paid heavy taxes while they paid none, and private enterprise had no government favoritism, and they had much—they all fell by the wayside.

They proved wanting in a world which demanded efficiency and which is demanding it now.

Whether the electric systems of Victoria and Tasmania will survive the dead hand of political interference remains to be seen. They are young.

GOOD JOB IN RADIO

In broadcasting, the national stations have done a splendid educational and cultural job, while the commercial stations, many owned by newspapers, have run away with the listeners.

The government bank, started in 1908 by Mrs. Andrew Fisher, has made colossal profits (no taxation) out of its share of the note issue, its control over private bank deposits, and its small trading business.

It is in a special position, and has been managed by a nonpolitical board, now, also to be abolished by the Labor government in favor of direct treasury control.

Looking now to the future, Australia wants busy employment and full production.

NATION HATES CONTROLS

But there is no sign of her going back to her expensive, inefficient, and unproductive socialistic enterprises.

Controls? She hates them, but will probably admit that the national interest, which moves alongside private enterprise, must be given the voice and power of a partner in the wider issues of the national economy.

Otherwise the voice of the government grabber and nationalizer is almost silent. The plain fact is that government enterprise lives in Australia only when protected by law from competition.

## Resolution of International Fur and Leather Workers Union, of Peabody, Mass.

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include herein a resolution adopted by Local 21, International Fur and Leather Workers Union, Peabody, Mass., on November 15, 1945.

To the PRESIDENT OF THE UNITED STATES, SENATORS WALSH AND SALTONSTALL, CONGRESSMEN LANE AND BATES, AND GOVERNOR TOBIN:

The members of local 21, assembled on November 15, 1945, at 10 a. m. and unanimously adopted the following resolution:

"Whereas the cost of living has risen and is rising to unbearable heights; and

"Whereas the real wages of our workers have decreased and are dropping to the extent that we are not able to maintain a human standard of living; and

"Whereas our great Nation with the complete support of labor for our armed forces and our Government has just completed and won with our allies a war against fascism and all it represents; and

"Whereas the mandate of our late Commander in Chief, President Franklin D. Roosevelt, was that victory will bring a better world, 'freedom from want and freedom from fear'; and

"Whereas the employers of our Nation have not honestly attempted to meet the postwar problems of full employment and decent wages, which if left unanswered will plunge our Nation into the most disastrous crisis in its history with all the accompanying deprivations and suffering in store for us; and

"Whereas our Government has as yet failed to provide a solution to this grave problem: Therefore be it

"*Resolved*, We, the assembled workers of local 21, city of Peabody, demand an immediate program that will effectively solve our economic needs and compel employers to increase wages without any accompanying increase in the cost of living which will destroy any raising of the real wages of labor in America; and be it further

"*Resolved*, We call on your good offices in the legislature and upon the labor-management conference and the employers of our Nation to carry out the economic program laid down by President Roosevelt in his new economic bill of rights."

LOCAL NO. 21, IFLWU-CIO,
RICHARD B. O'KEEFE,
*Business Manager.*

## Veterans of World War II Given Raw Deal on GI Insurance

EXTENSION OF REMARKS
OF
### HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Joseph Leib, service officer, Vincent B. Costello Post, of the American Legion:

VETERANS OF WORLD WAR II GIVEN RAW DEAL ON GI INSURANCE

(By Joseph Leib)

Here of late the Veterans' Administration has carried on a high-pressure campaign urging discharged veterans to continue their GI insurance. This is fine. Every veteran should be insured. But why has this campaign become necessary? Oddly enough, private insurance companies are spearheading this drive. Recently there appeared in the newspapers from coast to coast full-page ads entitled "A Message of Importance to Veterans and Their Families," carrying a letter from General Hines, as Administrator of Veterans' Affairs, and signed by the life insurance companies in America and their agents.

Naturally one asks why all this generosity? Why are these private insurance companies so interested in spending many thousands of dollars in advocating that veterans retain their Government insurance policies? These ads were published in over 300 daily newspapers.

One wonders if the answer could be that the rates being charged World War II men are the same or close to being identical to the old line companies that the Government's use of these premiums justifies the old line company rates. You will recall that these same rates and premiums of these companies were the subject of antitrust scrutiny some years ago.

During the month of September 1945, General Bradley announced that 14 out of every 15 veterans discharged from this war have permitted their national service life insurance to lapse without converting it into some form of old line policy. As an indication of how serious the matter has become the new veterans' chief explained that of the four and one-half million veterans who took out insurance during the last war, little more than a half million veterans have continued to pay their premiums.

It is obvious why the GI's of this war are turning down their insurance policies. They are fully cognizant of the fact that they have been given a raw deal. They know that they have been discriminated against and that their policies do not compare with the broad benefits given soldiers of the last war.

Last February this writer respectfully requested from General Hines a clarification as well as a break-down on the basic differences between war-risk insurance as it was called during the last war and the national service life insurance of this conflagration. Here is what he had to say, one month later, under date of March 26, 1945:

"War-risk insurance provides protection against both permanent total disability and death, whereas national service life insurance provides protection against death only."

Then he went into a long and complicated explanation which only served to confuse the issue even more.

However, it was obvious from the above quotation that the men who served in the last war got a better break in their insurance.

For instance, the War II policies are not like the insurance of War I in that they are not payable in a lump sum. Instead they are paid off in small monthly installments.

Among other specific objections, as reported by veterans, we find the following:

The insurance is limited to straight life—20- or 30-pay life, while war-risk policies permitted seven different plans of converted insurance.

The insured cannot designate whomever he wishes as the beneficiary and must name either his wife or a member of his immediate family.

Monthly payments are dependent on the age of the beneficiary at the time of the veteran's death and cover a range from $3.29 to $9.61 per month for each $1,000 coverage.

The rates on policies issued are considerably higher in this war than they were during the last war despite the fact that mortality figures have shown a downward trend for the last decade. In addition the premium charges made for the type of policy issued to War II men—this type of policy being pure term insurance—were in many cases in excess of the premium charges made by private carriers for the same type of insurance except that private carriers were not including war risk.

An indication of how far this alleged discrimination goes I would like to cite one plausible example:

Say a War I man was fighting alongside of a War II man each having taken out their respective Government insurance policy. Along comes a shell and injures both soldiers. Now the doughboy of the last war would receive monthly payments of $5.75 for each $1,000 of insurance upon proof of total permanent disability. The GI of this war would get absolutely nothing from his national life insurance policy.

Is there any wonder that the veterans of this war are rejecting their Government insurance? They look to Congress for a satisfactory explanation. They want nothing more—or nothing less in the way of protection or benefits than was given the veterans of the last war. What's more they want to know who were the instigators and who were the authors of the discriminatory and amazing National Service Life Insurance Act?

The various veterans' organizations should support H. R. 2996. Bills H. R. 1277, H. R. 1580, H. R. 2459, H. R. 2260, H. R 3114, H. R. 3537, H. R. 3088, S. 112, S. 650, are some of the bills to correct the above situation in part.

## United Nations Relief and Rehabilitation Administration

EXTENSION OF REMARKS
OF
### HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me in the House on January 25, 1944:

UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION

(Speech of Hon. DANIEL A. REED, of New York, in the House of Representatives Monday, January 24, 1944)

(The House in Committee of the Whole House on the State of the Union had under consideration the joint resolution (H. J. Res. 192) to enable the United States to participate in the work of the United Nations Relief and Rehabilitation organization.)

Mr. REED of New York. Mr. Chairman, I move to strike out the last four words.

Mr. Chairman, I understand when I was absent from the House engaged in conference on the tax bill, the very distinguished leader from Massachusetts [Mr. MCCORMACK] made some observations in regard to a speech which I made on the floor, in which my friends tell me he intimated that I was interfering with the Christian people and their purposes insofar as this legislation is concerned.

I want it definitely understood, and I have said it before on the floor of this House, that I owe allegiance to no country except to the United States of America. I am more interested in what comes out of this war than I am about ordinary observations on this floor.

What I was trying to do was to point out that you have scrambled a great humanitarian process with certain economic problems that are going to plague us abroad in the future. When I say "economic problems," remember that the European countries each year for 20 years have had government doles of some kind or other unemployment insurance, or what not, for 60,000,000 people. That is what they faced during a period of peace. I do not propose to support any legislation on this floor that is going to put into the hands of the ruler of any country, any dictator, whether he is an ally now or not, the power of saying to the subjected country of which he has control, "You will not get food for your babies or for yourself unless you vote as I want you to vote in this plebiscite."

I am trying to prevent the Christian faith being attacked, possibly destroyed, by Communists.

The gentleman from Massachusetts [Mr. McCORMACK] said on November 1, 1939:

"Within the past few weeks there came from Moscow itself the admission that Catholic priests were murdered, with the lying statement that they were resisting the Communist army. They were murdered in Christian Poland for the same reason that they have been murdered for 20 years in Soviet Russia, priests, ministers, and rabbis, because they were messengers of God, doing the work of God on earth."

I would call the attention of the House to the fact that when the State, Commerce, and Justice Departments appropriation bill for 1941 was under consideration on February 7, 1940, which was to provide for the salaries of ambassadors and ministers, the distinguished gentleman from Massachusetts [Mr. McCORMACK] offered an amendment to strike out the words "Union of Soviet Socialist Republics."

That shows that he then felt, as he must feel now, that the Christian organizations should still fear the attitude of Communist countries toward Christian churches and organizations in this country and in foreign countries.

These funds with which it is proposed to feed the destitude of Europe and Asia, which is under consideration today, should be handled, as I have said before, by the Christian organizations now operating and prepared to operate, wherever there are hungry and starving people to be fed. The money should not be made available to dictators, to make as a condition precedent to feeding those people, their willingness to sacrifice their independence, and support of a Communist regime. That is his indictment. I am trying to save the Christian religion all over the world from having to be dominated or disturbed by the work of this communistic society. I do not propose by my vote to put any implement of domination in their hands to carry on their subversive activities here, and we know they will do it. What I want to do is to put these funds, if we are going to legislate this way, into the hands of the services of the Christian organizations of this and other countries now organized, now in the field ready to carry on this work. Let us separate and unscramble this from the economic situation and drilling oil wells and building factories to compete with this country after the war. So I say to the gentleman from Massachusetts that every word I have said here is in the interests of the Christian faith and its organizations.

## Resolutions by the Board of Directors of the Cooperative League of the United States of America

---

EXTENSION OF REMARKS

OF

## HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 16, 1945*

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions recently passed by the board of directors of the Cooperative League of the United States:

Whereas the Government of the United States has built with public money what are generally known as the Big Inch and Little Inch pipe lines; and

Whereas practically the entire investment of approximately $142,000,000 in these pipe lines has been paid by the consuming public through the purchase of oil and gasoline, and these pipe lines are now practically debt free; and

Whereas pipe-line transportation of oil and gasoline to interior United States or to a large part of the consuming public is the most efficient and most economical transportation; and

Whereas pipe-line transportation, other than the Big Inch and Little Inch lines, is now and always has been owned and controlled, with few exceptions, by the major oil companies and this ownership and control has resulted in high profits which have been paid by the consuming public; and

Whereas ownership and control of pipe lines have been and still are major factors in the development and maintenance of a virtual monopoly for the major oil companies: Therefore be it

*Resolved*, That National Cooperatives, Inc., and the Cooperative League, U. S. A., owned and controlled by millions of consumers, do hereby protest any decision or action by the Government to abandon these pipe lines or to prevent or discourage their usefulness in the public interest; and

That the Reconstruction Finance Corporation shall be urged to call, immediately, a conference of independent oil marketers, and of cooperative organizations, for the purpose of discussing the possibility of these groups organizing a corporation which would thus be helpful to the Reconstruction Finance Corporation and the Government in carrying out the mandate of the Surplus Property Act which is to dispose of surplus property to independent and small industrial organizations as far as possible; and

That copies of this resolution shall go to all Government officials who are trustees for this public property, to the President of the United States, to the Petroleum Administrator for War, to the Surplus Property Administrator and to the Congress of the United States and to all cooperative organizations in the United States.

---

Whereas the future peace of the world and the future well being of democracy throughout the world will be greatly influenced and determined by the ownership and control of the crude-oil resources of the world; and

Whereas various oil corporations, often with the aid of their governments, have gained control over vast oil deposits in the Middle East; and a condition has been developed thereby which threatens the peace of the world and incidentally provides opportunity for the development of international oil cartels, and for the exploitation of the consumers throughout the world; and

Whereas a treaty is now proposed between governments which gives Government sanction to oil agreements for the benefit and profit of cartels, and hence to the exploitation of the consuming public: Therefore be it

*Resolved*, That National Cooperatives, Inc., and the Cooperative League U. S. A. do hereby advise the President of the United States, the Secretary of State, and the Senate of the United States that the future peace of the world must not be traded away for the benefit of those who are seeking to gain control and to perpetuate control over these oil deposits, and that these cooperative organizations believe and insist that the provisions of the Atlantic Charter should not be ignored, that these supplies of petroleum "should be available in accordance with the principles of the Atlantic Charter, and in order to serve the needs of collective security"; and

That an international oil authority should be created under the control of the United Nations Organization to own and control the development of these oil resources, and to thus give meaning to the provisions of the Atlantic Charter; and

That a copy of this resolution shall go to the President of the United States, to the Secretary of State, and to the Senate of the United States, and to cooperative organizations throughout the United States and the world.

---

Whereas the preservation and welfare of a democratic state is dependent upon the education of the people and upon their participation in the process of democracy; and

Whereas radio communications are a most important facility for the education of people, and they could be, and should be, used to the uttermost in the education of our people for the preservation of democracy; and

Whereas the Cooperative League of the U. S. A. is the educational organization of the consumer cooperative movement through which millions of families are united in a continuing educational program for the preservation of democracy: Therefore be it

*Resolved*, That the Cooperative League of the U. S. A. believes the Federal Communications Commission should order that at least 25 percent of the frequency modulation radio frequencies should be reserved for educational purposes, and the licenses for these frequencies should be granted to nonprofit corporations, such as educational, religious, cooperative, farm, and labor corporations, and so forth, and for nonprofit operation by such corporations; and

That a copy of this resolution shall go to the Congress of the United States, to the President of the United States, to the Commission on Communications, to all cooperative organizations, to educational, religious, farm, and labor organizations, and to any other organization devoted to the preservation of democracy.

---

Whereas the Surplus Property Administration is now the trustee for large quantities of goods and materials owned by the Government, or by the people; and

Whereas the obligation of the Surplus Property Administration is to return these surplus goods to the owners—the people—without adding to the cost any unnecessary charges; and

Whereas cooperative organizations, owned by the people and operated on a nonprofit basis, are the only economic systems of distribution which can insure the return of these goods to the people without the imposition of additional unnecessary costs or profits; and

Whereas the Surplus Property Administration has established systems of discounts which discriminate against cooperative organizations and, therefore, discriminate against owners of these goods: Therefore be it

*Resolved*, That National Cooperatives, Inc., and the Cooperative League U. S. A., owned by and representing millions of families, do hereby protest any policy or program adopted by the Surplus Property Administration which discriminates against cooperatives or cooperative enterprise; and

That these cooperative organizations request that the Surplus Property Administration shall establish and enforce a program of distribution which shall allow equal discounts to organizations which perform what is generally known as a wholesale function, and equal discounts to organizations which perform what is known as a retail function, and equal discounts to organizations which perform what is known as a manufacturer's function.

## No Time To Be Returning Alien Property

EXTENSION OF REMARKS
OF
## HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. BECKWORTH. Mr. Speaker, I have been one who is very interested in preventing the Alien Property Custodian from returning the property he has in his possession until the claims of all citizens of America are satisfied to the fullest possible extent. I believe it most unwise to begin at this early date to return the property. Investigations in Europe and in other parts of the world are in no sense complete. People in Europe or Japan or other parts of the world who seem innocent today of having sympathized with or done business with the Axis Powers in such a manner as to aid them to make war may be found guilty tomorrow. The trials we shall have in Europe and doubtless in Japan in the near future should shed light on some of the intricacies of ownership of the property our Alien Property Custodian for good and sufficient cause took over.

It is my belief that the House Interstate and Foreign Commerce Committee should begin immediately to consider or to make a study of what is to be done with this alien property. I feel very strongly that no disposition should be made of any of the property until a thorough study has been made. Be it recalled that the Trading With the Enemy Act was considered and reported by this committee in 1917; as I understand it the basic act was written by the House Interstate and Foreign Commerce Committee. Although there have been amendments to the Trading With the Enemy Act since—amendments written by other committees—at times, in my opinion, the Interstate and Foreign Commerce Committee does have and should have legislative jurisdiction on this entire subject.

A bill is before the House, H. R. 4571, which, I believe, should have very close scrutiny. In my opinion, it could be an opening wedge which will initiate a policy similar to the one we followed after World War I that permitted Germany to regain some 30 percent of the property which our Alien Property Custodian took over during World I.

I trust the letters, and the newspaper clipping I am including in my remarks will be carefully read by the membership of the House. The Marran letter is in the hearings recently held on H. R. 4571; the news item appeared in the Washington Post November 15, 1945.

OFFICE OF ALIEN
PROPERTY CUSTODIAN,
*Washington, November 13, 1945.*

Hon. LINDLEY BECKWORTH,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. BECKWORTH: I am happy to answer the questions raised in your letter of November 5, 1945. H. R. 3750 has been superseded by H. R. 4571, which I understand will shortly be reported favorably by the Committee on the Judiciary. Accordingly, I believe it will be more useful for me to address myself to H. R. 4571 in responding to your inquiries and I enclose a copy of that bill for your convenient reference.

The plan of the bill, as you of ecurse appreciate, is to permit return of vested property only to American and to foreign nationals who have never been hostile to the United States, and it would not permit returns to be made to enemy citizens in enemy or formerly enemy-occupied territory or to corporations owned or controlled by such persons. An important purpose is to restore their vested property to those nationals of the liberated areas who were innocent victims of aggression, since such property was vested for protective purposes (to keep the Germans, for example, from using it to bring pressure on the owners) and to utilize it in our war effort. I believe the bill provides appropriate safeguards to prevent returns being made to enemies or enemy collaborators.

With reference to your specific questions: The only German citizens who would benefit under the bill would be those continuously resident in and loyal to the United States since before Pearl Harbor, in the event any of their property had been mistakenly vested. Persons resident in the United States are not "enemies" as that terms is defined in section 2 of the Trading With the Enemy Act, even though they may be of German citizenship, and their property has been vested only in a few cases where there was evidence of aid or active sympathy on their part to the enemy cause so as to warrant treating them as enemies. In any cases of this latter category, return of property would not be made, because it would not be possible to determine that such return was in the interest of the United States—a determination which must be made before a return is authorized, as provided in paragraph (5), lines 3 and 4, on page 6 of H. R. 4571. In addition, no property which has been used since September 1, 1939, by or with the assent of the former owner, to cloak (i. e. conceal) enemy property, may be returned, by virtue of paragraph (3) on page 5.

Citizens of Austria, Norway, France, Luxemburg, or Denmark may also benefit under the bill only if the return of their property would be in the interest of the United States, under the provision noted. The facts as to their actions and affiliations during the war will be carefully weighed. Of course justice should be done to truly friendly foreign nationals, but it would be adverse to the interests of the United States to return property to collaborators or those who in any way favored the Nazi cause. A strict duty is imposed on the administrator so to apply the act.

The cases of persons in Europe outside of Germany who did business with Hitler until December 7, 1941, will be examined in a similar manner, although I should state that a small tradesman, for example, who merely pursued his ordinary livelihood, without active pro-German leanings, should probably not be penalized without more.

I do not have sufficient information for a complete answer to your questions whether any citizens of this country owning property in Europe, or any American corporations, derived incomes from Germany until December 7, 1941. Such activity was, of course, lawful under certain conditions, and I call your attention to the fact that the "freezing" controls of the Foreign Funds Control of the United States Treasury Department went into effect as to Germany on July 14, 1941.

Corporations organized under the laws of the United States or of any State in this country are already eligible to receive return of seized property under existing law—in fact, such seizure could only have been made by mistake—provided they were not owned or controlled by the enemy and did not use their property to "cloak" enemy property. In the latter event, they would be treated as nationals of the enemy country concerned, and would not be in a position to benefit under the terms of the bill. Again, any return to such corporations would have to rest on a determination that it was in the interest of the United States.

I shall be pleased to furnish you, to the best of my ability, any further information that you may desire.

Sincerely yours,
JAMES E. MARKHAM,
*Alien Property Custodian.*

CHADBOURNE, WALLACE,
PARKE & WHITESIDE,
*New York, N. Y., October 10, 1945.*

Re House bill H. R. 3750, Seventy-ninth Congress.

Hon. HATTON W. SUMNERS,
*Chairman of the House*
*Judiciary Committee,*
*Washington, D. C.*

DEAR JUDGE SUMNERS: I am writing this letter pursuant to our recent talk with respect to the need of an amendment to the above bill in order to protect the rights of certain United States corporations one of which is represented by my firm and by the firm of Smith, Shaw, Reed & McClay of Pittsburgh.

A Delaware corporation, American Austrian Magnesite Corp. (herein called American Magnesite), having its office in Pittsburgh, which is now and since its incorporation in 1923 has been owned entirely by United States citizens, owns 100 percent of the capital stock of a former Austrian corporation, Oesterreichische Magnesit A. G. (herein called Austrian company) which after the invasion of Austria by Germany in March 1938 was required by German law put in force in Austria to change from an Austrian into a German corporation. The Austrian company owns 1,886 shares (40 percent) of the preferred stock of another Delaware corporation, American Magnesium Metals Corp. (herein called Metals Co.). American Magnesite owns the remaining 60 percent of the preferred stock (2,950 shares) and 6,500 shares (65 percent) of the common stock of the Metals Co.

By vesting order No. 223, dated October 9, 1942, Leo T. Crowley as Alien Property Custodian vested said 1,886 shares of preferred stock of the Metals Co. belonging to the Austrian company.

A supervisory order, also dated October 9, 1942, was issued by the Alien Property Custodian and the Metals Co. has since that date been limited to transactions authorized by the Alien Property Custodian.

Subsequently, on October 7, 1943, American Magnesite filed with the Alien Property Custodian a notice of claim that said 1,886 shares of preferred stock of the Metals Co., be released from vesting and that a new certificate for said shares be issued in the name of the claimant, American Austrian, as the true owner of the stock. The position which the attorneys for the Alien Property Custodian have taken in discussing the case is that since the preferred stock is technically owned

by a German corporation not only was the vesting authorized, notwithstanding the fact that the German corporation owning the preferred stock was a 100-percent subsidiary of a Delaware corporation owned at all times entirely by United States citizens, but that there is no provision of law which authorizes the Alien Property Custodian to release the stock from vesting. Apparently therefore unless statutory relief is afforded, American Austrian and its wholly owned subsidiary will be permanently deprived of the preferred stock in question, although there is no real Austrian or German investment involved, the ownership being wholly in United States citizens through the corporate holdings above referred to.

There is attached hereto a chart which indicates the United States ownership in the various corporations.

At your suggestion, I arranged a conference with Mr. Markham, Alien Property Custodian, and discussed the problem with him. It was at first suggested by Mr. Markham that the bill in its present form protected the rights of United States citizens owning 100 percent of the stock in Austrian corporations, in view of the fact that the Alien Property Custodian had stated that citizens of Austria were not to be considered enemy nationals and that their property would be returned. However, after further discussion with Mr. John Cutler, associate general counsel, and Mr. Searles, Chief of the Claims Division of the Office of the Alien Property Custodian, it was the consensus of opinion that an amendment would be necessary in order to permit the return of the vested stock above mentioned belonging to the Austrian company because of the fact that that corporation had, after the seizure of Austria by Germany in March 1938, been required, together with all other Austrian corporations, to become a German corporation.

Mr. Markham then suggested that an amendment be prepared for submission to the committee providing for the return of property owned by corporations of enemy countries if such corporations were 100 percent owned by United States citizens or corporations organized under laws of the States of the United States, and that in such event he would interpose no objection.

There is enclosed herewith a proposed amendment which we believe will protect the interests of United States citizens who find themselves in the same position as the American Austrian Magnesite Corp.

There is also enclosed herewith, for use if deemed material by you, a complete history and background of our clients and of the ownership of the shares of stock above referred to.

Respectfully yours,

DONALD J. MARRAN.

*Stock ownership in American Austrian Magnesite Corp., a Delaware corporation*

| | Percent |

PROPOSED AMENDMENT TO HOUSE BILL H. R. 3750

Change subdivision (B) of section 32 (a) (2) to read as follows:

"(B) a corporation or association organized under the laws of such nation: *Provided*, That, notwithstanding the provisions of this subdivision (B), return may be made to a corporation or association organized under the laws of such nation if all the outstanding shares of stock of such corporation were on October 1, 1938, and continuously thereafter to the date of such return, owned by one or more corporations organized under the laws of the United States or of any State thereof or by individual citizens of the United States; or"

---

[From the Washington Post]

SENATE GROUP CHARGES SWISS COLLABORATED ON NAZIS ASSETS

A Senate Military Affairs Subcommittee charged last night that Swiss Government and banking officials collaborated in a Nazi attempt to preserve German economic assets for another try at world domination.

It released four letters written from Switzerland in the early part of this year by Emil Puhl, former vice president of the Reichsbank, to Dr. Walter Funk, Reichsbank president and German Minister of Economics. Funk is under indictment as a Nazi war criminal.

The Germans sent Puhl to Switzerland to nullify the work of an Allied mission, headed by Lauchlin Currie, personal representative of the late President Roosevelt.

OBTAINED AGREEMENT

Currie obtained from the Swiss Government an agreement that it would immobilize all German assets in Switzerland, but Puhl reported to Funk on April 6 that the "absolute stopping of payments between Germany and Switzerland which our opponents tried to obtain did not materialize."

Chairman HARLEY M. KILGORE, Democrat, of West Virginia, of the subcommittee on elimination of German resources for war, said the Puhl-Funk correspondence "makes it clear that the principal concern of the Swiss was the prospect of future business dealings with a postwar Germany, irrespective of its political character and its relationship to the peace and freedom-loving nations of the world."

"Despite the efforts of the Currie mission and the assurances of the Swiss Government that German accounts would be blocked," he said, "the Germans maneuvered themselves back into a position where they could utilize their assets in Switzerland to support their war effort, could acquire desperately needed foreign exchange by the sale of looted gold, and could conceal economic reserves for another war.

"These moves were made possible by the willingness of Swiss Government and banking officials, in violation of their agreement with the Allied Powers, to make a secret deal with the Nazis."

KILGORE said that German assets in Switzerland and other neutral countries must be seized in order to destroy Germany's economic potential for another war and to rehabilitate nations which were victims of German attack. He said that United Nations collaboration was necessary to carry out such action.

Puhl, who went to Switzerland even as Allied armies were sweeping across Germany, reported to Funk when he first arrived that it looked as if Swiss authorities would accede to Allied demands that Nazi assets be frozen.

SYMPATHETICALLY RECEIVED

He said, however, that he was urged to continue his endeavors by the President (Ernest) Weber of the Swiss Nationalbank, who pointed out that "under the given present-day conditions, an agreement between the Nationalbank and the Reichsbank would be of far-reaching importance beyond the present day."

Puhl wrote that he was received sympathetically by Swiss bankers and government officials and "in the last analysis found much understanding from the Swiss side."

---

## Not Unduly Exacting About Refugees

EXTENSION OF REMARKS

OF

## HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 20, 1945*

Mrs. LUCE. Mr. Speaker, Mr. Secretary of State Byrnes' characterization last month of our foreign policy as "not being unduly exacting" in our relations with the Soviet Government has a wider application in fact than the Secretary himself may truly wish.

Let us examine our American-Russian policy in relation to the subject of refugees, or displaced persons as they are called today. Of these, in Europe alone there are estimated to be upward of twenty million. Some scores of thousands are natives of what is now the Soviet Union; other scores of thousands are natives of lands now embraced or claimed as Soviet territory. These individuals are stated by the Soviet Government to be subject to repatriation, by force, if necessary, behind Soviet borders. On Sunday, November 18, a dispatch from Moscow announced that the Supreme Soviet has decreed restoration of citizenship to all former Russian subjects now in Manchurian territory. This adds at least a hundred thousand other persons whose return is sought by the Government at Moscow. In nearly all cases these latest additions to the swelling Soviet population are Russians, or the sons and daughters of Russians, who fled from the Bolshevik revolution of 1918.

It has never been either the policy or the practice of the United States to deliver up to any foreign government nationals who have fled because of real political persecution. This tradition of political sanctuary has been one of the oldest and most carefully observed policies of our Government since its foundation. At present, however, we have cause to question whether, by as a result of the private agreements at Yalta between President Roosevelt and Premier Stalin, this basic American principle has not been abandoned on the ground that it is unduly exacting when applied to individuals claimed by the Soviet Government.

How this abandonment is viewed by those whom it most affects—the refugees in our zones of occupied Europe—can be seen in the following articles from the Washington bureau of the Journal-American. Likewise the official attitude of the War Department, reflecting the view of the administration, can be determined from the correspondence regarding this subject which I have held with Secretary Stimson and Secretary Patterson. In fairness to the War Department, it should be recalled that overall policy in such matters is determined by the Commander in Chief and not by a department head.

UNITED STATES POLICY ON SOVIET REFUGEES

(By David Sentner)

WASHINGTON, November 3.—Representative CLARE LUCE, Republican, Connecticut, has protested to the War Department against refugees in the American-occupied German zone who disclaim Russian citizenship being "forced by our troops at the point of guns to return to Soviet areas."

In releasing her correspondence with the Secretary of War, Mrs. LUCE attached a dossier containing 300 affidavits by former Soviet nationals. They pleaded for asylum from the terrorism and tyranny of the Communist regime.

At the recent London Conference of Foreign Ministers, Soviet Foreign Commissar Molotov insisted on a more speedy repatriation of so-called Russian citizens from the Allied zones.

The Soviet repatriation representatives earmarked as Russian citizens all those displaced persons originating in territory absorbed by the Soviet Union despite any repudiation of allegiance to the U. S. S. R.

Mrs. LUCE and other Members of Congress charge the current appeasement policy of the State Department toward the Soviet Union has resulted in thousands of "DP's" being pushed over the border to face Soviet labor camps, persecution, or death.

Mrs. LUCE still is awaiting a reply to her letter to Secretary of War Patterson, dated October 5, which read:

"I want to call your attention to what appears to be a serious conflict between an official statement furnished me by your office on July 11, 1945, concerning American policy towards refugees from areas under Soviet control, and the actual conditions obtaining in the matter.

"Today an Associated Press dispatch, dated Frankfort am Main, Germany, says:

CITES EISENHOWER'S ORDER

"'General Eisenhower, in an order amounting to temporary abrogation of one phase of the Yalta agreement, has instructed that American troops discontinue forcing Russian nationals to return home unless the United States rules otherwise.

"'The existence of the order, affecting 26,400 Russians still in the American zone of Germany, was disclosed today by commanders of displaced persons camps.

"'Questioned on reports that troops had fired over the heads or near the feet of some Russians to compel them to board Soviet-bound trains, one officer said:

"'Possibly for a time some of them were pushed into trains without asking many questions but that's all stopped now'."

Please compare this with the following letter from the War Department, dated July 11, 1945:

ASSURANCE BY STIMSON

"'DEAR MRS. LUCE: In response to your letter of July 5, I can assure you that refugees from areas now under Soviet control are not being repatriated unless they claim citizenship in Soviet Russia and their claims are accepted by Soviet reparation representatives.

"'I may add that this policy has been observed by our authorities overseas for a considerable time * * *.'

"HENRY L. STIMSON,
*"Secretary of War."*

Mrs. LUCE's letter to Patterson continued:

"Based on this assurance I have given a number of my constituents to understand that they need not worry about relatives who might find themselves in the American zone, but who were natives of various parts of the expanded Soviet Union, or nationals of the U. S. S. R. unwilling to claim citizenship.

"It appears now that these reassurances were not altogether justified and that refugees who did not wish to claim citizenship in Soviet Russia have been forced by our troops at the points of guns to return to Soviet areas.

"What shall I write to my constituents now, who feared the unwilling repatriation of their relatives, and who were reassured by Mr. Stimson's letter that it was against our policy to do so, and that that policy was being observed, in view of the fact that General Eisenhower's order seems to show it has not been observed?"

Shortly after publication of this article, the above-quoted letter, I received the following answer from Secretary of War Patterson on November 7:

DEAR MRS. LUCE: I am advised that the subject matter of your letter to me of October 5 concerning the policy which has prevailed in the United States Zone of Occupation in Germany with respect to repatriation of displaced persons has been discussed with you by members of the War Department Staff and that you desire confirmation of the policy outlined to you at that time.

In his letter to you of July 11, 1945, in reply to your letter of July 5, 1945, concerning the policies being following by the military authorities with respect to the repatriation of refugees from the Baltic countries of Latvia, Lithuania, and Estonia, Secretary Stimson communicated to you the policy of the War Department that refugees from such areas are not being returned to areas under Soviet control unless they claim citizenship in Soviet Russia and their claims are accepted by Soviet repatriation representatives. I understand from those members of the War Department staff that, in reply to your letter of October 5, you desire an over-all expression of the policy being applied in United States zones of Germany and Austria with regard to the repatriation of displaced persons found in those countries upon the defeat of the German Armies rather than merely the policy with respect to the repatriation of Balts about which you inquired in your earlier letter.

With the exception of Soviet citizens, United States policy consistently has been that no such displaced person would be repatriated against his will. Persons formerly domiciled in Latvia, Lithuania, and Estonia, or Poland east of the Curzon Line, have not been considered by the United States as Soviet citizens unless, as stated in Mr. Stimson's letter of July 11, they claim citizenship in Soviet Russia and their claims are accepted by the Soviets. The repatriation of Soviet citizens is controlled by the agreement entered into at Yalta between the United States and the U. S. S. R. An interdepartmental committee of the Departments of State, War, and Navy is giving urgent consideration to the question as to whether or not this Government is obliged under the Yalta agreement to repatriate acknowledged Soviet citizens involuntarily. Pending determination of the Government's policy in this matter, General Eisenhower has suspended the use of troops for the purpose of forcible collection or repatriation of acknowledged Soviet citizens.

Sincerely yours,

ROBERT P. PATTERSON,
*Secretary of War.*

Two further articles appeared in the Journal American quoting from affidavits in my possession from Soviet refugees, under David Sentner's byline:

REIGN OF TERROR CHARGED TO SOVIET

(By David Sentner)

WASHINGTON, November 3.—Death in the cellars of the NKVD—torture, terrorism, slave labor; Siberia for being 40 minutes late on the job, starvation, blood purges.

The communist regime of the Soviet Union was pictured as a mammoth "chamber of horrors" in a dossier of affidavits from 300 former Russians in the American-occupied zone in Germany released today by Representative CLARE LUCE, Republican, of Connecticut.

Many threatened to commit suicide rather than return to the "paradise of Bolsheviks."

All virtually signed their death warrants in publicly attesting to the hellish conditions existing under the Red state in the event their pleas were denied to remain in the American zone.

PROTEST LODGED

Mrs. LUCE had lodged a protest with the War Department against refugees who repudiate Russian allegiance from being forced over the border of the Soviet at the point of guns.

Extracts from the affidavits of the hapless Russian-displaced persons follow:

"I, Philip Mouha, refuse to go to Russia for the following reasons: My father perished in the cellars of NKVD and mother and four brothers were starved to death in the year 1933 which I can prove by documents in my possession. I, accused of being the son of a physician, was exiled for 3 years to the Far East."

FEARS SIBERIA

From Gregory Yancenko:

"I, and my wife, Barbara, do not want to return to the U. S. S. R. My father and the brother of my wife were sent to Siberia because they had seven acres of land and I was nearly sent, too, because I got married to the daughter of a well-to-do man."

From Nina Firfaroff:

"I shall not go to the Soviet Union because my brother was shot as an officer and my sister was decapitated. My husband's three brothers—one officer and two engineers, were tortured to death in prison and my husband, a physician, was sent to concentration camp."

SPURNS DICTATOR

From Ivan Dolgopitoff:

"I do not go voluntarily to the U. S. S. R. as long as my native country is ferociously dominated by the dictatorship of the Communist Party whose aim is communistic revolution in all the world.

"As long as despotism, terror, violation, and humiliation of human beings reign and are systematically carried out by the Communist Party, its government and NKVD—this punishing sword of the proletarian revolution.

"As long as freedom and rights of men will be found only on the pages of the party press and in slogans but not in reality."

CITES PERSECUTION

From Olga Borisova:

"I do not intend to return to the Soviet Union because during my whole life there I was persecuted only for the reason that the brother of my mother was living in America. My two brothers were sent to Siberia because they were suspected to have corresponded with him."

---

CITIZENS IN EXILE

(By David Sentner)

WASHINGTON, November 5.—Moscow's global propaganda tinseling the Communist regime of Soviet Russia as a proletarian paradise was punctured today in a series of affidavits.

Former Soviet citizens in the American occupation zone in Germany depicted the U. S. S. R. as a veritable hell and pleaded against repatriation.

The majority of the signed declarations, released by Representative LUCE (Republican of Connecticut), are from peasants, workers, and the "little folk" who have suffered under the Communist regime.

Tales of death, torture and imprisonment to loved ones, seizure of farmland, starvation, and persecution by the dreaded NKVD are grimly reiterated in the sworn affidavits.

"I cannot live under a government of lies and deceit and constant terror of NKVD and severe exploitation of forced labor," asserts J. M. Timoshenko.

"I cannot see my own compatriots suffering under the government of dictatorship and being too frightened to talk about it.

"I cannot trust a power which for decades has been repressing the church and then begins acting the reverse. For years they have been killing faith in God by methods of killing and sending innocent people to concentration camps.

"I do not want to be tortured by the executioners of NKVD who are now governing in U. S. S. R."

The affidavits continued:

Kirichenko Afanassy: "Our life under the Soviet regime was nothing but a nightmare, not only materially but especially spiritually."

S. Solovieff: "I prefer death to living in the Soviet Union—a place of the most dreadful tyranny of Stalin."

Nicoli Gorbatshevsky: "I do not want to go back to the Soviet Union because as a son of a priest I was persecuted and deprived of my property. My mother and three sisters died of hunger."

S. Borodin: "I refuse to return to the Soviet Union because I was all the time persecuted as daughter of a Leningrad merchant."

Alex Andrianoff: "I do not want to go back to the U. S. S. R. because in 1933 my whole family died of starvation. They imprisoned me and put me out of work because my uncle used to be a well-to-do farmer."

These few examples are sufficient indication of the feelings of those men and women who had to be pushed into cattle cars at the points of American bayonets in order to expedite their return to their native country. That we are responsible for such enforced repatriation is ample evidence that this country is also being "not unduly exacting" in the interpretation of its own historic traditions in the whole question of sanctuary to the refugees of political persecution.

## Consumers Demand No Crippling of Price and Rent Control

EXTENSION OF REMARKS

OF

### HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a digest of the testimony offered by 15 national consumer, educational, religious, and women's organizations at a meeting held on November 14 in the House Labor Committee room by the Committee for the Protection of the Consumer. Representative AIME J. FORAND, of Rhode Island, presided. Members of our committee were delighted to note the deep interest of consumers in price control. We realize all too well that run-away prices will prove disastrous to all sections of the community—to businessmen and farmers as well as to consumers. It will be especially hard on the white-collar worker, the veteran returning to finish his education or trying to start a small business or getting back to his former job, and on all older people and widows living on annuities and pensions. For this reason we were glad to note the strong support of these groups for the renewal of the Second War Powers Act and their opposition to all efforts to relax the controls which have held inflation in check during the war and which experience after World War I teaches us are needed to avoid inflation in the coming months while reconversion is under way.

The digest of testimony follows:

STATEMENT OF COLSTON E. WARNE, PRESIDENT OF CONSUMERS UNION OF UNITED STATES, IN INTRODUCING THE ORGANIZATIONAL REPRESENTATIVES

If any evidence were needed that American consumers are excited about the maintenance of adequate safeguards against inflation, this meeting should be adequate proof. We have here representatives of leading national organizations, each of which is deeply concerned with the attainment of high living standards under stable prices. We appreciate the kind invitation of Congresswoman CHASE GOING WOODHOUSE and your group to come here to testify and are delighted that so many Members of the Congress are in attendance.

Each group, here represented, will make its own statement. I am sure, however, that you will note strong support for the continuation of the rationing and allocation controls in the Second War Powers Act; a demand for the retention of essential price and rent controls; an endorsement of ceiling prices for old and new dwellings; and an approval of the principle of cost absorption at both the manufacturing and retail levels as a means of protection against price advances while still allowing a reasonable over-all profit in each field.

From the beginning of OPA, these groups have been most active in its support. Their members have volunteered for price panel, rationing, and informational work. Whenever business lobbies have threatened the Act, these consumer groups have been vocal in backing effective price control. We appreciate that OPA has not had an unblemished record; yet we have no disposition to withdraw our support of price and rent control at this time when such controls are still critically needed.

Consumers Union, which I represent, is a national membership organization of 100,000 consumers, which tests and appraises consumer goods as well as affording to its members a collective voice in legislation affecting the consumer. Our members are bitterly opposed to the business lobbies which are now urging the too-hasty liquidation of wartime controls. No family wants rationing or price control for 1 day longer than necessary. But neither do our members want the Second War Powers Act and the Price Control Act emasculated or wiped prematurely from the books, bringing a mad scramble for goods and a runaway inflation, 1919 style.

With our Nation's money supply tripled and with the flow of many commodities now being blocked by sit-down strikes of manufacturers for higher prices, we think it fantastic that reactionary groups are now pressing for the complete elimination of OPA and all its work. We see the spectacle of an auto dealers' lobby championing exorbitant profits through the elimination of the cost-absorption principle in retailing. We see the Retail Dry Goods Association lobby invading this very building with an elaborately falsified exhibit which proves only that the OPA has not been infallible and that certain textile producers have taken advantage of OPA's inadequate appropriations and the congressional prohibition of quality standards to manufacture shoddy articles at high prices. We see the real-estate lobby setting aside the L–41 order and moving to eliminate OPA rent controls as well as to block the imposition of ceilings on old and new housing.

In coming months, Members of the Congress will have to choose whether they will back the millions of consumers with fixed incomes and the millions of workers whose take-home pay has been drastically cut since VJ-day or whether they will yield to high-pressure lobbies bent on the destruction of the Price Control Act. We as a consumer group think that businessmen across the country are not supporting the selfish attitude taken by their own lobbies. Inflation, in the long run, is as much a menace to business as it is to the consumer.

Consumers in America are rapidly identifying their friends on Capitol Hill and are also making a careful catalog of those who consider legislation to advance the profits of particular groups more important than victory over inflation. We shall watch the course of this price-control legislation closely.

STATEMENT BY MRS. LA FELL DICKINSON, PRESIDENT, GENERAL FEDERATION OF WOMEN'S CLUBS

The General Federation of Women's Clubs, which is in reality a great adult education agency, has been reaching its vast membership continuously with letters and news releases in support of the OPA program. The pages of its monthly magazines have also carried articles and communications from leaders in the antiinflation movement as well as messages direct from heads of the various divisions of the OPA. Thousands of clubs have held programs on anti-inflation and many hundreds of club women have served on local panel boards.

STATEMENT OF THE NATIONAL LEAGUE OF WOMEN VOTERS

There is no question but that our economy is in a disturbed and unstable condition. Conversion from war to peacetime production has created problems of enormous magnitude. Not the least of these is the one of increased availability of money with only slow increases in the availability of civilian goods. The inflation threat is greater at this time than it has been at any time during the war. We have said again and again that we must profit by the lessons of the last war, that we must take active steps to see that the disasters of that inflation do not again have such serious effects on the economy. But in spite of all these good intentions, the situation is worsening rather than bettering.

In one specific instance it is particularly noticeable. Returning veterans and others are acutely conscious of the spiraling prices in the field of housing. It is imperative at the present time that we consider means of preventing speculation in this essential factor in the cost of living. Rent control should be maintained and adequately enforced. Controls on building materials and services should be continued and strengthened. And ceiling prices on new and existing housing should be authorized by law.

It should be recognized that the inflation in housing prices is the result of a tremendous demand for shelter and an accumulated shortage of housing throughout the war. The only long-range solution must of course lie in the filling of this shortage by building programs. And it is important that controls at this time be such as to encourage building, not discourage it. Such encouragement, however, must not be at the expense of those who must live in houses while we are trying to fill the shortage.

Another essential to maintaining our stabilization program will be the renewal of the Second War Powers Act which expires at the end of this year. While it is desirable that we end rationing and allocations programs as rapidly as feasible, the process must be a gradual one and surely cannot be completed by December 31. Control for the sake of control is to be avoided at all costs, but it is obviously foolhardy to throw off the stabilization program at the very moment it is most needed. The relaxation of controls must be a

gradual and specific process. The National League of Women Voters urges Congress to consider seriously its role in contributing to economic stability.

---

STATEMENT BY AGNES WINN FOR THE NATIONAL EDUCATION ASSOCIATION

The 1,000,000 teachers in the United States have a deep and practical interest in holding firmly the price line against inflation. For this reason the National Education Association, speaking for the teachers, strongly advocates:

1. Renewal of the Second War Powers Act which expires December 31, 1945, unless renewed.

2. Extension of the Stabilization Acts beyond June 30, 1946.

3. Control over the sale prices of houses.

It can easily be seen why teachers have a special stake in the success of any legislation that would hold the line against rising prices. No group of salaried workers would be more adversely affected by rapid lifting of all controls because public school teachers receive relatively low salaries which respond slowly to changes in prices of commodities and in wage rates in private employment. The salaries of many teachers in the United States are below subsistence level and they have no margin of income on which to draw when prices rise.

Therefore we urge Congress to give the most thoughtful consideration to all legislation that will prevent a rise in living costs during this reconstruction period.

---

STATEMENT OF MRS. HENRY A. INGRAHAM, PRESIDENT, NATIONAL BOARD OF THE YOUNG WOMEN'S CHRISTIAN ASSOCIATION

The national board of the YWCA recently joined other organizations in support of a resolution calling for extension of the Second War Powers Act. We have supported price control and rationing throughout the war and in June we supported extension of the Price Control Act.

The dangers of inflation are clear to the women and girls of the YWCA. The national board's professional staff working in foreign lands could add to the testimony of returning veterans regarding the effects of inflation in other lands. Countries in the midst of economic chaos see their only promise for the future in the stability of the American economic system. An inflationary boom followed by depression would ruin this country and render it incapable of assuming a position of leadership in the world organization.

In addition to our interest in world economic stability, we have a deep personal concern for the welfare of each woman and girl in the YWCA's of America. Our constituents represent a large cross section of American society. * * *

One of the most serious problems, housing, disturbs us greatly. The YWCA has cooperated in providing temporary war housing for women workers in crowded industrial centers. Its existing residences have been filled beyond normal capacity to meet the needs of working girls for decent shelter. It is not hard to imagine what the demoralizing effect would have been on girls during the war had they been unable to find moderately priced, comfortable, warm accommodations. War production would have suffered and human beings would have been sacrificed. We cannot allow them to be sacrificed now. We firmly believe that, for the best safety of all economic groups in our society, controls should be maintained on rents in crowded areas and on prices of consumers' goods that are still very scarce.

Many businessmen admit freely that they want necessary controls on rents and prices of scarce consumers' goods because they know that they could not survive the competition of an uncontrolled price war. If inflation should hit the country no one would be safe. Even those who would make high profits for a while would suffer in the long run. The small wage earner and business man and woman would suffer most of all. It is a risk this country cannot afford to take.

---

STATEMENT OF MRS. PAUL E. HOWE ON BEHALF OF THE AMERICAN HOME ECONOMICS ASSOCIATION

Because the primary concern of the American Home Economics Association is the welfare of the American family, it was logical that 48 of the leaders of that organization, at the annual meeting last summer, selected as 2 of the 10 points in its legislative program for 1945–46: "Legislation to prevent increases in the cost of living and insure fair distribution of scarce commodities" and "Programs for consumer protection in government agencies."

Our economists, our home management specialists, our nutritionists, our councillors in social welfare agencies, our directors of cafeterias and other eating places, our rural extension workers—in fact our entire organization—earnestly urge the Congress to extend the War Powers Act, not merely to June 31, 1946, but to such a time as inflationary pressures have been reduced below the danger point. We urge further that the OPA and the Civilian Production Administration be given adequate funds with which to administer their programs, and that no hampering amendments be affixed to the extended act.

We point especially to the need (1) for extension of rent controls throughout the year of 1946 (in part due to the returning veterans and the slowness with which building for the lower and lower middle income groups is going forward); (2) for controls of prices of building materials throughout 1946, to prevent repetition of the boom-bust situation after the last World War which resulted in the most severe real estate depression ever seen in this Nation; (3) for insuring the success of the low-price clothing program developed by the WPB and the OPA. If these safeguards go, the situation of the majority of American families will be critical.

---

STATEMENT OF CAROLINE WARE FOR THE AMERICAN ASSOCIATION OF UNIVERSITY WOMEN

The American Association of University Women, which supported price control before the original Price Control Act was passed, believes that there has never been greater need than in the months ahead. Many of our 929 branches are making the fight on inflation their No. 1 business for this year.

When the Act was first renewed we asked that it then be extended for 2 years beyond the end of hostilities. We now believe that unless it is promptly extended some producers will refrain from producing, waiting for price control to end and prices to soar, delaying reconversion and preventing full employment. We urge Congress without delay to extend the Price Control Act for an additional year.

The most serious inflationary threat is in housing. Rent control must be held while the housing shortage continues—at least another year—and extended to new areas, such as college towns, where necessary to protect veterans. With regulation L–41 gone, there is now absolutely no protection against speculation in building. We hope that a bill providing for legal ceilings on the sale price of old and new houses will be enacted before the spring building season.

Though housing is central, inflation must be fought on all fronts. We, therefore, call upon Congress to hold food subsidies until they are no longer necessary to prevent increases in food prices; to maintain the authority to allocate scarce materials by renewing the Second War Powers Act; to support OPA's price policy by means of which, under Congressional direction, it has held the price line during the war, and not yield to pressures to substitute inflationary price policies for the postwar period.

---

STATEMENT BY RUTH CRAVEN, EXECUTIVE SECRETARY FOR THE BOARD OF DIRECTORS OF THE NATIONAL COUNCIL OF CATHOLIC WOMEN

A serious inflationary spiral is now under way. Because inflation affects family welfare and stability, we urge the continuance of such price and rent controls as are necessary to prevent inflation.

We also urge the continuance of the rationing system for items in short supply so that our people at home may be equitably fed, and so that we may assist in the feeding of the starving peoples of war-torn countries.

We support legislation to extend powers of allocating scarce materials in order to insure orderly reconversion.

---

STATEMENT OF DR. RICHARD MORFORD, ON BEHALF OF THE UNITED CHRISTIAN COUNCIL FOR DEMOCRACY

This council is one of six associations for social betterment within the churches of the country. In January 1944 the council began a series of leaflets entitled "The Six Battles for Peace," which corresponded to the title of the "Six Pillars for Peace," put out by the Federal Council of Churches. In January 1944 the first in that series of six pamphlets for peace was published entitled "Stop Inflation." One hundred thousand of those leaflets went into the hands of church people.

UCC has followed with legislative steps toward curbing inflation and supporting price control. This afternoon renews the contact for further work against inflation. The UCC takes the lead in accepting responsibility in protecting the consumer. Churchmen over the country are coming more and more to appreciate the total welfare and must concern themselves with the proper kind of balance between profits to business and industry, the wages paid to workmen, the prices paid for goods manufactured, and public purchasing power in order to buy the goods of the industry. UCC endeavors to work to this end, and is here today to work with the legislators on behalf of the people in support of price control.

---

STATEMENT OF HELEN HALL FOR THE NATIONAL FEDERATION OF SETTLEMENTS

Men and women in industrial neighborhoods come to settlement houses in 63 cities and 23 States. Settlement leaders from many parts of the country, meeting last week-end at Niagara Falls, reported the change this winter was bringing their neighbors deep fear of both unemployment and inflation. They have just seen the cost of butter go up 6 cents with the removal of the butter subsidies. They have seen already the buying up of small homes by real estate people, so to sell at inflationary prices. They are wondering where their sons are going to live, and whether ceilings on building materials will hold down the cost of the necessary new homes. They are wondering whether their representatives in Congress will see that a law is passed putting a ceiling on the sale price of new and old houses. Whether the OPA will be able to keep its rent ceilings.

In other words, they are wondering whether real-estate interests are stronger than the interests of the soldiers who are just coming home.

Those of them who are consumer-wise, feel that the OPA has probably lost its fight to protect them in their need for low-cost clothing. The others just see their money go for shoddy, expensive clothing and know they aren't getting the low-cost clothes that have been promised so often.

There is much confusion among working people and the newly returned veterans and their families, but it is beginning to crystallize into a feeling that while they seem to have won a war in Europe and the Pacific, they are certainly losing one in Washington. The full employment bill is held in committee. The unemployment-insurance bill is held in committee. The Wagner health bill is held in committee. The Wagner-Ellender housing bill has had no hearing yet. There is no bill as yet to protect the ceiling on new and old houses. Subsidies are being removed with an inevitable rise in food costs. Unemployment is increasing and pay envelopes are thinner. Families are doubling up to make room for the soldier son and his new wife. This is the way it looks to the people in hundreds of industrial neighborhoods in the United States and it does not seem to add up to what they fought for.

---

STATEMENT OF MRS. LEONA RULLER ON BEHALF OF THE NATIONAL COUNCIL OF JEWISH WOMEN

At the recent meeting of our national board, our members expressed themselves in the strongest possible terms in favor of the continuation of price control during the present critical period. In a formal statement to the press we declared, "Unless there is continuation of a strong price control program under the authority of the Office of Price Administration, it is inevitable that inflation of the wildest kind will result. We feel that the whole social and economic order in the United States is being threatened. We therefore urge that the OPA be continued until such time when an orderly reconversion and reemployment process has occurred and the supply and demand of food, housing, and commodities have moved toward a normal balance."

In order to continue an effective price control program, we believe that the following specific measures are necessary:

1. Consumer subsidies must be maintained for goods in which the supply is still too short to meet the demand and in which, if subsidies were removed too soon, price increases would result.

2. We most urgently support the continuation of rent control for the present. Besides contributing to the general danger of inflation, any relaxation of rent control would penalize our returning veterans who are now seeking to reestablish their homes. We are determined that these men must be protected.

3. We support the OPA in its request for the authority to fix prices on all residential real estate. This would include both old and new homes and building lots. We are particularly eager to see price ceilings established on the sale of homes.

4. We support the OPA's insistence that distributors absorb increased costs where such absorption does not impair prewar levels of profit. To pass increased manufacturing costs on to the consumer would, in our opinion, wreck our whole price control structure.

5. And, finally, we are concerned about the expiration on December 31, 1945, of the Second War Powers Act. For it is under that act that the President is empowered to set controls over allocations, rationing, and production. We respectfully urge that, in the renewal of the act, no crippling amendments be attached which would limit the authority to exercise the necessary controls as long as they are so urgently needed.

---

STATEMENT OF MRS. HERMAN H. LOEW ON BEHALF OF THE WOMEN'S AUXILIARIES OF LABOR (AFL)

We are unalterably opposed to inflation that will cause increases in the cost of living and housing. We believe price controls should be extended to such time as both rent and prices have reached a normal level.

STATEMENT OF MPS. FAYE STEPHENSON, PRESIDENT, CONGRESS OF WOMEN'S AUXILIARIES OF THE CIO

Women in workers families are deeply disturbed by the present drive on price control. They are trying to feed and clothe their families on wages that have been cut from 25 to 50 percent and even more. They are having a very hard time now, using up what savings they have, rapidly going into debt. Any further increase in prices would be disastrous.

We feel that maintenance and strengthening of price controls are especially important to protect our veterans and their families. We do not want our boys to come back to find their families starving on their allotments. We do not want them to find that their civilian pay will not buy the essentials of life for their families.

The greatest immediate threat to our price control program is the complete lack of controls on housing since the lifting of WPB Order L-41. Lifting of that order has resulted in the development of a real-estate boom. Such a boom is bound to bring greatly increased pressure for higher rent ceilings. Any such development would be a major disaster to the great mass of Americans and especially to our veterans.

We urge you to work for maintenance and strengthening of price controls, to vote against any new limitations on the powers of OPA and to give all-out support to legislation to curb the real-estate boom and put ceiling prices on houses.

---

STATEMENT OF RUSSELL SMITH, LEGISLATIVE SECRETARY, NATIONAL FARMERS UNION

The National Farmers Union strongly believes that the Price Control Act should be extended for another year. Farmers now are in a particularly vulnerable position. They face the prospect of postwar deflation in the not too distant future, so far as farm prices are concerned. If this deflation is accompanied by rising costs of things they must buy, farmers will suffer more, proportionately, than any other economic group.

The immediate future presents no great problem for farmers. If the removal of food subsidies is accomplished smoothly and effectively, then prices of farm products will remain high for approximately another year because of the still strong foreign and domestic demand. At the end of that time, however, barring strong Government action to the contrary, prices of farm products will decline, probably to the approximate level of the support prices guaranteed under the Steagall amendment.

If this decline is accompanied by some form of production control to reduce volume of farm production—which the Farmers Union opposes—and this decline in production is accompanied by rising living costs of farmers as consumers, then they will be caught in a serious squeeze. Even if production volume is sought, through Government action, at about war levels, there is a strong probability that the cycle of good growing years will end within the next 2 or 3 years and that some decline in volume of production will occur regardless of man-made programs.

For the protection of agriculture, therefore, we strongly favor the retention of price controls and the continuance of rationing for as long a time as necessary to insure the smoothest possible transition to full peacetime conditions.

---

STATEMENT OF MRS. ELEANOR AARON FOR THE LEAGUE OF WOMEN SHOPPERS

These are the days of gravest danger to our economic stability.

The League of Women Shoppers wants especially to point up the critical problem the country faces in housing. During the absence of husbands overseas many families were forced to double up for economic reasons. With the return of thousands of servicemen to civilian life their families need to find homes of their own. Many thousands of servicemen have recently married and are creating an additional market for homes.

These demands for homes cannot be satisfied for a long time. Meanwhile, sale prices of homes are spiraling far beyond the ability to pay of returning servicemen. This is due to the failure to establish ceiling prices on the sale and resale of houses before the shortage became so acute. However, it is still not too late and we strongly urge Congress to enact legislation which will put an end to these skyrocketing prices.

Mr. Bowles has testified before the Senate Small Business Committee that in his opinion the steadily rising prices of homes present the most critical inflationary danger American families and the building industry face today. The need for price ceilings on homes is as great as was the need for price controls at the beginning of the war.

---

STATEMENT OF NATIONAL COUNCIL OF NEGRO WOMEN

The National Council of Negro Women, representing millions of Negro women in this country, wishes to join in the fight for strong policies to prevent inflation in the reconversion period. So far America has established an enviable record of inflation control, but now that the war is over some people feel that we should relax and return to business as usual. The facts show, however, that we still face a dangerous inflationary period, and the real test of price control is under way now.

The National Council of Negro Women supports the Office of Price Administration in its effort to resist certain inflationary pressures.

We call upon Congress to use its authority to implement strong, anti-inflation policies during this crucial period. Specifically, we believe in and support the following measures.

1. The renewal of the Second War Powers Act which will expire on December 31, 1945. We urge that in the repassage of this act there be no crippling amendments attached which would limit controls over allocations, rationing, and production.

2. We urge the maintenance of consumer subsidies for those commodities in which supplies remain short, in order to avoid price increases resulting from premature removal.

3. We strongly support the maintenance of a tight rent control, and the granting of powers to the Office of Price Administration to fix prices on residential real estate, including both old and new homes and building lots.

4. We also support the policy adopted by the Office of Price Administration of insisting that distributors absorb increased costs where such absorption would not impair prewar levels of profit.

---

## Alien Property

---

EXTENSION OF REMARKS

OF

## HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I desire to include in the CONGRESSIONAL RECORD a letter from our Secretary of State,

Hon. James F. Byrnes, with reference to alien property:

DEPARTMENT OF STATE,
*Washington, November 20, 1945.*

The Honorable LINDLEY BECKWORTH,
*House of Representatives.*

MY DEAR MR. BECKWORTH: This is with reference to your letter of November 1, 1945, advising me that you are one of those who believes that the Germans and Japanese should not get back the property which the Alien Property Custodian has vested during this war as the Germans did get back some of the property the Custodian seized during and after the First World War. You wish to be advised whether or not any State Department agreements or agreements of any other department are being considered whereby Germans and Japanese may regain some of the property which has been vested by the Alien Property Custodian.

The Department has supported the policy which is embodied in House Joint Resolution 178, introduced by you in this Congress, that assets of Germany and Japan in this country should be used by the United States for its purposes in connection with claims arising from the war. Your attention is called to Executive Order 9567 dated June 8, 1945, which authorized the Alien Property Custodian to vest all assets, including cash and securities, of nationals of Germany and Japan. There was thus transferred to the Alien Property Custodian authority to vest certain properties which had previously been merely frozen under the controls administered by the Treasury. This Department has supported the policy embodied in this Executive order and the policy of liquidation of such assets by the Alien Property Custodian at the earliest possible date, considering, of course, the best interests of this country in the formulation of his policy of liquidation.

The Department has also, in the same connection, approved the statement of the Alien Property Custodian to the subcommittee on War Mobilization of the Senate Committee on Military Affairs in which under date of June 28, 1945, the Custodian indicated that his agency and the Treasury Department were agreed that recommendations by these agencies with respect to plans for the ultimate disposition of the funds realized from vested German and Japanese property should make no provision for any return or compensation, direct or indirect, by the United States to the former owners. Under this recommendation, the net proceeds of such property would be available for claims which this Government has against Germany and Japan or for any other purpose that Congress may determine.

The Department is now preparing further detailed comments with respect to House Joint Resolution 178 in response to the request of the chairman of the committee to which this proposed resolution has been referred.

I appreciate your interest concerning the disposition of enemy assets in the United States and if I may be of any further assistance to you in this matter please advise me.

Sincerely yours,

JAMES F. BYRNES.

---

## Must Legislation

EXTENSION OF REMARKS
OF
## HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. HOFFMAN. Mr. Speaker, the administration and its congressional leaders seem determined to push through Congress certain spending measures which, if the past is any criterion of what may happen in the future, will be used to swing the national election in 1946 through the distribution of Federal funds in congested city areas.

The Supreme Court's strained construction of an antiracketeering statute still permits its allies to levy tribute upon every citizen who purchases the necessities of life.

A specific instance is referred to by Westbrook Pegler in his today's piece. There is nothing new about it, and within 4 days after the Supreme Court of the United States in January of 1942 handed down its decision legalizing such racketeering I introduced a bill to correct the claimed defect in the antiracketeering statute. Around a year later the House passed the so-called Hobbs bill, which was designed to accomplish the same purpose. It went over to the Senate, and there it still lies buried.

Yes; the administration and the congressional leaders of the Democratic Party insist upon new legislation which will enable them to spend public funds for political purposes, but they cannot find time to protect the peaceful citizen seeking to use the highways in the transportation of food, clothing, and other necessary merchandise from the demands of their political supporters.

Pegler's piece reads as follows:

FAIR ENOUGH

(By Westbrook Pegler)

When the citizen reads that the National Government under President Roosevelt delivered him into the power of gangsters, thieves, sluggers, and racketeers, operating under union charters, he may think that that is an exaggerated statement.

However, this is literally true and the Department of Justice did consult the wishes of Joseph Padway, a lawyer and counselor and friend of some of the most loathesome underworld criminals of our time, in modifying the language of the Antiracketeering Act. This modification made it possible for union gangsters to continue to prey on the public and it still protects them.

Padway is the general counsel of the American Federation of Labor. He is loudmouthed and pushful and has long purported to be a spokesman for American labor when the fact is that he holds no credentials at all from labor and is merely a lawyer with a rich practice specializing in union law. He represents various unions, as distinguished from American labor, only in the role of counsel acting for his fee. For a long time he got away with a role of spokesman for American labor and statesmen were afraid to cross him. However, publicity has shown him up so that if today he should start bellowing demands and threats to committees of legislative bodies a sergeant at arms or exasperated lawmaker should not hesitate to treat him as they would any obstreperous persons.

Padway was general counsel for the dirty Bioff-Browne underworld gang in the movie industry and did some legal work for George Scalise, of the Building Service Workers Union racket, who, like Willie Bioff, began his career as a bargaining agent by sharing in the wages of prostitution. At least he says he did some legal work to justify a fee of $1,000 from Scalise. Both of these rackets were operations of the Capone gang.

In those early days, and before the facts of his practice and clientele were known, Padway could walk in on the Attorney General of the United States and lay down demands in the name of labor.

In the particular case referred to here, the flaw in the Anti-Racketeering Act is still preserved, enabling gangsters of the teamsters union to practice highway robbery against the owners of trucks freighting food and other consumer goods across State lines. That this privilege obviously increases the cost of living to those citizens who must eventually pay the amounts thus extorted goes without argument.

This was the celebrated teamsters case in which local 807 of the teamsters and 23 individuals were convicted of shaking down the owners of trucks entering New York from the south by way of New Jersey. They charged $8.41 to let a small truck enter the tunnel and $9.42 for free passage for a big truck.

A number of the individual defendants were ordinary police characters with FBI records, and weren't even eligible for drivers' licenses, and therefore couldn't have been hired.

On the appeal to the Supreme Court, Justice James Byrnes, now our Secretary of State, wrote the majority opinion, affirming the Court of Appeals which had reversed the District Court.

He admitted that the gangsters did use violence to obtain the money and, in some cases, refused to perform even the nominal work which was the pretext for the holdup, namely, driving or merely riding the trucks under the river.

Justice Byrnes held that the law against racketeering in interstate commerce excepted any person who attempted to obtain wages from a bona fide employer to a bona fide employee. This was the exception which was inserted in the law before its final passage by Congress, at the demand of Padway and William Green, president of the AFL. Congress gave way, never imagining that, in a few years, the Court would hold that this language, offered as an honest and legitimate protection to labor, gave immunity to criminals who got the money by violence and threats and then refused to do any work.

Chief Justice Stone, for the minority, wrote that when Congress was considering the act no member "and no labor leader had the temerity to suggest that such payments, made only to secure immunity from violence, could be regarded as the payment of wages." And he added that the compulsion of such payment never was made a legitimate object of any union by any statute.

Padway remains general counsel of the teamsters union. Many of its locals are mere fronts for racketeers but nevertheless, as recently as the start of his fourth-term campaign, Roosevelt selected the arrogant bosses of the union as the primary audience for his first big speech.

Padway tried to disown his old friend Scalise, after these dispatches revealed Scalise's criminal record and Tom Dewey uncovered the racketeering of the Capone gang in the guise of the Building Service Workers' Union.

But finally, he was confronted with a letter that he had written to Scalise, promising to intercede for him with the Attorney General in Washington and closing with the pledge "you can certainly count on me to help you in every way possible, and I will consider it a privilege."

Since then Padway has been less noisy. Legislative committees and Government officials are onto him and other lawyers specializing in union law are grabbing big fees from the faceless people who have to belong or starve.

Nevertheless, the law stands today as Mr. Byrnes interpreted it. And the citizen, including the worker and union members as well, thus remains in the power of gangsters, thieves, sluggers, and racketeers.

Because, having planned it that way, the Roosevelt government passed the word to some henchmen in the Senate who quietly killed a bill passed by the House which would have revoked this special privilege of Padway's client, the teamsters' union.

## Postal Service During War

EXTENSION OF REMARKS
OF
**HON. THOMAS G. BURCH**
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. BURCH. Mr. Speaker, one of the most important problems confronting the Army when it was getting ready to wage a world-wide war was to provide postal service for our millions of men in uniform. That was a huge task, but the manner in which the Army organized a global postal system almost overnight is a story of a job well done.

Several days ago I had the pleasure of attending a dinner, along with some of my colleagues on the House Committee on the Post Office and Post Roads, that featured the theme, postal service in war. Present at this affair were a large number of Post Office Department officials as well as the top officers of the Army postal service.

Lt. Col. Burris C. Jackson, who represents the War Department in the conduct of business with the Post Office Department, acted as master of ceremonies, and gave to those present a brief report of the far-flung operations of postal service in war with special emphasis on the team work that existed between our civilian postal establishment and the armed forces.

Col. C. C. Garner, acting director of the Army postal service, and a well-known post-office inspector in civil life, told of some of the problems of organizing a competent personnel and the troubles of transportation.

Jesse M. Donaldson, First Assistant Postmaster General, who was designated as the honored guest of the occasion, gave a brief outline of how the Post Office Department aided the Army in setting up a postal branch, and how the Army had later on erected buildings and furnished manpower to the Department in order that the tremendous volume of mail could be handled.

I was privileged to speak for the committee of the House which I have the honor of heading, and to stress the role that Congress played in this important undertaking by passing the necessary legislation.

The speakers, together with specially prepared charts, told a most interesting story concerning the postal service during war, and I am herewith inserting in the RECORD some information and data that was presented:

HIGH LIGHTS OF THE ARMY POSTAL SERVICE

1. Perhaps the greatest single morale factor during the war was mail. The tremendous task of supplying a rapid mail service to and from soldiers overseas was undertaken by the Army postal service, established under The Adjutant General in 1942. Literally starting from scratch the Army postal service grew rapidly to a world-wide organization which handled millions of letters and millions of dollars each month; provided the same postal service to which Americans are used to, to our fighting forces in practically every country in the world. The magnitude of the Army postal service is reflected in the following data:

(a) Army post offices overseas sold during the war more than $1,500,000,000 worth of money orders. This was an average of $55,000,000 each month and in terms of soldiers represent a $10 money-order purchase each month by every soldier overseas. More than $100,000,000 worth of postage stamps and stamped envelopes were sold, averaging $4,000,000 monthly or approximately 75 cents a soldier.

(b) At the end of the war there were 600 APO's providing normal postal service to soldiers in 55 foreign countries. At each one of these soldiers were able to obtain exactly the same services available at post offices located in the cities, towns, and hamlets in the United States.

(c) More mail was dispatched overseas during the war than in any period in the history of this country. From 22,000,000 pieces in July 1942 the volume rose steadily to more than 266,000,000 pieces in March 1945. This was equivalent to more than 50 pieces of mail a month for each soldier overseas. This mail was delivered with speed unheard of before the war notwithstanding the hazards encountered, such as enemy submarines, bombings, and the shortage of cargo space needed for vital war materials. For example, the average time of delivery for air mail under normal conditions is shown to certain typical areas where United States forces were stationed:

| | *Days* |
|---|---|
| New Guinea | 9 |
| Philippines | 8 |
| France | 8 |
| Germany | 9 |
| Italy | 8 |
| Egypt | 7 |
| China | 12 |
| India-Burma | 10 |
| Aleutian Islands | 6 |

(d) In July 1942 only 22 percent of letter mail was transported overseas by air, whereas by March 1945 the percentage had risen to the remarkable figure of 87 percent.

(e) During the 1944 Christmas mailing period, when the forces overseas were at their peak, the Army postal service successfully transported and delivered by Christmas more than 60,000,000 gift packages, an average of 13 parcels for each soldier overseas.

(f) When the Army postal service took over the courier service in May 1942, which was designed to provide a speedy and safe means of delivering highly classified official matter, there were 2 international routes of less than 17,000 miles, only 5 stations and 14 officer couriers. Seven hundred and thirty-seven pounds of classified material were handled that month. By June 1945, there were 7 international routes covering more than 92,000 miles and 319 officer couriers were handling more than 3,000 pounds of material each month.

(g) V-mail service was instituted in June 1942 with nine stations located in the United States and overseas. In December of that year approximately 5,000,000 letters in microfilmed form were sent to and from overseas. The system rapidly grew to a world-wide network of stations which prior to discontinuance on November 1, 1945, had microfilmed more than 1,250,000,000 letters, and which at its peak transported in 1 month more than 60,000,000 letters in microfilmed form to and from overseas. During its entire period an average of 16,000,000 V-mail letters a month were sent to our fighting forces. V-mail contributed greatly to the war effort. It released vital cargo space on planes and vessels and permitted the expeditious movement of regular mail, essential personnel, munitions and other critical supplies vitally necessary to the successful prosecution of the war.

(h) The Army postal service, in addition to handling of mail for the armed forces abroad, had charge of the personal radio and cable services. It was possible to send an EFM (fixed text) cable overseas for approximately 60 cents. These consisted of fixed texts of which there were more than 260 from which the sender could choose. In addition, regular cable service for transmission of messages of the sender's composition at the commercial rate was also provided. In 1942 the average monthly volume was 158,000 incoming EFM messages and 74,000 outgoing messages. This service became so popular that these figures rose to a monthly average of 314,000 incoming EFM messages and 85,000 outgoing messages.

(i) As a result of legislation providing for absentee voting by Army personnel in this country and overseas, the Army postal service in conjunction with the Post Office Department developed a world-wide plan whereby all ballots and ballot material between the soldiers and the various States were included in bags conspicuously marked to assure top priority in transit and promptly handled at mailing and delivery points. Such ballots and ballot material were contained in distinctively marked envelopes and covers and were given precedence in handling and transmission in Army postal service channels over all classes of personal mail, with the result that the program was completed successfully without criticism from any source.

## Congress Should Act To Speed Up Demobilization

EXTENSION OF REMARKS
OF
**HON. J. HARRY McGREGOR**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. McGREGOR. Mr. Speaker, the records prove the military authorities are inconsistent in handling the demobilization program and are not fully utilizing the equipment we have available. They tell us we have no ships to bring the boys home. Where are the $22,000,000,000 worth of ships built for war? We had plenty of ships to take them over—why can't we have the same number to bring them back?

On October 9, 1945, I made a speech on the floor of this House, and I quote the last paragraph of that speech—CONGRESSIONAL RECORD, Tuesday, October 9, 1945, page 9501:

> Mr. Speaker, we must bring these boys and girls home so they can be with their families, finish their education, and again get started in civilian life. It is time for Congress to once again become a truly legislative body governed only by the people as a whole and not by one group or a few individuals.

Mr. Speaker, that Congress might have that opportunity, I introduced H. R. 4498 on October 25, 1945, which reads as follows:

> A bill to provide for the discharge or release from active duty of certain members of the armed forces, and restrict jurisdiction of commanding officers in declaring essentiality, and for terminal leave for enlisted personnel
>
> *Be it enacted, etc.*, That without delay any person upon request shall be discharged from, or released from active duty in, the military or naval forces of the United States and who—
>
> (1) has served on active duty 12 months or more since September 16, 1940; or
>
> (2) has, at the time of making such request, a wife or a child or children with whom

he maintains (or would but for his service maintain) a bona fide family relationship in his home; or

(3) has, at the time of making such request, a mother or father dependent upon him for chief support; or

(4) desires to resume his education or training by enrolling in an educational or training institution, if his education or training was impeded, delayed, interrupted, or interfered with by reason of his entrance into the service. Any such person who was not over 25 years of age at the time he entered the service shall be deemed to have had his education or training impeded, delayed, interrupted, or interfered with; or

(5) has, at the time of making such request, a status of being essential to the operation of a farm; or

(6) has the desire and requests to be returned to his business or profession, which he was forced to discontinue or place in other hands at the time of his induction or enlistment into the military service.

SEC. 2. It shall not be within the jurisdiction of any commanding officer to declare anyone in the military or naval forces essential who meets the requirements in section 1 of this act.

SEC. 3. All enlisted personnel and noncommissioned officers shall be granted the same terminal leave which is now allowed to commissioned officers.

Mr. Speaker, there has been some talk of a recess of Congress within a few days. I will oppose such recess, as I strongly feel and urge that we should act on the demobilization program. I request the passage of H. R. 4498, which I have introduced. I am satisfied if the leadership of the House will permit a vote on this bill it will be approved by a large majority.

## Dedication of Albert J. Carter, Jr., Square

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address delivered by me at the dedication of a square at the intersection of Andover and Newton Streets, Lawrence, Mass., on November 12, 1945, in memory of Sgt. Albert J. Carter, Jr., who made the supreme sacrifice on November 21, 1944, in France while serving with Company K, Twenty-sixth Division in the One Hundred and First Infantry. Sgt. Albert J. Carter disregarded his own personal safety and went forth under enemy fire to the rescue of three of his wounded comrades by risking his own life. Sergeant Carter helped to save the lives of three of his comrades. For heroic service beyond the call of duty, he merited the Bronze Star Medal, but he did not live to receive his country's award.

We have come here to honor the memory of one of our finest citizens. He was not an educator, a clergyman, an industrialist, a public official, a labor leader, he was much more than all of these combined. Out of the tens of thousands who have come and gone since the birth of our city, few are remembered, because so few have given to the welfare of the community in a way that commands our undying respect. Albert J. Carter, Jr., is one of the precious few.

He gave all that we might live. In that giving of the fullness of his youth, with all its eager hopes and dreams, he has put before us an example that humbles and shames us. In the secrecy of our hearts we know how little we have given, how much remains for us to give in mind and spirit and devotion to humanity, so that we may win a world of peace and security and progress for all.

In the confusion of life we are apt to forget our goal. Knowing this, we gather here today to dedicate this square to Albert J. Carter, Jr., to the memory of his courage, his sincerity, his sacrifice. He was the great citizen, which each of us might become.

Lest we forget, we meet to dedicate this square in his honor. In the days to come, passing here, we shall be reminded of him and of the duties we owe to our community and our Nation. School children, seeing his name and the star which symbolizes his sacrifice, will stop and wonder and ask, "Who was Albert J. Carter, Jr.?" And we shall take them aside and tell them this.

Like you, he was born here, in South Lawrence. He went to the same schools as you do. He played the same games. He grew up, wanting the same chance in life which would be lived here in the valley of the Merrimack. The outside world seemed very far away. But it wasn't as far away as most of us thought. Great inventions, like the radio and the airplane, came along and boundary lines couldn't stop them. Even the oceans were no longer a protection between our Nation and other nations. Evil men were the first to see how these great gifts might be used, not to help people but to enslave them. And they used the radio to spread falsehoods and fear, to divide and weaken people. Great fleets of airplanes were assembled and they dropped bombs on the peace-loving nations who were unprepared. These evil men won victory after victory and the world was in darkness for it seemed that they could not be stopped and soon all men would be slaves, as they were many centuries ago. Then these evil men struck at our Nation, at the very moment when they talked soft words of peace. And our country was in danger because we were not ready to meet this attack. We suffered defeat after defeat while we tried desperately to arm ourselves. The Nation called on its young men for help. Albert J. Carter, Jr., was one of the first to respond.

Here, in Lawrence, it was hard to realize that a deadly war was going on many miles away, a war which threatened the freedoms of every man, woman, and child in Lawrence; a war which would demand all of our strength before it could be won. For the skies over Lawrence were clear, the people walked the streets erect and without fear, there was food and clothing for all, and no secret police hammered on our doors in the middle of the night to take away someone whom we would never see or hear from again. Children played in the streets as they always have in peace-loving America where we have never seen our cities destroyed or our citizens killed. We had no idea how much a small bomb, dropped from the sky, could destroy.

Albert J. Carter might have said: "This is no concern of mine. I want to live my own life." Or he might have said: "Why should I go when so many others stay at home?" He might have, as any other young man might have, but he didn't. Though he stood on the threshold of life, in the prime of his youth and with all the promise of life before him, he knew in this fateful period, that there were other things of greater importance. His family, his friends, his neighbors, his city, and his Nation. They were in danger and someone must save them.

As Americans, we have enjoyed more liberty of action than any other people on earth. It is doubly difficult for us to give up the free ways of peace for the regimentation of war. But thanks to our homes, our churches, and our schools, there is deep down within us, a recognition that freedom has responsibilities as well as rights. It is this which enabled our men to adjust themselves to the grim discipline of war.

Albert J. Carter, Jr., went to military camps where men must learn how to meet force with force. He knew what was ahead of him. All the misery and pain and weariness of combat. He knew the price which would have to be paid because our Nation was asleep to the realities of this world. He knew it would have to be paid by some to save the many at home. His prayer was that we might learn and remember the lesson we so often forget that eternal vigilance is the price of liberty. He knew that all the love and tenderness we profess for our children is a mockery if we allow them to grow up in a world which demands this bloody tribute from them. For we are to blame if, by our indifference, we ever permit aggressors to catch us napping again.

In 1940 and 1941 it was too late to repent of our carelessness during the 1920's and the 1930's. Our backs were to the wall and the only question was that of survival. And so the cream of our youth went into the caldron of war to save us from our mistakes.

Albert J. Carter, Jr., was one of those who went to Europe to fight our battle there, before the enemy could fight it here. He went to save the homes and factories of Lawrence from destruction; to save our women and children from the death and mutilation, the hunger and fear and disease which follow in the wake of war from the air.

Our men carried the battle to the enemy. They stormed the beaches of Normandy and after bitter fighting, broke through the enemy's fortifications. They pushed him back across the rolling hills of France. But each day, the casualty lists told us the price we were paying for our victories. They could not tell the full story of this ordeal, of the terrible fears which men had to overcome, of the burning heat and the bitter cold and the hollow-eyed sleeplessness and the earsplitting noises, of the rain of death in the air, and the cries of the wounded.

They do not tell the story of unsung heroism, of the great unselfishness that made men brothers, of the dark night when Sergeant Carter, disregarding his personal safety, went forth under enemy fire to come to the rescue of three wounded comrades. For here, in the throes of man's bitter tragedy, great qualities were born. As if the human soul stood up against this horror and said: "Though all the destructive power of evil is here, so is the individual man, standing up to it with a courage that can never be destroyed and tempering that courage with the gentle quality of mercy. War is huge and terrifying but the unconquerable spirit in the individual man can rise above this. In time it will, with God's help, eliminate war itself. For these qualities in man are the hope of a weary world."

By risking his own life, Sergeant Carter helped to save the lives of three of his comrades. For heroic service beyond the call of duty, he merited the Bronze Star Medal, but he did not live to receive his country's award. On November 21, 1944, 26 years after the war to end all wars was terminated on Armistice Day, Sergeant Carter was killed in action. Mercy and courage and self-sacrifice, these he laid on the altar of his country's freedom. These, we reverence today. He is gone, but in spirit he is still with us, reminding us of the duties which we, the living, must fulfill. Through us and what we must do to be worthy of him, he still lives. If we fail, we fail him, and we fail the children who look to us for leadership.

So on this day let us make a solemn compact with the spirit of our honored dead. Let each of us work and pray and think and feel, in every way we know how, to achieve a realistic and permanent peace among the nations of the world. In a democracy like ours, this responsibility is ours. In this we must not, cannot fail. This and this alone can justify the sacrifice which Sergeant Carter made for us.

To the Lawrence Post, Veterans of Foreign Wars, in charge of this dedication, we extend our thanks. They are performing a civic duty in keeping ever before our eyes the memory of our heroic dead that we may be inspired, by their example, to live up to the ideals of our American citizenship, in peace as well as war.

To the members of the Sacred Heart and LaSalle Clubs, of which the deceased was a member, we say: "Yours is a just and honorable pride, for you have been associated with one who lived and died in the highest tradition of American manhood."

The friends and relatives and neighbors have memories of his boyhood and his youth. These will never die. At unexpected moments, through the years, they will come to the mind, so vivid in sight and sound and movement, as to warm the heart. And it will seem that he has never really gone from us.

To his father, who also shares in the perpetual honor which the name Albert J. Carter, Jr., brings to this square, we speak the humble gratitude of our community. For it is the home which molds the child into manhood. And it is from such homes as these that the men and women were developed who went forth to save America. In honoring the hero, we honor the parents. They, like he, have served their country with unselfish devotion.

The Lawrence City Council has decreed that this square, at the intersection of Andover and Newton Streets, shall forevermore be known as the Albert J. Carter, Jr. Square in tribute to one who, far from home, brought credit to himself, his family, and his community. Today we dedicate this square to his memory and enshrine him in our hearts.

As the requiem notes of the bugle echo in the wind, we bow our heads in prayer. "Well done, thou good and faithful servant. You have earned a hero's rest. May we, your fellow Americans, be worthy of your immortal sacrifice."

## Requested Termination of United States Ambassadorship to the Vatican

EXTENSION OF REMARKS
OF
### HON. MALCOLM C. TARVER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

The following resolution was offered by Dr. Louie D. Newton, pastor of the Druid Hills Baptist Church, Atlanta:

"Whereas the statement appearing in Newsweek, October 29, that the President may soon be requested by Myron C. Taylor to relieve him as the President's representative at the Vatican would seem to indicate that our Government is expected to continue its Embassy at the Vatican, without approval of the Senate; and

"Whereas the only justification President Roosevelt ever offered for his appointment of Mr. Taylor was an emergency measure in connection with the war; and

"Whereas the war is now ended; and

"Whereas we consider the appointment of Mr. Taylor, even as a war measure, a direct violation of the Constitution of the United States (see the first amendment to the Constitution): Therefore be it

*"Resolved by the messengers from the 2,511 churches of the one hundred and twenty-fourth annual session of the Georgia Baptist Convention, meeting at Macon, Ga., this November 13, 1945, with a total membership of 566,231 persons,* That we do most earnestly and respectfully petition President Harry S. Truman to immediately terminate the appointment of Mr. Taylor, and call home the steadily increasing staff of the United States Embassy at the Vatican. We believe that such action on the part of the President will meet with widespread approval and relieve our Nation from a growing discontent with a situation which complicates our foreign relations and endangers the cherished principle of complete separation of church and State—the acknowledged guaranty of religious freedom; be it further

*"Resolved,* That a copy of this resolution, signed by the officers of the convention, be forwarded immediately to the President of the United States, to the Secretary of State, and to the Members of the Senate and House of Representatives from Georgia."

J. C. WILKINSON, *President.*
JAS. L. CLEGG, *Secretary.*

NOVEMBER 13, 1945.

## San Francisco's Postwar Plans

EXTENSION OF REMARKS
OF
### HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. HAVENNER. Mr. Speaker, I am proud to direct the attention of the Congress to the forthright, intelligent manner in which my city of San Francisco is dealing with the problems of postwar reconversion. Under the leadership of the San Francisco Chronicle, one of the oldest and most influential daily newspapers in California, a community forum has been organized to study the postwar needs of northern California and to recommend a program of community action designed to solve the problems of peace in that great area of western America. Leaders of industry, labor, government, and civic activities participated in this forum, and joined together in many days of shirt-sleeve working sessions to formulate their recommendations for a peacetime program.

When the program was completed it was presented to a great mass meeting of citizens in San Francisco Civic Auditorium, and the proposals for postwar progress were voted upon, item by item, by secret ballot by all of the thousands of people who attended the mass meeting.

Subsequently the community program was reprinted daily in the Chronicle in a number of successive issues, and all citizens of northern California who were not able to attend the mass meeting were invited to express their opinions by filling in printed ballots and sending them to the Chronicle.

The result has been an overwhelming expression of popular approval of the Chronicle's Community Forum program.

Among those who participated in the preparation of the program were Dr. Henry F. Grady, president of the San Francisco Chamber of Commerce and former United States Assistant Secretary of State, George T. Cameron, publisher of the Chronicle; Harry Bridges, California CIO director; State Senator John F. Shelley; president of the San Francisco American Federation of Labor Council, Harold J. Boyd; controller of the city and county of San Francisco, Ray B. Wiser; president of the California Farm Bureau Federation, Robert W. Kenny; attorney general of California, Bartley C. Crum; attorney at law and formerly western director of the campaign of Wendell Willkie for President, Francis V. Keesling; president of the West Coast Life Insurance Co., Adrian J. Falk; former president of the San Francisco Chamber of Commerce and prominent business executive, Wendell Phillips; AFL labor council official, Paul Heide, and Mervyn Rathborner, CIO leaders, and many other representative citizens.

For many decades the San Francisco Chronicle has been recognized as the leading organ of the Republican Party in northern California.

The following is a summary of the recommendations made by the panels of the Chronicle Community Forum, and approved by popular vote of northern California citizens:

PANEL NO. 1. MANAGEMENT-LABOR RELATIONS, INCLUDING AGRICULTURE

1. Community labor-management councils should be established to develop better industrial relations.

2. Legislation should be enacted guaranteeing the right of workers engaged in intrastate commerce to organize and bargain collectively.

3. Use of arbitration, mediation, and conciliation to settle industrial disputes should be expanded.

4. All union contracts should provide for settlement of questions by final and binding arbitration.

5. The standard of living can only be improved by over-all increased productivity; therefore this factor should be considered in all bargaining and arbitration on wage issues.

6. The Federal Government should extend arbitration facilities to those mutually agreeing to use them without cost.

7. Labor-management groups should give further study to the machinery and techniques of arbitration.

8. Any law which would make arbitration compulsory is unanimously opposed.

9. In order to give good, permanent jobs to veterans, the objectives of full employment, should be supported.

PANEL NO. 2. URBAN-RURAL RELATIONS, INCLUDING SUCH PROBLEMS AS BAY AREA, NORTHERN CALIFORNIA, STATE AND WESTERN REGIONAL UNITY

1. Full employment at relatively high wages is necessary in order to create a market for California's farm products.

2. Communication, transportation, marketing, hydroelectric development, and other economic problems can be solved only by a regional-wide approach to State and local trade barriers.

3. San Francisco should immediately plan better facilities for the distribution of fruits and vegetables, including an up-to-date wholesale produce market and a direct farmer's market.

4. Social security should be extended to agricultural workers.

5. Farmers should diversify operations to put farm labor on a year-round employment basis.

6. Rural housing should be developed by private enterprise wherever possible, but Government housing agencies should be available to fill any gaps.

7. The city press should print more news about agriculture, mining, forestry, and fishing.

8. The minimum wage law should be increased by upward of 50 percent.

9. Price-support measures during the postwar readjustment period should be extended to all farm products.

10. Farmers should pool their employment needs to stabilize the labor living in their communities.

11. War-housing facilities should be moved to farm localities where needed and where practical.

12. The State department of education should extend curricula to include basic information on urban-rural problems and relationships.

13. There should be a free exchange of information and opinion on urban-rural relationships, including a regular column service for the press.

14. Consideration should be given by the legislature to improving rural roads.

15. City residents should join with the rural in a program of preservation of California's natural resources.

16. There is need for the development of new industries that can be carried on in or close to the agricultural areas.

17. Urban and rural communities should exchange speakers in other's organization meetings.

18. A world trade center for San Francisco should be supported, with farmer, labor, and business representatives on the governing board. The center should include an expanded livestock pavilion.

19. All groups—agriculture, labor, business—should recognize their obligation to consider the effect of their acts on the others' welfare.

20. The Chronicle Forum should be continued next year, with conferences to be held in the interim.

PANEL NO. 3. GOVERNMENTAL RELATIONS WITH INDUSTRY AND LABOR, INCLUDING THE ROLE GOVERNMENT SHOULD PLAY IN MEETING POSTWAR PROBLEMS

1. Governmental agencies should act to whatever extent is necessary to assure equality of opportunity, to maintain economic stability and to stimulate the continuing improvement of our standard of living.

2. Rationing, control of prices, and control of wages are essential to avoid further inflation during transition from war to peace.

3. The United States Employment Service should continue as a national agency during the transition, but there should be no control over the free migration of workers across the Nation.

4. Essential public works should be carried on regardless of the employment situation, and since private enterprise will be unable to furnish full employment during the transition period, Government should also plan public works to absorb some of the unemployed.

5. Surplus plants and property should be disposed of promptly without handicapping competitive industry.

6. Government should provide research and service, including sponsorship of loans, to put small business on an equal footing with large corporate business.

7. Social insurance should be strengthened and extended to all gainfully employed workers.

8. Old-age benefits and unemployment insurance should be revised and increased in line with the new level of wages and prices.

9. A compulsory health insurance system should be added to the present Federal-State provisions for social insurance.

10. Retirement age should be reduced from 65 to 60, with the test being whether any part-time earnings of the individual when added to his benefits, exceed the amount he would receive if employed full time.

PANEL NO. 4. PRESERVING THE DEMOCRATIC WAY OF LIFE

1. The Chronicle Forum should continue panel discussions on a month-to-month basis.

2. All Americans should stand united against native Fascists who are still among us with their "divide and conquer" efforts.

3. Federal, State, and city fair-employment practice agencies should be established as quasi-judicial, educational bodies.

4. All communities should train their police officers and other public officials in the best methods of fostering understanding and bettering relations among all citizens.

5. Methods of eliminating segregation should be given further study, since discrimination in housing creates serious community problems.

6. Cultural education and vocational training in our schools are not mutually exclusive, but are mutually necessary to our democracy.

7. Vocational training should be made available to students, to war adult apprentices in industry, and to employed adults.

8. There is a need for more adequate elementary and secondary schools in rural areas.

9. There should be improved methods for the recruitment, selection, and maintenance of school teachers on the basis of fitness for teaching without distinction as to race, sex, or creed.

10. Teaching throughout all of the school system should be unbiased and should develop attitudes of mutual understanding among all students.

11. There should be more scholarships for students of ability who need financial aid.

12. All community groups should support the use by veterans of State and Federal aids for educational purposes.

13. Public-school systems should be adapted toward solving the juvenile-delinquency problem through parental schools, close cooperation between parents and teachers, and development of child-guidance and mental-hygiene facilities.

14. Preschool day-care centers and nursery schools for the children of mothers who must work should be supported by public funds, supplemented by parents' payments.

15. The parents as well as the children should be educated in any nursery-school program.

16. Adult-education facilities should be expanded.

17. The public libraries should take a larger share in both adult and juvenile education, should receive their full share of public tax moneys, and should carry on constructive programs of general community activity.

18. In order to obtain adequate housing, and remove all blighted areas, 780,000 homes must be built in northern California.

19. Existing temporary war housing should be eliminated when it is possible to provide decent housing for the present occupants and at the prices they can afford to pay.

20. The objectives of the Wagner-Ellender bill in the United States Senate—which is intended to aid public housing programs—should be supported.

21. There is need for an extensive health educational program.

22. Hospitals in San Francisco are crowded, old, and in need of replacement.

23. San Francisco should combine many of its existing clinical and hospital facilities in a few modern structures.

24. Health insurance is needed to assure to every person of California the opportunity for comprehensive medical services of the highest standard; it is therefore necessary to establish a contributory medical insurance plan to accomplish this.

25 Community resources such as schools, parks, churches, and public areas should be put to maximum use for the recreation of the public.

26. Long-range recreational programs should be planned on a community-wide basis, in all communities.

27. It is to be deprecated that certain public officials and some private citizens have made it impossible to build a new juvenile-delinquency home in San Francisco, although bonds were approved almost a year ago. Action should be taken at once to end the into'erable conditions that now prevail.

PANEL NO. 5—WHAT PRIVATE ENTERPRISE CAN DO TO INVIGORATE AND BEAUTIFY THE REGION

1. The many existing agencies which represent the collective thinking of business—chambers of commerce, better business bureau, area councils, and so on—should be integrated.

2. A research center should be established to study markets and manufacturing opportunities, establish the bay area as a foreign trade center, and to attract risk capital.

3. Business leaders of the future should act boldly and with vision adequate to match the natural beauty and geographical advantages of the area.

4. Private enterprise should do everything possible to provide a maximum of employment with maximum wages and at the same time, whenever possible, reduce consumer prices.

5. Small business for veterans and war workers should be stimulated by councils of well-disposed businessmen in each community who will lend their experience and advice.

6. Western capital should bid for and operate the war plants at Geneva and Fontana to assure western manufacturers a constant supply of steel at prices competitive with the East.

7. A world trade center should be established in San Francisco, centralizing all consulates, railroad and steamship lines, exporters, importers, overseas trade office, and exhibit space.

8. The immediate promotion and financing of the trade center, an apparel center, and a producer center is a duty of private enterprise in this region.

9. As a minimum requirement to remove transportation bottlenecks which have retarded this area, surface streetcar lines on Market Street should be replaced by a trunk subway, there should be more automobile parking spaces, and the $20,000,000 airport bond issue should be supported and endorsed.

10. The tourist industry in California which now suffers from an antiquated Pullman system and lack of competition between carriers, should be revived.

11. The advisory committee of the Chronicle forum should be continued in existence to plan for subsequent forums.

## Education

EXTENSION OF REMARKS

OF

### HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include an editorial from the Harrington school-news section of the Harrington Citizen,

published in the city of that name in my district.

This editorial, written by a member of the high school, shows a fine, clear grasp of the basic strength of our Nation. It follows:

EDUCATION AND FOUNDATIONS

American Education Week grew out of the First World War, first being observed in 1921. Twenty-five percent of the men examined in the draft were illiterate, and many more were foreign-born and had little understanding of American life. Today, we have almost a parallel situation. The need for public enlightenment concerning education is urgent. The United States failed to heed the lessons the last war taught concerning our human resources. America cannot afford to repeat that tragic mistake.

Education is a great power which teaches men how to control the forces of nature and changes the thoughts and actions of man himself.

Our enemies demonstrated the power of education for destruction. Hitler built his whole scheme of world conquest upon a program of education beginning with the smallest child.

On every hand people are planning for the future. Labor, industry, business, and government are all looking ahead. But our plan for the future will fail unless these people are capable of carrying them out. This is why we must provide an educational opportunity for every citizen wherever he lives—regardless of race, creed, color.

We must find and develop our best potential leadership for there is no substitute for human resources. There is no short cut in the development of men and women fit for the free world of today.

## A Price Ticket on Aid to Others

EXTENSION OF REMARKS

OF

### HON. ROBERT K. HENRY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. HENRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Oconomowoc Enterprise, Oconomowoc, Wis., on November 15, 1945:

A PRICE TICKET ON AID TO OTHERS

Emotions of local citizens ran the gantlet from amazement and revolt to chagrin and dismay upon the revelation in recently published articles that the CIO and AFL had received huge sums from the National War Fund (USO and allied relief agencies), the American Red Cross, and community chests in large cities to reimburse the unions for expenses in aiding the service agencies. In the case of the Red Cross the amount is revealed as $450,000 during the last 3 years.

The information which has been published reveals that the arrangement was known to only the top heads of the unions and, in the case of the Red Cross, to only the central committee and then only when one year's $200,000 payment was revealed for the first time to the committee members. Protests and a split in its ranks resulted but because of the war and damage to the war effort that might be expected to result from its revelation it was hushed up and kept secret. However, the arrangement still continues and resignations and public airing by other protesting central committee members are taking place now that the war is over.

It should be stressed that no one below the national heads apparently knew of the arrangement. This applies to regional and local Red Cross chapters, National War Fund offices and workers as well as members and locals of the two unions.

Those who defend the arrangement point out that it brought results and that no fraud was involved. That may be technically true but is basically wrong. The huge funds that were paid the unions meant just that much less for hungry human beings for whom the money was intended. If it was right to pay the unions for services rendered, so should every voluntary worker be paid. If such work now carries a price ticket in this country, God help America. The practice should be stopped at once and refunds should be made voluntarily by the two national unions who collected their drag from the pennies school children gave and from the dollars, representing sacrifice, from practically every American home, given for the purpose of bringing life itself to those less fortunate.

Let it be understood that union members and workers in the agencies had no part in the deal. Remember, too, the wonderful work was carried on. The point is that all the money should have gone for the purposes intended. The trouble is at the top and those responsible should be eliminated from their leadership which they have shown unworthy of holding.

The attitude of union members is probably reflected by the expressions of Clairborne F. Spaulding who, as delegate of local 695 of the teamsters union (AFL), heads the local group. He described the arrangement, if correctly reported, as rotten and stated he intended to bring it before his local as well as inquire as to the facts and the disposal of the funds.

Said Mr. Spaulding, "I was a Red Cross worker and solicited funds with the understanding that every cent went to the purpose intended. That is what the money was for. I am going to find out about it." It has been predicted that union members will force a correction of this grab done behind their backs which takes the money they themselves help raise, away from those it was intended to aid. Mr. Spaulding described the deal as one which would give a black eye to the unions whose sole purpose is properly representing the interests of workingmen in their relations with their employers. This reaction of Mr. Spaulding is as expected from any American citizen whose heart places his money in the pot for the relief of others without thought of selfish gain or reward. In that reaction lies the correction which everyone hopes will be the immediate result of the now published arrangement.

Let no citizen gain a wrong prospectus as the result of the revelation of this hand-out of funds. The Red Cross, greatest mother of all, still stands in spotless white with the pure cross of red. Her errands of mercy have been faithfully performed. Funds handed out for expediency at the top make the work no less merciful. The Red Cross must not be hurt. The acts of a few, regardless of their logic which prompted their acts, cannot stand astride the Red Cross which is an institution in the hearts of men, far above and bigger than these things which pass in the night. That the correction must be made stands without question, but the Red Cross will go on in its greatness. We would have it no other way. And the correction will probably be brought about principally by the members of the unions whose heads made the arrangements as their protests are registered in no uncertain terms in their national offices and as these same men join with all citizens in seeing to i that such a practice is stopped by all service agencies—that of paying some for what others give—and worst of all, under the hush-hush system.

## Daniel Webster on the Presidency

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. REED of New York. Mr. Speaker, the President of the United States is not a representative of the people in the same sense in which Members of Congress are. He is merely a ministerial officer, an executive.

The extravagant claims of President Jackson led to a public consideration of that question and in reference to the claim of Jackson that he—the President—was the representative of the people, Daniel Webster in a speech made in New York City said:

In some loose, indefinite, and unknown sense, the President has been called the representative of the whole American people. He has called himself so repeatedly, and been so denominated by his friends a thousand times. Acts, for which no specific authority has been found either in the Constitution or the laws, have been justified on the ground that the President is the representative of the whole American people. Certainly this is not constitutional language.

Certainly, the Constitution nowhere calls the President the universal representative of the people. The constitutional representatives of the people are in the House of Representatives, exercising powers of legislation. The President is an executive officer, appointed in a particular manner, and clothed with prescribed and limited powers.

It may be thought to be of no great consequence, that the President should call himself, or that others should call him, the sole representative of the people, although he has no such appellation or character in the Constitution.

But, in these matters, words are things. If he is the people's representative, and as such may exercise power, without any other grant, what is the limit to that power? When the Constitution expressly created representatives, as Members of Congress, it regulates, defines, and limits their authority. But if the executive Chief Magistrate may assume to himself another character, and call himself the representative of the whole people, what is to limit or restrain this representative power in his hands?

## The Price of Victory and Peace

EXTENSION OF REMARKS

OF

### HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave given me to extend my remarks in the RECORD, I wish to insert a sermon preached by Theodore Ainsworth Greene, D. D., at a union service of thanksgiving in the First Church of Christ, New Britain, Conn., on Sunday, August 19, 1945:

THE PRICE OF VICTORY AND PEACE

I

At the end of a long war and the beginning of a new era—in obedience to the proclamation of our President—we are gathered in this

old New England meeting house, Christians of various churches and denominations, to thank God for victory, and to prepare our souls for the tasks of peace.

The events of the past fortnight have been so momentous and surprising that none of us can fully take them in. The invention and use of the atomic bomb against the Japanese, let loose by our Air Force on the cities of Hiroshima and Nagasaki, killing hundreds of thousands and reducing steel and stone to dust and vapor; the declaration of war against Japan by our ally, Russia, with the subsequent advance of her armies into Manchuria; the unconditional surrender of Japan, our last Axis enemy; plus the acceptance of her surrender by the United Nations—a ceremony to be officially consummated soon in Tokyo: All these events have alternately stunned us and elated us. No man living today is wise enough to speak prophetically upon the tremendous issues involved in our present victory and the problems of the peace to follow. The end of this Second World War has arrived surprisingly soon. We did not expect it so quickly. As a Nation and as individuals, therefore, we are not yet prepared to meet the consequent changes that will inevitably follow the cessation of hostilities.

At the present moment—even after 2 days of holiday making and rejoicing—we can hardly master our emotions, set our minds and gear our wills to the next task, that of winning that just and lasting peace which alone can justify the awful price which America and her allies have paid to win this final victory. We are not so overawed and stunned, however, that we are without the capacity to speak or sing or pray.

Therefore, with one mind and heart, we lift our voices here in praise and gratitude to God, the Creator of this world and the Ruler of all nations, and the giver of every good and perfect gift. In deep humility, in sincere contrition, yet in genuine thanksgiving, we bow our heads in prayer. Beneath the persistent shadow of war on three fronts, we have lived and labored in this city ever since 1939. At long last that shadow has been rolled away altogether. The battle in the Pacific area of operations is ended. And we have every right to gather in this House of God again to let Him know the satisfaction that is still burning in our hearts.

And the prophet Isaiah, speaking to his people in that first section of our Scripture lesson, puts acceptable words of thanksgiving onto our lips today, when he exclaims:

"The spirit of the Lord God is upon me; because the Lord hath anointed me to preach good tidings unto the meek; He hath sent me to bind up the brokenhearted; to proclaim liberty to the captives, and the opening of the prison to them that are bound; to proclaim the acceptable year of the Lord, and the day of vengeance of our God; and to comfort all that mourn."

It matters not one whit that these words were written 2,700 years ago, for these words are immortal. And they express in spiritual terms with moral meaning the divine lesson of such an hour in human history as that through which we are now passing.

What is more, that second section of our Scripture lesson, taken from the Book of the Acts, reminds us not only of the price which the Apostles paid to keep our Christian faith alive and pass it on to us intact but also of the incalculable and staggering price which we and our allies have paid for our sins of omission and neglect ever since 1931, when the Japanese took Manchuria from China and let loose that series of aggressive wars, which have since involved Africa, Europe, Asia, Australia, and the Americas in ever-widening waves of conflict. For, in the words of this Roman centurion, captain of the Praetorian guard and keeper of the prisoner Paul of Tarsus, we are brought face to face today with the cost of this victory and the price of the peace, which has been paid for us and by us, and must continue to be paid for years to come.

"With a great sum—that is, price—obtained I this freedom."

II

What are we to think of this final victory for which so many lives and so much treasure has been sacrificed, and into which we have poured the works of our hands and the hopes of our hearts? How shall we interpret it as Christians and Americans? Are we to think of this final victory of the Allied Powers over their Axis enemies as something won by accident? As a piece of mere good fortune? As just one more demonstration of the inevitability of victory for the big battalions, and therefore not in any way to be associated with our faith in God?

I cannot know today what all of you are thinking about this last of three long contested victories, won in slow but sure succession over Italy, Germany, and Japan. I can only speak my own mind as I have done before from this pulpit on VE-day. But I say, and I believe it with all my heart and mind and soul, that this victory is not just another tremendous and lucky accident. Instead, it is the outcome of our fighting and that of all the nations who have contributed in any way to the winning of this victory. What is more, our fighting is the outcome of our faith. If we may not thank God—and I, for one, believe that we may—then we may at least thank ourselves. And in thanking God, we know that we are thanking the power of God working through us to win the right to build after this last victory an ordered world and a just and durable peace. I hold that it was God's power that drive us into this war against evil forces, and which nerved us to face all perils, even defeat itself, rather than to yield to those evil forces. If anyone in this church today hesitates to say a plain "Thank God for victory," then let him at least use the prayer of Admiral Nelson as he lay dying on board his flagship *Victory* in the battle of Trafalgar. As his sight grew dimmer and he felt the end approaching, Nelson asked Hardy to kiss him.

"Now I am satisfied," he said, "Thank God, I have done my duty."

That we should be given power to do our duty, when we set out to fight this Second World War after the dastardly attack on Pearl Harbor, is what we asked of God. Very well, then, may we not thank God now for answering that prayer?

Make no mistake about this awful business of war in which we have been so long engaged in the far eastern area of operations. God does not make wars. Man makes war, when and as and because he sins against God and his neighbor in direct disobedience to God's law and God's will. But God and man together can win every fight against evil in the long run. Therefore, I want us—as Christians and as Americans—to come out of this last phase of our long struggle with a new and unshakable kind of Christian faith. We cannot put tyrants down, nor set wrong things right by any lack of faith, either in God or in ourselves. When this war was forced upon us by our enemies, we had faith to believe that neither God's resources nor man's were at an end. We had faith to believe that a way out could and must be found. Yes. And it was found. From the destruction of Pearl Harbor and the defeats of Bataan and Corregidor, from the set-backs in Africa and the long-delayed campaigns in Italy and Germany, through all the hard-won battles of the Pacific, taking island after island with tremendous losses—we have kept pressing steadily forward in the faith that this war must be won for keeps. The Christian way out of trouble is never found by fearing and worrying. It is always found by a new call upon God for power to work, to think, to devise, and to fight. Therefore, out of our experiences in this Second World War now ended, out of those past defeats turned at last into victory with the help of God and our allies—let us take to ourselves new hope, fresh resolve, and a certain amount of good cheer with which to meet the dangers, difficulties, and problems that still lie ahead of us in the winning of the peace to follow victory.

When we begin to count the cost of victory already paid, the very counting causes us to stir with wonder and amazement. The full cost in life and treasure for all the nations—victors and vanquished—cannot possibly be counted here and now. But what this victory has cost our community can at least be indicated. This industrial city has done its bit and its best toward the winning of the victory we celebrate today. For 6 long years, capital and labor—yoked together under direction from government—have kept the wheels of industry in constant motion. Nor is this all that we have accomplished on the home front. Beside producing the munitions of war, we have helped to supply the sinews and the balm as well. We have met our quotas in seven Victory bond sales, in Red Cross war fund campaigns, and in United Service Organization drives. We take pride in this record on the home front, where 70,000 civilians, old and young, have been "standing by the stuff." But all this is only the beginning of the price that has been paid for victory today.

In every war, the real blows must be struck, and the real dangers met, and the real suffering endured and the enemy finally defeated on the far-flung fields of battle. Ten thousand young men and women—more than 12½ percent of our total population—have entered the service of the Nation with our armed forces or allied organizations. They have trained and traveled far and fast. They have seen service on nearly every distant field of battle. They have sailed the seven seas. They have flown around the world. And now—praise God—before many months those who are still whole and in one piece will be coming back to rejoin us in our family circles, to engage in manufacturing and commerce, to practice their chosen professions, to continue the interrupted years of education and apprenticeship, to settle down and marry and to take up the tasks of life each according to his or her ambition or capacity. And—as we gather here today—we thank God for all these individual contributions made by our sons and daughters to the common cause of the Allies.

Alas, however, not all of these 10,000 will be coming back to walk our streets, to work in our factories, and to grace our homes. With profound respect for all those who have paid that last full measure of devotion making possible this final victory, and with sympathy and prayers for their bereaved families, we would note here those 240 gold stars on the city's honor roll. All these men were either killed in action or died of wounds or disease in the service of this Nation. Six others are still prisoners of war. And 20 more are reported missing. In addition—though the full number is not yet known—several hundred have been wounded in combat. And the casualty lists are not even yet complete.

I speak for all of you, when I say that we honor these our dead and wounded in this union service. Humbly we pray God to make us worthy now of their sacrifice for us. We remember them and their gallant conduct. We salute them for their courage and obedience to the call of duty. We shall never forget those, whom we ourselves have known. In the language of the Bible, we can say of them now:

"The righteous shall be had in everlasting remembrance. The memorial of virtue is immortal because it is known with God and with men. When it is present, men take example of it; and when it is gone, they desire it."

As we think of those that have fallen, we shall associate them always in memory with these words of our Saviour:

"Greater love hath no man than this: that a man shall lay down his life for his friends."

It is no exaggeration to point out here that by their sacrifices ourselves, our homes, our institutions, everything we still possess and all we still hope to do and to be—all these, plus this final victory, have been bought at a tremendous price, an incalculable price, paid both by the fallen and those who will soon return to us. How deeply the sights and sounds, the scenes and odors, the brutality and boredom and ennui of total war and military life have touched their minds or scarred their souls, only God and time can tell us. All we can do now is to wait patiently until they can come home. But when they get here we must deal with them kindly and understandingly. Many of them went away boys. But they will come back men—men disciplined, developed, sobered by the experience of danger and the routine discipline and regimentation of living all together for a common purpose. They will come home with their dreams of what America ought to be. They will bring back trophies of battle and souvenirs of foreign lands. And we must listen when and as they may want to talk. But we must not press them when they desire to be silent. We must exercise imagination and tact and patience to help them first to reveal and then to fulfill the aims and ideals of their hearts. The peace and security of home will be doubly precious to them from now on, for it has been dearly bought, and they themselves have helped to pay that price. Therefore, you and I may well kneel down by our beds at home tonight and pray to God that these, our sons and daughters, may never be disappointed in us, their parents, nor in the homes and institutions which they fought to keep safe and unharmed by the distant enemy.

In his proclamation setting apart this particular Sunday as a day of prayer and thanksgiving, President Truman calls our attention to the end of a cruel war, but he does not stop there. Rightly, he goes on to point out that:

"This is the end of the grandiose schemes of the dictators to enslave the peoples of the world, to destroy their civilization, and to institute a new era of darkness and degradation. This day is a new beginning in the history of freedom on this earth."

Well, I believe that last-quoted sentence is perhaps the most important thought in President Truman's proclamation. I refer here to that last line:

"This day is a new beginning in the history of freedom on this earth."

If you and I can only see it so, and believe it, and live and labor henceforth in the light of that new day, there is no telling what benefits may yet be derived from this world's recent trial and turmoil. And President Truman goes on to add:

"Let us give thanks to God, and remember that we have now dedicated ourselves to follow in His ways to a lasting and just peace and to a better world."

And I say, "Amen, so be it." Let us do exactly that today and pledge ourselves to follow through with the pursuit of peace, come what may and cost what it will. For to thank God here and now, and then to go on willingly, cheerfully, freely, and sacrificially paying the price required of us to win the peace as we have won the war, that is our present duty as Christians and Americans.

Liberty, unity, and peace—in all our national and international relations—these are the triple goals for which we must now work and plan and sacrifice henceforth. Liberty and unity come only to those who have learned to know and to trust the right to be free. And peace comes only to those who have discovered and accepted for themselves the disciplines of Christian liberty. So long as there are those within a social or political group, who believe in freedom for themselves or their class alone, social and political cohesion is a fraud. So long as there are nations in this world who believe in liberty only for themselves and for their fellow nationals, the idea of world unity is chimerical. To talk about it deceives nobody except those persons encrusted in the pride of race or class, a condition as hopeless today as it is ancient and outworn. We can talk and plan for a united world today only after we have conceded the right to freedom to everybody everywhere.

When the captain of the Praetorian Guard, who held Paul prisoner in our Scripture lesson, boasted that he had bought his freedom "with a great price," the apostle of Jesus Christ—his prisoner—reminded his jailer that he—Paul—was "born free." Well—praise God—you and I were "born free" also. And our precious American Declaration of Independence teaches us today that beyond and above all the experience of freedom as an accident of birth is the concept of freedom as the endowment of every human soul, as the very essence of the spirit of God latent in every man. Let me remind you that this idea was but a feeble infant, when it first saw the light of day in Philadelphia in 1776. But it has grown to be a giant now. And still—as Christians—we need to be reminded again and yet again on this day of national thanksgiving for final victory that this cardinal tenet of our democratic faith came to us from the reservoir of our religious heritage. In fact it was taken straight out of the New Testament:

"Know ye not that One is your Father, even God, and that all ye are brethren?"

To forget this now at the beginning of a new era is to invite confusion again. To deny this is to repudiate our faith in the Christian God and in our American ideal. To treat it casually or as a matter to play with is to cast away our spiritual estate, to let go our precious heritage. For it is to the preservation and extension of nothing less than this that we have committed ourselves as Americans in adopting the Charter of the United Nations.

This is the time for us as Christians and Americans to venture beyond the mood of caution and to exercise the aggressive quality of faith, faith in God's way, faith in democracy's way. If you and I and all men—in these days of atomic bombs and world-encircling airplanes—are ever to be freed from our fears by learning how to live together in peace, we had better begin now, for we cannot delay action in that direction until perfect certainty is won.

III

The mystery, the wonder, the potential possibility of this hour in human history confronts us all. As Moses stood before the burning bush and heard the voice of God saying unto him:

"Put off the shoes from off thy feet, for the place whereon thou standest is holy ground," so we may be silent and hear God speaking to us and to our world today. The realization of the victory of right over might in the spirit of man convinces us. The newly aroused feelings of sympathy and tolerance sweeping over a suffering world strengthen our faith in the Christian God of Love.

It may be that some of us are still afraid to commit ourselves, our Nation and our manner of living to the way of Christ, which teaches that all men are the sons of God, and therefore free and equal. Well, if such there be, let me once more remind you, as I try frequently to remind myself, that the winning of this war and the winning of whatever peace may follow has been secured for us at an inestimable price on the bloody scenes of battle, and in the conference halls at the Golden Gate in San Francisco.

There is no question about the price that has been paid. Ah! No! The only question left for you and me today is this:

Will we join with this great army of the world's redeemers?

Will we go on now to pay the price of peace as well as victory?

Will we follow in the train of those who are to be known someday as the sons of God because they are the peacemakers of this world?

Will we follow in their train?

Or will we, as individuals and as a Nation, go our own perverted, selfish, futile way to death and Hell alone?

PRAYER

"Almighty God, ruler of all men and nations, we praise Thee for the comfort and assurance that comes to us in this service of Thanksgiving for the victory that has been won. But we pray likewise and with equal sincerity and intensity that Thou wouldst give us wisdom and fortitude, courage, and strength, power and persistence cheerfully to continue our service and sacrifice for the bringing in of Thy kingdom upon earth, and for the building of a just and lasting peace among all nations, through Jesus Christ, our Lord. Amen."

## "Not Unduly Exacting" About Refugees

EXTENSION OF REMARKS

OF

## HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mrs. LUCE. Mr. Speaker, yesterday I noted the heartbreaks, misery, and suffering occasioned by American policy in regard to displaced persons from the Soviet Union.

I would like to add a few more words on the subject of the Ukrainian refugees. Ukrainians, who have no government recognized by any of the powers, are in particularly a tragic case as they are claimed as Soviet nationals since the inclusion of all Ukrainian territory by the Moscow Government.

Here are a few examples of Ukrainian sentiments on the subject of repatriation to the Soviet Union:

FROM A LETTER WRITTEN BY A FORMER UKRAINIAN MEMBER AND DEPUTY SPEAKER OF PREWAR POLISH PARLIAMENT

AUGSBURG, GERMANY, *July 16, 1945.*

According to approximate estimate there are about 250,000 Ukrainian refugees under the Anglo-American occupation in western Germany. Among them are highly qualified intellectuals: engineers, architects, judges, lawyers, teachers, and clergymen; there are also merchants, journalists, editors, and even printers. All of them, voluntarily or otherwise, fled as far as possible away from the Soviet regime. Many of them have already experienced life under the Communist rule. * * * Besides these 250,000 there are many thousands of laborers and farmers.

The repatriation is now in full swing. * * * These people should be saved at all costs. If Bolsheviks get hold of them, they will destroy at least 90 percent of them. * * * The American policy relative to repatriation is not clear, and is being differently interpreted in different localities. Theoretically all refugees from the east territories, under the Soviet rule prior to September 3, 1939, are subject to forced repatriation, while all former Polish citizens have right to choose whether they wish to go back,

or not. But in practice this policy is not adhered to as is shown by the following incident: At Kaufbeurin, Bavaria, the Bolsheviks, with the assistance of the American authorities, arrested all members of the Ukrainian aid committee. They kidnapped the president of this committee, Mr. Fedoryshyn, and we cannot locate him. Imagine the Bolsheviks permitting the American authorities to arrest people living under the Soviet occupation! A most significant and characteristic feature of this incident is the fact that Mr. Fedoryshyn came from the western Ukraine and is therefore a Polish citizen.

FROM A RECENT LETTER TO AMERICA, TRIWEEKLY PUBLISHED BY PROVIDENCE ASSOCIATION OF UKRAINIAN CATHOLICS OF AMERICA, WRITTEN BY A UKRAINIAN JOURNALIST AND AUTHOR

FRANKFURT-ON-MAIN.

This forced repatriation is a tragedy. Recently, a Soviet officer, Colonel Davidov, arrived with about 60 officers and officials at Frankfurt-on-Main, General Eisenhower's capital. Officially he came to aid the people to return to their country. Actually, however, it turned out differently. Having first obtained lists of the refugees, drawn up by local American authorities, Davidov's NKVD agents swept through the American occupation zone "collecting our own" people forcibly, often with American help. People, who for 6 years suffered in German slavery, got married and places to live in—now don't know what to do with themselves, fleeing from one place to another, confused and terror-stricken.

For example, in Bad Kreuznach, where there is a large Ukranian camp, Soviet officers entered the camp headquarters, arrested its personnel, thrust them into an adjoining room, and taking possession of the place they seized everyone coming in and locked them up in the adjoining room. In this manner they caught about 30 persons, including Professor Prykhodko. Then they packed them into Soviet trucks and began to drive away. Beside himself with despair, Professor Prykhodko started to shout for help. As luck would have it, an American officer of Ukrainian extraction happened to pass by just then. He stopped the trucks and upon learning who was in them called out the guards and liberated the refugees. The Soviets were taken to the American headquarters and after being interrogated were permitted to go free.

Among those held by the Soviets is Bishop Platon from Ukraine. His illness prevents the Soviets from taking him away.

At a gathering of our refugees in Leipzig, which a Soviet official was haranguing in an attempt to persuade them to return to Soviet rule, an old man with an ax in his hand mounted the speaker's platform and extending to the Soviet officer the ax, said: "Here is my ax, and here is my head. Chop it off, but I won't go back." An American officer witnessed this scene and upon learning what the old man had said, promptly ordered the Soviet officials to leave.

It should be noted here that in many cases American officers defend those who refuse to return to their doom under the Soviets, and for this they deserve praise. After having helped to destroy the Nazi and Fascist hydra, it is difficult for them to reconcile their democratic sentiments with one of the most terrible dictatorships in world history—the Soviet dictatorship.

We realize the American situation here. It is hard for Americans here to reconcile with logic the fact that people whom they would help to return to their homeland refuse to return to it. The trouble is that America has a faulty conception of the Soviet land. Only people who lived there know from painful experience what it means to live there. So it is no wonder that at a gathering of refugees being harangued by a Soviet agitator some old man got up and cried: "You came here to persuade us to return to our homeland? Whoever heard of a country being forced to send agitators to persuade its people to return to it? Do you think that we do not love our native land? When it becomes as it should be, we shall be glad even to crawl on our knees to it and with our last bit of strength. Do you understand?"

With these words this simple peasant made clear why Russian Ukrainians, Poles, Estonians, Latvians, Lithuanians, hundreds of thousands, millions of them, refuse to return to their homeland. We feel sorry here that this matter is not clear, however, in America, to which we are very grateful for having destroyed Hitler and which waged this war for the rights of man, for freedom, peace, and happiness on this world.

FROM A LETTER TO THE NARODNA VOLYA WEEKLY OF THE UKRAINIAN WORKINGMEN'S ASSOCIATION, WRITTEN BY PFC DMYTRO STAROSCHAK, MEMBER OF THE BOARD OF ADVISERS OF THAT ORGANIZATION

Perhaps the Ukrainians in America are not very aware of the tragic plight of our people here in Germany now.

Having had an opportunity of seeing thousands of Ukrainians and talking with hundreds of them, I am convinced that not all of them want to return beneath Soviet rule. On the contrary they greatly fear that if they do return "Father Stalin" will reward them either by banishing them into Siberia or by slaughtering them like animals. Hailing from Galicia, as well as from eastern Ukraine, these Ukrainians existed from 2 to 25 years under Soviet rule and want no more of that "paradise."

When I informed them that a small portion of the Ukrainian people in America is well disposed and loyal to the Soviets, they replied, "Let those people go and live in the Soviet Union for 1 or 2 months, and if they manage to escape from that 'Soviet paradise' then they'll surely be rid of their pro-Soviet sickness."

Agents of the Soviet secret police (NKVD) swarm all over Germany. Sometimes they abduct persons at night. Why do they attempt to force people to return to their homeland? The answer is clear. They know that as long as these people remain free they will continue to talk and write what they experienced and witnessed in the "Soviet paradise." In this manner the world will soon learn that the Communist dictatorship in the Soviet Union is terrible. That is why the Red agents want to return these people to "Father Stalin."

I am not certain concerning the number of our Ukrainians in Germany, but according to available information there are more than a million of them.

The Ukrainians in the United States and Canada ought to interest themselves in the plight of these refugees and save them, else they will perish.

This is no phantasy. The Soviets are trying to persuade America to return to the Soviets all those who were under Soviet care before 1939. Rumors are going around that the Reds are demanding that even those who were under the Soviets before 1942 be returned, too. You can see now how "Father Stalin" takes care of his children.

I anticipate that our Ukrainian Communists in America will immediately say that, "These people are Fascists, and that is why they don't want to go back to Soviet rule." To call them Fascists is mere nonsense and a bluff.

I personally spoke with many of them. Among them are intellectuals, professors, teachers, students, tradesmen, and even most backward peasants. All of them refuse to return to the Soviets and all of them suffer from Soviet inhuman economic and political persecution.

They told me that if the time arrives when they will be compelled to return they will slay their families and commit suicide, or let themselves be killed by their captors, rather than return to Soviet rule.

I am certain that if our Communists in America and Canada had an opportunity of talking with these refugees who lead a gypsy-like existence in Germany they would realize that what the Soviets tell the world is entirely different from what is actually happening in the Soviet Union.

Why do I write this? There is but one answer. These refugees need immediate help. A month or two hence may be too late. The Ukrainian people have no communal life here, but flock together wherever they can to save themselves, irrespective of their religious or political differences. The Ukranians in America and Canada ought to organize help to save their kinsmen here from extinction. Time is costly, do it now, for tomorrow will be too late.

FROM A PERSONAL LETTER ADDRESSED TO THE CHANCELLOR OF THE UKRAINIAN GREEK CATHOLIC DIOCESE OF THE U. S. A., PHILADELPHIA, PA.

DIEHL (NEAR COBLENZ), GERMANY,
*September 11, 1945.*

Shocking events are taking place here. Soviet officers enter camps in the American zone which contain Ukrainians and demand that they be repatriated. News of their arrival stirs alarm and terror. Some attempt to hide, while others step forward boldly and announce their determination not to return to their "country" because they know death awaits them there, either by execution or by banishment to concentration camps in the Solovecki Islands and elsewhere.

To the camp at Mannheim, south of Frankfurt, wherein dwell 3,000 Ukrainians from Eastern Ukraine and from Galicia there recently came Soviet officials who demanded the surrender of the Ukrainians to them. The American authorities ordered the Ukrainians to prepare to leave. But the Ukrainians refused to obey. A tug-of-war ensued. Women and children began to cry and throw themselves before the feet of the Americans. But to no avail. The Americans threatened to shoot. Then one peasant from eastern Ukraine tore open his shirt and pointing toward his bared chest said, "Shoot, but I won't go to the Solovki." The American officer once more ordered them to prepare to leave and those who refused were beaten with rubber clubs. Nevertheless the Ukrainians did not give in. The crowd began to mill. Outcries and threats were directed from it at the Bolsheviks. Seeing that bloodshed was imminent, the Americans attempted to reason with the people: "We are trying to help you to return to your homes, and yet you refuse. The Big Three decreed your return. Do you want to remain dependent on German rations?" All replied: "We don't care on what we live here, but we won't return to the Soviets." To this the officer said: "If that's the case I'll give you 4 days to think the matter over. In the meanwhile I'll consult my superiors and inform you accordingly." Throughout all this an American, Dr. Dudra, acted as an intermediary on behalf the Ukrainians. Later the Ukrainians sent an appeal to the Pope at Rome and to President Truman. And there the matter rests at present. What of the future, no one knows.

All this is taking place at a time when we hear much about the freedom of person, individual, religion, and expression. * * * That is why I appeal to Ukrainians in America to bring our plight to the attention of the American Government with the plea to provide asylum for us. We exist in a state of alarm every day, while winter draws closer and closer.

## Great Daily Newspaper Editorial Charges That Congress Sleeps and Identifies Some Major Problems It Believes Obstructed—Criticizes Congress Re FEPC and Compliments Wendell Willkie

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. DOYLE. Mr. Speaker, in Los Angeles County, Calif., in which great county the Eighteenth Congressional District, which I have the honor to represent, is located, is published the Daily News, a daily newspaper with great and increasing circulation, the editor of which is Manchester Bodie. The editorial speaks for itself, and word that I believe reliable comes to me from thereabouts and to the effect that increasing numbers of responsible citizens are emphatically stating that it is true that "Congress sleeps." Manifestly there are Members of this House who will not agree with the fundamentals of this editorial; but no doubt those Members will be tolerant enough to recognize that the safety of our great democracy depends upon the freedom of the press, the freedom of the radio, the freedom of religion, and the freedom of worship. Likewise, Mr. Speaker, our democracy will only endure as such because of adequate opportunity for American men and women to find and fill jobs and occupations sufficient to support themselves and their loved ones with American decency and daily happiness and good health, which they are ready and willing to earn by the sweat of their brow. Less than such reasonable opportunity for American men and women who have to work and are willing so to do will definitely contribute to holding back of those finer instincts in American life, which will build instead of weaken our American system of free enterprise. Good food, adequate housing, decent wearing apparel, adequate education, participation in recreation, these, Mr. Speaker, are essentials of daily life and without which the daily life of American men and women is inadequate and insufficient to perpetuate enduring standards of living in our democracy. The editorial follows:

[From the Los Angeles Daily News of November 17, 1945]

WHILE CONGRESS SLEEPS

Their hoppers bulging with unfinished business, President Harry S. Truman's 21-page program hardly scratched, measures introduced during the Roosevelt administration sleeping soundly in committees, our lawmakers in Washington are discussing plans for the Christmas recess. Despite urgent requests from the White House, proddings from Majority Leaders BARKLEY and MCCORMACK, and crucial national problems calling for legislative action, Congress seems to be engaged in a sit-down strike.

Ironical feature of the situation is that in the face of this tragic obstruction and temporization, hardly a day passes that some irate solon does not call for the transfer of Executive authority to the States or to Congress itself. One group is ardently opposing the bill, approved unanimously by the Senate Foreign Relations Committee, delegating to the President the power to declare war. Time—more specifically, the atomic bomb—is now the essence of national security. No longer is war a slow development. It comes out of the night.

It took Pearl Harbor to silence many of the gentlemen now protesting against this new invasion of the legislative function.

Paradoxically enough, these same protectors of congressional prerogatives include many who now see nothing so important as an investigation to determine the blame for Pearl Harbor.

History will record that by this treacherous coup, the Japs brought about their own destruction, that it disillusioned Herr Hitler's confident belief that the United States would not get into the war—an item that by its own weight hastened the end of gangster rule in Europe.

States rights, the ever-ready weapon of bungling political strategists, won a victory, at least temporarily, during the week when a Senate appropriations subcommittee voted to return the United States Employment Service to the States. When Franklin D. Roosevelt saved the country from economic disaster by inaugurating his vast and highly successful construction program under Federal aid and direction—work, not the dole—to meet unemployment, he delegated the employment service to the States.

In the main it functioned capably, but in a number of States, the politicos utilized the power to build up patronage. When the United States entered the war, the President, recognizing that interstate migrations of war workers made centralized control necessary, took it over under the emergency authority invested in him. Existing necessities due to uncertainty in the national employment field make it unwise to make a change at this time. The presence of Republican executives in many States overwhelmingly Democratic on national issues, and their advantage of presiding at the pie counter during the coming congressional elections have much to do with the noisy demand for the immediate return of the service to the individual Commonwealth.

The clamor for State control of OPA and other war agencies appears to be prompted by no nobler motive.

Of particular interest to southern California is the announcement from Washington that the Fair Employment Practice Committee is forced to close, for want of funds, seven field offices including that in Los Angeles. This step confirms the suspicion that Congress is slowly choking this valuable agency to death.

During the Presidential campaign last year, a powerful voice, a voice unfortunately now stilled, was raised in protest against GOP indifference to unjust treatment of Negro workers. Said Wendell Willkie, with almost prophetic vision, after he had been discarded by the Republicans for Dewey: "It is strange that the Republicans year after year yield to the old States' rights argument, and the narrow interpretation of Federal power, to prevent the passage of Federal statutes which constitute the only practical method by which the Negro's rights can be assured him. The very fact that the Republican Party was the instrumentality through which the Negroes were given freedom makes them the more resentful that it should join in acts which prevent them from obtaining the substance of freedom. They have known the brief security of good jobs while their help was needed to make the tools of war, only to be filled with deep anxiety for fear that in the readjustments of peace, they will be shuffled off into unemployment and poverty."

The admonition may well be extended to those Republicans who participate in obstructionist tactics to withhold security from millions of other citizens—the vast army of workers of America, now watching the delaying tactics on such measures as the full employment and the unemployment compensation measures.

It is a travesty on that strong shield of democracy, the existence of an aggressive two-party system, to find Republicans in the House and Senate presenting no constructive plan of their own, following blindly in the paths of the Bilbos and the Rankins, at a time when economic peace is so vital to the safety and progress of the Nation. Hardly less fatal to labor than its own international dissensions is this unholy alliance against groups constituting the predominant majority.

R. R. K.

## Our National Defense

EXTENSION OF REMARKS
OF
### HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 20, 1945*

Mr. BROOKS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by the Honorable Kenneth C. Royall, Under Secretary of War, at the American Legion convention, Chicago, Ill., November 19, 1945:

The United Nations have won the greatest war in man's history. Fifty-one countries, representing every race and religion and social culture of the free world, were joined together against a giant conspiracy of gangsters. The United Nations achieved victory because we first achieved international cooperation.

But for us here today, the victory has a special and unique significance. Our country armed and powered and, to a large extent, spearheaded the decisive battle drives in Africa, Italy, France, and western Germany, in the Far East, and the vast reaches of the Pacific.

We criss-crossed the oceans and airways of the world with our supply lines. We replenished the losses our allies suffered in the terrible months when every battle seemed a triumph for the aggressor. We built the mightiest fleet and Army of all time. Then we struck.

Our sea forces purged the oceans of menace. Our ground forces strangled the aggressors in a steel noose. Our air forces smashed the enemy in his own homeland.

But the cost to the United States was stupendous. In money—almost $300,000,000,000—it cost us more than any of our allies. The cost in lives was tragic—the million names and more on our casualty lists include 265,000 who made the supreme sacrifice in battle—more than four times as many men killed in action as in all America's wars with other nations from the Revolution up to World War II. And to that total must be added 30 percent of nonbattle deaths, also sacrifices for freedom.

Our allies paid an even higher cost than we did in lives, losing millions of their best young men. In addition they suffered the ravages of war at home on an appalling scale. Their cities and towns were bombed and burned; great areas of their countries were devastated; millions of men and women were enslaved. They paid a terrible price for the delays they won for us.

We Americans shall be forever in debt to our gallant allies in the community of nations who, in the dark days of the war, refused to admit defeat or treat with the enemy. But we Americans, too, have every reason to be proud of the valor and achievements of our own fighting men and their contribution to victory.

Like most of you, I am one of the old Legionnaires. My real field experience ended with the First World War. This time I served largely in an office with only an occasional staff-carred or jeeped trip to the forward areas in Europe. But from my various seats I saw enough of our fighting men to know first-hand the greatness of their job and the price they paid in accomplishing it.

It is no disloyalty to my comrades of the First World War to say that the combat veteran of this Second World War has, in my opinion, never been surpassed in stamina, in determination, in the will to win, and in sheer physical courage when confronted with a fanatical and savage enemy.

The men who are now returning to their homes have added luster to our military traditions and written new pages in the world's history. Their battle record will endure so long as there is a United States. But, more than that, they, along with their allies, have proved for all time that freemen so cherish their freedom as to be prepared to pay any price rather than surrender it.

Yes; we have every reason to be proud of their valor. Their defeat of aggressive and lustful foes preserved our Nation from foreign conquest and foreign exploitation. But our pride in their accomplishment means little unless at the same time we take steps to assure the permanence of their victory.

The prize for which they were ready to die is now the responsibility of every American. That prize is the security of the United States and the free world. If we are not to lose what many millions of men in their valor and sacrifices won for us, we must in these present days take measures that will prevent a repetition of an aggressor's holocaust during the foreseeable future.

And yet, with our dead scarcely buried and in some cases not yet even known, some of us are already succumbing to the two chief faults of a democracy—apathy and the pendulum psychosis, a state of national mind that sweeps from one extreme to another. Because we are free, not subject to the inviolable decrees of a dictator, not living under the surveillance of a Gestapo, we can, each one of us, choose our own path. Too many of us either take the soft and easy life of do-nothingness or fling ourselves into that extreme most contrary to our recent past.

Already, in some measure, we are beginning to forget the sacrifices of war. Those who really suffered want to forget and to lose themselves in visions of an uncomplicated and happy future. Those who have not suffered—and there are many who have not, either personally or financially—welcome the disappearance of wartime restrictions and inconveniences, and prepare to settle back in their old or a new and better plushness.

And, moreover, the pendulum of American thought is rapidly descending from the high point of war consciousness. Unless a strong and concerted effort is made now, it soon will pass its nadir and swing swiftly over into the dangerous rosy zone of ostrich-thinking.

That is typical of the United States. We shift violently from strict prohibition to monkey rum and stump juice and back to $10 bonded whisky, from the imaginary affluence of 1928–29 to 1932–33's unimagined and unimaginative 5-cent cotton and 30-cent wheat and busted banks back to the easy money of those recent days. And our mental attitudes follow those shifts—even lead them.

We can laugh at these wild gyrations when they affect liquor or styles or even money. But we have just learned—or should have learned—that we cannot let the pendulum swing unrestrained when we are dealing with the very life of the Republic.

In his last biennial report, General Marshall warned us that, despite the magnitude of our victory, we won this war by a close margin; that in 1942 Germany and Japan came so close to complete domination of the world that we do not realize yet how thin the thread of allied survival had been stretched.

We barely caught the pigskin of victory. We caught it behind a staunch line of allies that held while we got set for the throw and the catch. It was a strange and marvelous line of allies. In it were some traditional friends, some new friends, some with our ideas and ideals of Government, and some with vastly different.

We hope that this line of freedom will hold in the years ahead and that, if another aggressor strikes, we will have the same teammates who will give us the same high measure of heroic aid and cooperation as they have in the dark days behind us.

We are now engaged in the perpetuation of that team through the establishment of the United Nations Organization. Because the hope of a peaceful world rests on its success, America as a whole is behind that organization and strong in its support.

We are pledged as a people to strive for its success. But in the unsettled world of today, with the lessons of recent history and the defects that crop up in national as well as human nature fresh in our minds, we cannot risk our Nation's future entirely on a yet untried organization. As of now, we have no certainty that there never again will be aggression.

We must realize that war is still a possibility. If it comes in this new atomic age it will be more terrible and total than anything we have known in the past. Neither the doctrine of "sweetness and light" nor solemn pledges will stop the bombs of a fanatical aggressor.

It was proven nine centuries ago—at the time of the Children's Crusade against the Saracens—that unsophistication and mildness and childlike faith and simplicity, and kindness of heart and complete trust in the essential goodness of man will not stop the weapons of a savage.

The same was proved in every conference with the totalitarian aggressors from 1931 on. From Manchuria to Munich it became more and more evident that words and reliance on promises, meekness, and love of peace do not slow down a nation bent on aggression. Rather they excite the aggressor to further violations of the world's peace.

Some may charge that this lack of faith in solemn pledges condemns the United Nations Organization to failure before it starts. I do not agree.

We have faith in our law-enforcement authorities, but we don't leave our bank vaults or our homes unlocked. We trust the neighbors in our community, but we have policemen patrolling our streets.

The United Nations Organization itself implements its compacts with the power of an armed force. That is the firmest basis for our hope in its success. The Organization is not only pledged to maintain world peace, but it will have the power to help enforce world peace. We realize now the possibility that some nations will recognize only the persuasion of force. And our world organization is prepared to use that form of persuasion.

Further, the United Nations Organization is careful in its compacts not to exclude armed forces of the individual nations. But its very existence will tend to prevent a headlong and competitive arms race. Because it will develop international contacts and world-wide comradeship, it should eventually result in the reduction of national armaments. But that reduction will be gradual and slow and cannot be completed until the Organization has been tested by experience.

Until then, the United States must be able to guarantee its own national security. But to come back to the pendulum analogy, the armed forces do not want a preparedness swing that will make this country an armed camp. We want no part of militarism in the United tates. But there are certain minimum measures which the World War II and the unsettled state of the world today prescribe.

We must, at least to a reasonable extent, fortify ourselves against a sudden surprise attack. Any lack of such preparation might prove suicidal. In the future, the unprepared will almost certainly be the vanquished. And no future aggressor will permit us the respite we were given in the last two World Wars. The aggressor bent on ruling the world will attack us first—and suddenly.

But we cannot adopt even the minimum security measures on a business-as-usual or life-as-usual basis. We must have men serving in the armed forces or trained to serve, industry prepared to produce quickly, scientific facilities coordinated with our defense requirements.

These do not drop like manna from heaven. For security we must depend on the men and the industry and the scientific facilities now available in this country. They must depart from the strict paths of peace to the extent necessary to meet our preparedness needs. But how great or severe that departure must be is dependent on the size of our intended military establishment, its nature and armament. That must be fixed—and fixed promptly.

With this in mind, to clear the situation and provide for adequate defense with as little peacetime dislocation as possible, the War Department, speaking through the Secretary of War, has proposed:

1. That we adopt a system of universal military training that will prepare our young men for service in the armed forces whenever the Nation is in danger.

2. That we develop an alert and integrated intelligence service that will keep us informed of hostile moves anywhere in the world.

3. That we prepare a plan for industrial mobilization that will assure us a speedy conversion to a war footing and adequate war supplies whenever needed.

4. That we establish a program for scientific research and development to guarantee ourselves continued leadership in the perfection of weapons to protect our Nation and the peace of the world.

The Congress will determine these matters and other aspects of our security establishment. But it is not fair to Congress to leave the burden entirely on them. They are elected to represent the people and cannot properly function unless the wishes of the people are known and manifest.

The Congress is subject to great pressure and distortions of the popular will from conscientious individuals unintentionally short-sighted, from selfish individuals purposely short-sighted, and from organized minority groups.

The latter are increasingly powerful today, not only because they bring the greatest pressure on Congress by organized mail, telegraph and personal visit campaigns, but also because by the same tactics they influence public sentiment.

These minority groups are frequently organizations whose pronouncements are controlled by the small percentage who attend meetings or the smaller group who, with or without meetings, assume to speak for the entire organization, when in fact a true poll of the members would show a contrary sentiment.

I do not want to discuss specific measures today. They will be discussed by others. But I would like to illustrate my point by

the confusion that surrounds public attitudes on universal military training.

In the newspapers there are almost daily stories of organizations attacking the proposed year of military training. This would indicate that opposed ' such training are enough groups to include a majority of our people. And yet the plain fact of the matter is the direct opposite. The Gallup poll, which has shown that it reflects the public opinion accurately, shows that for the past year, month after month, 70 percent of the people have been in favor of universal military training. Other polls show a similar overwhelming majority. On few issues that affect every family so directly has there been such national support. But the voice of the many has been almost drowned by the clamor of the few.

Here is where the Legion comes in. You are, of course, another organization, but you are by far the largest organization that touches and includes a real cross section of every other organization—religious, racial, social, political, labor, and management. You are organized America.

And you are more than an organization. You are a typical sample—and a very large sample—of the ex-servicemen of two wars and you reflect the sentiments of these ex-servicemen, whether they are members of the American Legion or not. It is equally important that you are the best source of communication to these ex-servicemen, these citizens who have the greatest stake in, and the greatest right to decide, the welfare and future of our Nation. Had your counsel been followed in the twenties and thirties when the Legion, time and again, strove to arouse public opinion as to the necessity of military preparedness, it is doubtful that the totalitarian powers would have dared embark on world conquest. It is certain that Pearl Harbor would not have caught us perilously unprepared to defend ourselves.

But minority groups with restricted points of view were able to aline public opinion with them in opposition to your counsel. Now you have public opinion overwhelmingly with you. But those minority groups are more clamorous than ever. Unless your organization—unless the mass of ex-servicemen in the country—are both alert and active, we may return to the lethargy that doomed us to almost 4 years of war.

It is your duty—and I am sure it will be your privilege—to study all the problems of adequate national defense, reach your conclusions, circulate them among the veterans of this great country, and thoroughly make your influence and the influence of all other ex-servicemen felt to the point where sound legislation will be adopted.

## Outstanding Reconversion Record

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. JUDD. Mr. Speaker, at a time when American eyes are focused on the reconversion front as they were during the war on the battle fronts, it is gratifying to report the remarkable record made by a company in my district, the Minneapolis-Honeywell Regulator Co. It has carried into the peace the same efficiency and speed which enabled it, prior to VJ-day, to turn out huge numbers of critically essential optical and electronic instruments for our planes, ships, tanks, and so forth.

Under leave to extend my remarks, I include an editorial from the Minneapolis Sunday Tribune of November 18, 1945, and a press statement regarding the way in which this company's management and workers have cooperated to make so rapid a shift to peacetime production with maximum benefit to the consuming public and to the Nation's economy, as well as to themselves:

A SHORT STRING

How long is a piece of string? Twice as long as from its midpoint to one end, replies the wag.

How long is the reconversion period for industry? That's a question which requires considerably more thought to answer, but when the answer is arrived at it, too, will be twice the distance from its midpoint to one end. If we want the reconversion period to be a short piece of string, we must reduce the length from one end to the middle. That is not always as easy as it sounds. Shortages of materials, of labor, and of machines must be considered. Each time they are encountered they lengthen the piece of string. Sometimes, too, management and labor get mixed up in disputes and valuable time is lost.

The shortest possible reconversion period benefits everyone. Workers have jobs and pay checks, business has output and profits, and consumers have civilian goods at reasonable prices. Can the reconversion period be kept short? The report of one Minneapolis manufacturing firm indicates it can.

Just 90 days after the end of the war, the Minneapolis-Honeywell Regulator Co. has manufactured more products than in any previous 3-month period, has almost doubled its 1939 pay roll and has on the market products which never before were available in addition to its prewar products.

Harold W. Sweatt, president of the firm, says his firm expects to expand its total employment even more because of the great demand for its products. This will happen, he says, provided labor-management disputes in other areas of the Nation do not reduce his firm's supply of raw materials. If that happens Sweatt says, the employment trend here may be downward rather than upward.

Minnesota is doing its part. Management and labor are getting together in most instances and the reconversion "string" is being kept short. Let management and labor in other areas look at what is happening here and then go and do likewise.

The basis for the above editorial is a press statement, as follows:

The Minneapolis-Honeywell Regulator Co., of Minneapolis, Minn., manufacturers of heat-regulating equipment, today reported that in the 90 days since VJ-day it had manufactured more products than in any previous 3-month period, had doubled its prewar employment peak, and was already delivering a number of new devices never before available on the consumer market.

In a report believed to be the first of its kind on what one company had accomplished during the first period of reconversion and the start of unrestricted civilian production, Harold W. Sweatt, president of the Minneapolis-Honeywell Regulator Co., told reporters that today the number of people on the company's pay roll stands at 194.2 percent of the prewar level. In 1939 there were 3,600 people working in the manufacturing divisions in Minneapolis, he said; and when new machines can be procured, factory employees are expected to total 7,125. The company also operates plants in Chicago, Wabash, Ind., and Philadelphia, where the current employment picture is substantially the same as at the main plant.

"As far as we can determine from surveys and studies of future market possibilities, there is a large demand for our products," Mr. Sweatt continued, "and we believe that in the years ahead the demand will increase. We expect, therefore, to be able to expand our total employment, providing that labor difficulties in other areas of the Nation do not affect our supplies of raw materials. On the other hand, supplies of some of our basic raw materials are dangerously low now; and if this situation continues, our employment trend may be reversed."

Sweatt said that in September of this year the company had granted a wage increase which took into consideration shorter working hours. The company has a contract with the United Electrical Radio and Machine Operators, CIO, he said.

With 78 of the estimated 200 discharged veterans back on the job, the company is finding the program for employment of returning servicemen in fairly smooth operation, he said. The few rough spots, such as the fact that 190 of the 1,395 company men in the services went into the Army and Navy from departments now discontinued, have not proved to be serious, Sweatt said. Physical disabilities or handicaps do not eliminate a veteran from his old job again because a careful selection program has been worked out to provide the best job and opportunity for any ex-employee who has suffered a physical loss in combat.

Manufacturing more than 3,000 different automatic-control instruments in the heating, ventilating, and air-conditioning fields, Minneapolis-Honeywell developed during the war years some new controls for such varied industries as the railroads, air lines, apartment houses, and private dwellings, he said. These include an electronic "hot box" alarm to guard against overheated railroad bearings which frequently cause dangerous wrecks, an electronic automatic pilot for aircraft, a new cabin temperature-control system for aircraft, a system of personalized heating control for apartment dwellers so that each may adjust the amount of heat delivered to his living space, and a new domestic heating-control system which, Sweatt said, brings an end to drafts and cold floors.

Because his company supplies controls for all types of domestic and commercial heating plants made by hundreds of different manufacturers, the official explained that "the heat was really on to try and keep up with the demands of our customers." This is further accentuated, he said, because of the anticipated housing boom which is expected to result in at least 1,000,000 new homes being built each year for the next decade. In addition, wide-scale remodeling in all parts of the country, coupled with the fact that the fall of the year is normally the peak season in the heating industry anyway, "makes our problem a tough one."

"But we did it in war and I can see no reason why we can't do it in peace," Sweatt said, in pointing out that his company had won five Army-Navy E's and had delivered more than $184,000,000 worth of specialized weapons to the armed services during the war.

## High-Point Men in the Pacific

EXTENSION OF REMARKS
OF
### HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
*Washington, D. C., November 17, 1945.*

Hon. FRANCIS CASE,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. CASE: I refer to your inquiry as to the number of men with 90 points who still remain in the southwest Pacific and Asiatic theaters.

While we do not have a breakdown of our troop strength by point totals which shows this specific group, our figures do show that as of October 15, 1945, there were approximately 75,000 enlisted men in the Pacific theater and 5,000 in the China and India-Burma theaters who had as many as 87 points on the basis of the September 2 computation.

The reports of troop arrivals in the United States which we receive in the War Department do not show a break-down by point-total groups. For this reason it is impossible for us to say precisely how many of the foregoing 80,000 men have been returned since October 15 or to compute the exact number that still remain in the Pacific and Asiatic theaters who have as many as 85 points as of VJ-day.

We do know, however, that there has been a substantial flow of troops from those theaters since October 15. During the month of October 187,000 troops arrived in the United States from the Pacific, India-Burma, and China theaters.

While we cannot say exactly how many men with 85 points or more were included in the number reaching this country, we do know that in view of the efforts which we are making to return high-point men first and in view of the large number of troops that have left the Pacific theater since October 15, the great proportion of men who had as many as 85 points on VJ-day have already been returned or are en route. The remainder unquestionably will be on their way home very soon.

There is every reason to believe that we will substantially achieve the goal which we announced in September of completing by the end of November the return to this country of all enlisted men overseas who had as many as 85 points on the original May 12 computation.

I am sorry that, for the reasons I have mentioned, I cannot furnish you an exact figure as of today in response to your inquiry. I trust, however, that you will find the information in this letter adequate for your purposes.

Sincerely yours,

MILES REBER,
*Brigadier General, Deputy Chief,*
*Legislative and Liaison Division.*

## Letter From an American Soldier in Japan

EXTENSION OF REMARKS
OF
### HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. BRYSON. Mr. Speaker, as part of my remarks, I attach hereto a letter dated November 10 from one of my young constituents in Fukuyama, Japan. The purpose of inserting this letter in the RECORD is to call its contents to the attention of my colleagues and the country generally. I believe this typical American boy voices the sentiments of the average serviceman:

FUKUYAMA, JAPAN, *November 10, 1945.*

Hon. JOSEPH R. BRYSON,
*Member of Congress, Washington, D. C.*

DEAR SIR: I am writing you not only in my own interest but in the interest of many of my friends.

I have lived in Greenville, S. C., all of my life. I was going to Greenville High at the same time your son Billy was. Therefore I know you are quite competent.

My friends and I are members of the Forty-first Division. We are now in Fukuyama on the so-called mission of occupation. But all we are doing is wasting time.

In the mornings we have an hour of close order drill and an hour of manual of arms.

Now will you please tell me what good that does now that the war is over! In the afternoon we clean up the trash around here so the Japs can come in and make themselves a garden.

We are supposed to be a conquering nation but all we are doing over here is working for the Japanese. They actually walk by and laugh at us because we are doing the work they should be doing.

All that talk about the soldiers in Japan going to health resorts and sleeping in nice beds is all a lot of bull.

We are sleeping on cots in a building without any means of heat. We nearly freeze to death because we aren't supplied with sufficient cover to keep warm.

It seems that the Government just doesn't care what happens to us. If they did they would stop shooting the bull and start some action.

They don't even care enough about us to send us ample supplies. Some of the men here don't even have decent shoes to wear. Often we don't get enough food to keep us feeling well.

The other day we received a newspaper which showed a picture of United States Army trucks carrying food to the Germans.

Now if the Germans can get food supplied by America, why in the name of God can't we get some?

There are some high pointers here who deserve to be home. In fact they should have been home long ago.

There are also some young fellows here who want to go home and continue their education.

Now all we want to know is what in the Hell is the matter with you people in Washington? Please get on the ball and get us home.

Christmas is nearly here and we sure would like to be home with our families and friends. There is no excuse for us not to be if something is done.

I am not asking, but begging you to do everything possible to get us home.

We are getting damn tired of reading about all the strikes back home. Just ask any of the strikers if they want to swap jobs with us.

Please help us out because if you people in Washington don't help us out then who in the Hell is?

Get the troops home!

Thanking you for your consideration I am,
Sincerely yours.

## Attention, Army and Navy Intelligence

EXTENSION OF REMARKS
OF
### HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. STEVENSON. Mr. Speaker, for the past several months we have been reading in the Spanish press of an alleged shortage of electric power for private use in Spain.

I have just received a letter from a friend of mine who has lived in Spain, and who knows what is going on there. This friend informs me there is a connection between the so-called shortage of electric power for private use in Spain and the great increase in the use of electric power by the Spanish Government, together with the fact that thousands of German scientists who have specialized on atomic energy took refuge in Spain about the time of the Allied invasion of Germany. It follows:

NOVEMBER 3, 1945.

Congressman WILLIAM H. STEVENSON,
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN STEVENSON: It must not be forgotten that the Spanish and German specialists in higher physics have been working intensely for over a year, and in the same direction as our own men of science, to arrive at the utilization of atomic energy. Nor must it be forgotten that if they succeed in making use of the arm that put an end to Japan's power the danger for us would be most grave now that the Spaniards with their German friends (of whom there are half a million in Spain) utterly lack those democratic and humanitarian scruples that inspire our international behavior.

Think, Congressman STEVENSON, of the terrible responsibility that would fall upon our Government in such a case as I dare to imagine: For some weeks now I have been reading in the papers of a critical shortage of electricity for industrial and private use in Spain, and I feel absolutely certain that I am conjecturing right in believing that two-thirds of that energy is being dedicated to experiments relating to the smashing of the atom and the isolation of its energy. Would that I were mistaken, but every indication authorizes me, and all Americans with some political sense, to keep that fear alive.

With best wishes to you always for the carrying out of your good work.

Very sincerely yours.

On reading the following Associated Press release from Stockholm under date of November 17, 1945, I am convinced of the truth of the statement of my friend that Franco Spain is collaborating with the German scientists who took refuge in Spain to produce atomic bombs which may be used to destroy our cities:

HEAR 20 NAZIS PURSUE A-BOMB SECRET IN SPAIN

STOCKHOLM, SWEDEN, November 17.—The newspaper Expressen said today it had been informed that 20 Nazi scientists were working feverishly in Spain to solve the secrets of production of the atomic bomb. The paper said the experiments were being conducted with the approval of Generalissimo Franco.

## The Housing Shortage

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include comments of Robert L. Norton,

appearing in the Boston Post of November 19, 1945, in relation to the critical housing shortage that exists:

With the Nation facing a housing shortage of critical proportions, Congress is still dallying with legislation intended to remedy this situation. Some attention is being given to slum clearance in the cities with the cooperation of local, State, and municipal governments, but the approach to the problems on a national scale is still confused and indecisive.

HOPE IN WAGNER BILL

Providing Congress is spurred to action, there is some hope of straightening out the housing troubles of the country in the bill introduced in the Senate by Senator WAGNER, of New York, and supported by Senator TAFT, of Ohio.

This bill, if adopted, would help the middle income groups which have hitherto been neglected in government planning. It strengthens the FHA system so as to reach the great number of families in this market. The plan is limited to houses where the principal loan is more than $5,000, which means about a $5,300 house. It raises the amount eligible for insurance from 80 percent or 90 percent of the cost of housing to 95 percent, thus reducing the down payment for a middle income family to 5 percent.

To make the terms more favorable, it extends the period of amortization from 20 to 25 years to 32 years. It also reduces the maximum interest rate allowable under the statute from 5 percent to 4 percent. Under the 5-year program for urban redevelopment, which is also set forth in the measure, the Federal Government could loan $500,000,000 to cities and towns to get land assembly and clearance projects started.

MANY VETERANS MARRIED

From all over the country comes the same story of a search for apartments and homes, any kind of a place to live. And the situation is made worse by the fact that a large proportion of the veterans coming back are married men anxious to establish themselves in their own homes.

One gets an idea of the seriousness of the situation from figures made available here. It is stated that a Government survey shows that some 1,200,000 families have doubled up and that more than 2,000,000 more families will be compelled to double up in 1946, whatever improvement is made in the building of new housing units.

Included in the 2,000,000 are the families of more than 1,100,000 veterans. One gets the idea of the problem facing the veterans from the estimate that 1,600,000 married veterans without homes are to be discharged. And the Army survey shows 1,300,000 additional veterans intend to marry within the next year.

Thus, there is a prospective total of 2,900,000 veterans without homes.

Present conditions are aggravated by the fact that between the First and Second World Wars, the housing supply did not catch up with the increase in the population. There are now nearly 3,000,000 more families in the country than in 1940.

## Meaning of Armistice Day for United States Citizens

EXTENSION OF REMARKS

OF

### HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave given me to extend my remarks in the RECORD, I wish to insert the Armistice Day message written by Mr. Cecil P. Dickson, of the Gannett News Service. Mr. Dickson's thoughts are pertinent to the moral turmoil which seems to have enveloped the world since VJ-day:

NOTES ON MEANING OF ARMISTICE DAY FOR UNITED STATES CITIZENS

(By Cecil B. Dickson)

WASHINGTON.—Yesterday was Armistice Day. It was celebrated at the end of World War I. That was supposed to be on November 11, 1918.

The Germans suspended fighting 27 years ago—in 1918, when Kaiser Wilhelm's forces failed.

A score of years later the Germans rose again.

This time it was under madman Hitler and his hoodlums.

They terrorized the world for 7 long years.

Several times they almost won World War II.

Victory slipped from their grasp by scant margins.

But they surrendered May 8, 1945, to the overwhelming Allies.

The Japanese, our ally in 1918, fought us from 1941.

The atomic bomb closed the Pacific war August 14, 1945.

The armistice of November 11, 1918, was a hollow victory.

For World War I was fought under appealing slogans—

"The war to end wars."

"Make the world safe for democracy."

The armistice 27 years ago did not bring an end to war.

It failed to save the world for democracy—dictators rose.

Even in democratic countries, one-man-rule increased.

Dictatorial rulers prevailed in all countries of the world.

Democracy lost ground.

Diplomacy lost the peace.

Now there remains one excuse for Armistice Day observance.

That is to mourn the loss of men, money, and materials.

True, two decades of nonhostilities followed.

Lavish living first, then masses of hungry.

The "have-nots" fought, but the "haves" had.

Hostilities resumed.

World War II spread over the planet.

After all, "armistice" means but a temporary peace—a stay of hostilities until fighting resumes.

Sentimentalists will add May 8 and August 14 to November 11.

But, what have the victories of 1945 brought to America and her allies?

Civil war is raging in war-weary China.

Battered and broken England is under drastic war rule.

South American governments fall; rise; and fall again.

In the United States, labor fights business and business fights back at labor.

Strikes and other economic disturbances stalk the land.

Stirred by bigots and demagogs, racial hatreds are rising.

Army and Navy war leaders are bickering over service unification.

Left- and right-wing Congressmen battle over governmental philosophies.

Scientists, legislators, and Government leaders squabble over atomic energy.

Servicemen flee from the Army and Navy.

Restlessness dominates the Nation.

There is no happiness.

The war just ended brought victory, but no peace of mind.

Other than for the destruction of the German Nation and the Japanese Empire, there is no satisfaction.

The returning warriors feel not as victors, but as victims.

Their attitude is that another war will come.

Their hope is that they will not have to fight it.

America gained a great position in world estimation during the war.

She is losing it now that peace is upon us.

Each Armistice Day should be a day of prayers—prayers that the men charged with leadership are capable of keeping America at peace.

## Address of Gen. Dwight D. Eisenhower

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. McCORMACK. Mr. Speaker, on Armistice Day of this year, General and Mrs. Dwight D. Eisenhower honored Boston by a visit, receiving a welcome from over 1,000,000 persons.

In the evening, at a State banquet, General Eisenhower made the following remarks:

Your Excellency, for me it is a most happy circumstance that my orders to proceed to Washington for temporary duty afforded opportunity to accept the gracious invitation of this city and State to pay here a brief visit. The warmth of your welcome to Mrs. Eisenhower and myself will live with us always. We are most truly and humbly grateful.

It is always a pleasant task to report to Americans upon the character of the service performed by the soldiers our country sent to Europe. My admiration, respect, and affection for the trained American soldier, sailor, and airman are without limits. So, it is a special privilege to assure you that your own Twenty-sixth Division, commanded by a great leader, General Paul, established a record in Europe that measures up fully to the highest American standard. The division was first committed to battle under such conditions of terrain, weather, and enemy resistance as to be classed as frightful. But from its first day of action until the whole job was done, it never faltered, never hesitated. Every man entitled to wear the YD of the Yankee Division on his shoulder will do so in honor and in pride for the remainder of his life. I am told that your Forty-third Division in the far Pacific established for itself an equally brilliant battle record. The minute men of Lexington and Concord would be proud to acclaim the brilliant performance of New England's representative of numberless battlefields in World War II.

In both hemispheres victory has crowned the efforts of our fighting forces, but in the aftermath of major conflicts there is invariably and inescapably experienced throughout the world a feeling of confusion, uneasiness, doubt, and indecision. These create unrest in many fields—industrial, political, financial, and international. Though we in America do not wholly escape these universal problems, we are, in one vital respect, extremely fortunate. We know, at the very least, that each of us has the treasured opportunity to exert his own influence in seeking solutions. We, any of us, may express freely our own convictions in the confidence that the will of the majority, peaceably expressed, will prevail, and that the rights of the minority will not suffer thereby.

It is in the role of a citizen exercising this American right that I venture to address to you today a few thoughts which, in my trip across the Atlantic, I have attempted to reduce to writing in order that I might not trespass too excessively upon your time.

As a preliminary I should like to suggest the importance of remembering, always—though with undiminished appreciation and obligation for the vital work of our great allies—the accomplishments of this country in the late war. Undismayed by the black outlook of the early months, when it seemed that the all-conquering hordes of Germany, Japan, and their partners were in an unassailable position, you, by your sweat, your blood, and your undaunted spirit contributed mightily and decisively to the greatest global victory of all time.

Never has more dismal prospect been transformed into more glorious result. The conclusion is that when America clearly visualizes the task she has to do, so that all may rally as one toward its accomplishment, there are few things that for her can logically be classed as impossible. She, and her allies, can even win the peace!

In Europe there were more than 3,000,000 Americans on the day of victory. The final division to reach us disembarked last April and promptly participated in battle to hasten and clinch the victory. In passing, it is significant to note that this division came into action 3 years and 4 months after Pearl Harbor day, a fact that gives some inkling of the tremendous task and the time involved in gearing a nation to the requirements of the battlefield.

Within 6 weeks after the arrival of this final fighting division the entire process of pouring our resources into Europe was reversed. The business of tearing down that mighty battle machine properly began, so as to provide additional strength in the Pacific and to return our uniformed men to their pursuits of peace. Ever since that day the War Department has constantly accelerated the pace of demobilization, using every ounce of energy at its command to restore those men to their family circles, where you are so anxious to welcome them. Up to a certain, definite point, this process of disintegration is wise, commendable, necessary. But a conviction that I want to leave with you today is that there is developing a situation that is bringing that limiting point into sharp focus.

Peace did not descend upon central Europe with the cessation of hostilities. It marked the end of killing and it provided an opportunity to begin the laborious business of restoring order from chaos; of imposing upon a conquered people methods and processes which we consider appropriate to peaceful pursuits; of cooperating with our allies in regulating the economy, the industry, the education—indeed, every activity of the conquered country—and to compel democratic reform and virtual rebirth of the German people.

Enforcement of this intricate program requires military strength. If disintegration of our forces proceeds too far, it will become quickly evident to the Germans, who are expert in this type of appraisal. If we become incompetent or unequal to the task, not only will we be humiliated and shamed, but America's influence in building the foundations of an enduring peace in Europe will disappear, and the great costs of the war may have been paid in vain.

May I point out that in addition to all the normal tasks devolving upon an occupational force in a thickly populated, hostile country, we cannot neglect our responsibilities to millions of unfortunate people that we call displaced persons.

The agonies they have suffered, the injustices they have helplessly borne, have left them a charge upon the democratic world. They are exceedingly grateful for what the American Government and soldiers have done and are doing for them. But the sad fact is that that job will be a continuing one until those people can return to their homes, or have been given opportunity, in some spot upon the earth, to develop for themselves a respectable standard of self-sustained living.

Beyond all these tasks there is another one for our soldiers that touches upon our immediate interests. In Europe there are now more than 6,000,000 tons of valuable American property. The processes of hasty redeployment have necessarily left much of it in condition where only deterioration and destruction will result if we are robbed completely of our own men to take care of it, and to provide for its orderly disposal. Though we are making in those areas the maximum use of local civilian labor, responsibility in this task can be faithfully discharged by no one except Americans, the owners of the property. We must take care of our own.

All of these tasks are now largely being performed by soldiers. Some of them will always have to be, as long as the task remains.

The plain and unpalatable fact is that accomplishment of America's war purposes—which I take to be the establishment of an enduring peace—requires, for a period of which the length cannot now clearly be foreseen, the maintenance of adequate American military forces in Europe.

Moreover, you and I, all of us, should help in making those men understand the depth of our appreciation for the distasteful but vitally necessary work they are doing for us.

Please do not think that I would agree to any unconscionable delay in sending back to his home the man who has borne the brunt of the battle. No one, anywhere, could have greater concern than I for the human desire and the logical right of the American who has faced the fury of the enemy in the field to have further military duties carried on by those who have not been so exposed. Certainly, we must recognize and plan for realization of this rightful desire.

In outlining this problem I am merely pointing out to you that a day of critical decision is rushing upon the American people. That decision in simplest terms is merely this: Are we going so far in weakening ourselves in Europe as to turn our backs upon a problem critically involving the future peace and the world, including this country? Are we going to abandon, unfulfilled, the great purposes for which we fought this war? Or, are we going sanely and logically to provide the means and the strength in Europe that will see that job through to the end?

In my opinion there can be no temporizing, no compromising, with this issue. I feel that I owe it to every man who loyally, uncomplainingly and successfully carried out the tasks that I placed before him in Europe—particularly I owe it to those and to the families of those who gave their all that America's purposes might be served—to urge the instant adoption of a system whereby America's wartime soldiers may be returned to their homes but under which America's obligations to the world and to herself may, in this regard, be satisfactorily met.

It is not easy, but it can, it must, be done.

As the representative of all the men you sent across the Atlantic and vigorously supported as they helped to crush Hitlerism and restore peace, I express our confidence that you, again, will meet the challenge.

## Rioting in Egypt

EXTENSION OF REMARKS
OF
**HON. BERTRAND W. GEARHART**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. GEARHART. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following correspondence between Mr. Peter H. Bergson, chairman of the Hebrew Committee of National Liberation, and His Excellency, Mr. Anis Azer, Chargé d'Affaires of Egypt, regarding the recent rioting against Hebrews in Egypt. It is noteworthy to point out that these riots took their usual course, beginning with anti-Semitic outbreaks and ending with vandalism and destruction upon churches and mosques, together with places of business of Christians and Moslems as well as Jews.

NOVEMBER 7, 1945.

His Excellency Mr. ANIS AZER,
*Chargé d'Affaires of Egypt,*
*Washington, D. C.*

YOUR EXCELLENCY: It has always been a source of gratification to us that in the conversations we have been privileged to have with some of Egypt's foremost statesmen, including His Excellency the Minister for Foreign Affairs Abdel Hamid Bedawi Pasha and His Excellency the Minister to the United States Mohmoud Hassan Pasha, we have always found ourselves in full accord on the premise that there is no basis for antagonism between Hebrews and Arabs. Whenever, in history, our two peoples have lived together, they have cooperated admirably to the greater glory of civilized mankind.

It was with great perturbation, therefore, that we learned of the recent shocking events that occurred in Egyptian cities. According to reports which we must credit, Egyptian mobs indulged in practices clearly paralleling the pogroms of Czarist Russia and Hitler Germany. Shops were looted, synagogues were profaned and fired, holy scrolls of law a thousand years old were destroyed and burned in the streets, venerable institutions of learning were pillaged, and defenseless men and women were mercilessly attacked.

We are regretfully impelled to reject the assumption that the events which occurred in Cairo, Alexandria, and other places were of a spontaneous and insignificantly casual character. Such an assumption is excluded by the fact that Arab spokesmen, both in the Middle East and elsewhere, have been repeatedly quoted as making inciting statements; the tenor of these statements was generally that Jewish citizens in Arab countries should and would be made responsible for political events in Palestine. The Nazis of Germany were infamous for similar practices with respect to hostages.

We do not overlook the possibility that these spokesmen might have been influenced by British agents not too scrupulous in their choice of means of extending and perpetuating British imperialism in the Middle East, but such a possibility does not absolve these Arab spokesmen from liability for the consequences of their acts.

This deplorable situation is the more incomprehensible to us in the light of the fact that Egypt itself has only recently succeeded in achieving its freedom, and that it only

this year joined the family of the United Nations. The regrettable events which are the subject of this communication can scarcely be considered to contribute to international understanding, world security, or the prestige or efficiency of the nascent United Nations Organization. Our regret at having to review these events is heightened by our deep appreciation of Egypt's importance in the international structure and particularly in the structure of the Middle East as it relates to the future of world peace and security. We are sincerely desirous that nothing should endanger the friendly relations between your great country and people, and our people.

It was for this reason that we read with satisfaction unofficial reports concerning condemnation of the riots by your Prime Minister, who was said to have expressed his conviction that no reasonable Egyptian will subscribe to what has occurred. It is our belief that the evil hands described by your Prime Minister as being the inspiration of the riots will be exposed, and that all those criminally guilty will be punished according to law. Liberal public opinion of the world will judge these events by the measures taken by your government to redress the wrongs committed and to prevent their recurrence.

We should greatly appreciate an official statement from Your Excellency as to your government's attitude and course of action.

Respectfully yours,

PETER H. BERGSON,
*Chairman.*

---

NOVEMBER 9, 1945.

Mr. PETER H. BERGSON,
*Chairman, Hebrew Committee of National Liberation, Washington, D. C.*

DEAR SIR: We beg to acknowledge the receipt of your letter dated November 7, 1945, and we reciprocate the feeling of gratification that in the conversations you have had with some of Egypt's foremost statesmen, including His Excellency the Minister for Foreign Affairs, Abdel Hamid Badawi Pasha, and His Excellency the Minister to the United States, Mahmoud Hassan Pasha, you have always found yourselves in full accord on the premise that there is no basis for antagonism between Hebrews and Arabs.

However, we beg to disagree with your insinuations that Arab spokesmen have been quoted as making what you have chosen to describe as inciting statements. Such connection between their statements and the late events is totally unwarranted.

We are gratified that you have taken note of the Prime Minister's pronouncements to the effect that "no reasonable Egyptian will subscribe to what has occurred." The vigorous measures undertaken by the Egyptian Government have resulted in reestablishing complete order and we assure you that the situation is well under control.

Yours very truly,

ANIS AZER,
*Chargé d'Affaires ad interim.*

---

## A Raw Deal for Our Enlisted Men

EXTENSION OF REMARKS

OF

### HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. O'KONSKI. Mr. Speaker, Army Regulation 605-115, governing leaves of absence of commissioned personnel, states, in substance:

A leave credit of 1 month per year with full pay and allowances will accrue to each officer in the Army of the United States on active duty for each year of service up to a maximum of 120 days.

Army Regulation 615-275, governing authorized absence—furlough—of enlisted personnel, states, in substance:

Authorized absence is a privilege granted to enlisted men under certain conditions. This privilege may be denied for disciplinary reasons or for the good of the service. No right will accrue to any enlisted man as a result of authorized absence not availed of or denied.

Again, the privates, privates first class, corporals, sergeants, and so forth, get a dirty deal. To give commissioned officers a 120-day leave with pay and deny same to the enlisted men is one of the most disgraceful and dishonorable acts perpetrated on all mankind.

It is the enlisted men who have the brunt of this war. It is the enlisted men who endured more and suffered more. It is the enlisted men who paid the heaviest price. Why in heaven's name deny them the privilege of 120 accrued days' leave with pay we give our officers?

The officers for the most part had soft, privileged jobs. Hundreds and thousands of officers here in Washington who never saw a Jap or Hun—who lived in luxury and ease—are given 120 days' accrued leave and pay.

Yet the privates who starved, who contracted diseases, who fought the war and did the dirty work and paid the heaviest price are denied that privilege.

It is coming to pass that we are establishing a military privileged class of officers in our country. God forbid. There is no excuse whatever for this crude deal. Wake up Members of Congress. Let us take the bull by the horns and remedy this rotten deal. If we allow this raw deal to continue we do not deserve the respect of the people we represent. Let us act now. In all decency let us act now.

Mr. Speaker, the morale of our enlisted men is breaking. It is a wonder it has kept up as long as it has. Are our enlisted men to suffer and endure only so that our officers can keep their jobs and enjoy privileges? God forbid. Members of Congress are we men or are we mice? Where is our manhood—when we permit this to continue?

Mr. Speaker, under unanimous consent, I insert an article from a service paper published in the Pacific. It gives an idea of how they feel about it. If we Members of Congress permit this condition of privilege to continue—we do not deserve to be Members of Congress. These boys in the Pacific—many of them have been in action 3 years or more. Are not these boys entitled to an accumulated furlough? There can be no furloughs while they are in fox holes or rotting in dungeons. Why not give them a furlough with pay now—since they were not given a furlough while in action?

ACCRUED LEAVE—A CRUDE LAW

Army regulation 605-115, governing leaves of absence of commissioned personnel, states in substance: A leave credit of 1 month per year with full pay and allowances will accrue to each officer in the Army of the United States on active duty for each year of service up to a maximum of 120 days.

Army regulation 615-275, governing authorized absence (furlough), of enlisted personnel, states in substance: Authorized absence is a privilege granted to enlisted men under certain conditions. This privilege may be denied for disciplinary reasons or for the good of the service. No right will accrue to any enlisted man as a result of authorized absence not availed of or denied.

Under these regulations there is one striking difference—the officer automatically receives accrued leave with full pay and allowances up to 120 days. The enlisted man receives nothing as a matter of right, regardless of how exemplary his record.

Why is it possible for an enlisted man to serve in the same theater of operations with an officer for a period of 3 to 4 years where conditions have not allowed receiving the benefits of accrued furlough time or a terminal leave based upon 30 days per year for total service? At the separation center the enlisted man receives his discharge button denoting an honorable discharge, travel pay from the center to his home at the rate of 5 cents per mile, and the first of three $100 payments commonly referred to as mustering-out pay.

The officer who has been in the same theater and subject to the same conditions, climate, diseases, hardships, and various other hazards, will receive accrued leave of 30 days per year, with full pay and allowances up to the maximum of 120 days. In addition the officer receives the discharge button denoting honorable service, railroad fare and, if he is of company grade (lieutenants and captains), will receive the first of three $100 payments of his mustering-out pay. All of which will total in the case of the average officer who has 120 days of accrued leave approximately $1,000 to $1,600, depending upon whether the officer is single or married. Which when contrasted to the $300 mustering-out pay that the enlisted men receives, plus mileage at the rate of 5 cents per mile to his home, is a glaring inequality which the citizens of the United States are no doubt unaware of in my estimation.

It is the opinion of all personnel with whom I have discussed this matter, both commissioned and enlisted, that the variance between these two regulations is an oversight on the part of the War Department. It is inconceivable that any branch of the American armed forces would willingly and intentionally keep a regulation in effect which unjustly discriminates against any group simply because they are enlisted men. But it appears to every enlisted man that AR 615-275 in its present form is completely out of harmony with the best customs and traditions of the service and unfair to the men who have been selected for the service but who, due to the exigencies of the war, have spent the majority of their army career in the forgotten, little-known and bypassed corners of the globe, where furloughs and rest camps were virtually unheard of, but hardships, loneliness, disease, dehydrated food, constant danger, and even death were SOP.

Under present regulations inequality exists. The choice should not be difficult. What are the enlisted men in this theater doing to bring this injustice to the attention of the War Department and Congress? (Reprinted from a letter by Master Sgt. John A. Johnson to the Daily Pacifican.)

## It's Time To Be Afraid

EXTENSION OF REMARKS

OF

### HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I includ. the following Armistice Day message by Booth Tarkington:

IT'S TIME TO BE AFRAID

* * * * * *

When anyone says that we must face the future with ccurage he is omitting the atomic bomb from his calculations. What we need is fear. Before atomic bombs go into mass production in Russia, in Britain, in France, in China, in Mexico and Cuba, and in Italy, Germany, and Japan, God give us grace to be cowardly enough to save ourselves by common sense.

For decades with every improvement of artillery, airplanes, or explosives, optimists have said, "Now there will be no more wars because the destruction would be too horrible." But there were more wars. The holocausts and the massacres destroyed human beings by tens of thousands and all their works and property with them—and the wars went on.

Thirty million people perished in this war. Many of those millions were people of the conqueror countries, for in such conflicts the winners are only less horribly damaged than the losers. And the atomic bomb says to mankind, "You ain't seen nothin yet. Wait till your next war."

Reality demands that we divest ourselves immediately of the idea that the atomic bomb is American. It was created by cosmopolitan physicists. But no matter who made the first one, the thing can no more be an American property than can earthquake or steam or photography. A shower of atomic bombs from Guatemala could write finis to the United States.

From now on the nations are like a family in a house with walls built of dynamite.

What would the members of such a family do if, like ourselves, they could not move to another house? I think they would walk softly and take care not to irritate one another.

Fortunately, at the moment when the means to destroy life arrived in man's hands there developed into his mind the conception that could save him from his dreadful machine.

The Security Council of the United Nations could protect the world against the atomic bomb. It must have a force of international and scientifically trained inspectors. The inspectors must have access to every country. Then a small police force under the Council would be able to insure the peace of the world. Aggressor countries could no longer be aggressive and exist.

Any isolationism, old or new, is now a peril. We cannot be or call ourselves the most powerful Nation in the world without rousing such mistrust and dislike of the United States as was roused in us when Germany set up to be a world dictator.

Our military forces, 12,000,000 strong at their best and supported by our industrial might, do not make us the most powerful Nation. Showered by atomic bombs, that whole power vanishes into less than dust. For the magnificent fight our forces have made we should be sorrowfully proud—sorrowful for their suffering and proud that they are our countrymen. But they cannot do it again.

That is the lesson of Armistice Day, 1945.

BOOTH TARKINGTON.

## Long Beach, Calif., Labor Market Report; An Indicative Report From Significant and Strategic Industrial Area of Nation—Long Beach and Southern California Testing Ground of Industrial Advancement or Set-Back—USES Renders Great Service

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. DOYLE. Mr. Speaker, in the great Eighteenth Congressional District of California which I represent, and which district is in my home State of California, is the great metropolitan city of Long Beach. During the war, aircraft, shipbuilding, naval drydocks, and other great naval installations, factories, small war plants, and great war plants by the dozens, because of patriotic, untiring work, contribution by loyal Americans, more than produced their share of the material things and spiritual forces which helped win the war.

The United States Employment Service there has done a great service from its inception and more recently it has begun to publish labor-market bulletins such s the copy of the one I hereinafter include in these remarks. You will see by its content that it undertakes to frankly and impartially analyze the labor market as it is from month to month. While this labor bulletin refers to the labor market of my home city of Long Beach, and its immediate vicinity, I understand that this same material is placed at the disposal and for the information of management and labor throughout the Nation at strategic centers.

Mr. Speaker, I take pleasure in bespeaking my utmost apprecia ion and high regard for the efficiency and loyalty of the personnel of the United States Employment Service in my native State of California and the great patriotic and devoted and able service which it has continuously rendered.

The text of the Labor Market Bulletin follows:

LABOR MARKET DEVELOPMENTS

Employment trend: A war production city for the past 4 years, Long Beach faces heavy odds in conversion to peacetime living. Now, 2½ months after VJ-day, it reports only partial conversion to civilian economy with several large companies still producing on remaining war contracts. Employment has dropped materially from the wartime peak but is still at a considerably higher level than that of the prewar period.

The character of Long Beach changed completely during the war years. Before the war, development of the harbor had given impetus to the growth of Navy and shipping activities. Small manufacturers had assembled automobiles, canned fish, produced oil well tools, edible fats and soap products, and built and repaired pleasure craft and fishing boats. Trade and service firms employed large numbers of people to serve tourists and residents. With the discovery of oil, a substantial petroleum industry developed.

With the declaration of the national emergency, the industrial growth of Long Beach was accelerated. The harbor facilities provided opportunity for large-scale expansion of shipbuilding and Navy facilities. A large air-frame plant located in the community. Small manufacturers converted to the production of parts for aircraft and ships, and new parts and assembly plants were opened. Manpower and material shortages kept trade and service establishments from expanding to any extent despite the heavily increased population and buying power. The influx of war workers and servicemen and their families swelled the population from 164,270 before the war to more than 260,000 at the present time.

Production cut-backs following the day of final victory brought sudden changes to the Long Beach industrial picture. Manufacturing which had mushroomed during the war was the chief industry affected by the quick stop of war production; about 16,870 workers were released from August to October, according to 40 reporting companies. Manufacturing had been decreasing steadily over the past year, however, and working forces in the reporting companies were 15,543 less on the day of surrender than they were a year earlier; increased plant efficiency, previous schedule cuts, and small plants' inability to maintain or expand civilian production because of material and manpower shortages had contributed to these previous employment declines. Aircraft companies and those producing ships' parts experienced the most severe reductions at the end of the war. Employment in private shipyards has remained relatively stable since August, as the companies still have a backlog of Government contracts for construction, repair, and conversion to complete. These companies employ 8,350 fewer workers than they did a year ago, however, because of schedule cuts made early in 1945. Navy establishments also have had an employment drop since VJ-day; the two reporting companies have lost more than 4,200 workers since August.

Unemployment: Unemployment increased sharply immediately after the end of the war. In addition to the workers released from local war plants, many Long Beach residents who worked in nearby war production areas have been released. The rise in the number of persons requesting service from the local USES office illustrates the volume of job seekers. Local office applications for work were 400 percent higher in September and 340 percent higher in October than they were in August. Barriers to the reemployment of war workers include: (1) Lack of job opportunities in which wartime skills can be used; (2) the surplus of women and over-age men over the demand for their services; (3) the reduction in "take-home" pay because of the 40-hour workweek in many industries; (4) the increased selectivity of employers. In addition, many employers have reached their peacetime employment peaks and are hiring only for replacement.

Migration: The continued and acute housing shortage points toward a balance of in-and-out migration. The war workers who have left the area, even temporarily, are being replaced by newcomers. Returning servicemen as well as veterans from other areas who are moving to Long Beach also have compensated for any out-migration of former workers. A sampling of work applications indicates that 7.5 percent of the work applicants are persons new to the community.

Conversion: Most of the aircraft and shipbuilding feeder and parts companies have been able to convert to civilian production without extensive retooling. The companies established before the war have returned to their former production, and several companies are now manufacturing toys, lawn mowers, phonograph records, civilian aircraft, and other products. Airframe and shipbuilding and repair companies are still working on Government contracts. Trade and service firms have added workers and have replaced less qualified ones as the manpower situation has loosened.

EMPLOYMENT OUTLOOK

Job opportunities: The number of unfilled openings, totaling 1,409 the last of October, remained practically unchanged from that of the last of September. The character of the openings has varied somewhat during the past month, however; fewer orders from manufacturers and more from trade, service, food processing, and construction companies were received in October. The construction industry accounts for the bulk of the need for skilled workers, although some are needed in manufacturing. Unskilled men are required in the manufacturing and construction industries chiefly. Most of the demand for women is in trade, service, and Government establishments, and are in the clerical, sales, or service occupations. About 15 percent of the openings pay from 50 to 75 cents an hour, while the balance pay over 75 cents an hour. Less opportunity for overtime pay is evidenced by the fact that only 1 percent of the jobs offer more than 48 hours of work a week, while 24 percent are for a work-week of 44 hours or less.

Future employment trend. Construction will expand materially and offer job opportunities in home and bridge building and in other planned public works as soon as materials are available. Ship repair in private yards will continue for several months at about current levels and hiring will be for replacement only. The future of the airframe industry depends upon the continuance of present Government and private contracts and the Government's disposition of the plants. Most of the other manufacturing industries have almost reached their peacetime employment peaks; some contemplate expansion as soon as plant additions can be erected and new markets can be developed. Some expansion in trade and service will occur, the employment increases being dependent upon the availability of experienced workers and goods and upon the continuance of buying power. Little change is anticipated in employment of naval establishments and the petroleum industry.

LOCAL LABOR-MARKET PROBLEMS

Conversion hindrances: Shortages of materials have deterred expansion in construction, as has the shortage of experienced and skilled construction workers. The lowered pay rates and working hours of civilian industry discourage the recruitment of workers for those companies that are expanding or are hiring for replacement.

Housing: Housing shortages prevent new workers from entering the community and handicap returning veterans in entering civilian life. About 185 dwellings are now under construction or are planned, many of which have already been spoken for; all are for sale, and substantial down payments are required. About 250 apartments will be built in the next 18 months. Civilian workers have difficulty in finding housing of any kind; priorities on public housing limit occupancy to servicemen, returning veterans, and civilians working in specific plants. New applications for public housing average more than 1,000 a month. The disposal of the 3,490 temporary public housing units will create a severe hardship; these units were to have been disposed of within 2 years of the time they were built, and the time limit is about to elapse. At least 11,750 houses must be constructed within the next 3 years in order to keep pace with the expanded growth of the city.

Labor surpluses: Reemployment of large numbers of displaced war workers is hindered by the difficulty in matching workers and jobs. Women and overage men who left their homes or retirement to accept employment during the war are not readily placeable. While some of these workers left the labor market at the close of the war, many are seeking jobs to supplement their incomes or to meet new financial responsibilities.

## The Political Parade

EXTENSION OF REMARKS

OF

## HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Rothwell Brown from the New York Journal-American of November 19, 1945:

THE POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, November 19.—In the matter of the proposed grant, loan, or gift to Britain of five or six billions of dollars, Uncle Sam is going to be gypped twice in a very clever squeeze play.

While the new Socialist government at London maneuvers in Washington for this fabulous sum, the same government at London is putting over a fast one.

When the Bretton Woods Monetary Agreement was rushed through Congress, many who did not like the idea supported it on the theory, carefully stated in debate, that America's contribution of $2,750,000,000 to the Monetary Fund, and $3,175,000,000 to the International Bank, would be used to finance the postwar needs of friendly countries, without further drain on the United States Treasury.

That was the assumption of certain influential Republicans who supported the scheme, and whose argument was sufficient to muster enough votes to put it over.

But Great Britain is playing a far smarter gam , from her point of view than that.

Although the United States Congress, in a gush of slobby sentimentality, rushed through approval of Bretton Woods, Great Britain has not yet approved it, and it has not yet even been brought up for debate in Parliament.

Now comes the proposal to advance Britain five or six billions—outside the Bretton Woods set-up—and those in Congress who are beginning to realize they have been hoodwinked, are asking "why?"

They answer their own question by saying that Britain is deliberately holding up endorsement of the Bretton Woods plan until after a huge loan (many in Washington call it a gift) has been negotiated here for Great Britain, and another one for Russia.

If this scheme can be put over it will be seen at a glance that the new loans, having been made by new legislation, drawing new money from the Treasury for the purpose, once they have been obtained, will leave rich reserves of the International Monetary Fund, and International Bank, untapped, all ready to be drawn upon over and above the vast sums previously obtained in separate negotiations.

Meanwhile, Members of Congress have been informed that Great Britain, pending her approval of Bretton Woods, is negotiating bilateral trade agreements with many countries.

This would be prohibited after the full acceptance of Bretton Woods, but the scheme itself provides that bilateral agreements already in existence when the pact goes into effect shall not be disturbed.

If Great Britain is indeed doing this, and the evidence that she is is said to be convincing, it is pretty slick work, at the expense of American trade and the American taxpayers.

All of this is certain to have a thorough exposure when the British loan bill finally

reaches the stage of legislative enactment, and it should have, for quite aside from the fact that the United States is in effect being asked to finance the new British Socialist experiment in government, it doesn't seem quite like what the British themselves would call cricket.

The American people are entitled to all the facts about what has been going on in the monetary conference in Washington.

They are entitled to see all the cards on the table, face up.

## Control of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from Americans United for World Organization, Inc.:

AMERICANS UNITED FOR WORLD ORGANIZATION, INC.,
*New York, N. Y., November 15, 1945.*

DEAR SIR: This ad was refused by the Washington Post. We are taking this means of drawing it to your attention:

"We are alarmed.

"The freedom from fear we pledged to humanity is today neither ours nor the world's. We Americans are proclaiming foreign policies based on a spirit of nationalistic smugness and worse. We are using the same weapon to keep fear alive that we used to end the war against fascism—the atom bomb.

"Today the fate of our children rests in your hands.

"We implore you to listen to the scientists who built our atom bomb, who unleashed the power of the atom—to listen and listen carefully as they tell us that what we have is no long-term secret, that what we have is either a power for good or for the destruction of all mankind.

"We implore you to listen to them and to listen to the people who will not and do not believe that more war is necessary. We implore you to listen to the hearts of men everywhere, quickened with fear where they were once filled with hope.

"We implore you to listen and to act.

"We urge an end to policies and proclamations which stir international uneasiness and distrust and plunge us into a new and final game of power politics.

"We urge that the United States take the initiative through the United Nations Organization to bring about a meeting of the representatives of the nations of the world in order to plan the control of atomic energy as a weapon of war and in order to strengthen the United Nations Organization so that it will be truly effective.

"We are alarmed. We want to be free from fear.

"Americans United for World Organization; Friends of Democracy; Independent Citizens Committee of the Arts, Sciences, and Professions; National Association for the Advancement of Colored People; National Citizens Political Action Committee; National Council of Negro Women; National Farmers Union; National Lawyers Guild; Southern Conference for Human Welfare; United Christian Council for Democracy."

## Letters From GI's Still in Uniform to Their Own Mail Bag in Philippines Tell Their Thinking, Hopes, and Objectives—Tell What Congress Should Do

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. DOYLE. Mr. Speaker, in the Philippine Islands there is published the Daily Pacifican newspaper, editorialized by the GI's themselves. One of these distinguished gentlemen and his family live in the great Eighteenth District of California. The distinguished GI himself is still in the Philippines, from where I received the service newspaper in which appeared the following letters.

I recommend that instead of listening to gossip and rumor and false report and instead of any of us making speeches on the floor of this great House which are based on rumor and gossip and hearsay, that we note what these distinguished GI's communicate to their own newspaper. Here they are:

ADVICE

EDITOR: We, the undersigned, have been in the the Army for periods varying from 2 to more than 5 years, with many having long combat service.

We feel that our congressmen are giving us a "run around," by not demanding a clear-cut discharge policy from the War Department.

The congressmen have not insisted that the 1,500-plus Liberty ships be converted to troop transports which, the port commander of Manila says, can be easily done in 48 hours if 50 construction men be assigned to each vessel. Each vessel would then be capable of transporting 750 men to the States.

They, the Congressmen, have not demanded that the 1,000-plus B–29's, now in existence, be used to ferry troops home. Each B-29 requires 20 man-hours of labor to enable it to carry more than 60 troops with all baggage, in less than three days, to the States. This amounts to more than 60,000 troops each week, even with the exclusion of the thousands of available C–46's, C–47's, C–54's, B–17's, and B–24's in themselves capable of transporting thousands weekly.

Records of all Congressmen will be scrutinized very carefully upon our return to civilian status to see what the record of actual legislation accomplished has been in each individual case. You may rest assured that those who have been resigned to no progressive action, when opportunities were at hand to benefit the overseas veteran, will be voted out.

Consequently, to those Congressmen who do not accelerate our return to our homes and loved ones from whom we have been too long separated, we pledge ourselves to vote against all Senators and Representatives now holding office who, within 25 days, do not assist us to return to our homes as quickly as posible.

Master Sgt. JOSEPH HUBNER
(And 317 others),
APO 707.

OFFER

EDITOR: Our unit, the Eight Hundred and First Army Marine Ship Repair Company, aboard the Army repair ship *Wm. F. Fitch*, is in the harbor with men qualified to supervise and carry out ship conversion work through experience gained on maintenance and repair of over 1,000 ships during the past year. The Eight Hundred and Third Merchant Marine Ship Repair Company, aboard the repair ship *Gorman*, is also in the harbor with similar qualifications and experience.

We can't speak for the fellows on the *Gorman* but as for ourselves we'd like to, if the Army will give us the go-ahead, sink our teeth into the job of converting enough Liberties or other cargo ships to enable all eligible men to get home by Christmas.

Our ship was the first Army repair ship in the Pacific and we'd like to get home as badly as anyone. However, if going home, even for high-point eligible men, is impossible as it seems to be, at least we would like to be doing work to help get the fellows home rather than the minor repair of small harbor craft we have been doing since our arrival in Manila Bay.

We've got the experienced men, the equipment and the material to do the job—just give us the damn job.

T3g WILLIAM SEARS
(And 100 others),
APO 75.

EAGER

EDITOR: In regard to the school program which is now beginning; we have talked it over and have decided that it is very good as far as it goes. However, we think something is being overlooked that could become a very important part of the program. We would like very much to see a trade school, where anyone interested could learn a useful trade, or improve on the one he had before the war.

We ourselves would like to go to a heavy engineering school where we could learn to operate bulldozers, power shovels and other equipment that would qualify us to take part in the big construction program that is going to take place after the war. We know that the Army has the equipment to train us with, how about giving us a chance to improve our position in the labor market after we change to civilian clothes again?

T4g DANIEL ROLFE
(And four others),
APO 75.

ANALYSIS

EDITOR: Can it be that the slow-down of redeployment is due to more than the usual snafu and the turning over of ships to private enterprises for commercial use? Can it be that as many soldiers as possible are purposely being held in this theater? What does General Devers, CG of AGF, mean when he says (as reported over WVTM) that the Army is discharging men so rapidly that there is a critical shortage of keymen in all departments?

I am wondering whether the current flare-up of fighting in China fits in here somewhere. The latest reports tell us that fighting has been going on for 2 weeks between the forces of Chiang Kai-shek and the forces of the north China autonomous region (so-called Reds). These two groups were apparently getting together on the questions of disarming Jap and puppet troops, restoring democratic methods in the Chinese Government, and establishing national unity. Then we heard of 53,000 United States marines, backed up by the Seventh Fleet, going to north China, supposedly to help disarm the Japs in these areas. The Red Chinese forces were already on the spot to disarm the Japs, but Chiang didn't want them to do it, for some strange reason. The Jap and puppet troops still have their arms. (The puppet collaborationists have sworn loyalty to Chiang.) And the marines are guarding Chinese railroads. Meanwhile the United

States Air Force hurriedly flies two of Chiang's armies to north China.

The picture of American soldiers fighting side by side with Japs and puppets in support of Chiang's feudal regime may be a fanciful one. But it certainly isn't a pretty one. If the Army should tell us that the redeployment program is scrapped, and should order us to China, we would, of course, obey as good soldiers.

However, if our folks back home told their Congressmen in no uncertain terms that they don't want us meddling in the internal affairs of other nations, the above picture would remain in the imagination. And who knows, redeployment might even be speeded up.

Corp. HENRY FRIEMAN,
APO 500.

## Filibusters

EXTENSION OF REMARKS
OF
### HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Southern Patriot for October 1945:

"THE TIME TO PERMIT FILIBUSTERS IN AMERICA HAS PASSED"

Majority rule is fundamental to democracy and the constitutional process.

A filibuster obstructs majority rule and gives supreme power to a small minority.

It is a disgraceful and intolerable situation when the highest legislative body of the land is placed at the mercy of the vocal chords of one man.

"The time to permit filibusters in America has passed," said Senator PEPPER, of Florida. * * * "Give one-tenth of the body the power to muzzle nine-tenths, and democracy, as a functioning institution in the Senate, has been destroyed."

We southern citizens, proud of the part played by southerners in establishing these United States of America and in drafting its Constitution, declare that Senators engaging in filibuster flaunt not only the will of the Senate, but the best traditions of the South.

We respectfully urge the Senate of the United States, after giving adequate opportunity for full discussion, to halt any filibuster by invoking cloture, to maintain majority rule, and preserve democracy.

T. D. Davis, Assistant Director, Mississippi Agricultural and Industrial Board, Jackson, Miss.; Mark Ethridge, Publisher, Courier-Journal and Louisville Times, Louisville, Ky.; Charles S. Johnson, Social Science Institute, Fisk University, Nashville, Tenn.; H. V. Reid, Chairman of Legislative Board, Brotherhood of Locomotive Firemen and Enginemen, Memphis, Tenn.; Carter Wesley, President, Informer Publishing Co., Houston, Tex.; Mortimer May, May Hosiery Mills, Nashville, Tenn.; Harry W. Schacter, President, Kentucky Merchants Association, Louisville, Ky.; Mrs. Alfred Taylor, Director, Organization and Education, Democratic Party, Austin, Tex.; Lucy Randolph Mason, CIO Southern Public Relations Representative, Atlanta, Ga.; S. A. Para, State Legislative Representative, Brotherhood of Railroad Trainmen, Memphis, Tenn.; Homer P. Rainey, Austin, Tex.; Mrs. W. H. Ratliff, Member, Southeastern Jurisdictional Council, the Methodist Church, Sherard, Miss.; Aubrey Williams, Publisher, Southern Farmer, Montgomery, Ala.; Mrs. M. E. Tilly, Woman's Society of Christian Service, Southeast Jurisdiction, the Methodist Church, Atlanta, Ga.; P. B. Young, President, Journal and Guide, Norfolk, Va.; Harry W. Acreman, Executive Secretary, Texas State Federation of Labor, Austin, Tex.; Roscoe Dunjee, President, National Negro Business League, Oklahoma City, Okla.; Samuel Freeman, Jr., Minister, Pulaski Heights Christian Church, Little Rock, Ark.; A. W. McAlister, Past President, Pilot Life Insurance Co., Greensboro, N. C.

Organizations are named for identification only.

## Writer Warns Congress and President of Dangers in Housing Crisis—Urges Consideration of Plight of Homeless Veterans

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. PATMAN. Mr. Speaker, today I desire to transmit to the Members of the House another sincere warning that the National Government must wake up and acknowledge the problem of finding shelter for our returning veterans this winter is our most pressing national crisis.

This warning comes from a trained, impartial observer, Marquis Childs, one of Washington's most highly respected columnists.

Under leave to extend my remarks in the Congressional RECORD, for the benefit of the Members, I would like to include Mr. Child's column for November 20, 1945, as it appeared in the Washington Post:

WASHINGTON CALLING
(By Marquis Childs)
HOMES FOR VETERANS

The White House is being told in no uncertain terms that the problem of finding homes for veterans to live in is one that carries a dangerous charge of political dynamite.

One of those who talked to the President about it recently was Mayor Edward J. Kelly, of Chicago. Whatever else Mayor Kelly may be, he is a shrewd politician who can see trouble on the horizon when it is still a small cloud.

The figures on the number of married veterans who will want places to live far exceed the number of houses and apartments that will be available even by the most optimistic estimates. The deficit adds up to a question mark bound to loom larger as the months go by.

By the end of 1946, it is estimated, 2,900,000 married veterans will need homes. Of this total, 800,000 will be doubled up voluntarily with parents and relatives.

Another 1,000,000 veteran families can be taken care of in existing housing. This is counting on the construction of 475,000 units during next year, which is probably an optimistic estimate. On this basis, 1,100,000 families would have no place to live.

Not long ago, National Housing Administrator John D. Elandford went up to Capitol Hill to suggest to Congress the need for a fund to move government housing so that it would be available for veterans. He recommended appropriation of $24,500,000 for dismounting and shipping houses from areas where war industry has now receded to cities where the need is most acute.

A House Appropriations Subcommittee received him with scant courtesy. When he presented figures from out in the country to show how serious were the shortages, Chairman CLARENCE CANNON, of Missouri, accused him of whipping up a fictitious demand for new housing.

This week, some of the leaders in the National Association of Housing Officials are meeting in Washington. They were called together by Hugh R. Pomeroy, executive director, not to consider the problem of veterans, as such, but the whole picture of future home building in the next four or five critical years.

One of the most powerful of the lobbies that now infest the Capital is the real estate lobby. It is made up of two wings, the National Association of Real Estate Boards and the National Association of Home Builders. They are fighting rent control on new-house construction and price controls on new houses.

The real estate boards are opposed to all rent controls after June 30, when the OPA Act expires unless Congress takes action to renew it. They say that after that date controls should be left to local communities.

This substitute might work in some places. But, for the most part, it would be a frail reed to lean on in the face of (1) the serious shortage that will persist long after next June and (2) the unspent billions in bank accounts.

No statistical charts are necessary to show that a degree of inflation in the real estate field is already here. Everyone knows in his own neighborhood the example of the house that sold one month for so much and the next month for 10 or 20 percent more.

As to the long-term public housing problem, there is hope in the fact that Senator ROBERT A. TAFT, a Republican, has come together with Senators ROBERT WAGNER and ALLEN J. ELLENDER, Democrats, on a bill which will soon be presented. WAGNER and ELLENDER accepted certain improvements that TAFT suggested.

Not long ago TAFT took part in a radio debate in which he argued the need for the Government to do part of the national housing job. He developed considerable heat in championing public housing to clear slums and give the lowest income groups a break.

Ever since then the real estate lobby has looked on TAFT with dark suspicion as a dangerous radical. That is a measure of the reactionary attitude of the lobby—that a TAFT, a Republican TAFT, could be mistaken for a radical. It is a measure, too, of the forces to be overcome if the housing job is to be done.

## Episcopal Diocese of Massachusetts on Universal Military Training

EXTENSION OF REMARKS
OF
### HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 21, 1945*

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks on the question of universal military training and the desirability for further study thereof

before definite action, I include herewith the following resolution passed unanimously by the Department of Social Service of the Episcopal Diocese of Massachusetts.

The resolution follows:

Whereas:

1. President Truman's action in placing before Congress a recommendation for universal military training is one which demands the most serious consideration of every American; and

2. This proposal appears to run counter to the fact that our foreign policy is committed to the support of the United Nations Organization which includes arrangements for military sanctions against possible aggressors and breakers of the peace; and

3. The discovery of the use of atomic energy has led even military experts to question the value of the future of universal military training along the lines suggested by the President; and

4. The future of the world is so obviously dependent upon the work and research of scientists in every field whose skills are attained only through long and persistent training that educators are greatly concerned with the serious loss of young men of college and graduate school age such a program would entail; and

5. Many thoughtful citizens are properly concerned with the inadvisability of instituting such training at this time because of considerations varying from the belief that eighteen is too young for the training to the belief that for the Federal Government to enter the States with a program of compulsory education is an invasion of our traditional conception of free educational system upon which our democracy has always depended for its perpetuation:

Therefore, we, the members of the Department of Social Service of the Diocese of Massachusetts resolve:

1. That it would be most ill-advised for Congress to act on any of the present proposals for compulsory military education until a more adequate study be made of their implications in terms both of our foreign and our domestic policies;

2. That Congress establish a civilian commission comprising leaders in education, business, industry, and public life who with the aid of military advisors should make a survey of what, in the light of such considerations as those noted above, would be the best over-all plan for the security not only of the United States but of all mankind from war in the future.

## Lebanon Independence Day

EXTENSION OF REMARKS

OF

### HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. WICKERSHAM. Mr. Speaker, I congratulate the people of Lebanon on the second anniversary of their day of independence, which falls on our Thanksgiving Day, November 22.

I have had the pleasure of meeting the distinguished Minister from Lebanon yesterday. With his coming to Washington, the cycle of friendship between our two peoples has been made complete.

We are young as a people, but old as a Nation; while you are old as a people, but young as a nation. Still, we have a common denominator in our way of life, our governments exist by the consent of the governed and we enjoy the mutual rights and responsibilities of living under the democratic processes of law.

The wise Solomon chose the "cedars of Lebanon" as his symbol for that which long endures. May the friendship between our two peoples outlast even the endurance of the "cedars of Lebanon" and link us together although seas and continents intervene.

## A New Outlook

EXTENSION OF REMARKS

OF

### HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 21, 1945*

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Life magazine for October 27, 1944:

A NEW OUTLOOK

SIRS: A year ago if someone had told me that today I would have a complete new outlook on the racial question of Mississippi, I would have laughed at him. That was before I joined the Navy. * * *

I was born in Mississippi and grew up like any other kid in that State. I grew to understand that there were only two kinds of people, the white and black, and that the Negro was not my equal. That was never said to me in so many words, but you could always hear it in such things as "Nigger, you cain't sit there—you cain't eat here—not in our schools—not in this theater." That was my democracy in action. * * *

In the Navy there were a great many Negroes, and it was not easy at first to eat, sleep, and wash by them. I brushed off those thoughts with "the Navy is run by a gang of damyankees." But when I became very seasick and couldn't eat, it was a big colored guy named Lewis from Florida who fixed me something that would stay on my stomach. When I was broke in Hawaii it was a colored guy who lent me money.

At night, when there was not much to do on the ship, we used to sit out on the rail and talk till all hours of the night * * * and it was not too long before I realized that they wanted the same out of life as I did, had the same dreams as I. They were fighting for a democracy they had hardly shared, one that had given them only poverty. Yet they have been willing to give their lives for that. I, too, was willing to fight for a democracy, one in which I had shared every benefit. Who was a better American? I'm sure it was not I.

* * * I never had the privilege of fighting beside a Negro, but I have talked to countless numbers of white men who have, men who fought on Iwo Jima and Okinawa. And they can all tell instances of uncommon valor among the Negroes fighting beside them. * * * I had felt if the Negroes worked and proved themselves worthy of democracy they would obtain it. But now I see that I was wrong to have thought such a thing, for what right did I have? * * *

The Negro in this war has proven himself entitled to the benefits of democracy above and beyond the call of expectation. If this be denied then we are frauds.

In what I have written I by no means wish to condemn the State of Mississippi, but only some of the people of Mississippi for their selfishness and narrow-mindedness.

JAMES P. O'BRYAN.

FPO, SAN FRANCISCO, CALIF.

## Addresses by Maj. William Moiselle Before the State Convention, AFL, and Minnesota State Convention, CIO

EXTENSION OF REMARKS

OF

### HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Friday, November 16 (legislative day of Monday, October 29), 1945*

Mr. MORSE. Mr. President, in the Labor Relations Section of the Army is a major whose name is William Moiselle. On October 22, 1945, he made an address before the State convention of American Federation of Labor at Duluth, Minn., and on November 10, 1945, he made another address before the Minnesota State Convention, CIO, at Minneapolis, Minn.

I believe that in those two addresses the major demonstrated a very keen insight into some of the basic problems affecting employer-labor relations of this country. I therefore ask unanimous consent to have printed in the Appendix of the RECORD the two addresses to which I have referred.

I am advised by the Government Printing Office that the addresses of Major Moiselle will occupy in the RECORD two-thirds of a page more than is allowed under the rule, and the estimate of cost is $138.80.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY MAJ. WILLIAM MOISELLE, OCTOBER 22, 1945, AT DULUTH, MINN., STATE CONVENTION, AMERICAN FEDERATION OF LABOR

You are gathered at the well springs of the Nation's industry.

It is proper that this, your first postwar convention, should be held in Duluth, situated in the Lake Superior region from whence comes, in peace or war, the immense quantities of iron ore for our manufacturing needs. It is fitting, too, that the representatives of a large section of America's working people should meet here as a tribute to the mighty effort of those valiant Americans on the iron ranges whose production achievements, when translated into tons of ore per man, stands as the greatest human accomplishment by workers for the successful prosecution of the war. Not a single dispute, not a minute's loss of time, not an ounce of ore delayed—and all this under situations beyond the understanding of those unfamiliar with range conditions. How many people know that the very shape of the earth itself was changed in northern Minnesota? That the bed of a river was rerouted, or that millions upon millions of tons of earth were moved in the passage of a season, during subzero weather, to uncover new deposits for war's seemingly endless requirements. Nevertheless, under hardship and personal inconvenience, with a minimum of manpower and a maximum of will, here was demonstrated the way to the perfect objective. Management, skill, experience, and competent labor leadership working in unity and concert toward maximum production and industrial peace.

Let this performance stand as an example and monumental pattern for others to observe, and may a grateful Nation be ever mindful of the unmedalled men on the iron ranges, employers and workers alike, for their

patriotic devotion and industrial contribution.

As the Nation makes ready to produce for peacetime business we find ourselves again confronted with what men call labor trouble. It is one of society's age-old riddles. Five thousand years ago the first known wage law in Biblical times provided: "Thou shalt not abide the wages of the workingman with thee overnight." Society and civilization have come a long way since that 50-century old ordinance, and still men and governments have failed to produce a lasting formula for industrial peace, with universal and full justice to wage earners and investors alike.

Let us, then, in the light of recent experience, examine the underlying cause of the problem and by careful steps reach the path to permanent solution.

If we really want prosperity and industrial peace, the most important step by employers, or management groups, and trade-unions is to jointly and immediately abandon forever the false conception that they are opposing factors, possessed of the attributes of enemies, with irreconcilable differences. For too many years and too long a time this fallacy has been permitted to infect our thinking, with disturbing results. The real truth is that the employer and the wage earner have a common problem to solve. Hence, they must now, and forever should, be allied against the unrelenting and inexorable vicissitudes of time, natural developments, scientific evolutions, and technological advances, all of which have a very important relationship to our economic scheme of things and standard of living. If we spike the lie and abide by this obvious truth we will have opportunity and understanding to live in continued prosperity—friction free.

In order to approach this truism, it at once becomes necessary for all to accept two fundamental facts.

1. Every intelligent employer, be he a manufacturer, distributor, or service businessman, knows that if he is to have a market for his wares or services, he must have buyers. Since people live not by bread alone, they must have the price for all other desirable and useful goods. It results, therefore, that he must find his sales in a community of plenty since there are none in sections of poverty.

This, then, establishes a factual generalization—"that there can be no business prosperity in a community of poverty." Businessman and employers understanding this deduction must make their plans to build their markets with an original sound contribution toward the desired goal.

2. If trade-unionism is to flourish, so as to be of value to the wage earner and benefit to the Nation, it must recognize that it can only survive in a healthy and orderly system of free enterprise, through the agency of free capital. The union must, therefore, become the blossom in industry's flower bed, and not its thorny weed. Modern history has repeatedly shown that trade-unions cannot and do not exist in a totalitarian state. Let there be no mistake about that.

It follows, then, as our second generalization—"that organized labor, if it is to exist, must preserve and protect the only system which can sustain it." Whether you like it or not, there is just one such system. It is the free capitalist system operating freely in a republic of freemen.

Undoubtedly these two propositions have always been known to both industrial and labor leaders. The aggravating question has been how to make them work.

It will serve no purpose now to discuss the well-known reasons for previous failures. Let us instead recognize the focal point at which these two principles can merge and form a perfect junction for beneficial action. Thus we discover what that object is. At once we determine it is the place of employment. Be it mill, mine, factory, warehouse, railroad, or what. For convenience of discussion we will call it the house. Since the house is the maker of jobs and the source of profit necessary to the continuity of employment within and beyond its own premises, it becomes the object of our highest concern and prime consideration. This is equally true for management as it is for the worker. It is in fact a subject of much greater anxiety to the wage earner than it is to the stockholder. In time of stress it engages the worker's most serious interest. It follows then as a logical conclusion that for the protection and security of the wage earner the house must be made to be and remain financially strong, safe in its trade, and beyond hazard of failure in time of distress. There can be no substitute then for the resolution by labor that the house comes first.

This being true from the standpoint of labor, it is, as previously remarked, true also in the interest of management and capital. For a weak or bankrupt business will not only fail to provide good jobs but it will default all its other obligations, waste its substance, and degenerate its position by insufficiency. So we ask: Has capital any alternative to protect its investment, its trade, its market, in fact, its own existence, by any other formula than that the house must come first.

There is no other answer, no other substitute, no other alternative.

Granting that in the times past, some men of capital were greedy and mayhap ruthless. It has since become common knowledge to men of commerce that the day of cruelly exploiting the investor or the worker is not to be practiced without penalty of law. Nor may a few willful executives drain away profits and bleed business in such disastrous proportions that decent wages become impossible and dividends waived. There is no virtue in such selfishness and no future in such establishment.

Management henceforth must and will see to it that the house prospers, that production is profitable, and wages high so that ready markets are handy for its goods, that capitalism is not an adventure for quick rich schemes and that capital itself in the form of profits and surplus are reinvested and made productive; not to be squandered in vain and destructive fashion, but, like plasma in humans, to reinvigorate and strengthen the house that it may, in the words of the Psalmist, "be like a tree planted by the rivers of water, that bringeth forth fruit in his season; his leaf also shall not wither and whatsoever he doeth shall prosper."

This is management's duty and responsibility. Thus is truly demonstrated that if the house comes first in the doings of employers, there will be abundance for the wage earners and prosperity in their midst.

But what of the trade union in this combination of things for the attainment of a desired end. It, too, has an inescapable duty and responsibility.

Since it is given to the union the right to represent the wage earner, it does not follow that the exercise of this right shall injure or impair the worker's source of earnings. On the contrary, it is the moral obligation of the union, that it shall contribute in every known way possible its cooperation, its skill and resource towards the successful development and operation of the house, so that its members may attain and derive the greatest measure of benefit from its labors.

The goal of the union and the house must be one.

Existing legislation has bestowed on the trade-union movement certain immunities not enjoyed by others. Such benefits are not transferable to individuals. They must be jealously guarded for the protection of the organization as a whole and never be permitted to shield the wrongdoings of malcontents within its own ranks.

To appreciate the full advantage of the trade-union movement and to evaluate its responsible position with respect to modern business, it will have to be understood that it is not the primary purpose of industry to provide security for organized labor as such. On the contrary, the very reverse of the idea is now mandatory. It is the union which must now help to make industry safe and sound so that good jobs may be secure. In that way and that way only can the trade-union movement establish its own security. For no matter how you argue the proposition there can be no free wage earners without prosperous industry and no trade unions without free workers.

This, then, again confirms the cardinal rule that the house comes first.

Admitting that the formula is contrary to the original concept of trade unionism, there must be an awareness that both capital and the labor movement have gone through a revolutionary change in the past decade. We therefore must bring our thinking and our doings up to the modern tempo of things and accept the fact that the rules of the nineteenth century, or even 10 years ago, are no longer useful for today's needs.

Be, therefore, wise and temperate in your demands—let common sense, sound judgment, and economic justice guide you in your dealings—with fair consideration to the house, that it may prosper and survive and be an everlasting institution of nourishment to a free system of business whose builders and workers may, through the agency of the trade-union, make the Nation and its citizens as well as its institutions the desired hope of a distressed world.

By dedicating the trade-union to the task of industrial peace founded on an understanding alliance with management to make the house prosper you will achieve, with prestige, independence and honor, greater gains far beyond the grants of Government or legislation, which at best temporizes with humanity's plight and leaves meaningless the words of its enactment.

The labor officer of the United States Army, together with the United States Conciliation Service in this area, working as one from Pearl Harbor unto this day, in the position of an honest and impartial friend has attempted to point the way as set forth in this discourse. Believing always in what is right, not who is wrong, to guide us to equitable attainments.

The Minnesota State Federation of Labor is, indeed, fortunate to be able to share in the commendation for extraordinary performance by its constituent members in the herculean task of war production.

Yours is an accomplishment well known to the military and governmental officials. It is fitting to note that in Minnesota your body cooperated completely with the several war agencies and gave full support to the other governmental offices and lightened their burdens thereby immensely.

As you now proceed to your deliberations, an anxious Nation hopes that just as you set an example for industrial peace during the trying war days, you will now formulate here, a similar pattern for peace and prosperity. May the Great Creator bless you with wisdom and courage and endow you with a firm resolve to light the way of industrial America to its appointed and happy eminence.

---

ADDRESS BY MAJ. WILLIAM MOISELLE, NOVEMBER 10, 1945, MINNESOTA STATE CONVENTION, CIO, MINNEAPOLIS, MINN.

The true course to prosperity and industrial tranquility can indeed be chartered here by this gathering.

It can well be that out of this convention may come a lasting solution for the Nation's industrial distress.

Let not this possibility be discounted—for Minneapolis has already set a pattern during and since the war days, which both a troubled

nation and a worried government can observe and appreciate with profitable guidance.

It will interest you to know that in Washington Cabinet members, Congressional leaders, commentators and other distinguished personages, including those expert in industrial relations and concerned in industrial transition, are still pondering in strange wonderment the marvel of Minnesota's recent accomplishments.

You will therefore be gratified and encouraged by this knowledge. But do not let it spoil you. Instead it must continue to provoke and promote the realization that Minnesota demonstrated the only effective way to a full life in peace or war.

You have repeatedly proven that by intelligent and willing cooperation with capital and management there need be no work stoppages, slow-downs or other detrimental activities with its attendant strife, injurious to maximum output. But over and beyond all this, the workers and employers in Minnesota have given new life to the old aim—that men achieve great ends without the aid or interference of government—if they are but free from the obstacles of mandatory regulation.

No legislation, no government, no boards or bureaus, no panels or directives, no hearings or conferences in this or distant cities sharpened the sense or developed the competency of our local leaders. None was needed—for here was a richness of experience, an acquired wisdom, and a wealth of devotion to a great cause, which when summoned to serve, in the time of travail, combined and brought forth production from the mines, forests, shops, mills, factories and foundries to a volume which excited the admiration of understanding peoples beyond anything heretofore known—and all this friction free—to a degree unequaled elsewhere, in all the world of free men.

Only a free and independent community, relying on its own resource, exercising the full rights of free negotiations as practiced in true collective bargaining could have brought this about.

Upon you therefore as leaders in the trade union movement has been thrust a new and added responsibility. It is the inevitable responsibility of leadership—you cannot—you dare not attempt to avoid it. The penalty for failure will be your undoing.

Let it not then be said of the trade unions that the limit of your ability was attained because of war necessity. But that an orderly and systematic change to the needs of a peacetime economy is beyond your competence, or that your vision is dimmed, your judgment warped, or your experience a myth.

Here is a challenge not from employers, not from industry or capital and not from the needs of war—but rather from the demands of peace and the resultant relentlessness of the requirements of human progress and advancement.

Everywhere the question is now asked: "Are you—the trade-union movement and its leaders in Minnesota—equal to the task?" It will be the verdict of reasonable and understanding men that in Minnesota the answer is "Yes." But you will have to prove it again—and maybe yet again.

Admittedly your task is not an easy one. It will need to have the full support of all concerned, which includes capital, employers, management groups, and the public confidence.

Let us, therefore, examine the situation and bring to light the cause of our present dilemma. Then produce the best calculated adjustment to make the formula for the future as nearly perfect as humans may devise.

Now then: Reducing the subject to the simplest consideration, it is necessary to recognize that out of the depression in the 1930's came two unrelated propositions. One of these, although very old and always true, required an economic disaster to rediscover and prove it. It is the accepted annunciation that: "There can be no prosperity in the midst of poverty." The second proposition is the institution by law of collective bargaining.

When these two propositions function properly the natural result is an amalgamation of two economic streams, like the confluence of a mighty river, which in turn creates a corollary result consisting of economic plenty. It is economic plenty that makes wealth for everybody.

Let us now skip the economist's phrase "purchasing power" and all the theories of the political professors who with their conflicting theses and confounding dissertations have brought us to a befogged pass, out of which only sane and clear thinking to logical conclusions will guide us toward the path of progress.

If a full and abundant life is to be achieved, then both capital through its agent—management—on one side, and the trade union as the agent of the wage earner on the other side, will each have to faithfully perform its full duty and discharge its sacred obligation without stint or reservation to all the people.

Let us see what management's part is in the scheme of things.

1. It must at once burst the dams that have held back the free flow of capital into free enterprise and increased industrial activity. It may be necessary to persuade the Congress to remove existing stifling restrictions but capitalism cannot at this date confess failure by hiding behind legislative imperfections.

2. There must be liberal extension of credits on a reasonable and wholesome basis to widen markets and increase purchases.

3. Profits must be reinvested into business and industry and all other channels of legitimate trade, to make the community, its industry, and capitalism itself strong, and not to enrich a few selected individuals at the expense of the worker and consumer.

4. Find and develop new industries and new methods. The old ones are fast ripening and soon due to rot.

5. Eliminate the exploitation of the small investor and the general public by the unscrupulous. So that the strength and character of commerce and its system will not be hinged on the cheat and the chiseler. Thus must also industry keep itself policed for its own safety and standing.

6. Create in appropriate areas and by localities, but free from politics and Government interference, study groups, to change the present unsound wage structure and local earning abilities to provide regular and good annual wages on a weekly basis for all production workers and establish a system in industry to make it work permanently.

7. Promote collective bargaining in good faith and make it work. Get rid of those elements and self-appointed labor relation experts who stand between the parties and keep them divided, who are expert only in stalling and trouble making, seeking refuge in doubtful technicalities to prolong insincere negotiations and pretending to give unneeded legal sanctuary to poorly advised employers.

8. Abandon once and for all the erroneous concept that the wage earner is a commodity—something to bid for in a misnamed and unworthy labor market. There is no such thing as a labor market in America. Society had better beware that none such ever develops in a republic of freemen. The labor market is the congregation of slaves, and slavery is the sire of poverty.

9. Management must from here out scientifically develop intelligent and understanding supervisory personnel—based on proven qualifications to handle and direct other people—leadership is an altogether different attribute than skill or craft ability. Too often a fine craftsman has been turned into a poor foreman. Sense, not seniority, is a virtue which time alone cannot produce. A good foreman like the honest policeman on the beat will have no trouble if he means to have none.

These, and no doubt some other points which time will not permit to dwell on at this meeting, are the primary functions and responsibilities of management. It will enrich the traditions of the trade-union movement to assist in making the proposals fruitful. But even greater than the responsibilities here set forth there is the paramount and transcendent obligation of capitalism and the society which sustains it, to abolish poverty and its wretched offsprings—slums, disease and dispair. Enlightened management now knows that its field of opportunity lies in good homes and more new good homes, in vastly increased distribution of all the products of industry from lamp bulbs to locomotives, hats to houses, radios to railroads, bath tubs to boats, and so on to the inclusion of every article for human need and human comfort. Yet, all of this can only be attained by work and earnings. Work must be plentiful and earnings abundant so that the producers may buy and enjoy the products of their labor in contentment and satisfaction. This, management knows. This, management must make possible or give way for capital to put men in the proper places who will courageously and honestly bring into existence the desired state of happiness which a nation of uneasy citizens seek to attain.

There is nothing new in the proposition—all it needs is to be put into effect. It is at this point, however, that the trade-union movement must decide to make it feasible and beneficent.

Be then prepared to do your part in its entirety.

If the trade-union movement is to be free and strong it must be composed of free, strong, and prosperous citizens sustained by and in turn sustaining a free economy unhampered by strangulating restrictions from any source. As your first step then, is the assumption that the destination of labor and good management is the same. It results as a consequence—if labor is to benefit—its leaders must support the true usages of capital by helping management through free channels to do for the wage earner all the desirable things which society seeks to do but which cannot be accomplished by the unions alone or by management alone. It must be done jointly and earnestly.

What are these desirable things? High wages, good working conditions, and good living conditions. How go about getting them? That's the intriguing question. The solution to wages will have to be divided into three parts.

First. Make up your mind that the worker can take no more out of industry than he puts into it. It is fair then to say that in order to earn a day's pay there must be given in return an honest day's work.

Second. The amount of money received as a day's pay must reflect the productive value of the worker.

Third. The true productive value of a worker is determined by his output in quality as well as quantity. The real judge of his value and his true earnings should be the employer and, mind you, he must be fair and sound in his judgment.

Thus we have the true formula for arriving at "what"—not how little or much is a day's pay for work performed.

Make up your mind that the hourly rate is as dead as yesterday's newspaper. In the

postwar expanding economy which we hope to attain, labor costs per unit is the thing that will count. Moreover, as the labor cost per unit comes down wages can go up without price increases to the ultimate consumer. Otherwise it economically results that the most costly labor in the world is the lowest paid, while the least costly labor when production is at its highest can be the most highly paid.

It follows then that restrictive quotas, or limitations on production by union edicts are disastrous to the wage earner, for by such means are the wages of workers held down to the detriment of himself. Nothing is so poisonous to full production as the planned slow down. Nothing will hasten economic chaos as quickly as provoked reduced earnings. Nothing is as suicidal to the prosperity of the worker and the community as predetermined scarcity of purchasable products. There must be plenty for low prices to prevail and high wages to be a reality. Any other formula defeats the purpose and blocks the path to prosperity.

The trade-union movement is not the instituted authority to manage the plant. Nor do the laws which bestow upon organized labor certain defined benefits and immunities grant such rights. That is not your affair. It is management's duty and responsibility, and management in the future may be depended on to do it a great deal better than it did in the past. If it fails to do so, enlightened and far seeing competition will attend to its misdeeds. That is, if the interests of invested capital doesn't do it first.

The trade-union movement in order to make itself secure and be of service to the Nation will be wise to bring the standards of its membership and its activities to a high level. It is now too important a factor in the lives of all the citizens to spread its protective influences over a disturbing element in industry, or give aid to its own malcontents who in the end have always proven to begin as a troublemaker in the plant and end up a traitor to the union. Do not be deceived by the "guardhouse lawyer" who mouths his condemnations to the delight of the unthinking. Be rid of him early and spare yourself the strife and subsequent embarrassment within both your organization and the place of employment.

The union and the plant are part of the community. Teach and develop loyalty to both. There can be no rift in trust. Prepare and train competent and understanding stewards and business agents. They are persons of responsible stature and like foremen must be possessed of the talents of constructive leadership. They, too, if fitted for their assignment, will have no trouble if they seek to have none.

Finally, collective bargaining is your structure. Labor designed it, labor fashioned and built it. But it is the employer who has to live in it. Be a good landlord; make his tenancy a decent one, so that more and more industry will seek its comforting shelter. Do not either condone or permit abuses to pollute the other stream at the conflux, lest the river of prosperity be muddied beyond useful human advantage.

All these things you have known, many of the points are labor's own. They are the fundamentals to joint action. If through the agency of the trade-union movement under the auspices of the men of Minnesota you will take heart and together with the employer continue to strive, regardless of the seemingly unending struggle toward perfection, you will give the Nation and a frustrated world a demonstration of capacity, a sample of stability, a guide to prosperity, and an everlasting manifestation that in America free men can light the way of an industrial nation to a happy and exalted destiny.

## National Housing

EXTENSION OF REMARKS

OF

## HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Friday, November 23 (legislative day of Monday, October 29), 1945*

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address on the housing situation, delivered on November 20, 1945, by the junior Senator from Louisiana [Mr. ELLENDER] and broadcast over the Columbia Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, a most critical housing shortage confronts our Nation. The main victims, although by no means the only ones, are our returning veterans and their families. Many have arrived from the battle fronts to find themselves literally homeless. It seems most unjust that thousands of our soldiers should live permanently in slums and substandard housing, when the Nation they defended so valiantly can well afford to assist them in obtaining decent homes.

Unless we act to relieve this situation, it is estimated that by the end of next year more than 6,000,000 American families will be living under deplorable conditions of doubling and overcrowding. Our remedy, therefore, is to immediately provide ways and means of building more homes.

The housing difficulties confronting us result from causes of many years' standing. These causes may be simply stated. One is that even in prosperous times a large proportion of our population has not been able to afford the price of decent housing. Therefore, living in horrible slums or under unhealthful conditions of overcrowding has resulted. Another cause has been that private enterprise was not sufficiently encouraged to build adequate housing for middle-income families—those families who earn too much to get into public-housing projects but too little to buy the new housing that private enterprise has been providing. Still another cause has been that the many Government agencies dealing with housing, while doing good work, have not been sufficiently related and coordinated to be entirely successful.

I share the view of many that residential construction offers the greatest single possibility for the expansion of peacetime job opportunity. More than any other single industry, it can absorb those released from the armed forces and from war plants. The jobs provided by residential construction are not for carpenters, bricklayers, or building tradesmen only, but also for those employed in every type of facility which serves home building—whether it be the furniture business, the electrical-appliances industry, the paint manufacturer, or other undertakings too numerous to mention. It has frequently been stated that, for every individual employed on the site of a construction job, two and a half persons are engaged off the site. Every veteran therefore has a double interest in a large home-building program; first because of the high level of prosperity and employment made available; and second, because of his opportunity to secure the kind of home he wants for his family and himself. I appeal to veterans in the course of this discussion, but may I say that the same arguments I make to them are applicable to all Americans.

The general housing bill, which I am sponsoring along with Senators WAGNER of New York and TAFT of Ohio, is pointed directly toward removing the underlying causes of our housing obstacles. I sincerely believe that it will provide an effective remedy for these difficulties. Let me say, that during my many years in the Senate, no bill has been the result of more detailed and careful study by the Congress. For more than a year and a half, a Senate subcommitte studied every phase of the housing problem. We heard witnesses representing every type of group. We took counsel with them. We examined their suggestions and weighed them impartially and objectively. The bill introduced on November 14 is the product of all this effort.

Now, what does this bill do? Because of the lack of time, I shall only summarize its main provisions. If any of you desire more specific information I will cheerfully furnish it.

In the first place, the bill recognizes that the overwhelming portion of the housing need must be served by private enterprise. It would utilize the Federal Housing Authority, which is so well known and so highly regarded throughout the country, to encourage private enterprise to build more houses within the means of middle-income families. These are the families whose incomes, generally speaking, range between twelve hundred and twenty-four hundred dollars annually and who can afford to pay, on the average, between twenty and forty dollars a month for their housing, whether they buy or rent. These are the families in the economic classification in which a majority of our veterans' families are to be found.

The bill sets up a home-ownership plan. The essence of the plan is that more favorable and attractive financing terms will be made available—through loans for a longer period, running up to 32 years, and at a rate of interest not exceeding 4 percent. I wish to emphasize that these are to be private loans insured by the FHA, and not public loans or credits. This plan will give private enterprise more to do, by expanding its mass markets. The down payment required of the family will be reduced to 5 percent, in contrast to the 10 percent or more which prevailed in the past. And of course, veterans could meet this down payment with a loan under the GI bill of rights. It is my belief that this home-ownership plan, especially when we take into account the lower construction costs which it will stimulate, will enable private enterprise to serve hundreds of thousands of additional families of moderate income.

I regard this home-ownership plan for the average family as the heart of the bill. However, the bill justly recognizes that there are countless families who prefer to rent rather than to buy homes. This will be especially true in the next few years, when many newly married families of veterans will not be certain as to their ultimate place of permanent residence. For this reason, the bill sets forth the plan for mutual ownership and rental housing at reasonable costs, for families of moderate income. It does this, also, through encouraging private enterprise to do the job with the aid of FHA insurance. The broad outline of this plan would be to induce private loans for rental housing, for periods up to 40 years, and interest rates not exceeding 3½ percent. It is estimated that these more favorable terms will reduce by 20 percent the monthly charges at which these houses will be made available.

There is another plan provided for in the bill, with the same objective. It sets up, under the FHA, inducements to large financial institutions, such as life-insurance

companies and savings banks, to invest their funds in housing projects for long periods of years at low rental rates.

As the veteran contemplates his opportunities for steady employment, he realizes that these prospects depend upon new outlets for the free flow of capital investment. One of the greatest of these opportunities is the rebuilding of the slums and blighted areas of our cities. It has been estimated that, over the next 10 years, between sixty and seventy billion dollars could be spent streamlining our urban areas so that we could have modern, up-to-date, 20th century cities. The great part of this rebuilding activity can be carried on by private enterprise—in the building of houses, stores, commercial facilities, and places of recreation. But the great obstacle which stands in the way is the excessive cost of the land in slum areas. This high cost makes it unprofitable to acquire the land and redevelop it.

The bill suggests Federal and local aid, to write down the cost of this land, so that it may be profitably rebuilt. In my judgment, every taxpayer, every municipal government, in fact every citizen, stands to benefit by this vital clearing up of the decaying cores of our cities. We must provide means to rid our great cities of slums, else our National will be plagued with disease, with increased delinquency among our children, and with all other evils that follow in the wake of indecent housing conditions.

In all these ways the bill will help to provide both homes and jobs for our citizens. In fact, homes and jobs are inseparable, because the construction of homes provides employment, and employment furnishes the income to pay for homes.

While the bill concentrates upon private enterprise, all fair-minded people realize that, for groups in the lowest income brackets, public low-rent housing is necessary. The opposition to public housing has been reduced to those who have a selfish, pecuniary interest in slums, or who mistakenly refuse to face the clear facts. The bill provides for Federal aid to localities, to build half a million units of public low-rent housing over the next 4 years. It provides similar aid for decent housing for low income farm families. I am doubly gratified that the farm-housing problem, so long neglected and discriminated against is now to be given attention.

The bill also provides that the permanent war housing, now owned by the Government, may be sold for low-rent housing where communities need it. In all types of publicly assisted housing, the bill provides for preference, as to occupancy, for veterans and their families.

And finally, the bill consolidates all the housing activities of the Government into a single national housing agency. This will promote efficiency and economy. More important, it will fix responsibility in one place, and enable the people of the country to judge more accurately how well the Government is doing its part of the housing job.

Nothing stands in the way of decent housing for all our veterans, and for every American family—nothing stands in the way but ignorance, or fear, or selfishness. America as a Nation is rich and strong enough to reach this goal. With courage and determination, we Americans will attain it.

I believe that every veteran in the country, in fact, every American, should study the general housing bill carefully. I feel that every veteran's family should unite with other Americans to insist that the Congress act speedily upon this bill, which lies so close to the health, welfare, and prosperity of all our people.

Thank you for listening. Good night.

## Two-Way Responsibility Needed for Labor Peace

EXTENSION OF REMARKS
OF
**HON. EARL C. MICHENER**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. MICHENER. Mr. Speaker, as every Member of the Congress is aware, Michigan, the automobile capital of the world, is in the throes of the great General Motors strike. Naturally, strikes in general, and Michigan strikes in particular, are the chief subject of conversation of an apprehensive and a worried people. Just how long will it last? How many industries outside of General Motors will be affected? What will be the general effect on reconversion and jobs for all? Are hundreds and thousands of innocent Michigan citizens to be deprived of the right to earn a livelihood at a time when their work is so essential? These and many more questions are being propounded to Michigan Congressmen, and I for one am being bombarded with demands that the Congress do something about it.

On Wednesday, the day before Thanksgiving, I addressed the House in regard to this matter and appealed to the President to take immediate action. Later that day the President did take action which resulted in stopping the transportation strike then in progress in Washington. By order of the President the Army took over. Today the Government is functioning because the employees and the officials are permitted to get to their work. For this I am sure the public in general is grateful. They are back of you, Mr. President, and it is to be hoped that you will make a similar declaration with reference to other similar strikes throughout the country.

There should be arbitration and settlement between directly interested parties without bringing misery, suffering, and worse things to the innocent bystanders—all the rest of the people. There should be fair and enforceable collective bargaining. A contract should mean something.

Mr. Speaker, the President's courageous statement with reference to the Washington transportation strike secured the predicted results and, in behalf of the general public, I appeal to him to use every power at his command to keep the wheels of industry going, the people working, the pay checks going home to the family on Saturday night, and the disputes settled by arbitration and in accordance with the law.

In this connection I am presenting to the Congress an editorial appearing in the Anne Arbor (Mich.) News, one of our leading daily papers. Listen to that editorial:

TWO-WAY RESPONSIBILITY NEEDED FOR LABOR PEACE

Two-way security—security for the company as well as for the employees—under terms of union contracts is asked by the Ford Motor Co. in a statement issued to the CIO United Automobile Workers on the eve of negotiations over 30-percent wage-increase demands.

It is a subject that merits serious discussion in all negotiations or conferences seeking a formula for industrial peace.

"The company proposes that the union present a plan, to be incorporated in the agreement, which will assure company security, through exercise of union responsibility, which the union shop and check-off plan have not provided; further, that such plan provide effective guaranties against work stoppages and for increased productivity on the part of its members," says the Ford statement.

Regardless of the merits of the union demands for a 30-percent wage increase, the present industrial situation obviously calls for a show-down on several important principles, one of these being union responsibility. Any manufacturing organization has a right to protection of its interests in a contract which is designed primarily by the union to protect its members. One-sided responsibility cannot be regarded as fair by any known method of analysis.

The Ford company observes that it made contracts with the union in 1941, with shop and dues check-off provisions, in the hope of eliminating "a great deal of friction, dispute, and downright industrial strife. But our experiences of the last 4 years have substantially dispelled this hope. The peaceful relations have not been realized, the experiment has been an unhappy one. The record shows, for example, 773 work stoppages since the signing of that contract in 1941."

In discussing union responsibility, the Ford statement suggests a provision whereby the union undertakes to reimburse the company for any damages it may suffer from violations of no-strike provisions and "other interference with production."

The suggested provisions, if written into contracts, ought to go a long way toward the establishment of industrial peace.

When a contract is signed, a labor union obtains guaranties of certain rights for its members. It even obtains cooperation from the company in collecting union dues. The company deals with union leaders in all its relations with the workers. When it signs a contract, it buys work at a specified price and under certain conditions, the same as it buys steel when it orders this essential metal from a steel mill.

The steel manufacturing firm guarantees the quality of its product at a specified price. The labor union should also guarantee the quality of its product, which is work, when it signs an agreement concerning wages and working conditions. Collective bargaining has been generally accepted by American industry as the proper method for employing large numbers of laborers, but collective bargaining cannot be acceptable indefinitely unless it offers advantages to both employer and employee. It ought to provide the method for harmonious relationships with cooperation to promote the common interests of labor and industry.

It ought to be possible, when an industrial concern has signed a labor contract, for the management to consider its labor problem solved during the period of the contract, as its raw product problems are solved when orders have been placed. Then management could plan for the future, feeling secure in its commitments concerning labor and other essential materials, knowing where it was at.

Mr. Speaker, that editorial, written by Mr. Arthur Stace, the publisher, is not only pertinent, but it is sound and demands the attention of management, labor, and the Congress.

## The Military's Drug for Democracy

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. REED of New York. Mr. Speaker, the Honorable Senator ROBERT M. LA FOLLETTE, Jr., has had published in the Progressive magazine in the issue of November 19, 1945, a powerful argument against universal military training. It is, in fact, an indictment of militarism and ought to be read by every patriotic American who does not wish to see the youth of this country mentally enslaved and made the physical robot of a goose-stepping military machine. Under leave to extend my remarks, I ask that the article entitled "The Military's Drug for Democracy" be inserted as part of my remarks in the RECORD:

THE MILITARY'S DRUG FOR DEMOCRACY

(By Senator ROBERT M. LA FOLLETTE, Jr.)

Once again we have the issue of peacetime compulsory military training squarely before the Congress. After considerable vacillation, the President recently recommended the enactment of such legislation.

This endorsement was the signal the militarists were waiting for. We shall shortly witness a gigantic propaganda drive in the public press and over the radio designed to push the legislation through Congress early next year at the latest. Proponents frankly admit that this is their last big chance to fasten peacetime conscription on America. They know all too well that the opinions of returning veterans and the considered judgments of more normal times will do their cause no good. So they choose to strike for their objective before the reaction against the plan becomes too great.

There are some well-meaning people in their ranks who firmly believe that we should have a large training program. There are other well-meaning people among them who confuse mere numbers with true military security. There are still others who have suffered irreparable losses in this war and who seize upon this in desperation as insurance against repetition.

The militarists know full well that calm, full, and frank discussion of the facts involved will cause large deflections in the ranks of these people, and so they want to push the program while the aftermath of war still beclouds the issues and facts.

In my brief discussion of this subject, I want to say at the outset that I advocate that we fulfill our international responsibilities. I favor adequate military security for our Nation and the winning of the peace. And no responsible official in the Government or Congress who is either for or against military training is advocating any other course.

I make that statement to clear the atmosphere of debate upon one of the most far-reaching decisions in our history—because some of the supporters of this adjunct of totalitarianism attempt to brand those who oppose it as having no concern for winning the peace or maintaining our national military strength. I shall endeavor to explain later why it is my firm conviction that compulsory military training will actually weaken us in a military way, as well as in economic and social respects, while at the same time lulling us into a false sense of security.

It was apparent even before this war that the science of war was rapidly becoming a contest of technology. The war proved this and clearly showed that manpower without the latest weapons of war is virtually helpless. High-performance airplanes, radar, and other electronic equipment, guided missiles and rockets, the proximity fuze, and the atomic bomb are the spectacular weapons that immediately come to mind. Other thousands of technical inventions and improvements serve to emphasize further the point, as we look back on the war.

It is true that we still required many millions of men to win the war, despite our mighty technical weapons. One reason is that our activities were expanded over the entire world, over much more territory than a previous war had ever been fought.

Another reason is that all too often we were not efficiently organized. But perhaps the primary reason, other than the necessity of occupying territory, is the fact that modern technological warfare requires tremendous numbers of men behind the lines repairing and maintaining equipment. In general, the men behind the lines, the ground crews and maintenance personnel, are more closely associated with the normal activities of industry and the laboratory than they are with the military.

It is undoubtedly true that our future military strength will require us to make sure that we have available for any emergency a sufficient number of technically trained men who can perform technical war jobs without too much conversion. Apparently some who desire a military training program for all youth think the Army should do this. This is a rash conclusion.

A strong industrial economy is rich with technical personnel who can do the job. Any additional training along this line that needs to be done can best be done within our present technical schools and industrial organization. What we need most is a good corps around which to build—an efficient professional Army, well organized, surrounded by proper technical personnel and up-to-date weapons, and loaded with practical plans for rapid expansion if the occasion demands.

The modern criterion for war strength is not manpower, but rather it is technical and industrial power and the requisite raw materials to feed the industrial activity. We are proceeding in the wrong direction when we indiscriminately draft prospective scientists, and put them in uniform.

We came dangerously close in the recent war to the point of destroying the source of our own strength. We blindly drafted young scientists and then put them in routine jobs in the Army and Navy, where no use was made of their exceptional talents.

So firmly entrenched was the idea of mass service, and mass training, and mass conscription that a few leaders who did recognize the indispensability of the services of these men had to go to the absurd lengths of blanketing these men into uniform by Presidential order, in order to keep intact the personnel of certain Government laboratories. This is an excellent example of the kind of Frankenstein we can create for ourselves when we make a fetish of universal training, or place our complete confidence in brute numbers.

I cite the previous situation as a case where blind action tended to retard technical progress. It could be worse. And peacetime military training would be precisely the factor that would produce the worst condition; namely, not merely retarding, but choking off the ideas for technical progress even before the ideas are born.

It is a well-known fact that most of the startling technical progress of the past war came from outside the armed forces. And many a scientist and engineer will bitterly tell you that his developments and contributions were made in spite of, not with the help of the services.

The military atmosphere simply is not conducive to progresss in science. And I am frankly concerned over the numerous reports in the press and elsewhere telling how the services have largely alienated those who did the work behind the scenes and received very little credit when the cloak of secrecy was lifted.

The plain fact is that science and the military do not mix. If we seek to inculcate the youth of America with what the military proudly calls discipline—then simultaneously we destroy the creative, the inquisitive, and other special aptitudes of our youth which make for technical progress. There would be exceptions, I know, but the general result would be a leveling process, regimenting all to a general pattern.

News correspondents filing stories from Germany nowadays are continually writing about the amazing servility of the German people in accepting and obeying any orders issued, no matter how harsh. They are unanimous in reporting that it is no particular deference that is being shown to the victors, but simply an acceptance of the fact that the Allies are the successor government to a previous government that demanded and instilled this militaristic servility in its people.

If that is what we want in our youth, we will get it with mass compulsory military training. Even if we don't want it, we will get it with peacetime military training.

Advocates of military training are always enthusiastic about training young men. They explain that young men don't have set ideas and prejudices against military training and take to it. What better proof can be had that militarism takes advantage of immaturity and distorts normal thought processes? It is no credit to those who teach military discipline that they can break the spirit and imagination of a boy more easily than a man.

Mass peacetime military training is not only a drug to youth, it is also a drug to the members of the professional army who must do the training. Several of the military historians who have studied the mass training programs in Europe in the past two centuries have commented on the problems of assigning top-notch military men to teach civilian armies.

They point out that insofar as military training is concerned mass teaching is not akin to generalship on the field of battle; that a long tour of duty as an instructor, especially if kept in the same surroundings, tends to weaken him as a battle commander; that he becomes imbued with the fixed dogmas that he teaches, if not totally discouraged with the impossible task of making a military man out of every boy. This, of course, is the directly opposite situation to that which prevails when a select few who desire military training are chosen for such training in institutions comparable to our present Military and Naval Academies.

I repeat, there is a very real danger that mass training on a grandiose scale can seriously dilute and impair the effectiveness of a professional army that we need for adequate military security.

That brings me directly to several questions I want to pose. What can we expect to teach the trainees? It is generally admitted that in peacetime the prospective trainee will be apathetic, if not actually unwilling, to undergo training. That is definitely "strike one" on the teacher in any training program. As to a course of training, proponents of the training have widely separate views in what they advocate for the curriculum.

We have those who want to use training to promote the health of the Nation. We have those who want the program to be

strictly military. We have those who want a broad training. We have those who want a specialized training to suit the individual. We have those who want to train all youth, men and women. We have those who want to select only the best specimens of young manhood.

My own personal opinion is that some health benefits might be derived from the training. We have many undernourished and underprivileged youth who might benefit physically. But if health be our objective, why not go to the root of the health problem directly? And why must we tie military training to it? If it is necessary and desirable to insure better health for our youth—and few will argue against it—the corrective proposition should stand or fall on its own merits, and not be a subordinate side issue to military training.

It is frequently argued that universal training will have democratic benefits socially. This is not true. Instead of promoting wholesome social conditions, the segregation of large masses of men for prolonged periods undermines accepted social attitudes and standards of values. The reason is simple; it is an unnatural life and conducive to many warped attitudes and behaviors. This is an important part of the heavy social price we would pay for compulsory military training.

Some of the advocates of training try to make it more palatable by suggesting that the curriculum be partially elective and include a variety of subjects among which they cite aerodynamics, electronics, jet propulsion, rocket missiles, and allied subjects. They may be excellent sugar coating and may entice some to swallow the bitter pill that goes with it, but it is sheer folly to imagine that any effective results along these lines could be obtained in any short training course or with any trainee who had a limited background.

Subjects like this can be taught much more effectively within the framework of our present educational system, including the technical schools operated in conjunction with certain industrial organizations. During the recent war it was the technical experts brought in from the various schools and industrial organizations who carried the brunt of the training programs for the services. Why should we try to make a technical college out of the Army when we are better equipped to do general training in our present educational system?

It is a different matter when we come to specialized military applications of highly confidential nature. Many of these devices will be developed and studied behind the closed doors of Government laboratories. But it would be a nonsensical policy to allow every Tom, Dick, and Harry in any civilian training program to have access to equipment of highly classified nature.

Let us suppose for a moment that we have trained one class of trainees. How much time was necessary or how much money it cost is for the moment irrelevant. The real question is, How long will this training be valuable to the Nation? The answer is found in our experience in the recent war. In many branches of the Army and Navy it was the established policy to train and retrain, or train and "refresh" at periodic intervals for the reason that technical progress was so rapid it was necessary to do so.

This will be equally true in peacetime. Hence, with the diversions of civil life, the ravages of time, and the changes in militiary tactics, it is not unreasonable to expect that the potential value of the training will be almost zero less than 5 years thereafter. A single weapon can change military tactics overnight, as we have learned in connection with the atomic bomb.

What are the costs of a system of military training? In a study on postwar fiscal requirements, the Brookings Institution has estimated the direct costs of training would be a minimum of $1,360 per man per year, based on a trainee wage of $30 per month, and excluding instructional and supervisional costs which would be considered a part of regular Army and Navy costs.

Multiply this by 600,000 trainees and you get a bill for military training that is in excess of $1,000,000,000. Now, contrast this with the total public expenditures for education: Federal, State, local; boys and girls, men and women; full-time day schools, vocational schools, night schools, part-time schools; colleges, universities, libraries. Toward the support of all of these institutions with about 26,000,000 persons attending school, total support, including various grants and aids, is only about $2,500,000,000. If we are to spend money on training, we might do better to spend more of it on our established educational institutions.

Financial costs to the Government are only one of the costs involved. I have already mentioned other social and human costs. But over and above these there are still other intangible costs that will be very serious. One is the loss that will result from the interruption of education. Educators confirm the statement that too often an interrupted education—for whatever the reason—means the end of education for that person. Too often the student does not return to finish. This is just another social cost we would have to pay.

I feel strongly that the mere existence of the universal philosophy of militarism would stunt our national growth. Ask anyone who has served for any length of time in the military establishments. If he is candid he will confirm the fact that the accepted attitude all along the line is, in vernacular language:

"Don't worry about it; don't stick out your neck; keep your own skirts clean; let the next fellow do it."

I don't have to convince you that such an attitude is not conducive to progress.

What are the ingredients of national strength? Everyone will agree it is a combination of manpower, economic resources, and national morale. However, a mere reservoir of any or all of these factors is not enough. The speed and mobility of modern war requires that we be able to translate these factors into offensive striking power and that we maintain a proper balance between peacetime uses and probable wartime needs.

On the one extreme, we could devote all our manpower and resources for military purposes. Obviously, unless we intended it for aggression and plunder, this would be a national folly of protecting an empty cupboard; because economic wealth and strength can arise only from creative economic activity. Such a policy could lead only to national financial suicide.

On the other extreme, we could devote no manpower or resources for peacetime military purposes. This would be the cheapest, but a disastrous policy.

As long as international relations remain uncertain we have no alternative but to maintain sufficient military power to cope with eventualities. How much manpower will be necessary to maintain sufficient military power is a decision that must be squarely met on the basis of three factors: The world outlook with respect to international relations, the extent of our foreign policy commitments, and the security of the United States and its interests.

Our forefathers recognized the danger of militarism to the democratic way of life. Ever since the founding of the Republic we have resisted every effort to fasten compulsory military service upon the people except in time of war. This traditional resistance of the citizens of the United States is not based on mere theory nor prejudice. It has been clear through all history down to this very hour that universal compulsory service in peacetime has been the characteristic of governments which have been to a greater or lesser degree totalitarian and despotic.

We should not reverse our policy without complete understanding of its far-reaching devastating effect on fundamental human rights, and the political, economic, and social consequences which it will bring about in the years to come.

We have always depended upon the family, our educational system, and the church to build the moral and intellectual strength of American youth. A year of universal, compulsory peacetime conscription will snatch every youth away from these three great institutions of American society at the most critical period in their lives. It is no reflection on the military to deny that they cannot provide adequate substitutes for the family, the school, and the church.

In fact, every thinking person knows, if he is honest with himself, that the military, despite any efforts they may make, is an organization radically different from any of those we have relied upon in the past to build for better citizenship and higher moral values.

In the world in which we now live it was never more important for ourselves and for humanity as a whole that we strengthen and foster the family, the schools, and the churches as the institutions for the development and attainment of the highest ideals of human conduct. Can anyone seriously argue that a year away from these institutions which have been the source of development of American civilization will weaken their influence upon American youth?

And here let me warn you not to be taken in by the window dressing which the advocates of peacetime conscription will set up to make the proposal more attractive. They will talk about giving educational courses; they will shout about the religious opportunities which they will provide. If they could get by with it they would cook up some military substitute for the influence of the family.

No! A thousand times no! Despite all their efforts the military cannot provide an adequate substitute for the family, the school, and the church when it comes to developing and improving the moral and intellectual values of our society.

I think any thoughtful citizen will admit that the burden of proof is upon those who advocate that we reverse our national policy and adopt the abhorrent system of universal compulsory military service, and they have not proved their case. It does not make it so just because men in high places say it is so.

The experience in two World Wars should make us pause before we take the first step toward totalitarianism. Twice in my lifetime we have furnished the decisive military force to defeat nations which have relied upon universal military service for vast numbers of trained reserves for their military power.

In this war one of the first nations to fall was France. She relied upon universal service for her national security. I can recall early in this war that some of those—both military and civilians—who are now loudest in their support of universal service were saying that the French Army was the greatest in the world. They pointed to the huge reserves trained as a result of the French policy of universal compulsory training. We all know now that mere numbers of trained reserves proved to be a false base of security for France.

If someone says that the atom and the V-bombs have changed the situation, I ask, in turn, what evidence is there that these discoveries and others yet to come point to building our military security on masses of men trained for a year?

On the contrary, the logic of scientific developments for war point in the opposite direction. They indicate the need for vast, well-organized research, and the maintenance of highly trained and constantly retrained military forces of sufficient size to provide adequate security for America and to fulfill our international responsibilities and obligations.

There is no evidence to prove that we cannot have such military forces as we require on a voluntary basis. On the contrary, the results now being obtained in the recently launched voluntary recruiting program indicate that it will be a success.

Only last week Washington enlistments were being made at the rate of 2,500 per day and the drive is just beginning to gain momentum. This rate will produce 75,000 per month which now exceeds the quotas being inducted under the Selective Service Act. This record is being made at a time when we still have to maintain large occupational forces in both Europe and Asia.

To make the voluntary system work over a period of years we will have to reassess the compensation offered and the conditions of service.

We will have to provide more opportunities for promotion, in-service training for skills and professions, as well as additional retirement benefits, but I am convinced the job can be done.

Others may disagree but before we break our national life-long tradition and take the consequences in social, educational, and moral retrogression, let us make the effort.

Let no man say we do not have time to try the voluntary plan. We are getting all the men the military now require by voluntary enlistments and the Wartime Conscription Act. For the immediate future, we have millions of men who have had the best training the military can now provide. In case of an emergency in the immediate future, they will be available.

There is no need for a hasty decision to fasten peacetime conscription on American youth forever. It is the proponents of this alien system who are in a hurry. They have everything to gain and nothing to lose if they can stampede the people and the Congress into making this initial move toward totalitarianism.

No; the evidence is clear that we do not have to take this decision on the basis of any immediate situation.

If it is argued that peacetime conscription is required for the more distant future, I ask who is it we are preparing to fight?

Certainly no informed person can contend it is one or all of the enemies we have just defeated. They have been crushed, their ability to wage war destroyed or in the process of destruction. They will not be able to wage war in the "foreseeable future," as Gen. Douglas MacArthur has said, and every competent military authority I know agrees with him.

Then, is it one or more of our allies we are preparing against? If the proponents of conscription in peacetime answer "Yes," then I say let us propose to our allies the universal abolition of peacetime conscription before we launch on another destructive, mad rush among our allies for rearmament and peacetime conscription.

The mothers and fathers, the educators, the clergy, the citizens and the youth of America are entitled to frank answers to these momentous questions before we sentence our youth to involuntary servitude even for 1 year.

Let us not import this alien philosophy and stunt our growth as a Nation with militarism. Let us maintain adequate military security by voluntary methods and free the people of this great Nation to devote their energies toward building a better America, a better world, and winning the peace.

## Statement on Palestine by Hon. Guy M. Gillette, Representative Andrew L. Somers, of New York, and J. David Stern

---

EXTENSION OF REMARKS
OF

### HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Friday, November 23 (legislative day of Monday, October 29), 1945*

Mr. GUFFEY. Mr. President, I ask unamious consent to have printed in the RECORD an important statement made by Mr. J. David Stern, publisher of the Philadelphia Record, the Honorable Guy M. Gillette, and Representative Andrew L. Somers, of New York, on November 15, 1945, on the eve of their departure for London to discuss a final solution of the problems of Palestine, with officials of the British Government.

There being no objection, the statement was ordered to be printed in the RECORD as follows:

The decision to create a joint Anglo-American commission of inquiry on Palestine is in line with American treaty obligations toward Palestine and the Hebrew people.

But we must sound a note of caution. Creation of the commission of inquiry must not delay for one moment the repatriation to Palestine of the Hebrews still surviving in European concentration camps, or living under conditions little improved over those preceding VE-day. It has been established by competent authority that these wretched remnants will not wholly survive the coming winter unless they are removed. No commission could establish the facts of that situation with greater force or with clearer competence than was shown by Mr. Earl Harrison, the President's investigator, Mr. Harvey Gibson of the Red Cross, or Judge Rifkind of General Eisenhower's staff.

The British Government has thus far failed to respond to the request by President Truman for the immediate transfer of the 100,000 in the American and British zones of occupation, or to the vociferous American public opinion supporting that request. We nevertheless feel it our sacred duty to sustain and not to abandon these martyrs in the cause of the United Nations. Our prime task in London will be to demonstrate to official and unofficial British opinion the error of British policy, and to point out that this policy is detrimental both to the interests of the British people and to Anglo-American friendship. The failure to have a "decent respect for the opinions of mankind" is a point on which our country is still very sensitive; and we can safely say that there has rarely been a phase of foreign affairs on which the American people have been so united as on the moral and legal right of the surviving Hebrews of Europe to enter Palestine.

We shall point out to our British friends that Palestine is not a British territory and that they cannot administer it in a manner that arouses such sharp criticism and dissatisfaction amongst the people and Congress of the United States. We shall point out to them that it will be highly injurious to the good name of Great Britain if they maintain that the Committee of Inquiry should also have to "inquire" into the position of the Hebrews now in concentration camps; it would be like appointing a commission to investigate a drowning man.

Now that a joint Anglo-American body is to review the broader aspects of the problem, surely the British Government can readily afford a gesture of good will toward these long-suffering people. They should no longer be denied the freedom of self-determination which is the right of other peoples. Under it they have applied for Palestinian residence and citizenship.

But the fate of the Hebrews on German soil is merely a fraction of the problem. Its core is the future of some 2,000,000 Hebrews in central and eastern Europe whose problem must also be solved and whose right of self-determination must also be assured. It is not only a humanitarian question; it is a matter of direct consequence to the stability and peace of Europe and the stability and peace of the whole world.

Our delegation will advocate a full and integral solution of this entire problem, believing as we do that further delay and postponement is detrimental to all concerned. Anti-Semitism has proven to be one of the deadliest weapons in the hands of Fascism and the dark forces of reaction. By leaving the problem unsolved there is created a tremendous source of anti-Semitic propaganda in Europe, in the Middle East, and even here in our own country. It is a test case of the principles upon which the United Nations Organization was founded; for of what avail are pronouncements of the "four freedoms" when pogroms again rage in Europe, and the Hebrews are denied the right of self-determination and a voice in the government of their own territory?

Our delegation will therefore back the proposals of the Hebrew Committee of National Liberation which distinguish between the status of people of many lands who are of Jewish faith and the status of the Hebrews of Europe and Palestine who regard themselves as members of the Hebrew Nation. The recognition of this normal national status of the Hebrew people will of itself and the anomalous position in which they now find themselves will make possible an amicable solution of the political and boundary disputes over Palestine. By eliminating the controversial issue of a state religion, such as the very term "Jewish commonwealth" inevitably signifies, it will be possible, once the present barriers have been lifted and the right of Hebrew repatriation assured, to grant Palestine its independence as a free republic with full equality in citizenship and government to Jews, Moslems, and Christians alike.

There is ample evidence that an overwhelming majority of the Moslems now residing in Palestine will be very happy with such a solution.

It is also proposed that in the interim period Palestine be placed under a United Nations trusteeship and that the United Nations Organization supervise and assist in the repatriation of the Hebrews and in preparing the country for the exercise of its freedom.

We wish to stress again the urgency of the first part of our task. Former Secretary of the Treasury Henry Morgenthau, stated last week that according to official information more than 50 displaced persons die every day in the British and American zones alone. This figure is bound to double and triple during the severe winter months now at hand. It is imperative to make sure that millions of Hebrew dead have not made us callous to the useless loss of even one more Hebrew life, hence the extreme urgency of our mission.

It is important to note that in his statement about the committee of inquiry, President Truman also made public the text of his strong communication to Prime Minister Attlee, asking the immediate transfer of all the Hebrews from Germany to Palestine; he reiterated his position by stating that "I continue to ahere to the views expressed in that letter."

We feel confident that our endeavor will succeed and that the present victimized

inhabitants of Dachau, Bergen-Belsen, and Buchenwald will not be forced to die there this winter, but rather that American Liberty ships will soon carry them to safety and dignity in their own homeland.

Judge William S. Bennett and Dr. Johan J. Smertenko, of New York; Mr. Fowler Harper, of Indiana; and Mr. Joseph Sharfsin, of Philadelphia, are already in London and have joined with a considerable body of Members of Parliament and civic leaders who are in agreement with our endeavor. We are leaving today with the strength of the knowledge that the people of the United States are behind us in this mission, and the hope that better judgment will prevail and the British Government will abandon its present indefensible position.

We wish to thank Secretary of State James F. Byrnes and British Ambassador Lord Halifax as well as officials of the State Department and British Embassy for having so helpfully expedited the arrangements for our mission.

(During the press conference in which the foregoing statement was made, Mr. J. David Stern disclosed that he had called upon President Truman and Secretary Byrnes yesterday to take his leave. Mr. Stern said he was "deeply gratified and encouraged" by their expressions of good wishes and their hopes for the success of the mission of rescue.)

## Statements in the House of Commons of Mr. Attlee and Mr. Eden

EXTENSION OF REMARKS

OF

### HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

*Friday, November 23 (legislative day of Monday, October 29), 1945*

Mr. HATCH. Mr. President, before I begin the remarks which I have prepared to make today I wish to comment briefly on a most important debate which took place yesterday in the House of Commons. I have read with intense interest this morning's news account of that debate, and I wish to commend the House of Commons for having full dress debates on the vital and all-important question of foreign relations. Especially was I gratified to read in the press report the statements of Mr. Anthony Eden and Mr. Attlee, among other things advocating a revision of the San Francisco Charter and doing away with the veto power, and strongly condemning that nationalism which stands almost as a complete barrier to world cooperation.

I approve of those statements and wish that I might comment at length upon them, but at this time I ask unanimous consent that the text of the speech of Mr. Attlee and excerpts from Anthony Eden's address before the House of Commons, as published in the New York Times, be printed in the appendix of the RECORD.

Mr. President, an estimate I have received from the Government Printing Office indicates that printing the addresses of Mr. Attlee and Mr. Eden will exceed by one page the two pages allowed under the rule and that the cost will be $156. Notwithstanding this, I desire to have the addresses printed in the RECORD.

There being no objection, the text and excerpts were ordered to be printed in the RECORD, as follows:

ADDRESS OF PRIME MINISTER ATTLEE

In addressing the House this afternoon I am speaking in the third legislative chamber in 10 days. On Tuesday, November 13, I had the honor of addressing the joint session of Congress at Washington and on Monday last I had the privilege of speaking to the two houses of the Canadian Parliament at Ottawa.

I am speaking in this debate on foreign affairs because I thought it right to take the earliest opportunity of giving the house an account of my visit to the United States and Canada and to amplify in some degree the joint declaration which was made by President Truman, the Prime Minister of Canada, and myself on atomic energy. I also thought it right that the house should have an opportunity of expressing their views.

It will, I am sure, be realized that I have not had very much time to prepare myself since landing on Tuesday night, and I, therefore, do not propose to range over a large number of topics which may properly be raised on debate on foreign affairs but shall confine myself to the main subject of discussions which I had across the Atlantic.

NO CURB ON DEBATE SOUGHT

In doing so I should, however, make it clear that the Government have no desire or expectation that this debate should be restricted to this topic.

The Foreign Secretary will be speaking tomorrow and will reply to today's debate.

I would like to say a word here as to the circumstances which gave rise to the visit.

Toward the end of September last, I made known to the President of the United States my views on the vital importance to the world of the discovery of atomic energy, and of its application to warfare which made it essential that those in responsible positions should consider the problems to which it had given rise, and the implications which emergence of this weapon has on the endeavors we are all making to banish war from the world.

In conveying to him tentative conclusions to which the Government had arrived, I suggested a personal discussion which might follow, and in October I received an invitation from President Truman to visit Washington to discuss the whole matter with him and the Prime Minister of Canada. The Prime Minister of Canada had been over here on a visit and I had the advantage of exchanging views with him.

I am very grateful to Sir John Anderson, whose knowledge of the subject and of the circumstances attending working with the Americans and Canadians on atomic energy research was so great, and for being so good as to accompany me. His knowledge, advice, and help at all times were invaluable, and I am very greatly indebted to him.

During my stay in Washington I was most kindly entertained and had numerous meetings with Cabinet Members, Senators, Congressmen, and other leading figures in the political world.

FRUITFUL TALK ON YACHT

From the day of my arrival I had constant meetings and talks, most of them taking place at the White House, and one long, fruitful, and pleasant talk on a yacht in the Potomac River.

While the principal subject of the talk concerned problems they had met to consider, I naturally discussed with the President and Mr. Byrnes and others matters of common interest, and I found as always a friendly and cooperative attitude.

I had the honor of addressing a joint session of Congress, and I paid tribute, as I feel sure that House would have wished me to do, to the unsurpassed war effort of the United States. I also told them I had come with the united good wishes of the House of Commons in the task which lay ahead.

I was quite sure in the United States it was fully realized that there was no difference of opinion in this House about its desire for the utmost cooperation in world affairs with the great Republic across the Atlantic.

I would like to acknowledge here the great assistance I had from our Ambassador, Lord Halifax, from Field Marshal Sir Henry Maitland Wilson, and from all members of our staff in Washington.

I then went to Canada, where I was immensely struck by the deep desire of the Canadian people to do all they could to help this country in the difficult circumstances of the present time.

I told them very frankly of our difficulties, but I assured them that we were meeting them in a spirit of resolution and confidence. The Prime Minister of Canada assured me of the affection and admiration of the people of Canada for the people of this country.

Indeed, I found that assurance in the demeanor of everyone with whom I came into contact. I had the honor to lay a wreath at the foot of the War Memorial in Ottawa and in Ottawa I also had the benefit of the extremely able help of the Lord High Commissioner.

I now turn to the principal matters which I discussed with the President [Truman] and Mackenzie King. I should like to say something first of all with regard to the approach I made to this question of atomic energy as applied to war. In my view it is impossible to isolate the problem of the atomic bomb from that of the use of other destructive weapons.

There was a time when wars were locally fought out with weapons which to us seem extraordinarily primitive. In those days losses and destruction caused by war could often be made up in a few years and great as was the misery caused the thing was measurable. Sometimes even the losses were slight and men in authority might count the cost of war as worth while for the advantages, but those advantages seem to us sometimes today to be trivial. Such an attitude toward war is impossible to our generation. We have seen two world conflagrations, and we know the cost or at least we know something of the cost in human suffering and in the destruction of the work of generations of man.

The practical obliteration of great cities which took place in the last war as a result of shelling and bombing was bad enough. We know too well what the effect of the bombing was in London, Coventry, Plymouth, and other cities, and anyone who has seen Aachen and Stalingrad or Warsaw knows how infinitely greater is the ruin on the continent of Europe.

BOMB MAY NOT BE LAST WORD

It was with that object lesson in their minds that representatives of nations met at San Francisco. But since then we have had the atomic bomb. Two only were dropped on Japan, but in each instance a large part of a great city with its inhabitants was wiped out. The atomic bomb is the latest word in destructiveness, but it may not be the last.

It brought home as nothing else has done that if civilization is to survive there must be no repetition of the First and Second World Wars. Therefore, when I spoke in Mansion House—and in all my discussions—I have considered not just the elimination of atomic bombs from the armory of nations but what kind of a world order is necessary in an epoch in which science has placed in man's hands such terrible weapons. I emphasize this because there have been attempts in the past to eliminate certain weapons and certain methods of warfare, and there were certain successes in the past. There have been wars in which the Geneva

Convention has been pretty fairly observed on both sides, but broadly speaking, the attempt to abandon certain weapons has failed.

Gas was banned before the 1914–18 war but was used, and I have no doubt that if the Nazis had thought it worth while they would have used it once again. The bombing of open cities once filled the world with horror, but it became the everyday experience of the citizens of London in the last war. I do not believe that in a warring world, except to a very little extent, there can be a set of Queensberry rules.

I think an attempt on those lines is as futile as an attempt of knightly contestants of the Middle Ages to ban that unsporting thing—gunpowder.

I think it is well that we should make up our minds that if the world is again involved in a war on a scale comparable with that from which we have just emerged, every weapon will be used. We may confidently expect full-scale atomic warfare which will result in the destruction of great cities, in the death of millions and the setting back of civilization to an unimaginable extent. You will find this thought expressed in the joint declaration.

UNITED NATIONS OFFERS HOPE

We have in process a meeting of the United Nations Organization, and there is an instrument which, if all nations resolve to use it, can establish a rule of law and prevent war.

I say resolve to use it because to my mind here is the essence of the problem. Just as no system of inspection or control of weapons is to avail without good will, so no international organization, however carefully framed, will be of any avail unless the nations resolve to lay aside war and threat of war as an instrument of policy, unless they determine to establish between themselves such mutual confidence that war is unthinkable. This is the only real solution. No safeguard offering any chance of success should be overlooked or ignored.

I say mutual confidence is needed, but it is as well to remember that over great areas of the earth's surface this confidence is already established. War between Britain and any of the dominions is unthinkable.

War between Britain, Canada, or the United States is unthinkable. It is the task of statesmen to spread that confidence throughout the world. The declaration which we made at Washington was made with this object of increasing confidence in order that we may press on with the great task of ridding the world of the fear of war.

Let me turn now to what we have actually done. First, we three countries were concerned in the discovery and development of atomic energy. Countries which possess the knowledge have already made available to the world the basic scientific information essential to its development for peaceful purposes.

We declare our readiness to make available any further basic scientific information of this kind for the whole world. We desire to promote the use of advances in scientific knowledge to peaceful and humanitarian ends, and we declare our readiness to exchange fundamental knowledge and to arrange for interchange of scientists with any nation that will fully reciprocate. I ask the House to note that desire for reciprocity. We cannot tell what scientific discoveries may be made and used for warfare. Therefore, we ask that all should be prepared to do what we have done and what we are prepared to do.

INDUSTRIAL ENERGY YEARS AHEAD

I now turn to the question of the disclosure of detailed information from the practical industrial application of atomic energy. Atomic energy already has been used for destruction. Its development for peaceful purposes, for helping instead of destroying the human race, is not likely to be perfected for some years at all events. Meanwhile, methods and processes already developed can lead to either purpose. The proposal has been urged in some quarters that knowledge of these processes should be broadcast to the world in the same way as fundamental scientific information has been given.

I cannot think this would be wise. In the first place this knowledge cannot be given in formula or blueprint. It can only be done by scientists and technicians being taken to the plant to explain everything in detail involving numbers of men with specialized knowledge.

That is a matter which would take a long time, and to do this for all nations would clearly be a matter of very great difficulty, and I can see no reason for singling out particular nations.

Secondly, this discovery can be used either for peace or war. Can it be wise then when the United Nations Organization is only just formed and not out of its cradle to broadcast to the world methods of making such a destructive weapon?

In our view, this must await the growth of confidence and the development of safeguards. It may be said, what safeguards are any use?

CONFIDENCE IS ESSENTIAL

I may be told that I have already said no system of safeguards can be devised to make an effective guarantee, but I ask the House to note the words about a nation bent on aggression in the declaration. Where there is no mutual confidence, no system will be effective. Where it exists there will be no difficulty. For instance, there is no difficulty between Britain and Canada and the United States. We trust each other. We are able to have free, full and frank discussions.

We wish to establish between all nations just such confidence. It is to be remembered that although the processes for producing atomic energy are complicated and require a great plant, the product itself is a small thing. The weight of the bomb on Hiroshima was not great. Clearly there must be most sedulous care taken in the control of this most dangerous substance.

The three signatories declare, however, their readiness to share with other nations on a reciprocal basis the practical industrial application of this discovery just as soon as effective and foreseeable safeguards can be devised and to this end they propose a commission under the United Nations Organization.

The House will have seen the duties it is proposed to entrust to the commission.

It will be remembered that the United Nations Organization is set up for the prevention of wars and the establishment of peace. It is, therefore, natural to entrust this work to the commission which will make recommendations to that organization. I draw special attention to the provision that the work of this commission is to proceed by stages.

There is not only atomic energy to be dealt with, but all weapons adaptable for mass production. Not one of these weapons has a legitimate place in the armaments needed for ordinary internal security or protection of a government. They are weapons for total war designed for mass destruction, and we must banish total war from the world if civilization is to continue.

Here is our declaration. I hope that there will be a world-wide response to its principles and proposals here made for spreading scientific information for peaceful purposes and the prevention of these perversions for war. The United Nations Organization will soon be meeting when these matters will be brought up. This cannot be solved by America, Canada, and this country alone and it would be a disservice to pretend that it could.

This is a world question, and for its solution we need not merely agreements of governments but the wills and faiths of the peoples of the world.

Lost friends, ruined homes are fresh in the memory of us all. We have been through so many horrors that perhaps it is difficult for most people to grasp the threat there is still stretching before us unless men can so order their affairs as not to be destroyed by their own invention.

The atomic bomb is here. It is not something just noted, nor a newspaper sensation to be read about in comfort. It is a danger that hangs over every one of us here in this country and over all the peoples of the world.

The United Nations Organization is now here. It is here, present in the world. It was born almost at the same time as the atomic bomb. It is not something vaguely heard of and outside the range of our life. It is fraught with tremendous possibilities, and I want everyone here in this country and in the world to feel their personal concern in the success of the United Nations Organization.

I would like to end with some words I used on Monday in addressing the Canadian Parliament:

"Unless we apply to these problems the moral enthusiasm as great as that which the scientists bring to bear on our research work, then our civilization built up for so many centuries will surely perish."

---

ADDRESS OF FORMER FOREIGN SECRETARY ANTHONY EDEN

All sections of the House will join in welcoming home the Prime Minister and Sir John Anderson. A flight across the Atlantic in midwinter is not without its risks, and it is characteristic of both of them that they covered with becoming modesty the fact that there was only one airdrome left in England upon which they could land. It is part of the business of Ministers in these days to take such risks.

We are happy that Mr. Attlee has done so this time without any unhappy consequences. We are glad to see him looking well, here with us again.

I had hoped the Prime Minister would tell us a little more about what steps are to be taken now to give effect to the conclusions reached in Washington. As I understand it, a really new departure at the Washington discussions was that the three powers there charged with this particular responsibility decided it was their duty to take the initiative in this matter in relation to the other nations of the world, and their initiative had been to ask that a commission of the United Nations should be set up which would, by stages it was hoped, and by agreement, deal with this subject.

ASKS ABOUT COMPOSITION

Who is going to compose that commission? Presumably it would be the members of the Security Council. Are there to be any others as well? If so who else, and have the invitations gone out? If they had not when would they go out, and who would send them? When would this commission meet? Those were the kinds of questions which we had in mind when we read the admirable basis of work agreed on in Washington.

As I understand the commission was to proceed by stages. In view of the immense intricacy of this subject I think that is right. As I see it, what will happen is, if these invitations are accepted, the United Nations commission will meet together and will first exchange this information.

If this exchange is accepted by all of them they had the first stage in the creation of international confidence and would move to the next stage, to the control of atomic energy to the extent necessary to insure its use for peaceful measures.

The other thing we would like to know is if communications have gone to other nations since the talks were completed. Have any communications gone to Russia about the outcome of the talks?

(Mr. Attlee interposed here and said the Washington declaration was communicated to the Russian Government before it was made public.)

I am much obliged. I think it was useful to get that out.

(Mr. Attlee interposed that the United Nations Organization would itself set up the commission, saying, "Therefore, until you have got the United Nations Organization I cannot tell you what the composition of the commission would be. It would be a matter for the United Nations.")

Is the conception that there will be a special meeting of the United Nations Organization to set up this commission? Otherwise, it may be a long time before anything will happen. I understand there is an acting chairman, and his suggestion is that someone should send a communication and ask for the commission to be set up; otherwise we may have to wait a long time before even the preliminary stages were taken.

This is what seems to be the fundamental of this problem: The truth is that by the discovery of this atomic energy science has placed us several laps ahead of our international political development, and yet unless we can catch up politically to the point we have reached in science and thus command the power which at present threatens us, we are all going to be blown to smithereens.

Mr. Byrnes put it well when he said the civilized world cannot survive atomic war. I agree with the Prime Minister that no set of rules is going to enable us to survive a future war when this weapon is latent for use, and no safeguards by themselves are going to provide an effective guaranty. They have got to be accompanied by the acceptance of the rule of law among nations.

During this war we had thought at San Francisco to lay the foundations of a new world order. But the truth is that all the events of recent years have tended the same way: to narrow the world and bring us closer together and, therefore, to intensify the shocks and sharpen the reactions before the shock absorbers are ready.

SOVEREIGNTY CRUX OF PROBLEM

Every succeeding scientific discovery makes greater nonsense of old-time conceptions of sovereignty, yet it is not the least use deluding ourselves. It is yet true that national sentiment is still as strong as ever, and here and there it is strengthened by this further complication—the differing conceptions of forms of government and differing conceptions of what words like freedom and democracy mean. So despite some stirrings the world has not been ready to abandon or to modify its old conceptions of sovereignty.

Now atomic energy has come to enforce the call for something more. The world family is smaller today than was the European family at the end of the last war. I have thought much of this business of atomic energy both before and since that bomb burst on Nagasaki, and for the life of me I have been unable to see—and I am still unable to see—any final solution that will make the world safe from atomic power other than that we all abate our present ideas of sovereignty. We have got somehow to take the sting out of nationalism. We cannot hope to do this at once. But we ought to start working for it now, and that I submit should be the first duty of the United Nations.

We should make up our minds where we want to go. I know in this respect where I want to go. I want to go to a world where the relations between nations can be transformed in a given period of time. As the relations between England, Scotland, and Wales have been transformed.

In the light of discoveries about atomic energy I think that the San Francisco Charter should be reviewed particularly with respect to the veto which is an anachronism in the modern world.

Nobody here will deny that there has been an increase of suspicion and mistrust recently between the Soviet Union and the other two great partners in victory, the United States and ourselves. We all deplore that, and if I make some remarks upon it I hope it will be understood that those remarks are made by one who always has been convinced, and is still convinced, that the future peace of the world depends upon understanding between ourselves, the United States and Russia.

RUSSIANS WANT SECURITY

We want the fullest Russian participation in all world affairs on equal terms. Many times Russian statesmen have spoken to me and Mr. Churchill of their need for security and the anxiety they feel for friendly relations with their neighbors. We have never disputed that.

The Russians had gone very far in making arrangements with all their neighbors. Against whom are all these Russian arrangements being made? I know the answer. They have given it to us many times. They are made against a possible resurgence of German plans for domination of Europe. The Russians are not as convinced as some people that the Nazi spirit is entirely dead.

Any arrangements between us and our western neighbors are no more aimed against Russia than are Russian arrangements with her neighbors aimed at us. I think it is desirable that that should be plainly stated because I am convinced it is the literal truth. We know that Russian arrangements are not aimed against us.

There continues to be in Britain amongst virtually all sections of the people, a deep desire for friendship with Russia as close and as cordial as we have with the U. S. A. But there is another unhelpful influence which militates against this and which I think should be mentioned. It is the difficulty of getting information out of Russia and out of territories controlled by the Soviet Union.

I would beg our Russian friends to believe that they could make no greater contribution to real understanding between our countries than to allow foreign correspondents in their territory or in territories under their control, the same full freedom as is allowed Russian correspondents here. We have got to get to know each other, and that involves freedom to speak and to comment across frontiers. Drop those barriers of censorship and you will blow away in one gust much of those black fogs of suspicion.

THE IRANIAN TROUBLES

We have read with some concern in the press of recent disturbances in northwest Persia [Iran] and of a decision by the Persian Government to send troops to deal with those disturbances and a report that those troops were turned back by the Soviet authorities.

I must say that I find it impossible to reconcile such action either with the Anglo-Soviet-Persian treaty of 1942 or with the Teheran declaration of 1943. That declaration said "the Governments of the United States, the U. S. S. R., and the United Kingdom are at one with the Government of Iran in their desire for the maintenance of the independent sovereignty and territorial integrity of Iran."

From 1940 and still more in 1941, when Russia was attacked, Persia became the happy hunting ground for German agents. The moment that Russia was attacked we had need of those communications through Persia as the only alternative route to the northern convoys, the full story of whose gallantry I pray somebody will one day write as it should be written. To deal with the German agents and to prevent sabotage to the railway it was necessary to take certain military steps. We did so, but we made it plain it was only to insure our supplies to Russia that we intervened in Persia and that we wished to interfere as little as we could with Persian sovereignty.

We were most anxious not to revert to that past and pernicious policy which was called the "spheres of influence" in Persia.

In view of that, when the German war began to come to an end we became anxious to withdraw our troops and we first raised this matter at Yalta. No decision was reached then about the withdrawal of troops but the Russians there did reaffirm to us their determination to stand by the Teheran agreement. Later, at an early stage of the Potsdam Conference, we raised the matter again, and our desire then was to arrange for an early withdrawal, even before the treaty obligation came into force.

The treaty obligation is to withdraw 6 months after the close of the Japanese war. In London agreement was reached to withdraw by March 2.

Our task in Persia, and our only task, was to guard the lines of communication and supply, and not to interfere in internal affairs in Persia. Those lines of supply are no longer of any importance except for the maintenance of our troops and the Soviet troops who are there. I am afraid this incident is not the only occasion when the Soviets have refused permission to Persians to move their troops and gendarmerie about in the area under their control, and in consequence it is not very surprising that suspicions have been raised.

There are two steps that our Russian allies could take that would remove suspicion. They could make it plain that they have no objection to the free movement of Persian troops in their area and that they would be prepared to give those forces opportunity to move and act when they reached the area. I might also add that here, as elsewhere, the Soviet Union would greatly strengthen its case and remove suspicion and charges by inviting the press of the world to go and see for themselves what is going on in that area and allowing them freely to publish their observations.

I do think it is better in the long run for our relations with Russia, which I hope my record shows I care very deeply about, that one should thus speak frankly when the occasion arises.

I should like to ask what exactly was going on in Greece. We read that the Archbishop has resigned. That is deplorable if it is true, because he had given very valued service to Greece at a very critical time; but perhaps resignations in Greece are not quite so serious as they are in this country. Maybe he will come back again.

Even more serious is the news of the postponement for 2 or 3 years of the plebiscite in respect of the constitutional future of Greece.

I am not going into the merits of my desire, if I have any, as to the outcome of the plebiscite, but what I want to say about this delay is that it does run counter to the undertakings which were given to the King by the then Prime Minister and myself when he himself offered not to go back to his country until the country had voted.

We then said and we told the House that the idea was that the plebiscite would be held at an early date. No one in the world can think that 2 or 3 years from now can be regarded as an early date.

Regarding the report of financial assistance being conditioned in some way, perhaps he can give some information about that also.

I know the Foreign Secretary was disappointed by the break-down of the London Conference. Despite that it is hoped that he would persevere in his efforts to bring about another meeting at which we could do better.

It is, I am sure, only through direct contacts with the Russians and other allies that suspicions can be ventilated and allayed, as they must be if the world is to have a chance to enjoy the enduring peace it deserves.

Earlier, I spoke of the destructive possibilities of atomic energy, but there is another side to this stupendous discovery—the possibilities for good, though not so immediate. The world sees, perhaps not so far away, the chance of security or even plenty for all. The world must seize that chance if we are to prove worthy of those who fought and died that we might have it.

## The Red Cross

EXTENSION OF REMARKS
OF

## HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Monday, November 19 (legislative day of Monday, October 29), 1945*

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from yesterday's Washington Post written by the talented and brilliant Agnes C. Meyer in a critical spirit of the centralization of the Red Cross, and urging that that organization lead the democratic trend in welfare.

I am familiar with the situation about which Mrs. Meyer writes, and I am entirely in sympathy with what she has said, since World War I.

I have received an estimate from the Government Printing Office indicating that the article will exceed by two-thirds of a page the two printed pages allowed under the rule and will cost $138 80.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED CROSS URGED TO LEAD DEMOCRATIC TREND IN WELFARE—CABINET POST PROPOSED, ALSO NATIONAL COUNCIL INCLUDING ALL AGENCIES

(This is the text of a much-publicized address delivered Thursday before the regional conference of the American Red Cross in New York)

(By Agnes E. Meyer)

Why am I here today? Because I made in a recent address to the trustees of voluntary welfare groups some sharp criticisms of the Red Cross. Some of your own liberal leaders now have given me the great opportunity and serious responsibility of amplifying those statements directly to you. Such an invitation is a mark of confidence which moves me profoundly. Surely democracy is safe when there are people left in our country who respond to criticism with such tolerance. I am, to be sure, in the position of a guest who has been invited to dinner to criticize the hostess. But your hospitality cannot absolve me from duty toward my country—and toward you—of speaking the truth as I see it. Your invitation obligates me to describe some of the dangers that beset not only the Red Cross but all voluntary welfare agencies in this period of social revolution.

For the Red Cross finds itself in exactly the same dilemma as many another American institution, not excepting the churches. A part of your leadership sees the urgent need for a revaluation of values in the light of social conditions and evolving contemporary needs. But another element clings with desperation to the worship of entrenched power and of certain authoritarian ideas that are now dead as a door nail. Your situation is more difficult than that of the other private welfare organizations because of your numbers, your wealth, and therefore of the power involved.

There are other obstacles which make it difficult for the Red Cross to find its way out of this dilemma. The Red Cross has a head and a body but these two parts have no lifegiving relationship. The central committee or mind of your organization functions in an exalted isolation which the body—local chapters and contributors—has no means of enriching with a vigorous blood stream of opinion. On the other hand, your bodily functions cannot be guided by the head through uniform standard setting and speedy assistance, whether of a financial, advisory, or other nature. Often the chapters in the same State or even the same city do not know what the others are doing or thinking.

NEED STATE SET-UP

Instead of a few area boards, what the Red Cross needs is a State-wide federation of chapters under an elected State council, the chairman of the State council to have a voice in major proposals of your central committee. Without a State agency, you can never cooperate effectively with a peacetime welfare program, since all welfare work in our country is organized on a State and community basis. But I bring up this point now because my appeal is addressed to the rank and file membership. To become articulate in a fluid moment such as this when your group, like any other, is torn between progress and reaction, the membership, the great body of people who contribute their funds and services, must become the deciding factor, must achieve machinery by which it can reject at a moment of crisis its reactionary leaders and support those whose policies seem in harmony with the Nation's welfare.

No American who has the future of our country at heart can be indifferent to the choice you make between these contending forces. The Red Cross has the greatest potentialities for good of any single welfare organization in the country if only because of its size, wealth, and prestige. But it also has possibilities for evil. Unless you see to it that your progressive leadership is upheld, the Red Cross can easily become a menace to the progress of democratic ideas and their effective implementation.

Let me begin by giving you an illustration of undemocratic leadership by your small but powerful group of reactionaries who strive to keep the reins of control in their hands. I refer to the distorted version of the relationship between the Red Cross and our two major labor organizations which lately have been fed to the press. These relations are based upon an honorable and businesslike agreement which does credit both to the Red Cross and to the labor organizations involved. Yet for devious purposes this contractual relationship has been painted as a stain on the otherwise untarnished reputation of the Red Cross and an unpatriotic act on the part of labor unions.

Let me outline the history of that agreement as given to me by members of your central committee and by the war relief committee of the labor unions.

RED CROSS AND LABOR

Early in 1942, A. F. of L. and CIO proved they could act together when the welfare of the country is involved by making an agreement with the Community War Chests and councils to collect at least 1 hour's pay each month from every union member. These labor leaders were among the first to recognize that the total efforts of the American people could be mobilized only if a unified approach were substituted for innumerable separate campaigns. They also wished to protect their members from the confusion of multiple appeals. The plan was worked out on a community basis with careful supervision. When the National War Fund was organized in January 1943, the arrangement was continued and extended. As the war fund had its own administrative budget covering campaign and promotional expenses, it preferred to meet the administrative budgets of the two labor committees and receive in return their total collection.

Then came the eternal problem of the separate Red Cross drive. The unions solved it by allocating 4 months of their annual intake to the Red Cross and 8 to the War Fund. Their combined budgets for the year beginning May 1, 1945, are $698,000, of which one-third is provided by the American Red Cross and two-thirds by the National War Fund.

In return for its $232,000, the Red Cross received from CIO and A. F. of L. $30,000,000 last year, or at an overhead of less than 1 percent. If the Red Cross received all of its contributions at so small a cost, we would consider it very efficient. Yet your reactionaries talk as if the rest of the Red Cross funds just drop into its lap like manna from heaven. Their loud cries that something has been put over on the dear Red Cross is hypocritical hokum. Your central committee voted for the contract with a majority of 16 to 2. It made no secret of the arrangement. Copies of the agreement were given to the press and to every one of 3,750 chapters.

The plan has worked remarkably well. Every group involved has expressed its satisfaction publicly, including the National War Fund and the Red Cross. It represents a great step forward in the relations of the Red Cross with working people. This agreement is no more a disgrace to Norman Davis, your former director, or to Mr. O'Connor, the present one, than it is to Winthrop Aldrich, head of the War Fund. It is, indeed, a tribute to their intelligence, business ability, and good sense. It is also a magnificent tribute to the statesmanlike vision and executive skill of the two labor groups.

DEVIOUS METHODS

But do not blame the press for the way this highly creditable arrangement was used to frighten Red Cross members and vilify union leadership. That story was given to the press in that biased light by your respectable, supposedly honorable but very bitter and very obtuse old fuddy-duddy leaders who resent the fact that labor is gaining a foothold in the management of the Red Cross. They shudder at the thought that their holy of holies—the central committee—may be polluted by representation from labor, a move the Red Cross should have made long ago, considering it is so dependent on labor contributions and is becoming more so every year. These reactionaries have decided to force Mr. O'Connor out of the directorship on the theory that he is too friendly to labor. If you don't believe me, let me quote from the last article for which this type of Red Cross leader is responsible. "Perhaps Mr. O'Connor will be reappointed and the labor-Red Cross agreement renewed. But the true interests of the Red Cross will not be served by either. Mr. O'Connor's reappointment, it is contended, will further demoralize the organization. (Contended by whom you members should ask yourselves.) Renewal of the agreement will not end the Red Cross opposition." There you have the die-hard psychology of leaders who would rather wreck the Red Cross than see it become democratic. Now I do not know Mr. O'Connor personally. It is of no interest to me whether he is reappointed director or not. But, judging by his enemies, he must be a person of some merit.

COULD PROVIDE LEADERSHIP

Now why should the rest of us care—why should I care—whether the Red Cross remains under the domination of a small, powerful reactionary group? Because what you do with the people's money under your control, with the more than $70,000,000 which, I am told, is left over from your war chest, can make or mar a trend now well under way in our country for the integration and cooperation of education, health, and welfare on the local, State, and Federal level. It has become obvious that far more effective

organization and administration of all welfare services are immediately required to meet postwar needs of the American family, of returning veterans, and dislocated war workers.

In such a program the Red Cross can play a leading part. But it will not lead unless it abandons the destructive influence of its stand-pat elements and rejuvenates its antiquated organization to match already existing State welfare machinery. Above all, it must cooperate unselfishly and wholeheartedly with the Nation-wide effort to strengthen public and private local community welfare agencies

To cooperate humbling, sincerely, and successfully in this national endeavor you first will have to recapture what you so proudly define as "the Red Cross spirit." The public respects what it knew as "the Red Cross spirit." But your reactionary leaders have perverted this spirit until it has achieved a genius for making enemies and has made the Red Cross the object of repressed fears, resentment, and even hatred. The fact that most Americans give money to the Red Cross is sometimes interpreted as proof that everybody loves you. That is fallacious. People have a long-standing reverence for the Red Cross, gained in simpler, happier days, which your well-publicized campaign methods always have exploited successfully.

MUST CORRECT MISTAKES

Red Cross traditions were so powerful that they led many chapters to fight a total war on the home front as if it were your own private war. But let me not give the impression that only you made this mistake. The suffering of war workers' families possibly was greater than those of many military men. Nobody in or out of the Government had the vision to foresee that a total war demands an all-inclusive democratic mobilization of our whole welfare structure. Even before the atomic bomb shocked us into realization that a new era has dawned, it became evident that the homeland, too, is a battlefield in modern warfare. We must begin at once a more democratic, better organized, more inclusive approach to our immense social problems, not only to handle our social reconversion successfully. If ever there should be another war, which heaven forbid, we must not make the same mistakes we did this time. An all-inclusive social strategy is as necessary as military strategy for the protection and safety of the home front.

If I now remind you of some of the strategic and psychological errors of the Red Cross, I do it only because they illustrate to an extreme degree a monopolistic, competitive and paternalistic attitude toward welfare problems. All voluntary organizations are more or less afflicted with these attitudes. All must strive to overcome them.

ARMY RELIEF GOBBLED UP

Take, for example, the hard-hearted way in which your leadership frustrated efforts of the Army Emergency Relief to help their own families at a time of dire need. The Army first made an agreement in 1942 that the Red Cross should contribute $1,500,000 to found Army Emergency Relief. The Army had to agree not to solicit funds but Irving Berlin's show and various athletic contests brought in gifts of $17,000,000. Then your leaders produced your famous charter to prove that only the Red Cross could administer home relief to the armed forces and induced Army's authorities to issue a directive in 1944 not to consider the Army Emergency Relief as a separate agency. The plea of your leaders was duplication of functions, although any intelligent person knew that no one organization could handle so gigantic a task.

Even had you made a huge success of home service, there would be no excuse for this arbitrary behavior.

"What right had the Red Cross to make a monopoly of mercy?" said one general's wife to me. "To be sure, there was amateurish incompetence among our people to which the Red Cross could point. But how competent was the Red Cross? Why and through what power," she demanded, "could the Red Cross forbid the Army to dispense as it liked money which it had received from a grateful public?"

I can tell you why Army Emergency Relief was assimilated by the Red Cross and its activities drastically curtailed. This unwise decision was defended by one of your most arbitrary old leaders as necessary because, if any other agency were known to be serving the needs of our soldiers, it would weaken the logic and appeal of your separate drive for funds. There, my friends, is the source of your obsession that the Red Cross must have a monopoly of service to our military forces. Your charter, which is not mandatory but only permissive, is a mere pretext in such conflicts. Bureaucratic power rather than service to mankind are the prime objectives of your reactionary element. This dire influence is indeed the crux of all your difficulties with the public. Therefore, it seems obvious to me that the country will never get wholehearted cooperation from the Red Cross, in peace or war, until its separate, expensive, drum-beating financial campaign has been eliminated and combined with the National War Fund. For the need to continue the War Fund I shall later make a plea. Your isolation, I feel sure, cannot be overcome until this supreme symbol of your isolation, your separate financial campaign, is sacrificed to the common good.

"NOBODY WOULD DARE"

The hot dispute between the Red Cross and Army emergency relief was carried above generals, who dared not commit themselves, to the War Department. It decided in favor of the Red Cross because the Red Cross dictates to Army leaders instead of cooperating with them, because everyone from the highest to the lowest in the land must bow to the prestige and to the financial and political power of the Red Cross. In one community the Red Cross marched into the largest church parish house, tossed an old established religious and social program out of the window, and told the clergyman calmly: "We'll use this room for the blood bank, that one for home service, this for bandage rolling, etc." When I asked this clergyman why he didn't toss the Red Cross out of the window, he looked aghast and stuttered, "Why, I wouldn't dare. Nobody can oppose the Red Cross."

The Red Cross can scarcely be blamed for regarding itself as sacred because it is never publicly criticized. But the mere fact that all criticism is repressed partly through fear of hurting your campaign appeal and partly through fear of your power, makes it all the more violent. Now isn't it fair to say that, when people high and low are afraid—are literally terrorized—by a voluntary benevolent society, something must be radically wrong at the very heart of its being?

It is but natural that the authoritarian, fear-inspiring attitude of your traditional old leadership is imitated and reflected by many local female gauleiters who rule the roost with a rod of iron, especially in smaller cities and towns. To me the most tragic thing about the Red Cross is the undemocratic influence upon many members which filters down from above. In too many of your offices people who want to ask questions or volunteer services are met not only with indifference but rudeness. When the Army sent out a hurried call for more trained nurses after the Normandy landing the professional women who volunteered, often at great personal sacrifice, were treated with such inefficiency and scorn at one of your largest recruiting centers that they complained to Washington headquarters. To investigators the local chapter replied that the woman responsible for this behavior could not be fired because she was one of the largest contributors to the Red Cross. Again money was more important than service.

Now you have thousands upon thousands of stanch members who resent this kind of thing. These are the women to whom I am trying to bring courage and support with this frank analysis of the conflict going on not only among your leaders but in your ranks. Again and again your forward looking, intelligent members, especially younger ones, would ask me in community conferences: "But what can we do, Mrs. Meyer, to make our Red Cross leaders see their mistakes? They slap us down if we criticize and tell us firmly that we aren't "good Red Crossers."

WE OR NOBODY

In many a community these tyrants will kill an idea no matter how valuable, if the Red Cross cannot carry it out and get credit for it. Their motto is: "Either we do it or nobody does it." This dog-in-the-manger psychology, this mania for "credit" in all but your truly modern-minded chapters, is again the result of pressure from above, from publicity and finance committees whose business it is to prove that the annual high-pressure drive for funds is justified by results.

Proof of this statement lies in the fact that a wholly different genuinely democratic psychology exists in your liberal national leaders and in local Red Cross chapters that weld their programs harmoniously with the local welfare program. For example, the five New York City chapters have combined to form a cooperative health council. San Francisco and St. Louis also have well-integrated communit, programs. But I should particularly like to quote the wise advice of William J. Norton, chairman of your Detroit board of directors, who in my limited experience is doing one of the most outstanding local Red Cross jobs in the country. "The Red Cross is just one of many voluntary agencies and must not look upon itself as a sacred cow," he said. "The paternalistic outlook in voluntary welfare work is outmoded and in its place must come a more democratic spirit. When you take people's money, they have rights. They are all entitled to know their money is well spent and therefore they must have representation on our boards.

PUBLIC OR PRIVATE?

"In Detroit," he continued, "we are a smoothly functioning part of the general community picture and do not act as if we had a halo around our heads. We believe the usual competition, jealousy, and desire for credit between agencies have to be overcome by working out channels through which they can act together and yet maintain their own functions to full capacity."

I wish I had time to describe in detail the extensive postwar program of the Detroit chapter because it is a model of social imagination and democratic procedure. Mr. Norton sees, for example, that professional people must conduct all technical programs. The blood bank, for example, will be conducted by State and local public-health officials, while the Red Cross confines itself to the no less important task of publicizing the program. He sums up the Detroit philosophy of action as follows: "The Red Cross should be promoters, salesmen, and publicists to get social programs going, to spur public officials into speedier action on a local level, then leave the program that emerges to trained and technical leadership."

Mr. Norton here defines what should be the role of the Red Cross and all other private agencies in the postwar world and sums up the central thought that I wish to leave with you. Private agencies should pioneer activities. When these are generally accepted and established, they must step aside and leave the administration to public agencies while they pioneer in new directions.

To accept that clear-cut philosophy and to achieve a genuinely democratic organization, the Red Cross must finally make up its mind whether it is, in fact, a "public" or a "private" agency. A little straight thinking on this basic problem of purpose and philosophy is essential now that your war jobs are evaporating and the Red Cross must decide what contribution it proposes to make to the "home service" community job. If you don't face this decision, your reactionaries will continue to make trouble by playing both sides of the fence as their own advantage dictates.

SURVEY WORTH STUDY

Fortunately your constructive national leaders had the social vision to anticipate the need for guidance on this subject. This group recently inspired a survey and report on the medical and health program of the Red Cross which will be of the greatest benefit to the Nation's health if it is carried out. This report is worthy of the closest study by every Red Cross volunteer. Although confined to medical problems, it is an excellent guide to step-by-step procedures that the Red Cross should follow in its endeavor to cooperate with local agencies. There you also will find an explanation of reasons why it is essential for the Red Cross to have State headquarters to work effectively. This State organization would be advantageous to the Red Cross if only for greater efficiency in times of disaster. The arrival of your area directors at points of disaster often has been delayed because they may reside hundreds of miles away. With a well-integrated State program the chances are that you could cover the scenes of sudden flood or conflagration with greater promptness, effectiveness, and expeditious community collaboration.

Your Red Cross medical report in its concepts of community reorganization fits in perfectly with the present general trend in Nation-wide social planning. To furnish a guide for such efforts, some 27 experts in government, education, health, and welfare have drawn up a report entitled "The Road to Community Reorganization," which was presented to the President, Congress, and the country last month. This report suggests community service centers as a joint clearinghouse of all local welfare endeavor. To hasten local efficiency, it points out methods by which State governments can be improved.

NATIONAL COUNCIL NEEDED

Because community services are now more than ever the concern of all people, because they are needed by all the people and because they never will assume their proper place in national life unless and until effective national leadership is provided, the report proposes that there be established in the Federal Government a Cabinet post, to include the functions of education, health, welfare, and social insurance, designed to provide appropriate coordination and leadership of the basic community services that are essential to the well-being of the Nation.

But it takes time to pass legislation for this Cabinet post and as an immediate step to accelerate the happy return of the veteran to civil life, I wish to urge upon your attention a plan that has the approval not only of some of your own leaders but of those at the head of many other national health and welfare organizations. This plan calls for the unification of all national organizations including veteran groups, Red Cross, welfare organizations of labor groups, national community chests and councils, the YW and YMCA, national health organizations—in short, all national groups concerned with the welfare of the veteran—in a council of national welfare agencies.

At present only two States have an efficient, strongly organized movement that encourages local community service centers where the veteran, war worker, or any other citizen can get help and guidance in any and all problems. This is essential if the veteran is not to get the run-around.

Yet many of these veterans' or community centers now are worse than useless because they look pretty on charts but do not succeed in bringing to the veteran all the services of the community, the State and Federal Governments.

MANY DRIVES WASTEFUL

If the national organizations should pool their efforts through a national council, expert advice in the setting up of veterans' centers and financial aid wherever needed by States and localities could rapidly be extended to all parts of the country. It would pool the immense resources and trained staffs these groups can put at the disposal of the States and communities. It would encourage this trend at the State and local level and hasten the day when the veteran can feel the whole country has been mobilized to receive him in a worthy fashion.

Such a council of national welfare agencies could cooperate quickly on a Federal level with the new Cabinet officer and we would have on every governmental level harmonious interaction between public and private community services. The war fund should be continued to raise through one annual drive the separate budgets of the council of national welfare agencies, including that of the Red Cross. The combined drive could raise as much if not more money than your separate drive and at the same time increase your prestige through your willingness to cooperate democratically.

Just as we continued the Community Chest after the last war, so also we should not let the National War Fund go out of business. Many separate national drives are wasteful and we can no longer afford them. Moreover, they throw the welfare picture out of balance when, for example, we commit such follies as raising millions for infantile paralysis and nothing for more prevalent children's diseases such as cerebral palsy and cardiac ailments.

Why shouldn't the Red Cross join with other national agencies in asking the President to call together all the leaders of the voluntary national organizations to consider the plan? The country would then have proof that the Red Cross is supporting its liberal leaders and inaugurating a new era of mutual assistance, good will, and democratic solidarity.

The Red Cross must play a role in the complex industrialized economy of the future equal but not identical with that which earned it the reverence and gratitude of a simpler, smaller nation in the past. In its national councils, as in each local chapter, all classes of citizens should have a voice in its decisions as well as the right to contribute. In coping with the vast welfare responsibility of the next decades, a vigorous, democratic Red Cross must share and collaborate flexibility with other public and private welfare agencies in serving all members of the community, regardless of race, color, or creed.

"There is a tide in the affairs of men,
Which taken at the flood, leads on to fortune."

The tide is running fast and the fortune involved is not only the welfare of our own country but the well-being of all other nations. For only if we are strong here at home, spiritually, morally, and physically, can we redeem the blood of our sons and carry out the obligations growing out of this war. Only if democracy finds new, more generous, more inclusive social patterns here at home, will it be strong enough to hold aloft its banners as beacons of promise for universal peace and freedom.

## Thoughts and Wishes of the Man in the Street

EXTENSION OF REMARKS
OF
### HON. SHERIDAN DOWNEY
OF CALIFORNIA

*Friday, November 23 (legislative day of Monday, October 29), 1945*

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Mr. Robert E. Hannegan, chairman of the Democratic National Committee, at a dinner of the Indiana Democratic Editorial Association held at French Lick, Ind., November 17, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have always considered it an important part of my business to keep posted as thoroughly as I can on the thoughts and wishes of that anonymous individual whom we in America are in the habit of calling the man in the street.

To me, that man is important—the most important figure in the whole United States.

Having no name, he may be a big industrialist or a small businessman or a farmer or a factory hand. He may be a Democrat or a Republican or an Independent. But as the man in the street he is all of them. He is all of them. He is bigger than any of them. His interests come first.

Now, for those of us who are in politics, this man without a name, without a stated occupation, is a very sound consultant. His thinking, you know, is usually pretty clear. He is a pretty level-headed fellow.

That is why it is always smart politics to find out, between elections, what he is saying, what he is thinking about, what he wants. You ignore him, minimize his importance, put your own objectives above his, and—well, look what has happened to the Republican Party.

But if it is a general rule of good politics to go to the man in the street and try to get his responses and discover his thinking, if this is important any time, then it is even more important now.

We are at this time in a period of transition, of change from war to peace. With that far-reaching shift, most of us realize and expect an atmosphere charged with new political and economic currents, a change in the approach of our people toward many issues and controversies that affect us all. It is natural and logical that this should happen. If anyone is surprised by it, I say such a person does not know the American people very well. He hasn't been talking very much with the man in the street.

While war lasted, we preserved a national unity in the defense of our country against a foreign aggressor. Even under the stress of this great conflict, we were not forced to give up our right of free expression.

We held a national election in the very midst of war. But we subordinated all our interests to the winning of that war. We not only placed restraints on ourselves by law, but we voluntarily refrained from trying to advance private causes that would have imperiled the great cause of our country. I say "we" and I mean most of us—all but a small minority.

Then, overnight, came an end to war, and an end to the extreme calls and exactions it had imposed upon us. This means, in a free country, the moral right to speak out again on any subject or for any cause, public or

private, within the limits of legality; and certainly it includes the right of any faction, any organization, and individual, when he thinks he is being hurt, to say so.

Inevitably, when this happens, our national unity is put to a test. But we have stood countless such tests in the past, and we shall go through many more in the future.

If anyone tries to tell me that it is unnatural for an American who has a grievance, or thinks he has one, to speak out about it, I say that person does not know his Americans.

And if anyone tries to tell me that our country cannot stand up under the strain of this free give and take, I say that person underestimates the tensile strength of our democracy.

We are just now hearing a good many of these alarms. They are coming from people who seem to think that America cannot pass this test of our national unity; people who fail to see the difference between controversy and catastrophe. They are people who think America can't take it.

Well, when I hear of these fits of self-induced hysteria, I set aside my copy of the CONGRESSIONAL RECORD, where most of the outbursts first see print. I throw away the editorial and columnists' page of the newspaper, where they are echoed. And I go out and have a talk with my level-headed friend, the man in the street.

I think some of his reactions are worth passing along.

You recall that back in 1940 and 1941, when war threatened us, there were people who said the many groups and factions in America with diverse viewpoints would be unable or unwilling to set aside their differences in defending the Nation against an outside aggressor. That was supposed to be democracy's fatal weakness. There were certain people in Europe saying that, and there were certain people over here, echoing them word for word.

Today the people in Europe who were most vitally interested in spreading that kind of talk are silent. Some of them have poisoned themselves. Some, for the same purpose, use a rope, others a revolver. Still others are on trial and will be taken care of in due course.

But what about the people in America—those who interested themselves in spreading the same doubt of our democracy over here?

Those people are not silent today. As leaders in the Republican Party, they used their membership in Congress 5 years ago as a sounding board. And they are using that same sounding board now.

They are still voicing defeatism—as loudly in peace as they did in war. Yesterday they were trying to break down the faith of the American people in their gallant commander in chief, the late Franklin D. Roosevelt.

Today they are trying to shake America's faith in the man who has quickly and ably shouldered the responsibility of leading this Nation to peace and postwar prosperity, President Harry S. Truman.

It is these opposition leaders who are now howling calamity and who are hoping that a great show of dissent will break the confidence of the people in Harry Truman—and who are doing their best to create and aggravate that dissent.

Well, they are wrong both ways. And do not be deceived, the man in the street knows it. He knows that the people who failed to realize the seriousness of this country's situation in 1940 are the same people who are voicing hysterical fears for the Nation in 1945.

When America stood in real danger for her very life, when complete national unity was vital and every disruptive word might have meant the death of a soldier on the battlefield, these were the people who complained of rationing and the OPA, who grumbled about the WPB, who shouted their pet grievances recklessly.

Now, with the crisis of war behind us, at a time when Americans have once more earned the right to assert themselves and to contend for that which they believe is their due, now these same people are suddenly alarmed for the survival of the Nation.

Well, the man in the street knows this. He does not like disputes, international, industrial, or domestic. About the only thing he likes to argue is politics.

Certainly he does not approve of strikes. He is both employer and employee. He is producer and consumer. He is labor, management, and the public. And he knows that industrial shut-downs hurt him, that he is the fellow who pays, any way he looks at it.

But when a Member of the United States Senate gets up and in his great fears for the safety of America, launches a bitter attack on President Truman for his effort to bring labor and management together in conference so that a way may be sought to resolve their differences, that Senator may be speaking for the Republican Party—of which he is a prominent member—but he is not speaking for my friend, the man in the street. He is not speaking for the employee nor the employer. He is not speaking for labor nor for management. And he is not speaking for the American public.

Yet only a few days ago such a speech was made on the floor of the United States Senate by Senator WILEY, of Wisconsin. And that speech, which was made in direct criticism of President Truman, was a very revealing one.

It revealed exactly what is behind all this sudden patriotic fervor on the part of the Republicans in Congress, these pious fears for America which they began voicing after America had won the war, but which they had never expressed while America's enemies were still on the march.

Now, what does this Republican Senator want? What has he been leading up to? What does he think President Truman ought to do so that his own fears wil be quieted?

Only this: Throw overboard the principles of the Democratic Party. Cancel out the social gains that have been made in recent years. Raise the tariff, and abandon the principle of collective bargaining.

"I know," he says, "that these realistic views will invite upon all those who voice them the accusations of labor baiting and union busting. I, for one, deny both charges with all the vigor at my command."

And in the same breath—with all the vigor at his command—he demands that President Truman outlaw the principle of collective bargaining—a principle to which both management and labor in all our big industries have long subscribed, a principle which they reaffirmed only the other day at the conference called by the President.

But this same Republican leader was not nearly so concerned for the safety of America a few years ago when war threatened us. Back in February of 1941, less than a year before Pearl Harbor, he told the people he did not believe Japan would be foolish enough to attack American interests.

From the record of his voting, one would not judge that the Senator was very greatly impressed with America's danger then. I think the time has come to cite the various items of that record having to do with the strengthening of this nation to meet the greatest war crisis that ever threatened its existence. Here is the way Senator WILEY voted:

Against revision of the Neutrality Act.

Against military conscription.

Against offering effective aid to Allied countries.

Against lend-lease.

Against lend-lease appropriation.

Against transfer of Axis ships to Britain.

Against extension of the draft.

Against belligerent zone restrictions to make possible the delivery of lend-lease shipments to nations fighting Nazi Germany and her allies.

Against the armed ship bill, to protect American vessels from submarine attacks. Against the ship seizure bill enabling us to take over ships belonging to countries occupied by German forces.

Against the second lend-lease bill.

And so on—all down the line of preparedness against the most dangerous enemy America has ever had, this Republican leader voted against every one of the measures of the Roosevelt administration to safeguard and strengthen America while there was still time—measures which, as later events proved, saved the lives of thousands of American boys.

Yes, Senator WILEY, "the man in the street" of today, who was also the man on the battlefield and the high seas of yesterday, remembers you and your Republican colleagues in Congress. He remembers you well.

And now he is the man, Senator, who has come home alive and safe, to a Nation that has been saved, because a Democratic majority in Congress backed up a Democractic President in an American program of preparedness against the aggressor.

That is why this man is coming home alive and safe today, Senator. And in a matter of life or death—his life or his death—don't you think it is natural, Senator, that he and his family should remember you?

And don't you think it is natural that now, when this man is home again, wanting to go to work, and wanting protection in his job—isn't it natural, Senator, that he should be a little puzzled by your sudden fears for America unless his protection is sacrificed?

My fellow Democrats, I do not expect this Senator or any of those of his party who voted with him in 1940 and 1941 to answer these questions. I expect, rather, that they will go on with their determined effort to smear the memory of one of the greatest Americans who ever lived—Franklin D. Roosevelt.

I expect these Republican leaders to continue turning their faces away from the postwar problems of our country, problems of reconversion and the maintenance of employment—the whole field that has been covered in the 21-point program set forth by President Truman.

I expect them, in their bitterness and their complete lack of a program of their own, to carry on this desperate search for a political smudgepot, a muck rake, and some way of making their accusations and innuendoes stick where they are trying to plaster them—on our country's great and honored dead.

In the beginning, you know, the man in the street—and I am talking now of the fellow who may be a Democrat or a Republican or an independent—welcomed the investigation of Pearl Harbor.

He thought the purpose was to get facts. He assumed that there would be a proper investigation of those facts. He expected the facts would be pertinent to the case.

That is what we all want. And what we did not want was a smear. What we did not want was to create the opportunity for an embittered political clique to use this investigation for indiscriminate muckrakng or as a sounding board for broadcasting unrelated findings which it may dig up and distort at will in a prejudiced resolve to destroy the name of the unanswering dead.

We have relied on the Senators of our own party who are on that Pearl Harbor Investigating Committee to prevent it from becoming just such a sounding board, and our confidence was well placed. They are going to see that this investigation is a clean job.

The Republican Senators were told that the committee would have access to any and all necessary sources of information through its legally constituted committee counsel.

In other words, the information was to be supplied to the committee as a committee for committee purposes. Files of the Roosevelt administration were to be opened and documents made available in this manner.

As a safeguard against the threat of political abuse of the investigation, the files were not to be made accessible to individual members of the committee as individuals for their individual purposes, whatever these might be.

But was this what those Republican members of the committee wanted?

They demanded, instead, that they be allowed to go themselves, as individuals, direct to the Roosevelt files and search through them for anything they wished, whether it was relevant or not, and to do anything they wished with whatever they might find.

Now, what do you think these Republican Senators could have had in mind when they made that demand? And from the fury they showed when the demand was not granted what do you suppose they could have been hoping for from this investigation? What plans have been thwarted?

One of them has since lamented that because he was not allowed this privilege, the investigation has been crippled. Crippled as what, Senator? As a congressional investigation with a proper and legitimate purpose, or as a political fishing expedition?

But what is behind this desperate effort to smear Roosevelt? What is the political significance, now, in 1945, of an attempt to turn and twist the history of 1941 so that it might discredit the memory of a man who is no longer President?

If you want the answer to that question, the man in the street can give it to you.

He will tell you that the Republican Party has not once offered a positive, constructive program for America in the past 20 years.

When a political party lacks a program of its own, there is not much else for it to do than attempt to discredit the opposition. When that doesn't work—and it hasn't worked in four national elections—the party is left in a pretty desperate plight.

Clearly, the attempt to smear Roosevelt is a tactic of desperation by a party without a program.

From election day of last year up to the time when President Truman offered his postwar economic program in his message to Congress last month, the American people had been given no sign of what the Republican leadership might have had in mind as a policy for the future of this country.

But at that time a brief but revealing expression of Republican sentiment was given us. It came from Congressman CHARLES A. HALLECK, of Indiana. And we can accept it as authoritative, because Congressman HALLECK is not only chairman of the Republican Congressional Campaign Committee, but he is also head of a seven-man group named by the party especially to draft a new program of its objectives.

HALLECK and his clique of Republican leaders didn't like the Truman program. And this is what he said:

"This (the President's message) is the kick-off. This begins the campaign of 1946. * * * And in waging the Republican congressional campaign, we will go back to old-fashioned conservatism."

That is all he could offer. "Back to old-fashioned conservatism," the kind which the Republican Party gave us when it was last in power. With it, you remember, they gave us corruption in government, depredation in Wall Street, depression in Main Street, foreclosure on the farm, ineptitude in foreign policy, and consistency and purpose in only one direction, the further aggrandizement of a favored, powerful, wealthy minority.

But a return to those ruinous practices which led to the crash of 1929 would never be accepted by the majority of the people as a program for the America of 1945. And the Republican leaders know it and admit it.

Accordingly, they have once more set out in search of a program which they can offer the electorate.

More than 9 weeks ago Congressman MARTIN, the House minority leader, made it known that the perennial quest was on again. He and his colleagues in Congress held a 2-hour caucus, which they announced as the first step toward drafting what they described as a positive program for America. A committee of seven Republican Congressmen was appointed to do the actual drafting, MARTIN said:

"We plan to set before the country a definite and concise statement of the aims and objectives of the Republican Party as represented by Republican Members of Congress. We plan to do this in such manner as will leave no room for questioning as to where the Republican Members stand on the issues before the country."

Well, that was very fine. But it was more than 9 weeks ago and the country is still waiting. To date there has been no definite and concise statement, no program, nothing that might bring to an end the questioning as to where these Republican Members of Congress stand.

A couple of weeks ago I remarked on this at a Democratic dinner in Philadelphia. At that time 7 weeks had passed, and no Republican program. I remembered it because I had marked my calendar on the day of JOE MARTIN'S fine promise, and I had crossed off every day that passed since then. I had at that time 51 crosses on my calendar.

But the very next day JOE MARTIN'S Republican steering committee made an announcement. It was great news. We learned in the newspaper, I quote:

"The Republican committee met for what they said was an attempt to bring closer to realization their 'statement of principles,' which will be the GOP platform yardstick for the 1946 congressional elections.

"Foreign affairs, labor and unemployment, soldiers and the returning veteran, were among the subjects discussed, but the conferees said no definite conclusion had been reached."

That story was accurate as far as it went. These members of the Republican steering committee failed to reach any conclusion because they failed to reach any agreement.

You see, they were split by the question whether to come out with Congressman HALLECK'S old-fashioned conservatism—which means no solution to any of the problems of the country—or to endorse in principle the program which the Democratic Party has already set forth.

They have been warned by members of their own party to drop the "me, too" tactic. They have been told that you have to have something better than "me, too" to win an election. And the last two Presidential elections have proved this.

On the other hand, they have also been warned against the consequences of having no program of their own—warned by men prominent in their own party.

A few of the more thoughtful and self-analytical Republicans have come out and stated this publicly. John D. M. Hamilton, for example, who was the party's campaign manager in 1936, recently contributed an article to Liberty magazine entitled "What the GOP Needs."

He writes:

"Over the last few years there has been a growing restlessness within the rank and file of the Republican Party, which does not bode well for its future. Too many Republicans, after years of loyalty, find themselves wondering where their party is going, and, worse, whether they will be obliged to go along with it as a matter of party regularity rather than through conviction. * * * Possibly our party will win even though it adheres to a negative program based on the other fellow's mistakes. If so, the victory will be neither creditable nor permanent, and the party will have destroyed its usefulness to the Nation and forsaken its destiny."

Well, such are the difficulties of a party without a program. That was the trouble when the Republican steering committee met. The result was, no agreement, no conclusions.

Now this report of progress was made public last November 2. But since then I have had to go on crossing the days off my calendar, because there is still no program, the Republican leaders continue reaching no definite conclusions. I now have 67 crosses.

But I do not want to predict that nothing will ever come from this Republican committee. What I do predict is this alternative:

These Republican leaders will either have to eat their words of criticism of Harry Truman's program for postwar America and go back to the tactic of crying "Me, too"—a tactic which they have already tried without success—or go even further back to the old familiar negatives, the do-nothing, offer-nothing kind of government which they practiced with such disaster to the country in three administrations.

To the people of America, to the man in the street, it is a matter of small concern which horn of this dilemma the Republican leadership decides to hang on. What he wants is settlement of our labor troubles without sacrifice of the right of collective bargaining.

What he wants is protection of American workers and American soldiers coming back to their jobs without leaving the matter of their future to chance or charity.

What he wants is maintenance of public purchasing power without price inflation.

## Historic Strato Flight Aided Victory

EXTENSION OF REMARKS
OF
### HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. CASE of South Dakota. Mr. Speaker, on November 11, 1945, the National Geographic Society conducted an anniversary ceremony at the rim of the bowl in the Black Hills of South Dakota, where 10 years before, a balloon manned by officers of the old Air Corps, ascended to an elevation of 72,395 feet, highest point ever reached by man, and obtained scientific data that has proven of the utmost importance.

These ceremonies, which it was my privilege to attend, were there participated in by Dr. Gilbert Grosvenor, president, and Dr. Thomas W. McKnew, secretary of the National Geographic Society; Gov. M. Q. Sharpe of South Dakota, and Maj. Gen. Curtis LeMay, personal representative of Gen. H. H. Arnold, commanding general of the Army Air Forces, and supplemented by overseas broadcasts from the men of the old Air Corps who had participated in the flight, Maj. Gen. Orvil A. Anderson, in Tokyo and Lt. Col. Albert W. Stevens in San Francisco, and from Gen. William E. Kepner in Berlin, who had a part in the preparations, having been an officer in a flight earlier attempted.

The address of General LeMay at the anniversary ceremonies was outstanding and is so significant when we consider

questions involving scientific research that, with the permission of the House, I am placing it in the RECORD at this point:

REMARKS BY MAJ. GEN. CURTIS E. LEMAY, TENTH ANNIVERSARY OF STRATOSPHERE FLIGHT AT RAPID CITY, S. DAK., NOVEMBER 11, 1945

As I participate out here in South Dakota's beautiful Black Hills as the official representative of the Army Air Forces in this impressive dedication ceremony, my thoughts go back to that time 10 years ago when the flight was made. It is my recollection that some of our newspapers, commentators, columnists—quite a few people—criticized this flight as a stunt, called it a publicity-seeking proposition.

I remember how most of us in the Air Force then boiled inside because of such short-sighted thinking on the part of so-called thinking men. All they had to do was think through to the reason why the AAF was so anxious to have this pioneering flight to be a success.

All of us can remember back—even so recent as 10 years ago—that there wasn't much money available for the Air Force to use for experimental work—work most of us knew had to be done to assure America air supremacy in a war obviously forming in a not too distant future.

So what happened? Here was a group of far-seeing, public-spirited men, a splendid organization, the National Geographic Society, which unstintingly undertook something which the AAF needed—not only undertook the job but furnished the money to do the job.

Personally, for General Arnold, and for every member of the Air Forces, I want to extend heartfelt thanks to the National Geographic Society, to you, Dr. Grosvenor, as its head, thanks for what you did for us then, that helped to give us the air superiority which did so much to bring defeat to both Germany and Japan.

I am well acquainted with what came out of the stratosphere flight which bore such fruit in World War II.

As you know, the B–29 was "my baby" out there in the Pacific.

To fly the superfort we had to have a pressurized cabin. A lot of the apparatus developed on the strato flight was the forerunner of the equipment used in later types of high-altitude pressurized-cabin planes—notably the B–29. And you know what they did to make the Japs yap for peace.

We learned a lot from that flight about aerial camera equipment. And I can tell you, we were mighty grateful out there in the Pacific to have photo equipment that would work—that would bring back vital reconnaissance pictures taken by our B–29 snoopers from 35,000 feet above Japan.

Still another first came from the epic undertaking—the extensive use of magnesium, a new metal then, which was lighter than aluminum and strong. It worked satisfactorily—so satisfactorily it has been used ever since in our aircraft.

I know, too, that many then unknown—or little known—scientific questions were answered when the ton or so of instruments were finally studied—answers that help us when we needed to have the answers right away. For out at Wright Field—where the Army Air Force usually gives birth to everything new and improved—the voluminous report prepared by the National Geographic Society from the data obtained during the balloon's flight has been, and is being continually used by research and development engineers as a reference guide in the development of important equipment—personnel, clothing, oxygen masks, cameras, instruments, aircraft design and construction.

Now, I come to a point I want to make when I referred to the scoffers who dubbed the flight a stunt. For just as we had scoffers, then, we have them now.

They are the people who think we don't have to keep ahead—and when I say ahead, I mean ahead in military aviation.

In two world wars the aggressors suddenly struck peaceful nations, believing that America would remain aloof or that our power couldn't be marshaled in time. Both times, however, we eventually mobilized our vast might. Twice we have been the determining factor in the defense of civilization.

Remember too: Both aggressors in this war struck first with air power—and we beat both when they lost air supremacy to us.

The lesson for the future is clear. The degree of our national security declines rapidly when reliance is placed on standing still, on doing with existing equipment.

Consequently—and I say this with all my heart—we must continually maintain scientific and technological advances—in and out of the services—to be sure that we have the most advanced air force in the world, for that is the only means we have of assuring national security and world-wide peace.

## Gallup Poll of Veterans on Peacetime Military Training

EXTENSION OF REMARKS
OF
### HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

*Friday, November 23 (legislative day of Monday, October 29), 1945*

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Gallup poll, published in the Washington Post of November 21, 1945, entitled "War Veterans Found Strong for Peacetime Army Training." It shows the position of veterans regarding the necessity for peacetime Army training. I ask that the poll be printed in the Appendix of the RECORD, because if any group knows about war and its horrors and knows what is best for this country, it is the war veterans who now are returning from all sections of the world.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

WAR VETERANS FOUND STRONG FOR PEACETIME ARMY TRAINING

(By George Gallup)

PRINCETON, N. J., November 20.—Veterans of this war are overwhelmingly in favor of universal military training in peacetime.

Eight in every 10 in a cross-section survey of the men who have been discharged from the service so far think all able-bodied young men should be required in the future to have a year's military or naval training.

This vote on the part of the men who have had first-hand experience with military life is actually more in favor of universal peacetime training than the vote of the civilian population.

The results:

"In the future do you think every able-bodied young man should be required to take military or naval training for 1 year?"

*Veterans of World War II*

| | Percent |
|---|---|
| Yes | 80 |
| No | 18 |
| No opinion | 2 |

The vote for the Nation as a whole is 75 percent in favor, 21 percent opposed, and 4 percent no opinion, as reported earlier this week.

In the House Military Affairs Committee the peacetime training bill has taken on a partisan aspect, a group of Republican members having last week moved unsuccessfully to delay consideration of the measure.

Among the rank and file of the country's voters, however, postwar military training is overwhelmingly supported by the voters of both parties, judging by the following poll results:

| | Percent |
|---|---|
| Yes: | |
| Republicans | 70 |
| Democrats | 79 |
| No: | |
| Republicans | 27 |
| Democrats | 18 |
| No opinion: | |
| Republicans | 3 |
| Democrats | 3 |

A test of sentiment by age groups in the adult population, by sex and by occupation has likewise been made by the institute, with the following results:

| | Yes | No | No opinion |
|---|---|---|---|
| | Percent | Percent | Percent |
| By age: | | | |
| 21–29 | 78 | 19 | 3 |
| 30–49 | 75 | 21 | 4 |
| 50 and over | 73 | 23 | 4 |
| By sex: | | | |
| Men | 76 | 21 | 3 |
| Women | 74 | 21 | 5 |
| By occupation: | | | |
| Professional and business | 74 | 23 | 3 |
| White collar | 76 | 22 | 2 |
| Farmers | 68 | 28 | 4 |
| Manual workers | 78 | 17 | 5 |
| All union members | 76 | 19 | 5 |

## General Housing Bill

EXTENSION OF REMARKS
OF
### HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a resolution adopted by the City Council of Chicago, Ill., on November 19, 1945, indorsing the Wagner-Ellender-Taft general housing bill, and the five-point program recommended by Maj. Edward J. Kelly, to the National Housing Agency.

I believe these recommendations are very sound and most appropriate, and should be given the consideration they deserve in our postwar building program.

Whereas there exists an extreme shortage of housing accommodations throughout the Nation, which will be intensified and aggravated as additional numbers of our veterans return to civilian life; and

Whereas it is imperative that prompt action be taken by the National Government to stop the spread of urban and rural blight, eliminate the slums, and provide decent homes for all our citizens; and

Whereas the immensity of the task requires the joint cooperation and assistance of all private and public agencies, local, State, and National; and

Whereas the Wagner-Ellender-Taft general housing bill, recently introduced in the Congress, provides for a unified national housing agency and a coordinated national attack on the housing problem through adequate research, active local planning, a liberal home-loan plan, the construction of homes for low-, medium-, and high-income families, and au-

thorizes assistance to localities for public and private slum-clearance projects; and

Whereas Mayor Edward J. Kelly has recommended to the National Housing Agency an emergency program, which includes, in addition to the support of the Wagner-Ellender-Taft general housing bill, the following:

(a) That temporary housing be provided by the Federal Government immediately to be utilized for the duration of the emergency.

(b) That the National Housing Act be amended to provide 90 percent financing of rental war housing, with an increased construction cost of $7,500 and provision for sale of the house to the occupant at his option within 3 years.

(c) That provisions be made for 100 percent loans to local housing authorities for the construction of permanent housing facilities to be rented at moderate costs to veterans for the period of emergency and thereafter sold.

(d) That the home use conversion program of the Federal Government which proved so useful during the war be reactivated for the duration of the emergency to provide an additional number of housing units.

(e) That priorities of materials be reestablished and be extended for the construction of homes for veterans: Now, therefore, be it

*Resolved by the City Council of the City of Chicago:*

SECTION 1. The city council hereby endorses and supports the Wagner-Ellender-Taft general housing bill and urges its prompt enactment by the Congress.

SEC. 2. The city council hereby endorses and supports the five-point program recommended by Mayor Edward J. Kelly to the National Housing Agency.

SEC. 3. That copies of this resolution be directed to all Members of the Congress from Chicago and to the Senators from Illinois, and to any other persons who may be helpful in effectuating its execution.

## Petition of Group of Rhode Island Citizens

EXTENSION OF REMARKS
OF
## HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 19, 1945*

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition:

A PETITION BY A GROUP OF RHODE ISLAND CITIZENS

*To the President and Members of the Congress:*

We, the undersigned, citizens of the State of Rhode Island, believing that our American form of Government and our private enterprise system are seriously theatened by proposals now being considered by the Congress of the United States, join in this petition to the President and the Congress.

To our great disappointment, Mr. President, your message to Congress of September 6, 1945, advocates the adoption of measures the effect of which in our opinion would be to substitute national socialism for our American form of Government and our private enterprise system. This course you have chosen despite the fact that the country's experience during the 7 years prior to the starting of the national-defense program in the spring of 1940 clearly demonstrated that the policies which you advocate failed utterly to bring about prosperity and to prevent large-scale unemployment. What reason is there, we ask you, for believing that these policies will have any different effect in the postwar period?

After the costs of this war have been fully paid, we shall have a net Federal debt of not less than $250,000,000,000, and probably considerably more. Furthermore, we shall have a postwar budget greatly exceeding anything we have hitherto known in peacetime. A debt of $250,000,000,000 would mean an average per person of over $1,800. For a family of five the amount would be $9,000.

Let us take the figure of $1,800 per person, which is a conservative estimate, and apply it to the State of Rhode Island. According to the 1940 census, Rhode Island then had a population of 713,346. At $1,800 per person, Rhode Island's share of the Federal debt at the end of the war would be $1,284,000,000 as compared with its own State debt at the present time of a little more than $21,000,000.

The average rate of interest on the Federal debt at the present time is about 2 percent. On the basis of population, Rhode Island's share of the interest alone on a Federal debt of $250,000,000,000 would be $25,680,000, a sum which is over $4,000,000 greater than the principal of the State's present debt. In other words, the amount of interest payable in 1 year on Rhode Island's share of the Federal debt at the end of the war would retire the entire State debt and leave over $4,000,000 besides. Rhode Island's case, we believe, is not unique.

A Federal debt of $250,000,000,000 and a prospective Federal Budget in the postwar period of four or five times the size of the Budget at the time the late President Franklin D. Roosevelt first took office present a problem of vastly greater difficulty than that which then faced Mr. Roosevelt. Only through the adoption of thoroughly sound policies and the most skillful handling of our national affairs can we have to avert ultimate financial disaster.

To continue the policies which have been so signally unsuccessful would, we are convinced, lead to the destruction of the American form of government and private enterprise, and the substitution of some form of national socialism.

We believe that the American people do not want this, and that if the issue were squarely presented to them the vote would be an overwhelming "No."

I. STATEMENT OF PRINCIPLES

We submit that adherence to the following principles is essential if our present form of government and our existing economic system are to be preserved:

1. Legislation which tends to strengthen the Federal Government and weaken the States should not be passed. Otherwise, the States will ultimately become in effect but mere instrumentalities of the Federal Government.

2. Legislation which tends to increase the power of the executive branch of the Federal Government at the expense of the legislative and judicial branches should not be enacted.

3. The strictest economy should be exercised by the Federal Government, and the number of bureaus and employees should be reduced to a minimum, in order that the Budget may be balanced. There is an alarming lack of evidence of any disposition to economize. The press reports indicate that much of the thinking is in terms of a normal postwar budget of not less than $25,000,000,000. A budget of this size would wreck the country. The Budget should not exceed $18,000,000,000.

4. Legislation which tends to discourage private enterprise should not be passed. Otherwise, it will be impossible to raise sufficient revenue to balance the Federal Budget.

II. CONSIDERATION OF CERTAIN MEASURES

With these principles in mind, let us consider some of the matters now before Congress.

*1. The Murray full employment bill (S. 380)*

We regard this bill, the speedy passage of which is being demanded by the CIO, as carrying the greatest threat to our American governmental and economic systems of any measure now before Congress. Although the bill professes a purpose and desire to aid private enterprise, the principles declared by it, if followed to their logical conclusion, would, we submit, lead to the destruction of private enterprise and our present form of government and the substitution of national socialism. We are in complete accord with the objective of having full employment, but the means prescribed are wholly impractical. For example, it is ridiculous to suppose that the President or anyone else could at the beginning of each year estimate with any degree of accuracy whatsoever the prospective amount of business to be done during the year and the number of persons to be employed, the estimate on which the bill bases the action of Congress in determining "the volume of Federal investment and expenditure * * * needed to assure continuing full employment." It would merely constitute an invitation to large-scale Federal spending with the disastrous effects to the Nation which such practice has caused in the past.

The only way, if any, that the plan could be made to work would be by completely regimenting the American people.

The character and ultimate effect of this bill have been most clearly and forcefully described by Dr. Virgil Jordan, president of the National Industrial Conference Board, in an address delivered before the St. Louis Control of the Controllers Institute of America, on May 31, 1945. Dr. Jordan concludes his address in the following words:

"So I can sum up for you the written and unwritten conditions of the full employment contract, in these terms: The Government will give you full employment and guarantee your income provided you will let it use your money as it pleases; if you will buy for your own use what it tells you, at the price it fixes, or let it do the buying for you; if you will save as much money as it says and let it invest it as it pleases; if you will work at whatever it says, when and where it says, and as much as it says for what it says you can be paid; and if you will hear, read and think what it tells you and keep your mouth shut. Beneath the elaborate and complex apparatus of fiscal and monetary policy, social insurance, price and wage fixing, rationing, conscription, and propaganda by which it is operated in the modern State, the compulsory collective economy, which this contract calls for to replace the voluntary competitive economy, is a simple and primitive bargain. It means merely that if most men in any community expect or compel a masterman or government—to promise to employ, support, or protect them as a matter of legal or political right, they must obey that master, do what work he makes them, live and move where he tells them; eat, wear, and buy what he tells them; save what he tells them; and ultimately believe and say what he tells them. Even if they do all of that, in the end their master can guarantee support and security to them only if some of them are able and willing to produce by their work somewhat more than the master permits them to consume for themselves. And since those who are able to produce more than they consume won't keep on working forever to support the rest, the standard of living must ultimately descend to the subsistence level unless the community can beg, borrow, or steal enough wealth and labor from some outside source to keep up the show. This is what has been happening in Europe and Russia in the past 5 years, and it will begin to happen in England and America if they follow the road laid down in the full employment bill and the Beveridge program.

"So, when we are told today that we must choose between full employment by this road or dictatorship and serfdom, I say you will get both, and must take both, for both are

stipulated in the bond of this bargain with compulsory collectivism, and if you ask me what we should do instead, I say that anything or nothing would be better than that. The colossal structure of international statism that has been erected as a monument to the dogma of unlimited government during the past decade is already collapsing into a rubble of bankruptcy and a brutal struggle for power and we have nothing to hope from it by way of peace or prosperity. Whatever the rest of the world may decide to do, let us in America make a stand for freedom here at home, and pay the price. It will be worth whatever it costs, and this may be our last chance to get it."

There should be no compromise with this issue. The bill should not be passed.

If the real purpose is to help the American people and to reduce unemployment to a minimum, let the Government refrain from actions which unduly hamper business, let it put its own house in order and practice the strictest economy, and let it drastically reduce its tax rates so that there will be an incentive for the production of wealth and at the same time more money in the hands of the taxpayers which can be devoted to the production of wealth. In such an atmosphere private industry would do the job that this bill aims to accomplish.

2. *The Wagner-Murray-Dingell bill to provide for the national security, health, and public welfare (S. 1050)*

Under the guise of amending and extending the Social Security Act this bill would impose an annual $12,000,000,000 pay-roll employment tax upon the country, would establish socialized medicine under the dictatorship of the Surgeon General of the United States, and would expand the existing Social Security Agency into a vast irresponsible bureaucracy with coercive political powers. Incentive to progress in medicine would in large measure be destroyed. This is but another step toward absolute unlimited government at the expense of the freedom of the individual. The bill should not be passed.

*3. Federal aid to education*

We are opposed to the measures providing for Federal aid to education as being unnecessary and as constituting a direct threat to the continuance of State control of education. The purpose of these measures is obviously political and funds would be apportioned politically, irrespective of State or local need.

In testifying on this subject before a congressional committee, Dr. George S. Benson, the able and patriotic president of Harding College, Searcy, Ark., said:

"The question involved is whether or not we want to keep a decentralized Government with State rights and local responsibilities and local freedoms, or whether we want to become a highly centralized Government with a regimented people. This, gentlemen, is the issue involved. Federal aid to education is the key to the entire situation. Given Federal aid to education we would soon have Federal control of education. Then with that type of political influence predominant in the school system we would soon have a public wanting Federal control of everything, because people are what they are taught.

"Under a planned economy I believe our national income would fall off by fully 50 percent, our wages by fully 50 percent, and our standard of living by fully 50 percent. I say this because no country in the world with a centralized government has yet achieved a standard of living one-half as high as our American standard of living, even though Russia has twice our resources. The reasons are easy to explain, but not necessary to this discussion.

"A very small percentage of the world's population has never enjoyed any reasonable measure of freedom or liberty or prosperity at any given time in the history of the world. With the eyes of the world upon America in this crucial period our responsibility is great. My prayer is that God will bless our lawgivers in guiding our course into still greater freedom and greater liberty and greater prosperity rather than toward less freedom, less liberty, and less prosperity.

"May I call your attention to the fact that Greece achieved her best during the days of her democracy, that Rome achieved her best during the days of the Republic, and that England established her great empire following the days of the Magna Carta. America, under still greater freedom, and still greater liberty, has achieved still greater power and prosperity. Individual freedom and prosperity go hand in hand, while regimentation and poverty likewise go hand in hand. I conclude by saying again, Federal aid is neither necessary nor desirable in public education in America. Moreover, Federal aid would, in my opinion, lead to a complete about-face in a system which has succeeded in making America the most desirable place in the world in which to live."

*4. The Kilgore unemployment compensation bill (S. 1274)*

This bill in its original form provides for the supplementation out of Federal funds of benefits payable to workers now covered under State unemployment compensation laws so that every eligible unemployed worker would be entitled to 26 weeks of benefits in an amount based on past wages up to a ceiling of $25, the financing of similar benefits to Federal workers and others who are not now covered by State laws, and the payment of traveling allowances to workers referred to employment in another city by the United States Employment Service.

This bill is objectionable for the reason that it would put a premium on loafing at a time when it is of the utmost importance that people work and produce.

It is also objectionable for the reason that it would lead to the federalization of unemployment compensation. At the present time it is administered by the States, which know best how to handle their own unemployment problems. The States are amply able to take care of their own unemployed.

In our opinion the bill should not be passed.

*5. Elimination of wartime controls, especially OPA*

The policy with respect to the fixing of prices and the regulation of profits which OPA is pursuing is unsound, and is destructive of the incentive to business which is necessary if there is to be a prompt reconversion to peacetime operations and a prosperous economy in the postwar period.

*6. Missouri Valley Authority bill and other similar projects*

Such measures as these are utterly unsound, constitute a wanton waste of the taxpayers' money, and tend through unfair competition to destroy one of the major industries of the country in which the people have over $13,000,000,000 of their funds invested. The example of the TVA should be sufficient to convince any fair-minded person that there should be no further extension of such projects. It is difficult to see why the people of New England and other sections of the country should have been forced to contribute money for the development of a huge project in Tennessee which could benefit no one at all except the people of that region, and which probably has not benefited even them after all the factors have been taken into account.

A most able discussion of this subject is contained in an article by Congressman ANDREW J. MAY, of Kentucky, published in the July and August issues of the National Republic under the title "TVA—The Great Myth of America." At the close of this article Congressman MAY says:

"Except for the artificial location of aluminum industries for war purpose, there is no evidence that TVA has been able to lure any new industries away from the present establishment.

"I hope and believe that the case against TVA could rest at this point. It has been demonstrated to be a flagrant failure in all of its pretentions to success. We have spent a great deal of money on a sort of laboratory experiment in water control and it has proven to be a failure. Logically it follows that the Federal Government should cut its losses and get out of the Valley Authority business.

"But the case against creation of further valley authorities will not necessarily be closed on the basis of the conclusion that our first experience in a Valley Authority has proved a failure. There are fanatical advocates of a certain philosophy of government who would merely argue that we should profit by the mistakes of TVA and create better and finer authorities on the basis of that experience.

"It seems to me that, instead of creating more valley authorities, the proper job of Congress today is to go into a reexamination of the merits of the TVA, to clip its wings where it oversteps the bounds of congressional intent, and bring this vast sprawling agency to heel, responsible to the wishes of Congress. It should be made to pay its way and it should be converted into a real flood-control project.

"If there is any doubt in your minds as to the direction in which the authoritarian road leads, I recommend as must reading a new and profound book called The Road to Serfdom. Between the lines of every sentence one sees the technique of propaganda of David Lilienthal and other apologists for the authoritarian state. I'm sure that Mr. Lilienthal would hotly and sincerely deny such intent. That is how far we have gone down the road of acceptance of these alien ideals of government."

*7. Fair Employment Practices Act (H. R. 2232)*

This bill, in an attempt to attain a social ideal, seeks to restrain persons in the exercise of their right to select their employees. We have no sympathy with race or class prejudice, but we are convinced that this measure would not accomplish the objective of its sponsors, and that, on the contrary, it would do more harm than good. We believe that it should be defeated.

*8. Aid to foreign countries*

There has been much discussion of the subject of aid to foreign countries, and among other things whether such aid should take the form of loans or gifts. In deciding what action this country should take in these matters, there are certain important considerations that should not be overlooked.

In the first place, there would appear to be no chance that loans to foreign countries by the United States now would be paid to any greater extent than they were after the First World War. Obviously, they cannot be paid in gold, and if they should be paid in goods such action would be fatal to a number of our industries.

In the second place, this country has made an enormous contribution to the winning of the war—both in blood and treasure. Our lend-lease contributions to our allies have alone amounted to over $42,000,000,000—which is within $8,000,000,000 of the country's total debt at the beginning of 1941, and $17,000,000,000 greater than the country's total debt at the end of the First World War.

In the third place, we have a very serious problem here at home, and it is by no means certain that we shall be able ourselves to avoid a disastrous economic collapse. As above pointed out, after the payment of the costs of the war have been completed our national debt will undoubtedly be at least $250,000,000,000.

In the fourth place, it is of the utmost importance to the future peace of the world that this country continue sound and strong.

In these circumstances, we should not embark upon a program of giving further billions of dollars to foreign nations, no matter what the form of the transaction may be, and whether it may be by way of a "stabilization fund," or otherwise. To do so would be to add to the already well-nigh intolerable burdens which the people of this country must bear.

In our opinion, whatever is done for foreign nations should be done by way of gift and should be so labeled. We should do what we can to prevent suffering and starvation, and to this end we should render assistance by sending needed supplies, such as food, medicine and clothing. Loans of money should not, we think, be made.

Recovery from the effects of the war is a job for each individual country, and its people must undergo privations and economize to the limit if success is to be achieved. The trouble, we fear, is that the other countries expect to saddle us with the load, when we have already more than we can carry. One would think at times that they regarded us as responsible for the war.

The views here expressed cannot be characterized as "isolationist." We believe in the fullest cooperation with other nations in maintaining world peace and by force of arms, if necessary.

*9. Taxation*

The adoption of a sound tax program is essential if industry is to be kept operating at a satisfactory level, an adequate market for the products of the farm and the factory provided, and employment furnished for all at satisfactory wages.

The all-important thing is to increase production and the national income. This cannot be accomplished under laws which deprive the taxpayer of the greater portion of his gains. It can be accomplished only by providing a proper incentive for people to labor and to invest in productive enterprises. This incentive is furnished by the reward of profits measured by the labor and risk involved and the right to transfer one's property to others, either during life or on death. Excessive taxation takes away this reward, and at the same time reduces the funds in the hands of the taxpayers available for investment.

This is true not only of the income tax, but also of the death and gift taxes.

The tax laws are much too complicated. They should be simplified and the field of taxation equitably divided among the Federal, State, and municipal governments.

We, therefore, favor—

1. The repeal at December 31, 1945, of the excess-profits tax.

2. The drastic reduction of income-tax rates for both individuals and corporations.

3. The repeal of the capital stock and declared value excess-profits taxes.

4. The elimination of the tax on intercorporate dividends.

5. Permitting the filing of consolidated returns by affiliated corporations for all purposes, with no penalty imposed for exercising such right.

6. The reduction of the rate of tax on capital gains from 25 to 15 percent, with the retention of the 6-month holding period.

7. The repeal of the death and gift taxes, so that this field of taxation will be left exclusively to the States.

*10. Reorganization of the executive branch of the Federal Government*

The executive branch of the Federal Government has grown to extreme proportions, and it should be reorganized as early as possible and unnecessary bureaus eliminated and personnel discharged. As of April 1, 1945, there were 3,553,639 civilian employees of the Federal Government, an increase of 10 percent over March 31, 1944. There can be no excuse for continuing any such number on the civilian pay roll. The essential work could readily be done by far less.

*11. Control of Government corporations (S. 469)*

Government corporations should be brought under the annual scrutiny of the Budget, the Treasury, and Congress. Testifying before a Senate committee on the Byrd-Butler Government Corporation Control bill (S. 469), Mr. Lindsay C. Warren, the Comptroller General, made the following statements:

"The General Accounting Office is vitally interested in the bill as a whole and in the principle of financial control of Government corporations for which it stands. * * * [It] is strongly in favor of the enactment of this legislation. * * * Government corporations have assumed a tremendously increased importance in their financial activities and their impact upon our daily lives. There is hardly a person in this country who has not felt directly or indirectly the effects of the farm and food programs of the Commodity Credit Corporation. Congress has entrusted billions of dollars of public money to such enterprises. There are 45 individual corporations or groups of corporations listed in this bill engaged in every imaginable type of activity. Counting individual corporations under the agricultural and home loan credit systems, the number reaches 101. * * * On June 30, 1943, these corporations had total assets of over $27,000,000,000 and total liabilities of over $22,000,000,000, including the intercorporate items. * * *

"Mr. Chairman, I am firmly of the opinion that if the present trend continues, i. e., the creation of Government corporations, or if it is not curbed, we will soon have a government by Government corporations. A large segment of the Government is today operating independently of congressional control and free from accountability to the Executive. Indeed, this thing we call 'government' has reached such Gargantuan proportions that it is sprawled all over the lot.

"The most necessary thing that I know of today along governmental lines is a thorough-going reorganization of the executive branch of the Government. It should be done scientifically, but once the decision is made then a bush axe or a meat cleaver should be used. The only way to reorganize is to reorganize. It calls for great courage.

"Duplications and overlapping are widely prevalent and untold millions could be saved and efficiency increased to a high degree. Of course, there would be loud yelps and snarls, but that is always true when powers are curbed, consolidations made, or appropriations reduced or discontinued.

"In my opinion if you exempt one corporation from the bill you will have many more requesting like treatment. * * * If you grant exemptions you will destroy the whole purpose of the bill to set a uniform pattern of control."

*12. National Labor Relations Act*

The National Labor Relations Act should be amended so as

(a) To make it fair and equitable to employees, employers, and the public.

(b) To protect the right to work—the right of the individual citizen to earn his living at a job of his own choice, without being forced by the Government, or any individual or group, against his will, to pay tribute to a private organization in order to secure and hold a job.

(c) To outlaw all assessments, voluntary or otherwise, imposed by labor unions upon members for political purposes.

(d) To make unlawful all combinations in restraint of trade, whether entered into by employers or employees, or the organizations of either.

*13. Legislation providing for a code of administrative procedure for the Federal executive departments and agencies*

We favor the passage of legislation, such as the McCarran-Sumners bill, providing for a code of administrative procedure for the Federal executive departments and agencies. Such legislation is long overdue.

III. CONCLUSION

The major nations of the world have been bled white by 6 years of the most devastating war in all history. To repair the damage wrought will require labor to the utmost by the people of all these countries, including our own. It will also require the investment of large amounts of capital, the savings of the people, in productive enterprises. In no other way can the needed things be produced, the wealth of the nations restored, and their economic collapse averted.

In this country, success in this struggle depends in large part upon the sound settlement of the issues which we have discussed. Let, therefore, each person holding public office remember that he is first of all an American, and let him, disregarding partisan political considerations, honestly and courageously support the policies and measures which he knows to be sound. The fate of 135,000,000 people is in the hands of you to whom this appeal is addressed.

On February 4, 1940, a group of leaders of the American Federation of Labor issued a statement the concluding paragraphs of which are as applicable today as they were then:

"As labor and industry survey what has happened to labor and industry in those lands where all powers have been concentrated in the central authority, they fear and oppose the steps which thus far have been taken here to enlarge the dominion of the Federal Government over the lives and fortunes of the American people.

"It is not a problem for labor alone, or industry and agriculture alone. It is a problem which must be solved by an awakened citizenship. It is a problem to be discussed at every fireside, to be dealt with by every publicist, to be prayerfully considered by those Americans who this year will be called upon to draft the platforms of both political parties.

"The hour has come for Americans to recognize the dangers that confront them, and to join in a united effort to halt the drift toward national insolvency and industrial collapse, and to extend opportunity for the Americans of today and tomorrow."

Accordingly, we most earnestly entreat you, Mr. President, and the Members of Congress to stop the trend toward national socialism and to take the steps that are essential to the preservation of our American form of government and our system of private enterprise.

Respectfully submitted.

DeForest W. Abel, Harald L. Amrhein, Theodore H. Belling, Albro N. Dana, Robert B. Dresser, Hovey T. Freeman, Edward B. Hough, Norman A. MacColl, Norman D. MacLeod, Harry R. Milner, Albert E. Noelte, George R. Ramsbottom, Harry Sandager, George E. Sinkinson, Harold W. Tucker.

PROVIDENCE, R. I., *October 18, 1945.*

## Policy in China

EXTENSION OF REMARKS

OF

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Times:

POLICY IN CHINA

On the basis of first-hand investigation on the spot, Under Secretary of the Navy Gates sends back to us that the situation in China is more serious and the danger of American involvement more acute than is generally realized. The Chinese civil war, which is rapidly passing from a war of words to a war of arms, is lighting new fires in the East which could set all Asia aflame again. It was Asia rather than Europe that was the immediate cause of America's entry into the war, and American forces are now deployed throughout the Orient to help liquidate that war, a fact which puts them in the direct path of any new conflagration.

Under these circumstances it behooves the American Government and the American people to be very clear about the reasons which brought our forces to the Orient, and about the policy we wish to pursue there. The temptation is great to avoid possible danger simply by withdrawing all Americans from the danger zone, and old isolationist voices mingle with those of partisanship to urge such a step. But an examination of the fundamental causes, principles, and methods of our policy in the Far East reveals how contrary such an act would be to everything we have stood and fought for, and how futile and how dangerous such a course might be. For these causes, principles, and methods may be summarized as follows:

1. The immediate issue over which the United States was plunged into war was American aid to China, which prevented Japan from conquering that great and friendly nation. America aided China for three reasons. The first was that we stand for a free world and that it is part of our policy to aid victims of aggression. The second was that we were specifically pledged by policy to defend the "open door" of China, and by the nine-power treaty to uphold "the sovereignty, the independence, and the territorial and administrative integrity of China." The third and most fundamental reason, proceeding from the elemental instinct of self-preservation, was the realization that the domination of Asia by Japan would represent a mortal threat to the security of the United States.

2. American aid to China was extended to the only authority to which it could be extended—the Chinese National Government under Chiang Kai-shek, which all Chinese factions still recognize. This government was America's ally during the war. It is now a charter member of the United Nations. To extend aid to any other authority in China would have been tantamount to fomenting rebellion against our ally and a flagrant intervention in China's internal affairs. It is a curious but revealing sidelight on the situation that some of the same voices which properly demanded American aid to the Spanish Loyalists as the legitimate government of a neutral country now cry out against American aid to the legitimate government of our ally China.

3. Before Japan surrendered it was feared that American forces would have to fight the Japanese across China even after Japan herself had been conquered. The Japanese surrender fortunately made that great and perilous task unnecessary, but by the surrender terms signed by all the Powers the Japanese armies in China have been ordered to surrender to Chiang Kai-shek, together with their arms and equipment. Because of the Communist revolt, Chiang Kai-shek has been delayed in carrying out his part of the surrender terms, and American forces are now aiding him in doing so. They are not there to fight the Chinese Communists, or to take part in a Chinese civil war, but to complete the Japanese surrender in conformity with obligations assumed by the American Government. In the performance of that duty they are entitled to understanding and support at home.

4. Whatever aid must still be extended to China must likewise go to the National Government, because any other course would undermine the United Nations. In this connection we must note that the other great Western Power in Asia, Soviet Russia, has pledged itself in the Russian-Chinese treaty to extend moral and military support to the National Government and no other.

5. The National Government of China is not yet as democratic as we should like it to be, but it offers more hope for liberty than the totalitarian regime of the Chinese Communists. The National Government is not only pledged to the establishment of democracy after a long period of tutelage; it is already beginning to extend democracy to the opposition. The Chinese Communists liquidate all opposition.

These are the principles and the practical considerations which have shaped, and should continue to shape, our policies.

## Detroit and the National Debt

EXTENSION OF REMARKS
OF
### HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. DONDERO. Mr. Speaker, as evidence bearing upon the economic condition of the United States, I offer for the RECORD a statement issued by the Michigan Survey on the pro rata share of the national debt of the people of Detroit, Mich.

It will be noticed that their share of the national debt is now 115 percent of the total assessed valuation of all of their taxable property and 11 times greater than the debt owed by the city itself.

What applies to the city of Detroit no doubt applies also with equal force to the entire country. In the face of that fact Members of Congress are being petitioned, lobbyists come to Washington, and demands are made for new and increasing Federal appropriations for every conceivable activity of the American citizen.

The statement follows:

DETROIT AND THE NATIONAL DEBT

TO COMPREHEND THE ENORMITY OF THE NATIONAL DEBT, IT IS COMPARED WITH SOME MUNICIPAL COSTS

Succinctly, Detroit citizens' pro rata share of the national debt amounts to 115 percent of the total assessed valuation of their taxable property.

This is more than 11 times greater than obligations owed by the city itself.

The city's public-school system could operate for more than a year on the amount represented by her pro rata share of the interest on the national debt alone.

The school bonded debt could be paid in full in less than 1½ years if a sum equal to the city's annual pro rata share of the interest on the Federal debt were used for that purpose.

Detroit's operations require about 25,000 people. The pro rata share of Federal employees is 48,000.

The city of Detroit is prohibited by statutes from incurring debts exceeding 9 percent of its total assessed valuation on taxable property.

No true counterpart of this local safeguard exists in our National Government. Control of the Federal debt is entirely in the hands of Congress and may be changed at its will. Omission of such a protective device may have been necessary to permit the Government to develop and meet unforeseeable circumstances, but it also has permitted much ill-advised spending.

The facts presented constitute a most serious problem for every citizen. These data necessarily cannot tell the whole story of actual need for the many expenditures that are constantly pushing our national debt upward. Regardless of purpose or need, however, this steady upward trend merits the serious consideration of every taxpayer. The problem of inefficient, wasteful spending no longer is a matter of partisan politics. It must be the object of closest scrutiny by all citizens interested in preserving and increasing the financial security and efficiency of our democracy.

Detroit's pro rata share of the national debt was established by determining the national per capita debt and multiplying this figure by the city's population. The pro rata interest share was found in the same manner.

The pro rata share of Federal employees for Detroit was established according to the relationship of the Federal Government's collection of taxes from Michigan residents to its total collections.

## UNRRA: A Duty and a Bargain

EXTENSION OF REMARKS
OF
### HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of November 18, 1945:

UNRRA: A DUTY AND A BARGAIN

Six and a half weeks have gone by since President Truman called on Congress for appropriation of the last $550,000,000 of its initial pledge to the United Nations Relief and Rehabilitation Administration.

The delay of even a few weeks would be extremely serious, warned Assistant Secretary of State William L. Clayton, who headed the United States delegation to the UNRRA Conference in London last August at which next year's work was lined out. But delay has occurred, and the appropriation bill has been stuck in the Senate Appropriations Committee for more than 2 weeks, with the serious results which Mr. Clayton predicted. Those results are becoming graver with every passing day.

The consequences of Congress' dawdling are becoming disastrous not only to the shivering and hungry peoples of Europe and Asia but also to the warm and well-fed people of the United States. In terms of pure self-interest, the inexcusable delays in a laggard Congress are causing us to lose on three counts:

First, we are subjecting ourselves to steadily mounting hazards of a world epidemic such as the fearful plague of influenza which swept the world in the winter of 1918-19. Hunger-weakened peoples of Europe, lacking coal and food and medicine, ill-clothed and living in windowless shells of houses in freezing weather, are vulnerable and helpless to resist the spread of disease—in Berlin, in Arnhem, in Sofia, and Vienna and Budapest, in Poland and Yugoslavia, Italy, and Greece and Rumania.

DANGER IN SPREAD OF DISEASE

Richard L. Stoke's dispatches from Berlin have told how the people of that ruined capital are ravenous with hunger, reduced to sifting street debris for acorns to be made into bread. Though rural Germany is relatively well off, famine is breaking out in the British-occupied Ruhr, owing to a transpor-

tation break-down and the shortcomings of Allied administration.

Tuberculosis has increased dangerously in Italy, and 10,000 a month are dying of it in Poland; 350,000 Czechoslovak children are infected with the disease, and an equal number are suffering from other diseases induced by slow starvation. From various diseases 5,000 a month are dying in Vienna, and the rate is expected to be 10,000 by Christmas. Influenza threatens to reach epidemic proportions. Spots of bubonic plague have appeared in Europe. In Warsaw, 100,000 disintegrating bodies feed hordes of disease-spreading rats.

Leave our humanity out of it. Our self-preservation depends on our doing something about it, and doing plenty, and doing it in time.

Second, we are deferring indefinitely the day when we can call our job in the relief and rehabilitation of Europe done, and can pull out. Already our tardiness in keeping our pledged word has required UNRRA to cancel $50,000,000 worth of rehabilitation supplies—and until those supplies and much more of the same sort flow stoutly and steadily, the stricken countries cannot begin to travel the long, hard road back to self-reliance.

Most of the $550,000,000 still owing by the United States to UNRRA is needed now for supplies to be sent in December and January, Director General Lehman has said. By February UNRRA should be moving supplies bought out of a second $1,350,000,000 appropriation by the United States—which Mr. Truman also has asked for, but which Congress has not even begun to discuss.

SUPPLIES CANNOT BE BOUGHT

Until Congress makes this second needed grant available, UNRRA cannot purchase supplies for shipment starting in February, the critical period of the winter. If the grant is too long delayed, the flow of goods will be interrupted, with appalling effects on those who depend on this help for bare existence. Unless it is forthcoming, UNRRA—the only hope of millions of the cold and starving and ill—will collapse, for the United States' share is 65 percent of the total expense borne by the 31 participating nations.

Third, we cannot sensibly expect democratic minds to rise from unrelieved misery and unreconstructed ruin. Without our relief and reconstruction aid, the results can be only bitterness, cynicism, a hopeless turning to any authority that can and will help. Orphan children in Bosnia living on a piece of bread and two ounces of powdered milk every other day—that is not a prelude to democracy. While Americans eat 3,800 calories a day, and go on diets of 1,200 calories to reduce their weight 2 or 3 pounds a week, millions of Europeans are doomed to that gradual wasting away month after month.

WHAT TWO LEADERS SAID

As Franklin Roosevelt said in another November, 2 years ago: "It would be supreme irony for us to win a victory and then to inherit world chaos simply because we were unprepared to meet what we know we shall have to meet. We know the common wants, the human wants, that follow liberation."

As Foreign Minister Jan Masaryk, of Czechoslovakia, said this November: "The next 6 months are going to be as critical as the next 6 years."

There is no time for congressional leisureliness. Millions will die this winter in spite of everything we can do. Millions more will die, or be stunted and crippled for life, unless we do all we can, as quickly as we can. We could no more escape the consequences, in terms of disease and bankruptcy and citizen selfdom, than we can escape tomorrow.

Every dollar we put into UNRRA is good, hard-boiled business for our country's profit. Congress should act promptly and plentifully, if it knows a bargain when it sees one, without first having to gaze at it for weeks.

## United Auto Workers State Their Position

EXTENSION OF REMARKS
OF
## HON. JOHN M. COFFEE
OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. COFFEE. Mr. Speaker, the public should know the facts which the UAW feel justify its position with respect to the current dispute with General Motors. Under leave to extend my remarks in the RECORD, I include the following article from the New York Times:

TEXT OF UAW STATEMENT IN DEFENSE OF STRIKE

DETROIT, November 20.—Following is the text of the statement issued by the United Automobile Workers, CIO, explaining the position of the union on the strike called against the General Motors Corp.:

"General Motors' reply to our arbitration proposal is a stall, pure and simple. It does not contain even a hint that the corporation accepts the principle of arbitration.

"The corporation management has heard from Wall Street and Wilmington, Del., and has made its choice. It has stated its decision.

"We have had 97 days of stalling, of refusal of this corporation to meet its responsibilities to its workers and to the public.

"The workers and the union have exhibited the utmost patience in the face of the most flagrant provocation, intimidation, and inflammatory challenges to strike ever exhibited by an American employer. We have exerted every effort to settle this issue on the basis of economic facts, rather than on the basis of economic power. We have laid our full case before the corporation and before the public in terms of facts and figures, while the corporation has delayed, evaded issues and refused to make available to the union and to the public information essential to the settlement of this dispute. The records of this case in the Nation's press show that this is true."

MANAGEMENT HAS REFUSED PUBLIC NEGOTIATION

"Even behind closed doors GM has refused to negotiate in good faith.

"It has refused conciliation.

"Now, by its stall, it has in effect refused arbitration.

"The General Motors Corp. knows now, in fact, it knew last night, whether it would accept our proposal to arbitrate. Arbitration is not an economic matter that requires extensive research and study. It's a simple question that demands only a simple answer.

"Management either believes in arbitration, or it does not. It is a yes or no proposition.

"Is General Motors willing to lay the facts of this case before an impartial board and accept that board's decision on the basis of the facts? Yes or no?"

PRESIDENT IS QUOTED

"For 3 weeks C. E. Wilson has been attending the Labor-Management Conference in Washington. On the first day of that conference he heard the President of the United States say:

" 'Management too often has looked upon labor relations as a stepchild of its business, to be disregarded until the controversy has reached a point where real collective bargaining becomes very difficult—if not almost impossible.

" 'It happens all too frequently that in the actual process of collective bargaining, delaying tactics are practiced, with the result that there is no real bargaining. There can be no justification for such tactics at the present time or in the future.'

"Only yesterday, at the same conference, Wilson listened to discussions specifically on the question of voluntary arbitration.

"There is nothing complicated about his making up his mind as to whether he favors voluntary arbitration or not. His mind is already made up. If it isn't, then he is certainly derelict in his responsibility to the people of the Nation as president of the wealthiest, most powerful corporation in the world.

"If he needs consultation with other officers of the General Motors Corp., he has had plenty of opportunity for such consultation. The telephone and telegraph of this country are still operating. You can even reach Wilmington, Del., the home of the du Ponts, through such means.

"If Wilson and the corporation agree on the principle of arbitration, but have certain disagreements with the details of our proposal, they should have submitted a counter-proposal or have accepted the principle of arbitration and arranged an immediate meeting with the union to work out an agreement on the details."

ALLEGES UNCHANGEABLE STAND

"They have not done this because they know now, they knew last night, and they knew before we submitted our proposal, that they would never agree to voluntary arbitration—that they don't dare submit to public and impartial scrutiny the economic facts in this case.

"President Truman has urged voluntary arbitration.

"Eric Johnston, president of the United States Chamber of Commerce, urged acceptance of voluntary arbitration before the labor-management conference yesterday.

"George Romney, manager of the Automobile Manufacturers' Association, reputedly spokesman for the entire automotive industry, including GM, said yesterday that he favored voluntary arbitration.

"Yet, General Motors asks more time without even hinting that it favors the principle of arbitration.

"In the light of all these facts, delegates to the national UAW-CIO-General Motors conference have unanimously rejected this last attempt by the corporation to stall and delay a solution to this problem—a problem of urgent importance to General Motors workers and to the Nation.

"Speaking for the workers in more than 100 GM bargaining units, the delegates to the General Motors conference, having seen every effort at peaceful settlement blocked by the corporation, have today voted unanimously to recommend that the UAW-CIO strike-strategy committee authorize a strike in all the plants of the General Motors Corp. under contract to the UAW-CIO."

CHARGES OF DU PONT CONTROL

"The deliberate provocation and capricious irresponsibility of the small group of industrial and financial bureaucrats who control General Motors, and who contemptuously disregard the interest of workers, consumers, and stockholders alike have left us no choice.

"The GM front for the great du Pont industrial empire and its entire economic and political allies had a choice between stable industries peace and unstable industrial dictatorship. Peace could have been achieved by open arbitration of the economic facts of this dispute, along lines long accepted and practiced by thousands of employers, as we pointed out yesterday in addressing our appeal to the corporation. Instead, General Motors has been and still is driving straight toward industrial dictatorship by a management group responsible in turn to the du Pont interests, who hold 23 percent of GM stock.

"The UAW-CIO sincerely regrets the necessity for this conflict.

"We have presented our case to the public and we believe that never before has it been so clear in the minds of the public that an arrogant corporation, which has refused to bargain collectively, refused public negotiations, refused conciliation and has now refused arbitration, is solely and exclusively responsible for the strike which is about to occur.

"We want to take this occasion to thank the press and radio of the Nation for their full and accurate presentation of the union's case to date. We hope their impartiality and accuracy will be continued through the emotional pressures and stresses of a strike situation that General Motors has forced upon its employees and upon the Nation.

"We are confident that this dispute will ultimately be settled on the basis of the economic facts, including the arithmetic which the corporation has kept locked up in its vaults, inaccessible to the negotiators, to the public, and even to the corporation's own stockholders. For our part we shall make every effort to settle it quickly.

"We take this occasion to restate our proposal:

"We demand 30-percent increase in wage rates to maintain take-home pay without increasing prices. If the corporation can show that it is impossible to pay 30 percent higher wage rates without increasing prices and at the same time to continue to pay substantial profits to its stockholders, we will scale down our demands to the point the arithmetic of the case requires. But until such proof is made, we will not reduce our demands by one red cent.

"That, we submit, is a firm, fair offer. On it we stand."

## What About the Farmer?

EXTENSION OF REMARKS

OF

### HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Nashville Banner:

WHAT ABOUT THE FARMER?

The largest single industry in the United States—in point of those working at it, as those, certainly, depending on it—is agriculture. Its "take-home pay" is the difference between its cost of production and the price received for its products. Here, then, is a basic test of the squeeze between wages (increased) and prices (static). What is the outlook, as officially forecast?

The Department of Agriculture Wednesday predicted "a decline of as much as 15 percent in the net income of farmers in 1946." How's that again? We thought everybody was getting a raise. What is the basis for evaluating the need, and justice, of a raise?

Working? Hours worked? Fidelity to the job in the face of an overwhelming war emergency?

Well, the farmer works; none harder. He works, not by a 40-hour week or a 45- or 52-hour week; but around the week; 7 days per week, and 10 to 16 hours per day. Fidelity to the job? Who stayed more faithfully on the job when the demand was for more and more production? Without stint, regardless of labor shortage or machinery shortage or any other shortage.

But not one time in his outline of policy to govern the economic order, and adjust it to a proper balance between wages and prices, did the President mention specific policy relating to balance in this industry, and the only major "official" acknowledgement of an impending plight for the farmer—most definitely caught in the middle of a pincers movement—is the Agriculture Department's prophecy that next year he will make 15 percent less. How then, is he to pay higher wages to attract enough help to raise the Nation's food supply?

Is there any good reason he should not sit in on the labor management conference? His is "labor," certainly. His is "management," certainly. His an industry millions strong.

What about the farmer?

## Housing for Veterans

EXTENSION OF REMARKS

OF

### HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. JOHNSON of California. Mr. Speaker, on November 19, 1945, my colleague, Mrs. LUCE, of Connecticut, introduced H. R. 4742, which has for its purpose giving of more liberal provisions for veterans in the procurement of farms. The bill increases the amount which veterans may borrow from $2,000 to $5,000 and it reduces the interest rate from 4 percent to 2 percent. Also, the bill provides that veterans shall be given a vehicle, through the Veterans' Administration, in obtaining the housing priorities to which they are entitled under present laws.

With the provisions and purpose of this act I am in thorough accord. I hope that the bill may become law soon. There has been a unanimously favorable reaction to this measure. During her career in Congress, Mrs. LUCE has taken a practical and aggressive part in trying to bring justice to our veterans, who have done so much for the American people.

As an example of the reaction to this proposal, under unanimous consent, I include as part of my remarks an editorial from the Bridgeport Post, which is as follows:

HOUSING FOR VETERANS

Once again the representative from Fairfield County is attracting Nation-wide attention by her intelligent and practical helpfulness toward returning servicemen. CLARE BOOTHE LUCE has introduced a bill which would give to these returning veterans unconditional priority for building materials for homes, or farms.

Everybody knows the acute nature of the present housing shortage and everybody realizes that it falls hardest on these returning men who have looked forward so eagerly to their own homecoming.

What is their reaction to find themselves harried from pillar to post with no shelter over their heads?

And what is a practical solution?

Obviously one practical solution is just what Mrs. LUCE has outlined—that in the present shortage of building materials—a shortage destined to continue some years in the opinion of experts—these men should be given priorites. The war has taught us the meaning of priorities. When it comes to building their homes veterans should be first.

As for financing, Mrs. LUCE thinks the present arrangement which allows a veteran a Government guaranteed loan of $2,000 to build a home is insufficient and should be increased to $5,000. With this as a backlog, any veteran can finance the building of a home. The repayment of the money on a monthly basis will amount to no more than rent and the veteran will have the advantage of buying his own home back by paying rent for it.

It should be observed that this is a loan, not a gift. There isn't any charity involved in it, only justice to the men who sacrificed all their immediate happiness, gave years of their lives, and sustained wounds and hardship to save the rest of us.

As Mrs. LUCE says: "If we can afford to lend billions to foreign governments, we can afford to lend money to our own veterans."

Right!

## Congress Could Go Far Toward Solving Problems by Making Labor Responsible

EXTENSION OF REMARKS

OF

### HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Knoxville Journal of November 12, 1945:

CONGRESS COULD GO FAR TOWARD SOLVING PROBLEMS BY MAKING LABOR RESPONSIBLE

Members of Congress are thoroughly aware of the clamor from one end of the country to the other that it "do something about labor."

What to do about it, or the phrases of its activities that recurrently arouse the ire of our citizenship, is a question tremendously complicated by the nature of politics and the inescapable fact that legislators are politicians.

Members of Congress are being constantly pulled at and prodded by extremists on the labor question. On one side are those who are definitely and clearly antilabor; people who would, if they could, turn back the labor picture to 1890. On the other side are extremists who would place the rest of the country firmly under the heel of a labor dictatorship, utilizing such extreme measures as the so-called full employment bill and the $25-per-week unemployment bonus as steps in that direction.

Realizing that neither of these groups represents a majority of sentiment, one element of Congress takes no steps whatever to bring about a correction of those things which are wrong with the Nation's labor set-up. Another element undertakes to meet the issue by devising complicated systems for the settlement of labor ills which are completely unworkable and frequently threaten to do violence to labor's universally admitted rights. * * *

Yet while the President calls labor conferences, such as the one now in progress in Washington, and Congress chews its nails in indecision, labor strife continues with little abatement and the basic causes of the Nation's labor troubles remain untouched.

Our main trouble, as has been pointed out here on several occasions previously, is the ancient one of power without responsibility. Labor is now big business in terms of money.

In terms of power it is even bigger than business ever was, because it has in its hands the ability to paralyze whole industries at a time, or even all industry.

Yet labor operates, by comparison with other big business, completely outside the law. It pays no taxes; it cannot be held liable for damages; it is accountable to no government for its actions, and yet every resource of the Government is at its disposal. Furthermore, it controls the economic destiny of millions of United States citizens, levies head taxes on them, and yet in many cases deprives the individual member of any appreciable voice in the mass action to which he is committed.

We submit that here is the place for sensible and fair-minded action; that in remedying the obvious injustices that grow out of the facts enumerated above there is a fruitful field for congressional activity.

We speak not in behalf of the extremists who would disarm labor and not in behalf of the equally dangerous extremists who would place the heel of labor on the whole Nation's neck but in the name of that great majority of Americans who are neither prolabor nor antilabor, but who want labor to get and give a fair deal.

Let labor be given a responsibility under the law identical with all other business enterprises—perhaps by incorporation.

Let it be made responsible financially for its contracts and subject to damages in the courts, as any other business is, for failure to perform them.

Let it pay taxes to the Government, just as any other business does, and in conformity with its ability to pay.

Let it make an accounting of its income and expenditures to the Government, and make these figures available also to union members (some unions already submit detailed financial reports to their members).

Finally, let Congress devise some method under which the constitutional rights of union members cannot be violated by forced membership or coercive action by a majority of members against a minority.

There is certainly nothing antilabor about such a program as this and we are confident that it would find wide support among millions of union members themselves—if they dared to express their views.

With such legislation on the books, a sound basis would be established for union responsibility commensurate with union power. Ninety-five percent of the Nation's labor troubles of the kind that now spring from union irresponsibility would be eliminated.

Strikes and work stoppages springing from the growing yen of labor politicians for personal power would be reduced to a minimum. Labor would, we are convinced, settle down to the role of being substantial, responsible business and abandon permanently its present one of being the naughty boy in the Nation's economic school.

## Repeating an Ancient Folly?

EXTENSION OF REMARKS

OF

### HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Charlotte Observer of November 3, 1945:

REPEATING AN ANCIENT FOLLY?

Hardly had the sound of President Truman's voice died away after he had asked Congress to effectuate General Marshall's sane and pertinent recommendation for universal military training before the pacifists began crying aloud their arguments against any kind of military protection for this country.

If this outcry came mainly from a few politicians with their eyes on the next election, it could be dismissed as merely politics.

But the chief opposition is coming from educators and ministers who ought to know better: Educators who have seen their campuses almost depopulated of male students and their physical equipment converted into military laboratories; and ministers who have had to console hundreds of bereaved families and have watched their young people's organizations become almost exclusively feminine.

If the catastrophic events of the last decade have not taught these pacifists the plain truth of General Marshall's observation that a display of weakness has never yet kept this Nation or any nation out of war, they are certainly incapable of learning.

The person who never learns anything by experience is the worst possible advisor on matters of public safety.

After the First World War we tried the pacifist plan of making an open exhibition of our weakness in the naive hope that this display of helplessness would persuade avaricious and predatory neighbors to let us alone.

We sank the best of our naval vessels, disbanded the greater part of our Army, let our air force go to pot, made no effort to keep up with technological advances in warfare, and reduced our Military Establishment to a ridiculous little constabulary drilling in outmoded tactics with antiquated and rusty equipment.

This, we innocently thought, would convince the world that we had no aggressive intentions.

It did, and what did it get us?

It got us the most agonizing war in human history.

It prolonged that war for terrible, unnecessary years while we retreated across a half a world of land and ocean, trading space for time to repair the damage done by the pacifist doctrine; and before it was over we gave up 270,000 of our sons as living sacrifices to the folly of disarmament in an armed world.

And now, these pacifists would have us do it all over again.

And what arguments do they offer in support of this counsel of folly?

Only these: That universal training is against our democratic traditions, that it will interfere with the education of the young men, and that it will create a spirit of militarism among our youth.

As to the first, democracy means nothing if not that each person should do his part. Nothing could be more democratic than a requirement that all young men, without favoritism, take their regular turn at training.

The expressed attitude of many Members of Congress is that some provision will be made for the boys to keep on with their education while they are in training.

And, as to the third objection, that the training will create a spirit of militarism among our youth, if the educators who persist in mouthing this absurdity will only open their eyes, they will see their argument discredited within their own profession.

Land-grant colleges in every State in this Union have, for nearly 50 years, required military training of their students. If such training were ever going to create the militaristic spirit among our young men, certainly a half a century has been plenty of time to engender it.

Yet you would have to look long and diligently through the alumni lists of North Carolina State College, or Clemson, or a hundred other reputable schools, both public and private, in which military training is a regular part of the curriculum, before you could find a single militarist who got that way by wearing a cadet uniform.

Mere technical study of military science never made a militarist of anybody. Militarism is a thing of the spirit and not of the mind. It is generated by indoctrination begun in kindergarten and continued relentlessly throughout the educative period of youth.

A young man who gets his first contact with military training after these impressionable years are past and he has begun to use his own mind is very poor material for militarism.

## Views of the Propeller Club of the United States

EXTENSION OF REMARKS

OF

### HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include several resolutions adopted by the Propeller Club of the United States, sponsor of the American Merchant Marine Conference, nineteenth annual meeting, in New York City, October 19, 1945. I have carefully read each of the resolutions and agree with each of them wholeheartedly:

AIR TRANSPORTATION POLICY

The war has brought great improvement in airplane service facilities and equipment throughout the world and demonstrated the necessity of commercial air power to national defense and the establishment of a comprehensive overseas transport service in the postwar period.

It is in the public interest that American steamship lines participate in the development of transoceanic air service to the end that an efficient and adequate American transport service be established and maintained under competitive conditions.

Steamship lines have long engaged in transportation of passengers, mails, and cargo by water and have contributed to the development of international trade and established the organizations and relationships essential to efficient overseas air service.

A complete coordinated sea-air service under a single management affords the shipper and the traveler the most efficient, adequate, and up-to-date facilities in transportation, and is demanded by the public and affects the public interest.

Foreign countries, particularly England, France, and Holland have long been active in the field of air transportation through the facilities of the steamship companies of their respective countries, and these and other foreign countries propose to press the development of overseas transportation service in this manner in the postwar period. It is essential to protect the American merchant marine from the threat of foreign competition that it likewise be permitted and encouraged to engage in transoceanic air transport service to the end that it will be enabled to meet the inevitable competition of foreign steamship lines.

The Propeller Club of the United States urges:

1. That steamship companies are entitled to certificates of convenience and necessity, without discrimination, upon a proper showing before the Civil Aeronautics Board that the proposed air service is required by public convenience and necessity and the applicant steamship company is fit, willing, and able to perform the service properly.

2. That it is vitally essential to the operation of a sound and adequate American merchant marine that the right of American steamship companies to engage in air transport, as an auxiliary and supplemental service to their service operations, should be fully recognized and established at the earliest possible date.

The secretary is directed to send copies of this resolution to the President of the United States, all Cabinet officers, to the United States Maritime Commission, to the Civil Aeronautics Board, to the Senate Committee on Commerce, to the House Committee on Interstate and Foreign Commerce, to the House Committee on the Merchant Marine and Fisheries, to all Members of Congress, chambers of commerce, and boards of trade in the United States.

H. J. HARDING,
*National Secretary, the Propeller Club of the United States.*

SHIPBUILDING

The experience of two World Wars has shown that the shipbuilding and ship-repairing industry is vital to national security; and the existence of a shipbuilding and ship-repairing industry in time of war requires the effective continuous operation of the industry in time of peace.

The continuous employment of a substantial staff of technical employees and a nucleus of mechanical employees at all times is essential to the national defense and the existence of the industry.

The Propeller Club of the United States urges the continuance of a long-range annual building program of merchant ships such as that provided for in the Merchant Marine Act of 1936, together with a naval replacement program and the building of experimental new types of ships, sufficient to keep our Navy and merchant marine up to date, and for the preservation of the shipbuilding industry.

The secretary is hereby instructed to send copies of this resolution to the Secretary of the Navy, The United States Maritime Commission, the House Committee on the Merchant Marine and Fisheries, and the Senate Committee on Commerce.

H. J. HARDING,
*National Secretary, the Propeller Club of the United States.*

NONDISCRIMINATION AGAINST AMERICAN VESSELS

The Propeller Club of the United States commends such efforts of the United States as have been made to accomplish the elimination of blocked currency restrictions, Empire preferences, tax discriminations, and other discriminatory practices which militate against the best interests of the American merchant marine and the American producer, as one of the conditions to the granting of foreign loans.

The convention of the Propeller Club of the United States urges that the United States exert even greater influence to bring about a return throughout the world to sound principles of nondiscriminatory, multilateral trade in accordance with the spirit of the Atlantic Charter and the United Nations agreements. Loans or credits should not be made by the United States or agencies thereof to foreign governments which persist in discriminations, direct or indirect, against Amercan foreign trade or American shipping.

The Propeller Club of the United States recommends that Joint Resolution No. 17, dated March 26, 1934 (48 U. S. Stats. 500), which, in effect, provides that all products purchased with the proceeds of loans from the United States be carried exclusively in American bottoms, be not repealed unless and until the United States has been concretely assured that such discriminatory practices will be eliminated and unless provision is made for the carriage in American bottoms of a reasonable portion of cargoes financed with American loans.

The Secretary is instructed to send copies of this resolution to the President of the United States, the Secretary of State, the Secretary of Commerce, the Director of Mobilization and Reconversion, the Director of the Budget, the chairman of the Senate Committee on Commerce, and the chairman of the House Committee on Merchant Marine and Fisheries.

H. J. HARDING,
*National Secretary, the Propeller Club of the United States.*

MARITIME RESEARCH

The United States of America possesses the greatest collection of research facilities of all types in the world, and there are many outstanding examples of leadership of our country's industries in competition with corresponding industries in foreign countries due to the extensive use of research.

The American merchant marine has already achieved world leadership by the use of the products of the country's research laboratories.

The Propeller Club of the United States recommends that the laws and regulations pertinent to the operation of the American merchant marine be formulated or modified in such a way as to encourage the vessel operator to employ our national heritage of inventive genius, natural resources, and enormous research facilities to the fullest possible extent.

The secretary is instructed to send copies of this resolution to the United States Maritime Commission, the chairman of the Senate Committee on Commerce, the chairman of the House Committee on the Merchant Marine and Fisheries, and the Commandant of the United States Coast Guard.

H. J. HARDING,
*National Secretary, the Propeller Club of the United States.*

FIRE PROTECTION

The Propeller Club of the United States urges that the Coast Guard Fire Fighting Service be extended and made permanent, and further urges upon Congress that it adopt any appropriate acts or other legislation which may be necessary to that end.

The secretary is instructed to send copies of this resolution to the Commandant of the Coast Guard, the Merchant Marine and Fisheries Committee of the House, and the Commerce Committee of the Senate.

H. J. HARDING,
*National Secretary, the Propeller Club of the United States.*

EXEMPTION OF THE UNITED STATES MARITIME COMMISSION FROM REORGANIZATION OF AGENCIES

There has been passed by the House and will probably be acted upon by the Senate, legislation (H. R. 4129) providing for reorganizing agencies of the Government, from which the Interstate Commerce Commission and other agencies have been exempted, but from which has not been exempted the United States Maritime Commission. The Senate bill is S. 1120.

The magnitude of the American merchant marine and its importance to the national defense as well as the country's commerce are too great to be entrusted to any governmental department other than an independent establishment. Continuity of policy, administration, and personnel is essential to the proper maintenance and development of an adequate American merchant marine. The lack of such continuity is criticized in the recently issued Harvard report.

The first effort of the United States in the present century to revive the American merchant marine was the creation of the United States Shipping Board under the Shipping Act of 1916. This Board functioned through World War I and until 1933, when, under legislation similar to that contemplated in H. R. 4129, the Board was abolished and its functions were transferred to the Department of Commerce. The result was so disastrous that the Congress, in the Merchant Marine Act of 1936, recreated an independent establishment, the United States Maritime Commission, to perform the functions which from 1916 to 1933 were exercised by the United States Shipping Board.

The progress made by the entire maritime industry under the 1936 act and under the direction of an independent Maritime Commission in the prewar years cannot be denied. The outstanding record of the Maritime Commission during World War II in the construction of ships, their operation, and the administration of the laws affecting shipping is such as to more than justify its continued independent existence. The need for the Maritime Commission as an independent establishment in postwar international relations is of utmost importance to the maritime industry and the Nation's welfare.

Therefore, the Propeller Club of the United States strongly recommends that the United States Maritime Commission be excluded from the Government agencies whose reorganization is covered in the pending legislation.

The secretary is instructed to send copies of this resolution to the President of the United States, the Chairman of the United States Maritime Commission, the Director of the Bureau of the Budget, and to each Member of Congress.

H. J. HARDING,
*National Secretary, the Propeller Club of the United States.*

ST. LAWRENCE RIVER CANAL PROJECT

The Propeller Club of the United States expresses its disapproval of the Barkley Senate Joint Resolution 104, which has for its purpose the ratification of an agreement dated March 19, 1941, with Canada for the construction of dams and power works, and a 27-foot canal in the international rapids section of the St. Lawrence River, and hereby voices its opposition to this bill and any other bill which may be introduced in Congress having a similar purpose. Furthermore, any effort to obtain authorization of this project shall require ratification of a treaty and shall not be accomplished by approval of an agreement.

The Secretary is hereby instructed to send copies of this resolution to the President of the United States, to the Secretary of State and to all Members of Congress.

H J. HARDING,
*National Secretary, the Propeller Club of the United States.*

## Demobilization of the Armed Forces

EXTENSION OF REMARKS

OF

## HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, if the mail which comes to

my desk from men still in the armed forces is a sample of the mail that reaches the desks of other Members of Congress, then there is every reason to expect that this Congress should take some definite and immediate action in behalf of these men and pass legislation to return them at the earliest possible moment.

I should like to be among the number of the Members of Congress who feel that matters of this kind should be dealt with with justice and with an understanding of the wishes of the people themselves, as well as the officers of the armed forces and the United States Government. At the same time, there is a veritable revolution going on, and until a tangible understandable method has been adopted that will return these men more rapidly, letters of this type will continue to come to the desk of every Member of Congress.

Under unanimous consent, I include a letter from an officer expressing his views on this important question:

NOVEMBER 13, 1945.

Representative ROBERTSON: I, being a native North Dakotan and a member of the armed forces for over 3 years on active duty, would like to take this privilege of writing to you on the unfairness of the demobilization program.

Men with a long time of service are still in the Army and men with as little as 16 to 18 months of service are already out and in the civilian jobs. The reason being the unfairness of the point system. Men that actually had engagements with the enemy should have gotten some preference by the awards of the battle stars. But men with no contact, such as service troops and other headquarters troops should not have received them. Many were awarded them and the additional 20 or 25 points makes a great difference on their points. A lot of these men are home and have had less than 2 years of service.

I happen to be one of the men that was stuck in the States for a little less than 3 years in a training center and sent overseas at the end of the war. Twice previously I had asked for overseas duty but was told they needed me at the center. It was not of our own choosing we stayed where we did. I see no reason why men that were held in those places for that purpose should serve from 3 to 5 years and men with much less service are already out. We have one officer who happened to be with me most of my Army career who has been in a little less than 5 years and has a total of 65 points, and that includes one child. Yet the man is still not eligible to return under the point system. Furthermore a circular just came out to segregate all officers' papers with less than 50 points for further assignments. I have been in over 3 years and have a child and only have a point score of 46. I ask, Is it fair to let men out with less than 2 years' service and the men that were first in are still in? Men with the longest service are the last ones out.

I read some of the protests that you got from the people in the States as to the year's conscription of the younger men. Is it asking too much for them to give 1 year to relieve men who have been in for years? We had no choice or time limit that it would take us this long to win the war. Our time was indefinite. I have a wife and child just as dear to me as any son is to his mother. Yet some of them think it is asking too much for her son to put in a year to relieve some other man that put in over two.

Men in this area have developed a slogan, "No boats—no votes," and all are very serious about the matter. Redeployment here could be speeded up considerably if some of this brass of majors and above who were bellhops and wheelbarrow pushers before they came in were relieved. It is to their advantage because as long as they have troops they have a job, and they make more money now than they ever made before. Therefore they hold troops as long as possible.

I am asking something be done for the men and officers who find themselves in the same predicament. Men with over 2 years' service and low points through no fault of their own.

Sincerely yours.

## Improvement of Big Sandy River and Tug and Levisa Forks, Ky., W. Va., and Va.

EXTENSION OF REMARKS

OF

### HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Board of Review of the War Department:

STATEMENT OF HON. ANDREW JACKSON MAY, MEMBER OF THE UNITED STATES HOUSE OF REPRESENTATIVES FROM THE SEVENTH CONGRESSIONAL DISTRICT OF THE STATE OF KENTUCKY

Congressman MAY. Mr. Chairman, gentlemen of the Board of Review, it may have been rumored around here that I was interested in this project and, if it has been, I want to enthusiastically confirm that rumor and say that it is a reality.

I think I have more reasons for sponsoring this program and prosecuting the hearing and the development of it than probably any other man who has appeared here as a witness either for or against it.

I don't know whether the press boys present will record it or not, but I am past 70 years of age and I have spent all of those years, except what time I have been in Congress, in the Big Sandy River Valley. I am mighty proud of it; that is, the part of my life I spent in the Big Sandy Valley. I do not know whether I have reason to be proud of what I have done since I have been here. That is a matter for the people to determine.

I want to qualify myself as a witness, if I can, in addition to expressing my age, by telling you of my experiences:

I would hate to hazard a guess of how many times I have met Uncle Tom Vaughn, the captain who has testified here on the Big Sandy River and, practically every time I met him I was riding a raft of logs and he was steaming up this great river, particularly fast, it always appeared, in order to make the waves that much higher. Often I passed him on another steamboat, and I never had a collision of those boats at either one of those short curves you have heard talked about, and I have been right on them, two steamers passing each other.

After I was a practicing lawyer for 15 years, and I have been at it 46 years, I happened to be a logger also and I have piloted, and I was pilot, because that is the steersman on the rear end of the raft, on more than 100 rafts from Beaver Creek at Allen, Ky., to Catlettsburg, and I beached them and tied them up and sold them. I did that for years. I have been caught out in the night on fleets of timber in the Big Sandy River and I even hired a Chesapeake & Ohio Railway towboat to tow me out.

But I think I ought to give this review board just a few facts about towing freights up and down the Big Sandy River while I am on my feet.

I have stood on the banks of the Big Sandy at Prestonburg and seen towboats owned by the Chesapeake & Ohio Railway Co. and operated by it all through the spring and summer of 1903 and 1904, towing four large barges up the Big Sandy River loaded with barrels of cement to build the bridges and the piers at the mouth of all of the creeks, over which the railroad was being built. That is not second hand. That is eye-witness testimony. That is the kind of a witness I used to want awfully bad, sometimes, when I was defending some fellow for murder or for housebreaking, or for something else.

Now I want to tell you who I speak for and who I represent.

I represent the Seventh Kentucky District, the Seventh Congressional District in the State of Kentucky.

That same area covers the thirtieth district of the United Mine Workers of America, and I represent that 20,000 coal loaders that you were told about yesterday by Mr. Caddy. I not only represent them but I represent every man, woman, and child in that area; and I not only represent that area but I represent that great industrial development composed of workers and farmers and businessmen and industry in the great Middle West. I not only represent them but I represent the American Railway System. I have even voted votes for the railroads, no longer ago than last week.

I want to represent everybody that I ought to represent.

I want to say that the district engineer who prepared this report that is attacked here does not hold the burden of proof on this thing. His report is conclusive until it is disproven, and we have a law provision in my State, and it is true in every other State, it is fundamental in elementary law that the party who holds the burden of proof is the party who would fail if no evidence was offered. Thus these two railroads must fail. They hold the burden of proof.

So here we are with a glowing, justified, truthful report being attacked by two railroads. They have the right to attack it.

Now, let's indulge in just a little bit of common sense ordinary reasoning and logic, if you want to carry it that far: If this project is not going to be a success when it is developed as is proposed in this report, if it is not going to be an improved inland waterway, then, why the alarm of the Chesapeake & Ohio Railway Co. and of the Norfolk & Western? If it is going to carry no coal on the waters, why be disturbed about it?

It simply means, gentlemen, that they know it is going to be a success and that they don't want competition. They don't want legitimate competition. Now, let me lay down two propositions here, just this way:

You gentlemen are officers of the United States Army. You are in what we know in Congress as the Corps of Engineers. You belong to a service that is 175 years old, that has an office and a district in every community in almost all the United States that has stood the test of time.

Now, what is the problem?

The United States Government has declared, promulgated, and enforced, and is today engaged in enforcing, two great Federal policies: One, a policy of developing and improving inland waterways; and the other, a policy against trusts and combinations in restraint of fair competition and legitimate trade.

Now, those two things are directly involved in this proposition and when I saw this array of witnesses coming here from Pittsburgh and the Allegheny River and all those important streams, the railroad representatives, the coal operators' representatives, water transportation institutions, I was reminded of the old, 25-year-old, dispute called and known as the Lake Cargo case,

when they were trying to keep this coal out of the Lake markets and did succeed in doing it so far as that case is concerned.

Now, with these two policies, what do we have?

We have about 6,000 miles of developed inland waterways that gets up to Catlettsburg, Ky., and it was testified to here yesterday, I believe, that there was very little freight and there was very little traffic on the main stem of the Big Sandy from Louisa to Catlettsburg. That is very simple to understand. That is, there is nothing there to handle. They just went far enough with the original navigation dams to get up within sight of the storehouse of coal, lumber, and oil, and other products that come out of that great area.

Now, then, as representative of the great developing industries of the Middle West, as a representative of the workers of the Middle West, as a representative of the developing industries in the entire Mississippi Valley, I want to see a link made, and I have a secondary reason for it, down here in the Big Sandy Valley because there is the great storehouse of the finest metallurgical by-product coal in the world. I used to mine it, and when the analyses were made in sulfur it was .65; less than 1 percent. In ash it was 2 plus. In British thermal units it was 15,500. It had a fusing point of 2,700. That cannot be excelled anywhere in the world, not even in Connellsville, Pa. That is better metallurgical coal than can be found anywhere else in the world.

Now, they attack this proposal by arguing here that there is not enough coal up there to justify it.

Well, I want to pay tribute to the District Engineer again by saying that he is a very modest man. He perhaps contented himself with taking from the United States Geological Survey the figures that they have in Document No. 876, designated United States Department of the Interior, Coal Deposits of Pike County, Kentucky—just one county. Get that. And don't forget it is just one county, and that geological report shows this: After a long surveying expedition of core drilling, and drift mine opening, after going around and inspecting the log on gas and oil wells that had been drilled all over the county, getting the thickness of seams underneath, the United States Geological Survey group made a report, and it is this public document to which is attached 52 maps. They say this in the very first page of their report:

"The county—meaning Pike County—contains an estimated reserve of about 8,000,000,000 tons of coal in beds 12 inches or more thick that are minable by drift mines. That means coming out of the hill and going over a tipple. In addition, probably several times this quantity is available to shaft mining in the lower Pennsylvania rocks below the level of the stream."

In other words, 8,00J,000,000 known and several times that much more down underneath, and that is just Pike County. That does not include Floyd County, a great coal county; it does not include Johnson County; it does not include Lawrence County in Kentucky; it does not include Martin County in Kentucky; and neither does it include any of the West Virginian counties. It includes merely to the Tug River in Pike County, and that county is larger than the State of Rhode Island.

Well, when my friend, Tom Townsend, was talking yesterday about the comparison between the Kanawha River and the Big Sandy River, I believe he said that there was no more comparison between the two than "there was between midnight and the noonday sun." Those are his exact words. I am sure that he is not the brother Townsend that developed the old-age pension system, but he is guilty of either of one or two things: Talking about something that he does not know about—and I think that is the trouble with the good friend—or that he just doesn't know. I do not think he would make a willful misstatement.

With all of this coal, and with all of the timber we have standing in that area, with nearly all of the natural gas they burn in Charleston, W. Va., and up and down the Kanawha coming out of the Big Sandy Valley—except, of course, as a war measure we developed the 24-inch main from Corpus Christi, Tex., to the Appalachian area as a war measure in the last 2 or 3 years to suppy the additional need—we have more natural wealth for development in the Big Sandy Valley than the Kanawha can ever have.

Therefore, I take it for granted that Mr. Townsend was speaking without proper information.

Now, having developed and spent about a billion and a half dollars—and, of course, that is not much money these days—on inland waterways reaching up to Catlettsburg, what kind of common sense and common judgment is it to refuse to spend $65,000,000 more to get to the real product that the waterways were built to reach? It is like curing blood poison up to the wrist and then inoculating it in the shoulder. You are cutting off the source of coal that goes to the Middle West to develop a great inland area. Bring coal and iron together.

Now, I want to put it on another ground—and when I talk about this, I am talking about something that has grown and grown on me and in my mind for the last 8 or 10 years during the time in which I have been the chairman of the great war committee of the Congress. I am putting this on the ground of national defense for the future.

And why do I say that?

I say it because, with the development of the jet-propelled plane, with the development of the rocket, with the rapid development, the unprecedented development, of radar and radio, with the development, even, of the atomic bomb, what does the great general of the United States Army Air Forces say to the world and to the Secretary of War in his report made public a few days ago? He said the time is coming when we will have to depopulate the great cities of the Atlantic seaboard; that we would have to go underground for protection unless, of course, the human race becomes sane and decides that we will live in peace rather than prosecute war—and he is advocating going underground.

Now, let us make it possible to develop great metallurgical industries essential to any war program in the Middle West, out in the Mississippi River Valley, where we are just a few miles farther from the Atlantic seaboard than is New York, Philadelphia, Boston, or Baltimore. Let us not go underground. Let us stay on top of the ground. Let us have an industrial empire in the great Sandy Valley and one in the great Mississippi Valley. The onc way to do it is to establish the transportation link between the two areas by building the dams proposed in the Big Sandy River as recommended in this engineer's report.

Now, of course, I have heard this young gentleman who is an experienced pilot that followed in the footsteps of his father, as did Uncle Tom Vaughn follow in the footsteps of his father, Captain Elsey, or whatever it is, who said yesterday that he was such a good pilot—and I am sure he is—that they were able to save the difference between $1.36 and 36 cents on a river, saving for Raymond City coal from the Kanawha River to Cincinnati. Well, the difference between $1.36 and 36 cents is exactly one dollar.

You save one dollar a ton or you save 89 cents a ton, as is shown in this Engineer's report that you will, on three, four, five, six, thirteen, or fifteen million tons of coal that will come out of the Big Sandy River to go into the Ohio and the markets of the West, and you will have saved enough to liquidate the cost of this project in a very short time.

It is feasible.

It is justifiable.

It is the last chance of a great people to appeal to their Government, through its agents, for the development of a great industrial area based on a great metallurgical product.

And, when I leave here this evening to go back to my post of duty, I want to leave with the belief in my mind that this Board of Engineers will not determine this question upon anything except cold logic and common sense based on this report and the facts with which it has been supported.

Now, of course, I don't want to detain you any longer. I think you have been punished enough and sometimes when I get the Army officers up before my committee I think they would like to see the shoe on the other foot every now and then. If you have any questions you want to ask me I will be glad to be a willing witness, but I want to serve notice on you now that I am a partial witness on this project.

Thank you, gentlemen.

I hope we may have an early decision on this matter.

Brigadier General DUNN. Thank you, Mr. MAY.

## Jewish Resolution

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter from Judge Samuel Barnet, president of the New England section, Jewish Welfare Board, with offices in Boston, Mass., in support of a resolution adopted at the thirty-fifth annual convention of the New England section, Jewish Welfare Board, held in Springfield, Mass., on November 10–11, 1945. This resolution has my unqualified support.

NEW ENGLAND SECTION,
JEWISH WELFARE BOARD,
*Boston, Mass., November 19, 1945.*

Representative THOMAS J. LANE,
*Washington, D. C.*

DEAR REPRESENTATIVE LANE: We petition your support of the following resolution adopted at the thirty-fifth annual convention of the New England section, Jewish Welfare Board, held in Springfield, Mass., on November 10–11, 1945:

"In the present war Jews fought heroically and in great numbers in every Allied army, on every battlefield, in every land, on every sea. In Nazi dominated Europe over 6,000,000 Jewish men, women, and children were mercilessly slaughtered in cold blood by every means which diabolical Nazi ingenuity could devise. They are dead, but hundreds of thousands of persecuted Jewish survivors still remain in Europe and they live in misery and despair. They stretch out their hands to the conscience of the world for help. They ask for life. They ask for a home. Their only hope is Palestine. Is their appeal to be answered merely with sympathetic words and more investigating commissions? Aren't 6,000,000 dead enough?

"We ask that their lives be saved now. We ask for a home for the Jewish people now. We ask for action now. The Balfour Declaration, endorsed by 52 nations, including the United States, and by the mandate of the League of Nations and the treaties thereto, solemnly pledged the establishment of a Jewish national home in Palestine. We ask that that solemn pledge be kept. We ask that the

infamous white paper of 1939, which is a relic of the policy appeasement and which was then bitterly denounced by the Rt. Hon. Winston Churchill and by present members of the British Cabinet, be abrogated immediately.

"Time and again the British Labor Party, before it was in power and as recently as May 1945, pledged its support to the establishment of a Jewish commonwealth in Palestine. We ask the present Labor Government, now that it is in power, to keep its pledged word.

"We ask that the doors of Palestine be opened at once to admit 100,000 displaced Jews of Europe. We ask that Palestine be opened to unrestricted Jewish immigration. We ask that Palestine be reconstituted as a free and democratic Jewish commonwealth. We ask our Government to use its best efforts to achieve these results; and be it

"*Resolved*, That a copy of this resolution be sent to the President of the United States, to the Secretary of State, to the British Ambassador at Washington, to the governors of the New England States, and to the New England Senators and Representatives in Congress."

Respectfully submitted.

Judge SAMUEL BARNET,
*President.*

## Baltic Refugees in Sweden

EXTENSION OF REMARKS
OF
**HON. ALVIN E. O'KONSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. O'KONSKI. Mr. Speaker, information has been received from Sweden that the Swedish Government has agreed to surrender to Soviet Russia 157 Baltic refugees. This has been confirmed by a United Press dispatch datelined Stockholm, Sweden, November 19, 1945, and carried in the New York Times, November 20, 1945.

There are approximately 36,000 Baltic refugees in Sweden now. Among them are people of all walks of life and of all political parties, except Bolsheviks. The leftist Social Democrats are represented among these Baltic refugees by numerous prominent Socialist leaders, who felt that their only chance of survival was flight from the advancing Soviet forces last year.

This indicates the scope of Bolshevik terror as practiced by the Soviet in the Baltic countries in 1940–41 when they first invaded Latvia, Estonia, and Lithuania.

The 157 refugees, whose fate and, indeed, whose lives are now at stake, are former soldiers, forcibly mobilized by the Germans and impressed into German uniforms.

These forcibly mobilized Baltic youths escaped from the Germans at their very first opportunity. Some of them surrendered to the American Army, some to British forces and those now in Sweden escaped by way of sea.

The American and the British authorities treat these Baltic peoples as displaced persons. None of them have been surrendered to the Soviet, and according to numerous pronouncements of the American and British Governments, respectively, there is not the slightest intention on the part of the United States or Great Britain to surrender any of the Baltic refugees to the Soviets.

The United States first denounced the Soviet aggression against the Baltic States on July 23, 1940, when Hon. Sumner Welles as Acting Secretary of State characterized this Soviet aggression as "predatory activities" and "devious processes," to destroy the political independence of the Baltic Republics—Latvia, Estonia, Lithuania. Hon. Sumner Welles went on to say that unless the principles of American policy—the principles of nonintervention, the principles of opposition to predatory activities by force or by threats of force—are sustained the basis of modern civilization cannot be preserved.

I respectfully submit that this was true in 1940 and that it remains just as true today.

Former Governor Lehman, of New York proclaimed June 15, 1941, as Baltic States Day and in his proclamation he conveyed the sympathies of the people of the State of New York to these enslaved nations.

I respectfully submit that this is as true today as was in 1941. And it is just as true with reference to the period of 1941–44 when the Baltic peoples were oppressed and enslaved by the brutal Nazi German invaders.

Among the many acts of brutality and oppression, perpetrated by the Nazis in the Baltic States was the forcible mobilization of Baltic youths and their impressment into German service.

The Baltic peoples did not accept the German occupation. Fighting undergrounds were formed in Latvia, Estonia and Lithuania, and these undergrounds denounced both German and Soviet occupations and succeeded in furnishing the western allies with considerable information regarding German atrocities and other matters.

The policy of the United States is a matter of record. The attempted legal absorption of the Baltic States into the Soviet Union has not been recognized by the United States. Neither has Great Britain, nor the western democracies, nor any of the American Republics, recognized Soviet aggression against Latvia, Estonia, and Lithuania.

As far as the United States is concerned, the aggression of the Soviets against these republics stands condemned as predatory activity, carried out by force and by threats of force.

The United States, by their unequivocal denunciation of these Soviet actions, by the proclaimed principles of the Atlantic Charter, and by their continued recognition of the legal existence of the Baltic Republics, has indeed given moral support and encouragement to the Baltic peoples in their hopes and struggles for freedom and independence.

Also, American public opinion has been well-nigh unanimous in the support of the independence of the Baltic Republics. As characteristic, in this connection, I should like to quote the concluding paragraph from an editorial published in the New York Times, on November 18, 1941—the anniversary of Latvia's Independence Day:

> But the present struggle against Hitler will fail, and civilization will be the worse, if European minorities like that of Latvia are not able to control their domestic affairs in their own way, to develop their own cultures and to be safe from armed aggression. The great powers will never have peace unless the little nations, such as Latvia, are secure.

In view of the above, I respectfully submit that we Americans have a moral duty to give every succor and protection to the Baltic refugees. We have denounced the Soviet aggression against them. We have repeatedly and continuously in our pronouncements, statements, and declarations held out to these peoples the hope for their independence. It is not surprising that the Baltic peoples have felt themselves encouraged to hope for and to fight for their very survival.

Now we are faced by the fact that Sweden, a country of a high civilization, of noble purposes, and a genuine democracy, is forced, under continuous and unrelenting pressure of the Soviets, to surrender the first group of the Baltic refugees to Soviet Russia, under the pretext that these people fought against the Soviets. It is, of course, entirely overlooked that these people were forcibly mobilized. And their sovereign rights—as citizens of recognized independent republics—to fight against any and all aggressors are denied and ignored.

If these 157 unfortunates classed are political refugees, then their right to asylum in Sweden should be unquestioned. The last people in the world to question the right of asylum for political refugees should be the Bolsheviks, because they have most freely availed themselves of this right in the past. The United States has given refuge and asylum to thousands of Bolsheviks who have come here since 1905—the first, abortive, Russian revolution—and even before, and have found here liberty, opportunity, and prosperity.

If these 157 unfortunates are classed as escaped prisoners of war, then, by gaining the neutral territory of Sweden, they have regained their freedom under international law.

In either case, it is against all precepts of international procedure, against all canons of international law, to even consider the surrender of these 157 unfortunates to a hostile power, whose actions we have condemned in an official statement of the State Department as "devious processes" and "predatory activities."

Especially since we well know the horrible fate that awaits them at the hands of NKVD—secret police—of the Soviets. In this connection, I should like to quote the following from a recent editorial—October 20, 1945—of the New York Times:

> But the vast majority of these people are refugees who opposed both Germany and Russia in the name of the independence of their countries, which the United States still recognizes. Germany is powerless to harm them, but Russia, having annexed their countries, considers them to be at the very least oppositionists to the Communist Party line and perhaps even traitors. And the fate which awaits them on "repatriation" can be easily imagined. The American and British Governments have given assurance that no

one will be compelled to return to the Russian zone against his will, and it is to be hoped that this pledge will be kept.

Latvian, Estonian, Lithuanian organizations have addressed telegrams and letters to the President, to the Secretary of State, to the Pope, the King of Sweden, the Presidents of both Houses of the Swedish Parliament, the Swedish Minister in Washington, to our Representatives and Senators.

It is a question of life and death for 157 innocent victims of war and aggression. But it also means more than that—it is the setting up of an insidious precedent, which the Soviets will exploit in a continued endeavor to obtain the surrender of other Baltic refugees in the hands of States unable to resist the powerful and ruthless pressure of Soviet Russia.

## United Nations Relief and Rehabilitation

EXTENSION OF REMARKS
OF
### HON. JOHN H. FOLGER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. FOLGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast of Raymond Swing on November 22, 1945:

What ails the world at large is that there is not enough of doing things together. The war had to be fought together. If it had not been, the Axis powers would have won it. The pressure of peril drove people out of their individual and national separateness, and together they could muster the might which forged the victory. During the war, skeptics dared not scoff at doing things together. More cooperation was obtained, within nations, and among nations, than has ever before been seen. It was clear, too, that after the war the need of doing things together would be just as great as during the war. The need would be as great, but the peril would not appear to be as great, so cooperation was going to be harder to obtain.

That consideration was in the minds of Allied leaders in deciding to set up an international relief organization for the postwar period, and to do it while the war still was being fought. No more wholesome thinking was done by this country and its allies than when they decided to set up UNRRA. Since we were fighting for the preservation of civilization, since ours was the cause of decency, since devotion to the rights and sensibilities of man was to be found only on the Allied side, it was imperative that we take thought of the need for relief and rehabilitation, and be prepared to bestow them on the victims of German savagery, having the organization already launched and the funds in hand.

Nothing done by the Allies so closely conformed to the best American standards of humanitarianism. And it was a matter of gratification to most Americans that while they were going to make the largest contribution to UNRRA, the task of relief after the war should be a joint one, something done together, each contributing according to his ability. That, many felt, would help along the work of peace, and peace itself would never be secured if people did not establish it together.

THANKSGIVING AND RELIEF

This first Thanksgiving Day since the war surely is an appropriate moment to take stock of what we have done about UNRRA, as well as our reasons for gratitude. As a Nation we are bound to be thankful that we won the war, that our freedom and our power have not been impaired, and that we have indeed been vested with as great a responsibility as any nation in history. It adds up to a tremendous amount to be grateful for, and to be humble about. But we have not expressed our gratitude or our humility with the prompt fulfillment of our pledge to the work of UNRRA. That would seem to be the least we could expect of ourselves. Some of our international problems are beyond our experience, and we are entitled to a little fumbling and delay in solving them. But this problem of feeding the hungry, and aiding the impoverished to aid themselves, is an old and familiar one. Our interest in it and ability to cope with it are part of our civilization. This is something Americans understand, believe in, and accomplish. It is what Americans can be relied upon to see through. But, in regard to UNRRA, it is not what we have accomplished or seen through.

The $550,000,000 underwritten on our behalf for the work of this year has not yet been voted, and the $1,350,000,000, our quota for the work of the new year, faces strong opposition in Congress. Doing things together is indeed harder in peace than it was in war. It is easier now for the skeptics to scoff, and for the fault finders to score with exaggerated criticisms. What is most disconcerting, perhaps, is that the attitude of the opponents of UNRRA in Congress so completely misrepresents every generous instinct in this country, and makes us smack of a meanness and selfishness which, in all objectivity, cannot be said to predominate in the American nature. Never before have American Thanksgiving dinners been more bountiful, or have a greater number of our families enjoyed them, than on this day. This, of all seasons, is the one in which Americans are ready to give thought to those not replenished as we are, who so recently were our associates in the war.

CRITICISMS OF UNRRA

Some of the criticisms of UNRRA are justified. It has not been a faultless organization by any means, partly because it came on the scene when the best administrators were already working for other Government agencies. It has bungled, and its supplies have been stolen, just like other agencies, and not much worse than others. It is doing a more extended job than did the Hoover relief agency after the last war, and at lower cost. It is a job that cannot well be turned over to any other agency at this time. General Eisenhower told the House Committee on Foreign Affairs today that the Army could not do the work, and no other organization could do it as well as UNRRA. Certainly no agency of any single country could do as well what requires international cooperation, and it would be a loss to the world if the international nature of the work were abolished.

Much of the criticism of UNRRA is the same kind of carping that was done against Lend-Lease. A good deal of it comes from individuals with personal grievances to air, and still more is the output of the rumor factory that always works overtime when a Government spending agency is involved.

The House, in voting the final $550,000,000 of our contribution for 1945, tacked on an amendment stipulating that the money could not be spent in any country which does not give full access to newspapers as to the expenditure of the fund. In the Senate, such leaders as Senator MCKELLAR and VANDENBERG have spoken out against this amendment, and it now looks as though it would be defeated in the Upper House. If it is not the fund will not become available in time to do the work planned for it. For a limiting condition adopted by one country has to be accepted by all the other countries comprising UNRRA. And if we set down conditions, other governments may do so, requiring still more time for general adoption. To use the threat of starvation as a means of freeing the press in impoverished countries is getting values badly mixed, and serving freedom by a strange compulsion. The people who are hungry and who need rehabilitation are not the ones who keep the press in their countries from being free.

When these amendments to international agreements are added in Congress, one is entitled to ask whether the real purpose of them, no matter what they say, is not to kill the agreement. For the additions have that effect, and Members of Congress who vote for them cannot be excused for not knowing it.

EISENHOWER'S EVIDENCE

The House Committee on Foreign Affairs held a special session today to listen to the evidence of General Eisenhower. The new Chief of Staff was suffering from a severe cold, which prevented him from undergoing prolonged questioning. He told the committee that Europe is making every effort to rebuild its own economy. But he pointed out that no matter how vigorously these efforts are pursued "there will," he said, "inevitably be a grave transition period through which these countries will have to pass, when they will have to receive outside assistance.

"I am fully confident," he declared, "that the people of Europe can recover from the grievous blows they have suffered if they can be helped through this period. However, if this bitter situation is not to be so disastrous as to make men wonder if it was worthwhile to have taken up arms against the Nazis, we in the United States must be prepared to discharge a very heavy responsibility. We must, now, make our proportionate contribution to the relief of Europe, in order to insure the permanence of our military victory."

"UNRRA," he continued, "represents one major effort of the United Nations to act constructively in meeting the challenge of the peace. The United States assumed leadership in organizing UNRRA. The United States has also assumed leadership in urging upon other nations of the world the thought that by united action and consultation through such a medium as the United Nations Organization, resort to war shall not again be necessary. If UNRRA were to fail them, they could not help but feel that not only had the United States failed them, but that the hope of solution of world problems through United Nations action was an illusory one."

And he described Europe as prostrate, with many of its cities devastated beyond imagination. River, rail, and water transportation are still disrupted. The harvest was poor due to lack of farm labor and fertilizer. "There are few places in Europe," he said, "where people are not cold, hungry, and apprehensive of the future."

DIRECTOR LEHMAN'S TESTIMONY

Director General Lehman of UNRRA today pleaded for immediate legislative action on the two UNRRA appropriations. The administration has, he said, already exhausted all its resources and must have additional funds immediately to save millions of Europeans from starvation, disease, and exposure in the coming winter. "This month," he said, "the month in which we celebrate Thanksgiving in America, 10,000 people in Warsaw alone will die of starvation and disease."

He said that UNRRA is pumping overseas more than a hundred Liberty shiploads of supplies a month, but added that lack of funds had forced it to suspend $50,000,000 in orders for medicine, clothing, and other critical items. Another $50,000,000 worth of

United States Army supplies already in Europe also have had to be withheld for the same reason. Even with the $550,000,000 appropriation, UNRRA will be out of funds again in mid-February. "The ships are here," he said, "the supplies are on hand. A ton of supplies now will achieve immeasurably more than 5 tons shipped 6 months from now, after famine and disease have got out of control. It represents a saving of lives by the millions."

Mr. Lehman admitted that some of the criticism of UNRRA was justified, but pointed out that in these cases "we have recognized it and have rectified the situation. It comes as a disheartening surprise," he said, "that by far the greatest amount of criticism is heard in this country—the richest, healthiest, and best fed in the world. Whereas in those countries which have suffered—as we have never been called upon to suffer—there is solid support for UNRRA and the heartiest praise for its work."

## Control of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

TRUMAN-ATTLEE-KING PLAN ANNOUNCED NOVEMBER 15 FOR CONTROL OF ATOMIC ENERGY COINCIDES WITH CONGRESSMAN M'DONOUGH'S RECOMMENDATIONS OF OCTOBER 29

The plan for control and development of atomic energy as set forth in the declaration of the President of the United States, the Prime Minister of the United Kingdom, and the Prime Minister of Canada on November 15 at a Washington conference, is strikingly similar to the recommendation for foreign and domestic control of atomic energy presented in a speech October 29, in the House of Representatives by Congressman GORDON L. McDONOUGH, of California.

Congressman McDONOUGH urged, we should exchange our knowledge of atomic energy with other nations for peacetime pursuits for knowledge they have. Mr. Truman, Mr. Attlee, and Mr. King stated, "We declare at the outset our willingness, as a first contribution, to proceed with the exchange of fundamental scientific information for peaceful ends with any nation that will fully reciprocate."

Congressman McDONOUGH further stated that the United States should not reveal the secret of the atomic bomb at this time and that we should urge the abolition of the atomic bomb by all nations in the world for military purposes. Both of these recommendations were stressed by the declaration of Truman, Attlee, and King which stated in part, "We are not convinced that the spreading of the specialized information regarding the practical application of atomic energy. * * * would contribute to a constructive solution of the problem of the atomic bomb." This was followed by a strong plea for the universal elimination from national armaments of atomic weapons adaptable to mass destruction.

Congressman McDONOUGH with his background of experience in scientific research has a clear picture and thorough understanding of what is necessary for the protection of the American people from the atomic bomb and of the control of atomic energy to further the preservation of peace.

## Discharge of Physicians From the Armed Services

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from a doctor now in Japan.

Mr. Speaker, you will note that this doctor, and I know him very well, states that he has not done a bit of medicine since January of this year and most of the other doctors over here say the same thing.

Last Tuesday, I had a conference with six other Members of Congress in my office. Surgeon General Kirk was present. We pointed out to the general that many complaints were coming to Members of Congress relative to keeping physicians who were not needed in the armed forces. General Kirk assured us that they were now giving first priority to the returning of physicians, dentists, and nurses to this country. They should then be discharged at the earliest possible moment. The difficulty in the discharge system is one which requires a medical man to have 80 points, be 48 years of age or in service before Pearl Harbor before he is entitled to a discharge from the Army medical service.

The discharge points are to be lowered to 70 the first of December. Even at this rate, there will be entirely too many medical men in the Army medical service. The ratio at the present time is about one physician to 110 soldiers. This is entirely out of proportion and even higher than the 5½ medical men to 1,000 soldiers during the war. Unless the Army reduces the number of points and other restrictions, we will see far too many medical men retained in the Army. These men are desperately needed in many communities where the mothers, the children, and the old folks have a much higher medical and surgical care need than the young healthy men in the Army.

KOKURA, KYUSHU, JAPAN,
*November 8, 1945.*

A. L. MILLER, M. D.,
*House of Representatives,*
*Washington, D. C.*

DEAR DOCTOR: Now that the war is over in the Pacific, we doctors who have been in the Army for some time, who left practices and families, would like to get back. I have been in the Army nearly 3 years and overseas 15 months. I practiced at ———, Nebr., for 7 years before going into the service and at present my wife and two daughters are now residing there.

There has been no policy for getting general practitioners out of the Army. The work of the general practitioner in the Army has been nothing more than a first-year intern and he could easily be replaced by men just finishing their first year internship. The general practitioner at the present time certainly should not be essential now that the war is over and our communities are in need of medical care; I know the one I left is.

Something should be done to get the oversupply of medical men overseas home. Personally, I haven't done a bit of medicine since January of this year and most of the other doctors over here say the same thing. Why attempt to keep the same number of doctors in peacetime as in actual combat? Why, with an oversupply of doctors over here, they keep the number of points necessary for discharge so much higher than other Army officers. We doctors, who have given 2½ to 3 years in service, feel we should be allowed to return without the usual Army delays, especially when we know definitely that we aren't needed here.

I know that you have been receiving considerable correspondence from Army men and I wouldn't bother you except for the deplorable situation that exists in the returning of doctors, especially those overseas.

DOCTOR C. C.

## OPA Must Go

EXTENSION OF REMARKS
OF
### HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, this country is about to witness a national scandal all because Chester Bowles and his organization is either too stubborn or too dumb to see the real effect of its automobile pricing policies. Not only is it forcing auto manufacturers to stop production lines but as a result thousands of workingmen will be out of jobs. This nonsensical policy will surely retard reconversion at a time when our boys are returning from the armed services. These men, Mr. Speaker, have a right to more consideration than Mr. Bowles is giving them, but he shuts his eyes to the facts and says: "The public be damned."

Then, too, Mr. Speaker, he is placing in jeopardy thousands and thousands of small businessmen who have for more than 20 years been establishing a profitable business through hard work, precarious investments and long hours. And by a stroke of the pen, an executive order, these men stand to lose their entire investments. This situation is brought forcibly to my attention by a letter I have just received from a personal friend who by the dint of his own ability in the last 25 years has established a fine business and an enviable reputation for honesty and integrity. He writes with a good deal of feeling and with every justification, for he believes that Mr. Bowles is driving him out of business. I insert at this point all of his letter. I withhold his name for obvious reasons, but will gladly furnish it to any Member of the House, upon request:

Mr. LAWRENCE SMITH,
*Member of Congress, Washington, D. C.*

DEAR LAWRENCE: I am surely glad to know that we have men of your type in Congress, who have guts enough to tell OPA and Bowles and his gang where they fit, and that they are a bunch of bungling fools who will run the country to hell, if they can.

So he proposes to cut the car dealers discount of 25 years standing, and calls us a lot of selfish power lobbyists? Well, even a dog has a right to squeak, if his tail is being

cut off. Lawrence, if they cut our discount by even 1 percent I promise you the greatest scandal and racketeering the country has ever seen. The bootlegging days of the twenties will seem like a Sunday school picnic by comparison. Do you know why? Well, if new cars are held at 1942 prices here would be the picture:

New 1946 Chevrolet sedan, including all tax and charges (this was the price in Racine in 1942), $940.

Used 1942 Chevrolet sedan, same model, present OPA ceiling, $1,134.

In other words, a used 1942 Chevrolet sedan could be legally sold—a car which is 4 years old and at least half worn out—for $200 more than a brand-new one. In proposing to hold the price of new cars to the 1942 level, has he proposed to cut the OPA ceiling of the used one to $470, which it would be worth as a true value? No; he has not. Check this one with Bowles; he can't deny it. Why, in the name of God, has he ever permitted, as shown, a used car to be sold for more than it was worth when it was new.

Now, normally, I employ 14 retail salesmen; 4 are here now, and I expect 9 of my former salesmen to return from the Army and Navy in the near future to their old jobs with me. Bowles says we will need no salesmen. Shall I tell them to go to work in the coal mines or shall we shoot them?

So, Mr. Smith (or Jones, as the case may be), if you want to buy a new car—and about 15,000,000 will—you won't be able to buy your new car from any dealer unless, as a condition to the sale, you will agree to trade in your car that is actually worth $400 for a $200 allowance. So you won't trade it in? Good; you can keep on using it or walk. If you have no used car, O. K., we'll play a game of gin rummy for $200, and you'd better let me win or you'll keep on walking. Oh, yes, there are many more in the book. Does Bowles and the OPA want some scandal? They'll get it, and plenty.

In 1942 I paid my mechanics $1 per hour. I now pay them $1.25. The rent on my garage building in Kenosha has been increased just 100 percent since 1942. In 1942 the Government requested me to sell them my last 90 new cars in stock—they said they needed them, and it would be unpatriotic to hold them for customers at the regular price. They then chiseled me 7 percent discount, which was O. K. because I was supposed to be a patriot.

The OPA waited until 1944 (why?) and then put a ceiling on used cars. It was so high that it had no semblance of true values. So I quit handling used cars and haven't handled one since. Only the law violators and racketeers kept on—and got fat—and paid no tax—they all carry $100 and $500 bills in their vest pockets. Want me to prove it? O. K. I will, when you ask me to.

So Bowles and OPA want to hold 1942 car prices. They want to cut the car dealers' discount. Yet they approve wage increases—why I even read that Mr. Truman wants you Congressmen to get a raise of 100 percent. (God knows you are entitled to it.)

Don't let the OPA and their bungling-dam policies put us all on the rocks. We don't deserve it, this kind of treatment. But I promise, if we get it, that we car dealers can take care of ourselves, and let the stink go up to high heavens or higher.

You are right, especially in your last bulletin. OPA must go out the window before it is too late. Out with the rascals, before they ruin us all, and our country besides. Tell Mr. Bowles, since he has said he would like to be in the business, that he can buy this one. The purchasing price will be the figure of a fair, impartial appraiser of the physical assets. I have spent 25 years in building it up, only to see it jeopardized by a bunch of laughing insane hyenas.

I belong to no association, national or State. So OPA and Bowles are liars and stinkers besides, when they say I am a selfish unfair lobbyist. Who can I appeal to? Only you, as my Representative in Congress, and you are O. K. with me. I wish we had a lot more like you there.

With kindest personal regards,
Yours very truly.

## One World or None

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. VOORHIS of California. Mr. Speaker, I shall not attempt to comment on the following article which appeared in the Bulletin of Pacific School of Religion written by Mr. Buell G. Gallagher. The article will recommend itself to everyone who reads it as one of the most powerful things that he has ever read:

ONE WORLD OR NONE

(By Buell G. Gallagher)

All through the war, some of us were saying that the world was going through a revolution, but few of us dreamed how profound and tremendous that revolution actually was to be. Just how true these predictions of revolution were is now made clear in the flashes over Hiroshima and Nagasaki which literally wrote the story in columns of boiling smoke 50,000 feet high for all mankind to see.

It was a thousand years ago, August 5, 1945, that a single plane flew over Hiroshima, a single bomb floated earthward, suspended from two parachutes, and the atomic age burst upon us. Between one and two hundred thousand people were crushed and cremated by that bomb. Scores of thousands more have since died of its effects.

Never before has man possessed such power. Never before have the inadequacies of ethical controls been as clearly revealed. There is little point in arguing at what stage modern warfare violated the old Hague Covenant, or by what nations the violations were perpetrated. The effort to bring under ethical controls an essentially unethical practice is as absurd as to argue that murder by poisoning is immoral while murder by malnutrition is permissible. The point is that all participants in the war, Americans no less than their enemies, came out of war with radically different standards. There has been a profound revolution in our morals, no less profound than the new technology of neutron fission.

In this atomic age, certain conclusions already are redundantly clear:

1. That the old ways (particularly national sovereignty and its corollary, international war) are no longer usable. It was General MacArthur who said: "We have had our last chance, if we do not devise some greater and more equitable system. Armageddon will be at our door. The problem is basically theological." General Eisenhower put the matter more bluntly when he said, "Now mankind may be blackmailed into peace." The ways of war and the premises of nationalism are unusable in the atomic age. This is not pious sentiment; it is stark realism. Show me a man who today believes in the war method, and I will show you a man who is either a complete romanticist, refusing to face facts, or else one who, knowing the facts, is a sadist who believes in race suicide. Just as gunpower ended the feudal classes, so atomic energy has ended the nations. As Raymond Fosdick puts it, our choice is simple: One world or none.

2. Hiroshima made San Francisco obsolete. Fairly good in its day, the United Nations Organization is as outmoded in the atomic age as a crossbow in a day of buzz bombs. Nothing short of a genuine world government, to which the United States, as well as all other nations, is subject, will suffice to save us from the fearful frightfulness of an atomic war—over in a few hours, with the attacked nation obliterated.

3. The time is short. Not more than 10 years are available before the atomic war is an instantaneous possibility, the victory resting with that nation which acts first, before its mutually mistrustful opponent obliterates it. The time is now.

4. The only adequate method of controlling the fearsome atom is to bring the consciences and actions of all men under the control of a greater fear—the fear of the Lord which is the beginning of wisdom.

Since that day when (in the words of Horace):

"Prometheus first transmuted
Atoms culled for human clay,"

down to the present moment when atomic fission threatens to give humanity back to the dust, man has never stood in greater peril. In this brief half-second of history's time, we can escape the fear of our fellows only by a genuine fear of the Lord, which begets a love of mankind. We can be very specific about the price of survival under a just God: (1) An end of national sovereignty, in world government; (2) justice and equity among all peoples of whatever race or culture as the basis for this world government; (3) the speedy end of all forms of economic and political exploitation and domination. These things on the world level we will do only if we also do them on the local level, by ending restrictive residential covenants in our cities and discrimination because of race in employment or in social life; and by the rapid creation of the inclusive church, instead of the segregated churches we now have.

Atoms like those that were split over Hiroshima make up all matter, all energy, all flesh—whether it be the flesh of Greek or Jew, barbarian, Scythian; bond or free. We have a terrible and portentous choice to make. We can say with Pilate, "I have power," and we shall be answered with the words of Leviticus, "I will break the pride of your power." The other choice is hidden deep in the prophecy of Zecharaiah, "Not by might, nor by power, but by my spirit, saith the Lord of Hosts."

## Roosevelt Amateur Strategist

EXTENSION OF REMARKS
OF
### HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, at this Thanksgiving season of 1945 the Nation should offer its sincere thanks to Admiral Richardson who has just completed his testimony before the Pearl Harbor Investigating Committee. He has rendered an outstanding service to the country by revealing that he had notified President Roosevelt that the Pacific Fleet was not ready for war 10 months before Pearl Harbor and that the fleet should not be based at that place. In an editorial appearing in the Washington Post for November 22, 1945, it is pointed out that the President overruled the admiral for what appeared to have

been political considerations. This editorial intimates also that Mr. Roosevelt might have been using the fleet for purposes of diplomacy and not defense. The plain fact emerges, Mr. Speaker, that the keeping of the fleet in Pearl Harbor was upon the orders of the President and responsibility for the final disaster is upon him. As a part of this extension, I include herein the editorial in question:

RICHARDSON'S TESTIMONY

Until the appearance of Admiral Richardson as a witness, the congressional investigation of the Pearl Harbor disaster of December 7, 1941, had, despite all the publicity given to it, added very little to what was covered or implied in the previously published report of the Army Pearl Harbor Board. Admiral Richardson's testimony is, however, quite new and startling, and introduces another question into the controversy, namely, whether the late President Roosevelt was not using the Navy as an instrument of diplomacy rather than of defense.

Admiral Richardson was known in the service as one of the naval officers who had given a large part of their lives to the study of the Pacific problem and to the possibility of war between the Japanese Empire and the United States. Besides, as commander in chief in the Pacific, his was the responsibility for the safety of the fleet. Thus, his opinion, expressed before both President Roosevelt and Admiral Leahy at a luncheon in the White House just 14 months before Pearl Harbor, should have carried unusual weight. Admiral Richardson testified that he told the President that it was a strategic mistake to keep the fleet, undermanned as it then was, based at Pearl Harbor. It was in no condition, the Admiral said, to conduct operations against the Japanese. Preparations for war could be made more rapidly if all the fleet, except the Hawaiian detachment, were returned to its natural base on the American west coast. Among other things, Admiral Richardson believed that, whether there was to be peace or war in the Pacific, the thing most immediately necessary was to recruit the fleet to full strength, to have it fully supplied with provisions and ammunition, and generally placed in a condition of readiness for war at any moment.

On both these points he was overruled by the President, and for what appear to have been purely political considerations. The President said that the fleet must be kept at Pearl Harbor, first, because its presence there would have a restraining influence on the actions of the Japanese Government and, secondly, because the withdrawal of the fleet would, rightly or wrongly, give the impression at home that the United States was weakening in its attitude toward Japanese aggression.

To the first point Admiral Richardson retorted that a civilian government in Japan might be impressed by such a gesture, but that a military government, such as then existed, would be impressed only by the knowledge that the American Fleet was actually capable of war. The President, however, replied that he would not approve the removal of the fleet from Pearl Harbor unless it could be done in such a way as to convince both the American people and the Japanese Government that we were not weakening in our far eastern policy. Yet, at the same time, according to Admiral Richardson, the President made it plain that we had no intention of going to war because of impending aggression by Japan against Thailand or the Dutch East Indies, and that it was very doubtful that we would fight even if the Philippines were attacked, although sooner or later Japan would inevitably make some move that would draw us into conflict with her. Admiral Richardson's second point, that the fleet must be recruited to full strength, Mr. Roosevelt dismissed on the ground that, if the need arose, it would be easy enough to take in and train civilian mechanics and technicians.

Neither Admiral Richardson's testimony nor anything else that has thus far been disclosed by the Pearl Harbor investigation in the least justifies the accusation of certain partisan Republicans and fanatical isolationists that President Roosevelt actually desired, and conspired, to bring about the destruction of the Pacific Fleet as the only means of reconciling public opinion to a long and costly war against the Axis Powers. It does, however, indicate that Mr. Roosevelt was taking some very extravagant risks in his efforts to apply his foreign policies by political and diplomatic means. It does suggest an extraordinary overconfidence and a dangerous disregard for realities which seem to have spread from the White House to the military, naval, and diplomatic bureaucracies. There is no question that Admiral Richardson was right and the President wrong about the folly of exposing the fleet to risk of annihilation by a surprise attack on Hawaii. And in this respect it is ironical but not unjust to recall the President's subsequent lecture to those "typewriter strategists" who had ventured to question on some minor points the omniscience of military and naval experts.

## Dorothy Thompson on What It Will Take To Prevent an Atomic War

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. VOORHIS of California. Mr. Speaker, repeatedly I have proposed in the House that the United States, in conjunction with Britain, take the measures advocated by Dorothy Thompson in the column which follows. In my opinion, Miss Thompson has been doing the most outstanding job of analyzing the world's present problem that has been done by any writer:

ON THE RECORD

(By Dorothy Thompson)

The joint statement of President Truman and Prime Minister Attlee on the atomic bomb rejects the idea that by distributing atomic bombs to all and sundry anything would be clarified. Maybe the atomic bomb is no secret, but for the time being only the western powers have the thing itself. So, for the time being, they are in a unique position—either to save the world or perhaps to send it to hell.

The joint statement of the United States President and the British and Canadian Prime Ministers adds up to declaring: First, we get secure peace; first, we get a real world authority; first, we fix it so no nation can make war, and then we will be free to use atomic energy for human welfare without fear of human destruction.

When the first atomic bomb fell on Hiroshima the common man recognized that nations must not only consider but decide to stop the nonsense that ceases to be fun when it involves suicide.

The uncommon man, of systematically trained intellect, must, however, answer the question "What kind of world?" and face the full portent of all alternatives. "Agreements," "negotiations," "conferences," and cries for universal disarmament will not pass muster before the dialectic of the atomic bomb. Previous talk about "using force to prevent aggression" is babbling. The mathematics of the atomic bomb is aggress-victor. Every war college in the world knows it.

Even without the atomic bomb, the logic of total war leads to elimination of nations. The defeated becomes a policed colony, as far as military and foreign policy are concerned. This war reduced the world to only a few power unities. Serious tensions can arise only between these and all issues between these become issues of life or death.

Thus, with the atomic bomb, the struggle for power becomes inevitably a struggle for world mastery. The existence of a few great powers, each sovereign, can only precipitate further tests—and eliminations. Only one authority, with world control, ultimately can have the atomic bomb, because only a world of one authority can abandon its use.

If this is not recognized, we shall have an atomic war—this time a war genuinely to end war, by the establishment of the world mastery of the victor. The question is, of course, How much would be left of the one world thus created as the outcome of another war?

Must we fight that war to establish world unity by domination of the victor? Or, shall we now establish world unity by a ccoperative pooling and delegation of power to one single world authority?

Obviously only the second answer is sane. But this is possible only if we are prepared to use all we have—even the atomic bomb—to create it. At this moment, the western powers have the necessary ingredient for world mastery. They will probably not have it long; they may lose it at any moment; but right now they have it. World peace demands one world; one world can only be created by power, and power is relative to force.

The western powers possess, for this fleeting historical moment, the power and the force to compel the creation of a genuine United Nations of the World, united not under Anglo-American domination but by Anglo-American power in behalf of all peoples through cooperative authority and mutual policing by great nations and collectives of small nations. One single authority whose business, backed by overwhelming power, must be maintain the union—secession thereafter being agression.

The choice in the world is self-mastery through cooperative action or mastery through domination. In the long run there are no other alternatives. Either will be accomplished only by the test of power, which means the test of willingness to use force, if it is necessary to use force to achieve it.

Force is seldom used, where power is so overwhelming that to challenge it is catastrophe—unless the alternative is patently inacceptable. Desperation, of course, knows no restraints of cold calculation. Therefore the Anglo-American world must not only offer the world, but be prepared to impose on the world, a world authority offering no nations, including our own, any advantage not enjoyed by others, nor any obligation not undertaken by all: "To each according to its needs, from each according to its abilities."

## Ultimatum Was Japan's

EXTENSION OF REMARKS
OF
### HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Christian Science Monitor of November 20, 1945:

ULTIMATUM WAS JAPAN'S

The Pearl Harbor inquiry has now added another "if" to the astounding story of measures which might have prevented or sharply curtailed the destruction of December 7, 1941. If the Navy had flown long-range reconnaissance with the 69 PBY's it had available, the Japanese carriers might have been spotted.

Senator BREWSTER has done well to bring this out, and it seems to us that the Navy's defense that it didn't do any patrolling because it couldn't do enough to cover the whole perimeter is a poor excuse. But we can only decry continuing efforts by Republican members of the committee to make it appear that it was not Japan but President Roosevelt and Secretary Hull who started the war.

The claim that Mr. Hull "pushed the button" that set off hostilities by an "ultimatum" on November 26 was always a dangerous and partisan one, playing directly into the hands of the enemy. In the light of evidence now piling up it is clearly unjustified. An examination of Japanese officers and dispatches fills in and corroborates information showing that Tokyo had decided on war long before Mr. Hull on November 26 gave Japan's envoys a statement of the American position.

The evidence now discloses that Admiral Yamamoto briefed the Japanese pilots on October 5 to "hit the American fleet" on December 8 (Japanese time). Moreover, the force that struck Pearl Harbor started out the day before Mr. Hull's statement was supposed to have "pushed the button." The real ultimatum was the Japanese statement of November 20, to which Mr. Hull said "No" 6 days later.

It is now shown that had the Secretary of State tried to follow the course urged by the Army and Navy—to stall the Japanese off—he could not have succeeded. For Japan had set a secret deadline. Agreement by November 27 or the attack plan was to be set in motion—although apparently open to counterorders up to December 5. But only complete acceptance of Japan's terms—American aid and supplies for Japan's career of conquest—would have turned back the attack.

Who is the American who wishes to stand up and say the United States should have accepted? But that is precisely the position into which those who try to pin the war on Mr. Hull are getting themselves.

## Battle-Participation Stars for Prisoners of War

EXTENSION OF REMARKS

OF

### HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. GOODWIN. Mr. Speaker, as evidence of the feeling of veterans toward the War Department ruling denying a battle-participation star to American soldiers captured and made prisoners of war, I bring to the attention of the Members the following resolution passed by the Middlesex County Council, Department of Massachusetts, Veterans of Foreign Wars:

Whereas the War Department's ruling that American soldiers captured and made prisoners of war while in action are not entitled to battle participation stars conferred upon their contingents during their imprisonment; and

Whereas these decorations are worth five points each in the process of discharge; and

Whereas most men captured were at the front lines and no doubt fought bravely before surrendering, and on some occasions surrendered only when ordered to do so by their commanding officer; and

Whereas on some occasions their outfit as a whole has been honored, and battle participation stars awarded to their rear guard troops: Therefore, be it

*Resolved*, That we, the members of Middlesex County Council, Veterans of Foreign Wars of the United States, at a regular meeting assembled at Newton Center, Mass., on October 28, 1945, do hereby go on record as being opposed to the War Department's ruling, and respectfully request that it be changed, so that these unfortunate men who have been prisoners of war may be accorded the same honors as their comrades in arms.

PHILIP J. GIBBONS,
*Adjutant.*

## The Art of Living Together

EXTENSION OF REMARKS

OF

### HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES

*Friday, November 23, 1945*

Mr. ROMULO. Mr. Speaker, under leave to extend my remarks, it is my privilege to insert in the RECORD a speech delivered by the Honorable Abe Fortas, Under Secretary of the Interior, at the celebration of the one-hundredth anniversary of the City College of the City of New York, Saturday, November 17, 1945.

Under Secretary Fortas is one of the most efficient and able public servants of the United States. Since my appointment as Resident Commissioner of the Philippines to the United States more than a year ago, I have had the pleasure of working with him, and I have found his cooperation and sympathetic interest in the Philippines and the Filipino people both inspiring and stimulating. He is a liberal in the truest sense of the word, and this speech of his entitled "The Art of Living Together," should be read by every American who believes in enhancing the greatness of the United States through "an understanding of the essential equality of men and a recognition that civilization is based upon the dignity and freedom of the individual." It is to Americans with the breadth of vision and liberalism of Under Secretary Fortas that the world should look for guidance in these uncertain and troubled days.

I am honored to have been asked to speak to you on the occasion of the celebration of the one hundredth anniversary of the City College of the City of New York. In the uncertainties of our world we do well to celebrate those institutions which are dedicated to the task of training our people for life in an ever-changing world. For we have come again to a crisis point in the history of our country and in the education of our people—a crisis which will test our fiber, the validity of our institutions, the resiliency of our precepts, and the strength and adaptability of our education and training. The centennial of this great institution affords us the opportunity in the perspective of its many yesterdays to contemplate our countless tomorrows.

Since the beginning of history there has been remarkable constancy in the aspirations of civilized man. Man has striven for the same simple, fundamental objectives—food, shelter, security, freedom, and dignity. And since the beginning of community life the degree to which he has attained these has depended upon the understanding and goodness of himself and the members of his community.

I learn from a speech of our chairman, Mr. Mark Eisner, that many years ago, one of the legislators who supported the founding of this great college, advanced as the reason for its creation the cultivation of "the virtue and intelligence of the people." That is still the commanding duty of educational institutions. If the natural virtue and intelligence of the people are not cultivated but become smothered in a rank growth of fear, suspicions, and prejudice, civilization is in danger.

In a speech which Franklin Roosevelt prepared just before his sudden death, he said, "Today we are faced with the preeminent fact that, if civilization is to profit, we must cultivate the science of human relationships—the ability of all peoples, of all kinds to live together, to work together in the same world, at peace."

The religious and secular literature of mankind have always glorified the science of human relationships, the art of living together in peace and dignity, with a feeling of security, free from the torment of hunger and want. But practice has widely departed from preachment. Men are, with few exceptions, in agreement upon the objective; but in the pursuit of avenues to its achievement, they have too frequently flailed about like feeble-minded rats in a maze. Upon occasion, disregarding the fact that their problem is to get out of the trap, they have turned upon one another, with frightful destructiveness, in the blind belief that the other occupants of the maze are the cause of the misery and frustrations of life.

Man has written a history of warfare, plague, fear, and strife. Cities have been razed, civilizations destroyed, glorious cultures stamped into dust by the savagery of man toward man. Men have raped, pillaged, and burned in the name of their gods—for riches, for power, for fear, and for glory. Man has too often used his physical dexterity, his superior ability to recall past experience and to connect cause and effect, to build strange and wonderful contrivances for the destruction of his fellow men. The miracle of it all is that through the carnage and horror of the ages, man has survived; even more, than he has steadily progressed toward the realization of his aspirations.

But the fact of this slow progress is small comfort to those of us who must live through the years ahead, and who feel the burden of responsibility for the generations that will inherit our world. For our crisis, though its nature is as old as recorded history, has a new and terrifying urgency. The tempo of events has accelerated as the speed of man's locomotion has increased from the two legs with which he is born to the supersonic projection of the jet airplane. The volume and pitch of man's crises have swelled in a deafening and stupefying crescendo.

We are, in brief, in a race between man's destructive powers and his ability to construct a civilized way of life. For a few billion dollars, within a few years, we have created atomic bombs capable of unprecedented destruction. Only one thing seems clear—that given the world of today, destruction on a massive scale may confidently be predicted. The burning question is whether we have the ability, within the time that remains, to change today's world sufficiently to avoid this holocaust.

The answer to this question is so largely dependent upon the people of the United

States that everyone of us shares an immediate and compelling responsibility. We are the one Nation in the world that can sucessfully assert the moral leadership which is necessary to guide the world to peace and civilized living. We are the one Nation in the world that, in terms of physical resources, is in a position to provide the economic foundation of nonaggressive life to the people of the world. We are the one Nation in the world that can give to others hope for a better world, for a society in which they may, by their own peaceful efforts, obtain those simple things which are the basis of civilized living: an adequate measure of food, shelter, and security, and freedom and dignity.

But how, how can we do this? How can we, the people of the United States, lead ourselves and the world to a better life?

We have by no means learned how to solve our own domestic problems. Within our own borders, there are the same conflicts, insecurities, provincialism, passions, and prejudices which beset the world, and they are rising to fever pitch.

Even within this country where the simple addition of economic arithmetic would show that there is enough for all, we have not solved the problem of division, of distributing what we have and can produce, so that no one feels the sharp stab of hunger and insecurity. Indeed, we are already beginning to see the familiar outcroppings of not-enough-to-go-around, the effort of each unit of our society to shift the burden of too-little to the other fellow. And in this shifting process within our own country are involved the same hideous stratagems which we have observed internationally. Any element of vulnerability—in fact, any difference from the majority; whether it be race, religion, national origin, sex, or political belief—will do. The tactic is to narrow the group that can share in the distribution of goods produced and benefits conferred by the society, so that the remainder can (or so they are led to think—get a bigger portion.

Our problem, therefore, is not merely as big as the world; it is as immediate as our own Nation and our own community. In broad outlines, its pattern is the same, internationally and domestically. Its basic motif is economic, but woven throughout, disarranging the perspective and fundamentally distorting the impression upon the eye of the observer, are the passionate themes of religion, race, custom, and nationalism. It is the familiar design of primitive man's struggle individually to obtain increased security, more goods, and greater power at the expense of other men; and to establish the validity and superiority of his individual and community personality.

What approach, then, may profitably be made to problems which are so fundamental and comprehensive; conflicts which are as familiar as our own houses and shops and factories, and at the same time as remote geographically as Indonesia and Mongolia? Or must we, with H. G. Wells, accept and embrace what he has announced as "the end of everything we call life?"

Obviously, despite Mr. Wells, the human race is not ready to turn in its chips. Obviously, we shall try to resolve our problems. There can be no doubt that they are capable of resolution. The difficulty lies not in our stars, but in ourselves.

We can be sure that we will not cure the ills that beset us unless we are ready and willing—all of us, in our daily lives, in our homes and schools and churches—to set about the task boldly and fearlessly. And to do this, to rid ourselves of the plague of conflict, destitution, and fear, we must first relentlessly face and frankly admit our difficulties.

There are still too many of us who prefer to regard the atomic bomb as the weapon that isn't there, just as there were too many of us who chose to consider Adolf Hitler as the little man who wasn't there. And there are still thousands of us who seek escape from our domestic problems by tracing their cause to John Lewis or the CIO or the NAM or Father Coughlin or reactionary groups in government.

Others try to find refuge from the troubles that beset us by a return to the past: the good old days when there was no Labor Relations Act, when labor unions were curiosities; when small business was the order of our economy instead of its fringe; when taxes were insignificant; when government was a remote, scarcely-noticed agency instead of an omnipresent force in everyday life; when an individual and his family, if they were moderately sober, industrious and thrifty, could cope with the exigencies and hazards of living; and when the oceans were our majestic and unconquerable guardians against foreign foe.

This, then, I suggest, is the first task: We must strip our minds of escape traps and of antiquities. We must realize that today is today and yesterday was long, long ago. We must acknowledge that there is no returning; that events have washed away forever the familiar monuments of the years that have passed. We must face the present candidly if we are to face the future effectively.

We are today experiencing the full power of the industrial revolution. From humble beginnings, mechanization has reached a point where now it threatens the existence of its creator. Man's machines have at this moment in history surpassed man's ability to control. We must quickly make social and moral changes which will match and subdue to the service of mankind the tremendous force of these machines. Man has remade the world. It is time that man reformed himself.

In this great task of catching up with our own ingenuity, every segment of our society—all men of virtue and intelligence, our schools and churches—must play a part. The principles of religion and morality must become more than cliches, offered or authority and accepted and repeated with all of the understanding and conviction of a parrot. The precepts of civilized living should be a summons to action; not merely statements of doctrine, piously mouthed on ancient and current authority.

The assault that is being made upon the precepts of humanity does not, in my opinion, challenge their validity. Civilization today and tomorrow depends as it always has upon a few simple postulates: that each human being is entitled to dignity and respect; that no one is entitled to injure his fellow man; and that each is, in truth and in fact, his brother's keeper. These are the principles that must govern the relationships of man to man in the world community as well as in the village and the family.

The question which we must ponder is whether our people have the comprehension and the skill to salvage these doctrines and to make them the working principles of a world which is in the throes of gigantic upheaval. That, after all, is the task of civilization, of government, of the churches, schools, and homes. If we fail to preserve the principles of humanity and civilization and to practice them in our economic and political society, we can be sure that not only our morality, but our very lives are in mortal danger.

We have seen the results of a collapse of civilization's doctrines. In Nazi Germany, authority had supplanted reason; blind obedience had displaced understanding. It was not long before humanism and civilization gave way to a new order. A new set of rules, supported again only by authority, but this time by the authority of a government of evil men, quickly took hold. Its course was comparatively easy. It had no barriers of virtue and intelligence to surmount. It had merely to displace one kind of authority, one folk lore, with another.

The pattern of Nazi Germany is not unique. Wherever the people have failed to study and apply the art of civilized living, wherever reason and intelligence have not been brought to the support of decency and community living, the structure of civilized life is in peril. Particularly in this exploding world in which we live, full of combat and passion, when the people are unable to reason from cause to effect, from malady to prescription, there is but one short step to savagery.

If the education and training of our people will clear away irrational fears and anxieties; if our people can be induced to reason—to examine their problems thoughtfully and rationally; if with the power of reason we make a determined assault upon prejudice and superstition; then, I think, we will begin to take the measure of our problem and to find a solution.

The basic desires of ordinary people everywhere are the same, and the world is rich enough to satisfy these desires if only man will devise the method. And it is in the satisfaction of these basic needs that, in my opinion, salvation lies both within our own borders and internationally. We must provide for the people of our own country, and we must help to furnish for the people of the world, an understanding of the essential equality of men and a recognition that civilization is based upon the dignity and freedom of the individual. We must help to provide people with security, the minimum essentials of livelihood, and a basis for hope that with industry and effort they can improve their lot.

Within our own country, we must assure our people against destitution. We must give them confidence that illness, old age, and unemployment—the basic hazards of nature and of man's economy—will not destroy them or their families. We must provide for each person willing and able to work the opportunity to do so. Without this, without a job of work to do, self-respect is threatened and dignity is in jeopardy. If each family can be sure that its basic livelihood is provided for—that the parents and the children will eat, that they will have shelter and clothing, that the children may be educated—much of the bitterness and venom will be drawn from the strife and competition and oppositions of life. We will still have conflict; we will still have aggressive rivalry. But we will have provided a floor of economic security which will raise these conflicts from the fearful, clawing, primitive struggle for existence to civilized competition.

Internationally, I think that the prescription is similar, although its compounding is more difficult. There is room to doubt that statecraft alone can bring peace. Wisdom and sagacity may guide the fixing of Poland's boundaries, but Poland and her neighbors are hungry, fearful, fretful, and insecure. The statesmen of the world may create a United Nations Organization which may gradually become a mechanism of world governance. But meanwhile the specters of fear and famine stalk the people of the United Nations, and the god of war is armed with new and incredibly devastating weapons.

Nor can I believe that the overweening military might of any nation or group of nations can bring peace. Armaments are designed to win wars. They are not a Magna Carta or a world constitution, nor are they themselves the cause of war. Armaments are merely the means, a factor to be taken into account by the nation which is otherwise moved to warfare. A set of burglar's tools do not cause a man to rob a house, but if he is hungry or avaricious or fearful of tomorrow's destitution, and if he believes his tools will do the job, he may break and enter another's property. The problem with the burglar as with the nation centers not on the tools, but on the psychological and economic factors that are involved.

We can, therefore, best contribute to the construction of a peaceful world by a wholehearted, generous effort to provide the people of the various nations with economic assistance and a feeling of security against aggression. We must realize that the best assurance of our own wealth and possessions is the well-being of all of the people of the world. So long as millions of people are starving or fearful of their neighbors, so long as millions lack the materials necessary to enable them to till their fields and operate their factories, so long as people lack an opportunity to buy what they need and to sell a fair share of what they reasonably can produce, just so long will the shadow of war darken the earth.

We cannot, of course, feed and clothe the world, nor would the people of the world welcome this. But we can lend of our surplus; we can arrange to buy as well as sell; and we can furnish technical advice and assistance. In short, we can help others to help themselves, and we will thereby mightily help ourselves.

Nor can we alone preserve the peace of the world. We cannot bring security to the world by declaring ourselves its self-appointed policeman. But we can seek to press the development of a world order—the evolution, if you like, of the United Nations Organization—with vigor and spirit and idealism. A world organization, created and functioning by consent of a majority of people and nations, and properly equipped for policing, is an imperative of a world which is only a few hours' large.

There is much to be done and little time within which to do it. There is much that each of us can do, in the ordering of his own life; through his participation in government, in great institutions of training like that which we celebrate tonight; and even in his daily conversation with others. Those who are trustees for the lives and affairs of others, whether their positions are in government, educational institutions, religious organizations, or in private groups should feel that the difficulties which we confront are a challenge to their conscience and an urgent call to their greatest effort.

Neither the immediate crises of domestic and foreign policy, nor the basic necessity of vitalizing morality and social intelligence presents an impossible task. If we have the conviction and the daring, the freedom from anachronistic thinking and the good will, we can make it possible for all people to obtain the bases of civilized living—food, shelter, security, dignity, and freedom. And if all of us who are devoted to the cause of mankind's survival and progress will undertake a responsibility for the cultivation of the virtue and intelligence of our people—for the substitution in the place of passion and prejudice, of a reasoned understanding and application of the principles of civilized living, we can build a world that will move steadily forward to the realization of man's highest aspirations.

It is to this task that this great College of the City of New York has in the past dedicated itself; and it is to this task that I am sure it will address itself in the future with renewed zeal.

## Not Unduly Exacting About Iran

EXTENSION OF REMARKS

OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mrs. LUCE. Mr. Speaker, what Secretary Byrnes meant by his statement that we are "not unduly exacting" in our relation with the Soviet Union can be seen very clearly from the present situation in three Oriental countries—Iran, China, and Korea.

Each of these three is important to us and to the creation of a peaceful world. In each country, under private agreements between the heads of the executive branch of the United States Government and the Generalissimo-Premier of the Soviet Union, Russia was given a free and concealed hand in the northern areas. Not only were allied observers excluded from these areas, but the ordinary governmental process of the various recognized governments of Iran, China, and, lately, Korea, have been given over to secessionist groups under tutelage of Moscow-trained leaders.

To understand the relationship of these movements it is necessary to look at the map of Asia. One glance discloses the fact that Iran is important to a peaceful world because of its own oil reserves, and because it is a military base from which the much greater oil deposits of Arabia can be controlled, and the rich Empire of India can be encroached upon.

China, of course, is important because it contains nearly one-quarter of the human population of the earth. Likewise, it is important because a peaceful China following its high ethical principles has always been, and can increasingly become, a force for peaceful civilized exchange between nations. The Chinese tradition and philosophy is that of productive peace.

Korea's importance materially is less obvious, but of no less moral responsibility on our part. It is by our connivance that today Korea is cut into two parts, with the majority of the population in our area, and the bulk of its industries, mineral deposits, and food production separated artificially under Soviet "closed economic policy" from its proper contribution to the peace and welfare of the Korean nation.

At this moment the Iranian problem is most acute, and the attention of this House and of Americans should be called to it, not only for what it means in the loss of oil reserves, but as a pattern which we are likely to see repeated over and over again, so long as our foreign policy remains not unduly exacting instead of being based on principles which we mean to uphold.

The following dispatches from the New York Times of November 20 give a general outline of the situation in Iran:

IRAN RUSHES FORCE TO TROUBLED ZONE—GOVERNMENT FEARS RUSSIANS IN AZERBAIJAN WILL BAR TROOPS SENT TO QUELL REVOLT—MOSCOW SILENT ON LINK—TEHRAN PAPERS COMPLAIN OF NEGLECT BY ALLIES—DECLARE PEOPLE OF PROVINCE LOYAL

TEHRAN, IRAN, November 19.—Iranian troops were rushed tonight to Soviet-garrisoned Azerbaijan Province, scene of armed outbreaks, despite uncertainty whether the Russians would permit them to enter the trouble zone, where seven persons were reported killed.

On previous occasions Iranian forces dispatched to the north had been turned back and Iranians reported that Soviet forces had prohibited the government from sending gendarme reinforcements into the Province.

Parliament decided, however, in a special session to send two battalions to try to halt armed members of the Separatist Democratic Party reported advancing down the 230-mile railway from Mianeh to Tehran. (The Democratic Party is the former Tudeh party, led by Communists.)

(In Moscow there was no comment of the Iranian rising. Reports that the rebels were being supplied with weapons by the Russians are being officially called to the attention of Soviet authorities, Moscow diplomatic quarters said.)

Iranian concern was increased tonight by a Government spokesman's assertion that rifles and machine guns were distributed to the Separatists from trucks bearing Russian Army insignia.

Tehran newspapers said editorially that the patriotism of Azerbaijan citizens was well known and asserted the rebels were recently immigrated strangers wearing military boots and trousers, with civilian jackets and hats.

One editorial complained that "certain enemies of this war have been better treated than Iran, which has been a faithful ally, one that made her roads and communications available for the aid of Russia."

With all communication with Azerbaijan, northwesternmost province of Iran, severed, there has been no news of the rising since last night's statement by a Government spokesman that members of the Separatist movement had occupied Mianeh and were marching toward the capital.

The spokesman said that the dead included an Iranian gendarme captain, 4 soldiers, and 2 railway station employees. Three towns with Iranian garrisons were reported to have been isolated in 2 days of fighting, which was said to be threatening Zenjan and Kazvin, respectively 165 and 80 miles northwest of Tehran.

The newly nominated Governor of Azerbaijan was scheduled to leave by plane today for Tabriz, main city of the province.

IRAN ENVOY BLAMES SOVIET FOR REVOLT IN CALL ON BYRNES—RISING WAS "ENGINEERED," HE SAYS, CHARGING FOREIGN TROOPS IN COUNTRY FOMENT DISCORD—SECRETARY SEES TRUMAN—TROUBLE IN AZERBAIJAN, LONG EXPECTED, MAY FOCUS ISSUE BETWEEN BIG THREE ON OIL

(By W. H. Lawrence)

WASHINGTON, November 19.—An indirect charge that the revolt in the Iranian province of Azerbaijan had "most certainly" been "engineered" by the Soviet Union was made today at the State Department by Hussein Ala, Iran's new Ambassador to the United States, who conferred for the first time with Secretary of State James F. Byrnes.

Mr. Byrnes, who saw President Truman later to discuss a wide range of "important" foreign policy questions, confirmed that he and the Iranian envoy had touched on the rising in that country but declined comment in the absence of official and detailed information. He said that he had not talked with the President about it.

The revolt was no surprise to Washington officials who had long feared trouble in that part of Iran because of the Soviet Union's desire for important oil concessions and the Iranian Government's persistent refusal to grant them.

DEPARTURE SET FOR MARCH 2

That area has been garrisoned by Soviet troops since 1941 to protect the lend-lease supply line from the Persian Gulf to the Soviet Union. Red army troops, under recent agreements, are scheduled to leave March 2.

Asserting that his country had been the bridge to victory over which moved American arms and supplies that enabled Russia to defeat Germany, the Ambassador declared:

"This so-called revolution or separatist movement doesn't in the least represent the feeling of the people. It is not spontaneous. It was most certainly engineered. We have tried our utmost to have friendly relations

with our powerful neighbor to the north and have shown the greatest forbearance in our dealings with them."

He said his government had been apprehensive all along of some such development because of the continued presence of foreign troops on Iranian soil, even after the victory over Germany and the cessation of lend-lease shipments to Russia.

GUARDING BORDER HELD DIFFICULT

He added that the presence of foreign garrison troops "aggravated disruptive influences" and made it difficult, if not impossible, for the Government to maintain order and keep a close watch on the frontier to prevent infiltration from the Caucasus.

If the indirect Iranian charge that the Russians have assisted this revolt are borne out, it will constitute a major diplomatic issue between the Soviet Union on the one hand and Britain and the United States on the other. The three countries are rivals for oil and other economic concessions in Iran, but all are bound by terms of the Tehran declaration, signed by President Roosevelt, Premier Stalin, and former Prime Minister Churchill, to respect the territorial sovereignty and independence of Iran.

The dispute has been brewing since September 1945, when the Soviet Government dispatched a mission to Tehran to demand oil concessions although the Iranian Government had already decided to take no action on further concessions until after the war. Iran refused to change that decision and the Rusisans became angry, so that the government of Premier Mohammed Said Maraghei toppled. His successor, backed by the British and United States Governments, also refused to bow to Russian demands.

LONDON PROTEST UNLIKELY

LONDON, November 19.—The British Goverment received today confirmation of an outbreak against the Iranian Government in the Russian-occupied zone. It is understood that this is not thought to warrant a British protest to the Soviet Government for permitting a separatist movement in its zone.

No protest has been received from Iran's Government, nor has a request been made by Iran for Britain to intercede. Iranian circles here believe that their Government may appeal to the United States, however.

A point raised by an Iranian spokesman in London is whether Russian authorities are interfering with security arrangement of the Government and preventing Iranian police and military from dealing with the outbreak.

The Iranian spokesman asserted that because his country had 120,000 troops under arms, about 300 aircraft, and a number of tanks, the Government would be competent to deal with the outbreak if it had the opportunity.

It is understood that the authoritative British view is that under the British-Soviet-Iranian Treaty the British Government would consider it wrong to interfere in the operation of Iranian troops under Government orders.

Official Iranian circles here emphatically denied that there could be any real connection between the Azerbaijan people of Iran and the Soviet Union. They assert that the Soviet Azerbaijan Republic, though using a similar language, is distinct in culture and background. Its two parts have never been joined. Iranians add that Soviet Azerbaijan was so named by Enver Pasha when this territory was still Turkish before the 1914 war, but that there was no real justification for his doing so.

The situation is being closely followed in political circles, particularly since northern Iran adjoins the area of the Kurdish revolt of northern Iraq. This was reported to be spreading into Turkish territory, less than 100 miles from the rich oil fields of Mosul.

CRISIS FOR IRAN FEARED

CAIRO, Egypt, November 19.—The outbreak in Azerbaijan caused no surprise in Cairo today because an independence movement under Soviet auspices had been expected any day. Iranians here regarded the revolt as a supreme crisis for their country. They blamed the Soviet Union for it.

It is generally agreed that the Iranian Government alone is powerless to check the revolt.

Official quarters had no information on the course of events beyond that in news dispatches. There were no reports that the rising had affected British or United States troops in Iran. The American forces are concentrated about a supply base and an airfield in the south, and only a few detachments are protecting American property strung throughout the country as far north as Tehran.

Neither the British nor the Americans ever had forces in the province where the outbreak occurred; in fact, Azerbaijan had been barred to them by the Red Army and, according to Iranian complaints, to Iranian officials as well.

Mr. Speaker, the Washington Post, last week, published an editorial which indicates that our failure to be firm and exacting in decisions made according to our principles has encouraged Soviet Russia to embark in Iran on a policy of interference in that country which may lead to war in the Orient:

TROUBLE IN IRAN

At the close of the Tehran Conference on December 1, 1943, the late President Roosevelt, Marshal Stalin, and Prime Minister Winston Churchill issued a joint statement concerning Iran which has a rather melancholy interest in view of developments now taking place in that country. The three powers, said the statement, "are at one with the Government of Iran in their desire for the maintenance of the independence, sovereignty, and territorial integrity of Iran." Together with the pledge given earlier by Russia and Great Britain that their troops would be withdrawn from that country as soon as the war emergency had come to an end, this meant, if it meant anything at all, that the Big Three proposed to pursue a hands-off policy toward Iran in the postwar period.

That policy is already an actuality so far as the United States is concerned. The former Persian Gulf command, which rendered such valiant service in moving lend-lease supplies into Russia, has now passed into history. Great Britain, too, has shown a disposition to restore the status quo ante in Iran, although she hesitates to recall her entire garrison until the Russians have done so. But there is so far no indication that the Soviet Government is prepared to carry out promptly and in full the pledges it made with respect to Iran. On the contrary, many signs point to the possibility that now, as in czarist days, Russia aims to make Iran, particularly northern Iran, a Russian sphere of influence. Certainly it is more than a coincidence that at this particular juncture when all the way from the Adriatic to the China Sea, relations between Russia and her wartime partners are strained, an armed uprising by the ominously named Separatist Democratic Party has broken out in the Russian-garrisoned area in Iran.

It is difficult to avoid the suspicion that this uprising, if not started by the Russians, which is certainly not unlikely, was at least encouraged by them. Nor can the possibility be discounted that the development cloaks a Russian attempt to extend her sovereignty over a section of Iran, or at least to establish there a regime similar to the governments that Russia set up in areas adjoining European Russia. Certainly thus far Russia has shown no particular inclination to permit Iran to reestablish her independence, sovereignty, and territorial integrity.

## Southern California Scientists Declare Almost Any Sacrifice To Bring About International Peace Is Justified

EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. VOORHIS of California. Mr. Speaker, I asked unanimous consent because of its extreme importance to insert here with my remarks the statement of a number of southern California scientists connected with the California Institute of Technology and other institutions concerning the control of atomic energy. Their statement is quoted in part in the following article which appeared in the Los Angeles Daily News:

SOUTHLAND SCIENTISTS WARN OF ATOMIC ENERGY'S FEARFUL THREAT

The awesome responsibility of humankind to itself in exploitation of atomic energy on planet Earth received definition today in an open letter bearing the signature of 192 leading southern California savants.

It was addressed to President Truman and to Congress.

"We pledge support to an all-out effort in the cause of international cooperation," promised the scientists, technicians, chemists, physicists, and teachers—and added the following solemn warning:

"Almost any sacrifice to bring about international responsibility is justified."

The scientists, most of whom are on the faculty at the California Institute of Technology, are now active in almost every field of research.

A group of them were drafted for the research and other laboratory activity that resulted in the creation of the atomic bomb which rocked New Mexico, obliterated Hiroshima and Nagasaki.

The letter follows, in part:

"We, the undersigned, address you in our capacity as private citizens concerned about the future of our country and of civilization itself if faced with another war.

"We believe that World War II has demonstrated with fearful clarity the urgency of intellectual, informed, persistent, and sacrificial effort by all nations to prevent the occurrence of a still greater catastrophe.

"We believe that scientific facts cannot be kept secret for long, and that other nations will discover how to make atomic bombs within a few years.

"Unless that short time is used to establish international control, an armament race may ensue with results even more disastrous than they have been in the past.

"We believe, therefore, that the United States should take the lead in negotiations seeking to establish this international control with its appropriate inspection procedures.

"The first step is national control. Immediate action is necessary. Therefore a national commission should be set up immediately to execute this control.

"We believe that additional functions of this commission should be to advise in the

formulation of policies and procedures for international control and to protect and foster scientific research on atomic energy and its utilization for nonmilitary purposes in order that the achievement of nuclear fission may provide a boon to mankind instead of a menace to civilization."

The letter added that the composition of the proposed commission was of utmost importance, shou'd be chosen from science, industry, government, with science heavily represented.

"We believe moreover, that the personnel of the commission should represent in knowledge, integrity, and ability the best that is available without regard to political affiliation or political position."

Speaking directly to the President and Congress, the scientists and intellectual leaders said:

"We believe that you, truly representing the desires of the American people, are exerting yourselves to the utmost in the cause of a new world order of international cooperation in which the menace and fear of war will be eliminated. To this end we pledge our support.

"We believe that you will not fail us. You will not fail a world which is looking to you for courageous leadership."

Signers of the historic letter, which may well serve as the basis for policies covering national as well as international control of nuclear fission, were:

Walter S. Adams, director of the Mount Wilson Observatory; C. D. Anderson, professor of physics; Fern Ansorge, research assistant; Harold D. Babcock, astronomer; Horace W. Babcock, research staff member; Richard M. Badger, professor of chemistry; John E. Barber, associate at Caltech and steel executive; Z. J. Barnett, research assistant at Caltech and professor emeritus, UCLA; Edward C. Barrett, comptroller, Caltech; Roland Baughman, associate curator, Huntington library; Virginia Baygulow, librarian; E. T. Bell, professor, mathematics, Caltech; Solange Berczeller, research, biology, Caltech; Henry D. Blankenship, radio technologist, Caltech; Carey S. Bliss, supervisor, Huntington library, Walter D. Bonner, Jr., biology, Caltech; H. Borsook, professor, biochemistry, Caltech; Dorothy Bowen, assistant, Huntington library; I. S. Bowen, professor, physics, Caltech; Paul Bowman, professor, languages, Caltech; Anthony Briglio, Jr., research, chemistry, Caltech; Stanley C. Burket, research, chemistry, Caltech; Margaret L. Gay, research chairman, Huntington library; Horace N. Gilbert, professor, economics, Caltech; Theodore S. Gilman, research, chemistry, Caltech; Joe R. Goodman, chemist, Caltech; P. Kyropoulos, instructor, engineering, Caltech; William N. Lacey, professor, chemical engineering, Caltech; Graham Laing, professor, economics, Caltech; R. C. Lauritsen, professor, physics, Caltech; Thomas Lauritsen, research, Caltech; M. B. Lewis, accountant, Caltech.

## Thanksgiving and Dedication Service at Washington Cathedral

EXTENSION OF REMARKS
OF

### HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

*Monday, November 26 (legislative day of Monday, October 29), 1945*

Mr. BUTLER. Mr. President, yesterday afternoon a service of thanksgiving and dedication for the community of the Nation's Capital was held at the Washington Cathedral. It was sponsored by the Washington Board of Trade, in cooperation with the Washington Federation of Churches and the Washington Cathedral.

The sermon was delivered by Rev. Oscar F. Blackwelder, D. D., and the address entitled "Thanksgiving—A Dedication," was given by our fellow Senator the junior Senator from Wisconsin [Mr. WILEY].

In addition to those before mentioned, participants in this service were Rev. Carroll C. Roberts, D. D., president of the Washington Federation of Churches and pastor of the Ninth Street Christian Church; Rev. L. Ralph Tabor, chairman of the public meetings committee of the federation and pastor of the Luther Place Memorial Church; Rev. John F. McClelland, pastor of the Silver Spring Congregational Church; Rabbi Norman Gerstenfeld, minister of the Washington Hebrew Congregation; and Very Rev. John W. Suter, D. D., dean of the cathedral.

I ask, Mr. President, that the address delivered by the Senator from Wisconsin be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This Thanksgiving season of 1945 is one of special significance and inspiration for all of us.

The guns of war have ceased firing. The foes of freedom have been vanquished. The labor of reconstruction has begun. Unfortunately, there are still clouds of strife in many quarters of the world, particularly in Asia. And in our own land there is still some disharmony and disagreement. Yet these discordant conditions only serve to spur us on to their solution, when we consider all the things for which we are grateful.

You remember those lovely verses from the Book of Psalms:

"It is a good thing to give thanks unto the Lord, and to sing praises unto Thy name, O most high; to show forth Thy loving kindness in the morning, and Thy faithfulness every night."

These beautiful words have been known and lived through countless generations by good men and women. Now, another season of Thanksgiving has come, and the verses shine forth with greater meaning than ever before to the people of America. It was Browning who said: "Life has meaning, and to find its meaning is my meat and drink." Through the manifestation of gratitude, life's meaning becomes more apparent.

This new atomic age offers great challenges to us. But it also offers so many opportunities for constructive living, for dynamic action, that we may well offer up our thanks to our Creator and say from the depths of our hearts: "We are grateful to be alive."

Now, just what specifically should we be thankful for? We can note at least six cate-

gories in which every American can count his blessings:

1. The horror of war has come to an end. The world has another chance. Our boys are coming home. Families are being reunited. Sweethearts are joining one another and they are planning their union. There is a boom in babies. This year we are going to welcome 2,800,000 new-born Americans into our fold. In 1933, only 2,000,000 babies were born in this country. We are grateful that these young citizens will enter an America at peace.

And so for this first reason, for an earth above which the dove of peace now flies, we are duly thankful—to our allies, to our men and women of the services, to our home front that went into unified action, and to our God who blessed our efforts.

2. Let us now turn to the second reason why we are grateful. It is that the America for which our boys fought and sacrificed is still the America of old, with all its spiritual blessings, and freedoms intact.

Yes, all of the great freedoms and liberties known to our people in the past are still our cherished possessions.

The first Thanksgiving was, as we all know, celebrated by the Pilgrim fathers. They came to these blessed shores in order that they might worship their Creator according to the dictates of their own conscience. They found freedom of worship here, and now, over three centuries later, freedom of worship still prevails.

Other millions followed in the Pilgrims' wake, some seeking adventure, some seeking release from the thralldom of serfdom—political and economic, some seeking freedoms of speech and press. All found here a land overflowing with opportunities to satisfy their heart's desire.

Here a man's home has always been his castle. Here public officials are the servants, not the masters, of the public. Here the humblest citizen can aspire to the highest office in the land if he has been born on this soil. Here a man is entitled to a trial by a jury of his peers.

For all this we humbly give thanks.

3. The third reason for which we are grateful is that our land still abounds in material blessings.

We are now turning our magnificent production toward peace. The autos, the refrigerators, the washing machines, the new plastic products, for which we have waited so long, will soon be a reality. American common sense will see to that. Yes, our land abounds in material blessings unmatched anywhere else on earth.

America has only 7 percent of the world's population (140,000,000 people out of a world total of 2,000,000,000). It has only 6 percent of the world's land surface (3,000,000 out of a total of 51,000,000 square miles).

Yet we possessed even before the war—

Seventy-one percent of the world's automobiles; 59 percent of the world's telephones; 52 percent of the radio sets; 31 percent of the world's railroad mileage. We drink 55 percent of all the coffee consumed in the world; roll on 63 percent of the petroleum, and 66 percent of the rubber; and used 75 percent of all the silk in the world.

Twenty-six million of our children normally attend school. We have over 900 radio stations and 20,000 motion picture theaters, and countless other material blessings.

We know it was our skillful workmen, the ability of American brains and the resourcefulness of our industrial system, plus the political system under the Republic, that gave us our high standard of living. We are grateful that these material blessings are ours in this hour to share with those in need—feeding the hungry and clothing the naked in Europe, aiding other nations to restore their economy.

And so, for all our material blessings and opportunities to serve mankind, we offer up our thanks to our God.

4. The fourth reason for our gratitude is that the peoples of the earth are on the march toward a just and enduring peace. Our people have learned the lesson of Pearl Harbor—America must be constantly alert, on guard, and equal to any emergency.

The United Nations Charter has just been ratified by the number of nations necessary to make that document legal and binding. Soon the United Nations Organization will inaugurate its opening session. Soon we hope to see a vitalized new league go into action to iron out the postwar difficulties and usher in "the thousand years of peace." The world is aware of its need for teamwork among the nations; the establishment of wise and just relations among the nations; the cultivation of sympathy, understanding, tolerance, helpfulness, and good will among the nations; but this awareness, to be effective, must be translated into action. That is the job for each of us. Actions—deeds—speak louder than words. The Golden Rule put into action by individuals and nations casts out fear and distrust and establishes good will. It is the omnipotent panacea for the ills of mankind.

For all the steps which have gone before in bringing this new league into being, for all the spiritual forces that make for the unity of the nations, for all Thy goodness, Lord, we are grateful.

5. The fifth reason for gratitude is that America is resolutely facing her postwar problems.

We have difficulties with regard to labor and management, with regard to Government, with regard to insuring the welfare of America's agriculture and of American free enterprise.

But I am convinced that we will be adequate to solve all these problems. Our people face the future with their traditional confidence, faith, and hope. A nation which could defeat some of the most powerful aggressors ever seen on the face of the earth can solve its domestic problems, which by comparison seem puny.

For the confidence and adequacy of America, for its hope and its faith in this hour, we are duly thankful.

6. The sixth reason why we are grateful is that men in increasing numbers are becoming aware of the abundant life of spiritual living. Political and physical freedom alone do not satisfy. Men are seeking the larger liberation, which is the inheritance of the children of God. Jesus spake of the truth that makes free. When the race has absorbed the truth He taught, the way for peace will be found.

Ralph Cushman has written:

"I met God in the morning,
When my day was at its best;
And His Presence came like sunrise
With a glory in my breast.

"All day long the Presence lingered,
All day long He stayed with me;
And we sailed in perfect calmness
O'er a very troubled sea.

"So I think I know the secret
Learned from many a troubled way;
You must seek Him in the morning,
If you want Him through the day."

For the awakened spiritual interest, for the kindlier approach, for the more tolerant attitude, for the restless seething within men to know the truth, which blots out all fear and hate and sin—for all this we give thanks.

These, then, are six reasons, among countless others, for our gratitude unto God—for peace, for the American Republic intact, for spiritual blessings, for material blessings, for world cooperation, for American adequacy.

There are so many other things for which we can offer up thanksgiving at this time—for sunset and sunrise, for happy homes, unseared cities and countryside, for the beauties of the day and night, for loyal friends, for the companionship of great minds, for the devotion of loved ones and the new challenges of each new day, for a land in which we can enjoy all of these, and more—a land around which "the everlasting arms of our Maker" will be found, guarding and guiding this people.

Therefore, all of us are joined in offering up a fervent thanksgiving. Next year we are certain that we will have even more things for which to be grateful. Next year, some of the constructive possibilities of the atomic age, which we at this time can only glimpse, will have come into fruition.

This indeed is a thanksgiving season of which we dreamed fondly during the years of war.

This is a thanksgiving season which we shall remember in time to come. For we will say then, that in the year 1945, America stood on the threshold of an even greater future than the great past she has already had.

And so with gratitude in our hearts, let us here dedicate ourselves to the unfinished task—the accomplishment of reconstruction; of reconversion; of full production; the square deal for labor and management and the public; the eradication of ill will, mistrust, and misunderstanding, at home and abroad.

Thus will we of this generation manifest our gratitude in action and make our contribution to world order and peace. Thus only will we measure up to our responsibility and earn the gratitude of those who come after us.

---

## Remuneration of the President of the United States

REMARKS

OF

### HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. JENNINGS. Mr. Speaker, the sheriff of Knox County, Tenn., my home county, and the city manager of Knoxville, my home, each receive a larger net salary than the President realizes out of his salary of $75,000 per year. Hundreds of county and city officials in this country each receive for their services larger net salaries than the President realizes out of his.

Former Senator A. B. "Happy" Chandler and Eric Johnston, czars, respectively, of organized baseball and of the movie industry, are each paid much larger net salaries than the President of this great country.

The Chief Executive of the greatest and richest nation on earth should not be forced to work for nothing and board himself.

The Presidential office is a man-killing job. There is only one living ex-President. The President must stand silent and expend virtually the whole of his salary for upkeep of the White House and the payment of income taxes. Congress is the only body that can remedy this gross mistreatment of the President. As a Member of this body I am ready and anxious to remedy this injustice and to do it now.

The salary of the Chief Executive should be commensurate with the power, the responsibility, and the dignity of this high office. I am for economy in government, but am opposed to a penny-pinching policy in the treatment of the President.

I include as a part of these remarks an article on the President's inadequate compensation appearing in the December 1 issue of Collier's, written by Jonathan Daniels:

THAT POOR MAN IN THE WHITE HOUSE

(By Jonathan Daniels)

The poorest-paid man in the United States is the gentleman who lives at the request of the American people in their big house at 1600 Pennsylvania Avenue in Washington.

The President of the United States does not look poor. He is not chosen to play philanthropist. But so far as the pay he gets from the people of the United States is concerned, he is both.

President Truman has not complained about it. He won't ask for more money for himself. In his last report to Congress he said that Members of Congress ought to be raised from $10,000 to $20,000 a year, but the fact is that Congressmen, even at $10,000 per year, are well off in comparison with the President.

Unfortunately for Presidents, they are not merely men but institutions. They have to live in that big White House. They move in grandeur, not as men but as America. They personify the pomp and the glory of a great Nation. They are provided with a mansion and doctors, aides, servants, gardeners—almost everything except enough cash to meet their bills.

They get what sounds like the grand salary of $75,000 a year and some opulent-looking funds for travel and official entertainment. The only trouble is that what the American people pay their President and what they expect of him, in terms of his living standards as their Chief Executive, do not meet—or meet only by a miracle.

No President of the United States has had a pay increase since March 4, 1909. And the last President known to have voiced satisfaction in the pay was William Howard Taft, who got the raise. He was almost lyric about it when he wrote the incoming Woodrow Wilson in 1913:

"You will find that Congress is very generous to the President. You have all your transportation paid for, and all servants in the White House except such valet and maid as you and Mrs. Wilson choose to employ. Music for all your entertainments by the Marine Band, or some other band, is always at hand. Provision is made by which when you leave in the summer you may at Government expense take such of the household as you need to your summer home, and the expense of their traveling and living is met under the appropriation. Your laundry is looked after in the White House, both when you are here and when you are away.

"Altogether, you can calculate that your expenses are only those of furnishing food to a large boarding house of servants and to your family, and your own personal expenses of clothing, etc. This, of course, makes the salary of $75,000 with $25,000 for traveling expenses very much more than is generally supposed. I have been able to save from my 4 years about $100,000."

Americans have no wish to be stingy with their Presidents. Most of them are under the impression that they are paying the man well for his work. Unfortunately, that "large boarding house" is still there, but the $100,000 saving has gone forever. It is at least as dead as Taft.

DISTAFF SIDE KNOWS THE FACTS

Mr. Taft's successors have expressed a good deal less enthusiasm. Their wives have occasionally indicated an entire lack of rejoicing about the pay. Mrs. Woodrow Wilson, as she left the White House, was happy that her husband planned to go into law practice, because it would keep him in the stream of active affairs and also because "there were some unpaid bills." Mrs. Franklin Roosevelt rather tartly answered a citizen who suggested that one way to get rich was to get to be President.

"I know that as far as my husband is concerned," she said, "he has spent in fulfilling the obligations of his office as President somewhat more than his salary."

If President Truman were able to buy his groceries and other necessities as cheaply as President Taft could from 1909 to 1913, and if he were able to save at the same rate, the best he could do would be to leave the White House $100,000 in debt. For Harry S. Truman will have to pay in a 4-year term nearly $200,000 in State and Federal taxes which did not exist when Taft counted his luck and his thrift.

The President is just as liable to the tax laws as anybody else and his returns are just as secret. A man with a net income of $75,000 with a wife and one other dependent is due to pay a tax of $46,770. The President may have some other deductions. But experts figure that out of his $75,000 salary he probably has to pay around $46,000 to the Federal Government and another $1,000 or so to the State of Missouri. Take $47,000 from $75,000 and that leaves $28,000—still a tidy sum. Unfortunately, however, it is not quite left intact.

The President receives a fund from Congress of $30,000 a year for travel and official entertainment. Official entertaining, however, is a small part of the entertaining he must inevitably do. Presidents before Truman have found that their personal expenses in the White House have amounted to around $2,000 a month—with, say a couple of thousand more at Christmastime for presents to the staff—usually pictures, books, and the like. That would amount to about $25,000 a year, which would theoretically leave $3,000, after taxes and household expenses, for all other Presidential needs and savings.

The big expense item is that "large boarding house" about which even the enthusiastic President Taft spoke. In the last days of the Roosevelt administration there were 31 servants on the White House staff. Their wages were paid by the Government, but the President had to feed them 93 meals a day, which added up to well over 2,000 means a month—counting days off. This does not include any meals for the President, his family, or a single guest. That seems not only a lot of food but also a lot of servants today. But the White House is a lot of house.

THE FORCE BEHIND FORMALITY

All visitors are attended with a nice combination of vigilance and formality. Three thousand square feet of hardwood floor must be kept polished in the East Room alone. In the great chandeliers in the state chambers there are 5,000 pieces of crystal which must be polished by hand. Just making up the huge Lincoln bed must be a job for more than 1 maid, and a household staff of 31 people requires a lot of care. Sometimes, strangely, in recent years the White House problem has seemed to be too little instead of too much help on those inevitable and recurring elaborate occasions when extra servants have to be brought in.

Nevertheless, under the Trumans, the number of servants was reduced last summer from 31 to 24. And there has been some experimenting with a plan by which servants eat fewer meals at the White House.

All White House visitors come by appointment, but every day she is in the residence a First Lady probably sees at least as many people as the President sees in his office. They will not only be callers. There must be teas and luncheons, their number dictated not only by the inclinations of the President's wife but by inescapable responsibility. Some visitors will be official; the Government will pay the cost of entertaining them. Others, almost equally inescapable, will be personal as far as payment goes, though Mrs. Truman would personally never have even contemplated such entertaining when she lived in servantless simplicity on Connecticut Avenue. There are Democratic women, newspaperwomen, senatorial, and Cabinet wives. There are the ladies of good causes.

Fortunately for Mrs. Truman, the Government provides a housekeeper, a secretary, and a social secretary, and such other staff as is necessary to her in doing her big, entirely unpaid and, often from the entertaining standpoint, unofficial job.

Unavoidably, a good many White House visitors come to eat. Hoover and Roosevelt rarely dined without a few or many guests. The elaborateness of the food depends on who is to eat it. Indeed, because of the number of guests and servants who eat there, the White House was classified under OPA regulations as an "institution"—a designation which served as a constant source of amusement to President Truman's predecessor.

There are, of course, many details of White House housekeeping divided between the President and the people by two sets of bookkeeping. When a King and Queen, a Governor General of Canada, a Prime Minister, a Regent of Iraq come visiting, the Nation entertains them and pays the bill. The Government furnishes the gas and the electricity. The Government mows the lawns and maintains the house and grounds. (Truman does not have to feed gardeners). The Government pays for the laundering of sheets, pillowcases, towels and table linens, and for the cleaning of drapes and spreads.

The Trumans pay for their own personal laundry and cleaning. Books and magazines are no expense. The Government provides the White House staff (including the President) with daily papers. Periodicals come in a flood. At regular periods the book publishers of America present the White House with copies of the best American books.

Clothes are a personal matter. Americans do not expect their President to be a dandy. But Mrs. Truman and Mary Margaret are undoubtedly going to have a good many more clothes than hung in the closets of their Connecticut Avenue apartment.

REQUESTS GREATER THAN RECEIPTS

The President is expected to set an example in buying war bonds. A man with no fortune to leave his family must be concerned with insurance. The Democratic Party will be interested in a contribution; and the appeals from charities, the invitations to join organizations and pay dues, the personal appeals, are overwhelming. A President could give away his salary very easily if he responded as requested to almost any week's mail. There was a personally richer President than Truman recently who sometimes complained that he didn't have a dime.

Roosevelt, Hoover, Harding all had some private means. Coolidge made a Presidential profession of being thrifty. Wilson's second wife was wealthy. President Truman has made it clear that he has no private fortune.

The Trumans may be able to do better with the pay than other Presidents have been able to do. President Truman has a smaller family than any other President except Harding has had in this century. He hopes, it is said, to feed his "large boarding house" and pay his other personal expenses in connection with the White House for $12,000 to $15,000 a year. If he does, it will be by the most rigid economy. It will also be well under the $25,000 it has cost recent Presidents.

President Truman's hopes are for the future. They are hopes which run against past Presidential experience which would make his situation look like this:

| | |
|---|---|
| Salary | $75,000 |
| Federal taxes | 46,000 |
| White House expenses over and above those met by the Government | 25,000 |
| State taxes | 1,000 |
| | 72,000 |
| Left for other personal expenses, and savings | 3,000 |

It is a great job—the greatest job on earth. But from the pay standpoint, the President only gets the privilege of handling a nice chunk of money in order that he may pay back practically all of it to the American people in taxes and for living in their big White House behind the clipped green lawn and the high iron fence

## The Christian Century Asks: Shall the Church Become an Accessory to Murder?

EXTENSION OF REMARKS
OF
### HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including an article from the November 28, 1945, issue of the Christian Century. The article follows:

SHALL THE CHURCH BECOME AN ACCESSORY TO MURDER?

Silent concurrence by the churches in murder by starvation makes the church an accessory to the crime. As a result of the Potsdam decisions, millions of Germans are starving now. Before the winter is over, five times as many Germans will die as died in the recent war, according to Bishop Dibelius of Berlin. By no stretch of the imagination can these doomed babies, their mothers, and the aged be called war criminals. They have had no trial. What is happening to them is therefore not retributive justice, but murder.

Is the church to remain silent while wholesale murder by starvation is committed? An individual who knows that a crime is being committed and who does not communicate that knowledge or go to the aid of the person in peril is held legally responsible for his silence. He is held to be an accessory to the crime. Will history try and condemn the Christian church as an accessory to the infamy of Potsdam? It will and should do so unless the churches cry out in the name of the compassionate Christ against this high crime against humanity. It will and should do so unless the churches immediately mobilize all their resources to aid this part of the world Christian community.

This aid can be given. It can be given by telling as much of the truth as the churches have been permitted to learn. It can be given by immediate, concerted, and large-scale efforts to breach the wall of silence which is raised by Potsdam around the millions of dead and dying in central Europe. Public opinion in Great Britain has swung in the last 3 weeks against the Potsdam policy of mass starvation. The bishops of the Roman Catholic Church, meeting in Washington in their annual conference, have just denounced our treatment of the people of Germany, Austria, and Hungary in a spirit of vengeance. They declare that every report indicates that unless heroic measures are taken at once, millions will die from starvation and exposure during the coming winter. The feeding and clothing and sheltering of these suffering people is not a work which can be left to some future convenient date. They hold that Congress must promptly appropriate funds for this purpose and that private relief agencies must be freed to do their part. In this category they, of course, include church relief agencies.

We rejoice to hear Catholic leadership in America speaking to the Government in this unequivocal tone. How long will it be before Protestant leadership summons equal courage?

Opinion will change here if the people are given the truth. The church dare not withhold what it already knows. Its mission is to speak for humanity. It is commanded to work for forgiveness and reconciliation. If it fails in this crisis, it has not only missed an opportunity to set its record straight before history it has also betrayed its mandate from Christ who is its head.

If every person in America should immediately start doing everything in his power to save the helpless victims of Potsdam, great numbers would die in spite of all that could be done. But the fate of even greater numbers depends upon the American people, and particularly upon the American churches. The churches are the conscience of the Nation. That conscience must now speak to President Truman. It must thunder through the quiet corridors of the Department of State. It must demand that the United States Government order the release of the 200,000 tons of Army rations which were sent to Europe for the use of soldiers who have now returned. It must demand that the ban which prevents all private agencies, including the churches, from sending food or other material relief into Germany, be immediately lifted.

In addition, the churches must use their own facilities with far greater intelligence and devotion than they have yet displayed. Nothing that is being done to aid the people in other countries of Europe should be stopped or diminished in volume. But the same church relief warehouse in New Windsor, Md., to which shoes, clothing, and blankets are being sent for France and other countries can also take care of shipments for use in Germany when the way opens. So rapidly is public opinion changing even here that it is not impossible that Washington may relent before the churches are ready to act. On the other hand, the most convincing argument that could be used to change official attitudes would be the accumulation in New Windsor of a great stock pile of lifesaving supplies ready for shipment. Every church in the country could and should take steps without delay to collect and ship to this warehouse its own sacrificial share of what is so desperately needed.

Funds for food for the starving, for shelter for the homeless millions who are freezing in the ruins of a shattered continent, for medicine and vitamins for the sick, can be sent to World Council Service, 297 Fourth Avenue, New York 10. Word has just been received in this country that the newly constituted Evangelical Church in Germany has appointed Bishop Wurm, fearless Confessional Church leader who stood out against Hitler throughout more than a decade of Nazi terror, to head a nation-wide relief organization. Every Protestant parish in Germany is united in this organization. It is already at work gathering up the pitiable crusts of bread and the clothing that Christian Germans can spare out of their poverty to help the millions of refugees who are wandering on every road in the country.

This relief organization is known to center its work for the American sector in Stuttgart, where Bishop Wurm is now located. Its headquarters for the British zone is Bielefeld. A document which has reached this paper from the director of Evangelical Church relief work for the British zone says that "the population in Bielefeld has no fuel at all." Evangelical Relief is building there and elsewhere sheds "where the frozen population will be able to get warm." The town is overrun with refugees from the East. "In our railway-station shelter, where we have every night 700 refugees and returned soldiers, we have a terrible picture of the dying of a whole nation. There is hardly a complete family. As a result of an appeal made from the pulpit we have received for these refugees and ex-prisoners of war from Russia bread and other foodstuffs, so that we have been able to give each a piece of bread and butter. It is for us a wonderful thing to see how people who themselves have insufficient food can still give from their poverty for those who are even worse off. If only we could see that the Christian churches of the world have not forgotten us." * * *

Shall this appeal fall on deaf ears? After the last war all ecumenical discussions were handicapped for years by the German church's determination to argue the question of war guilt. The recent Treysa Conference settled that question in 2 days. There the leaders of the Evangelical churches fully confessed, not only the wrongdoing of the German people but the church's own sin. They were thereafter accepted into membership in the World Council of Churches. Now it remains for the churches of other lands to demonstrate in deeds of forgiveness the restoration of ecumenical fellowship in the world-wide Church of Christ.

In what beter way could the churches of America confess our own share in the sins which led to the war than by providing out of our abundance concrete symbols of assurance that the Christians of the world have not forgotten their brothers in Germany? How could we more effectively express our faith in the reality of the ecumenical principle? In what other way can we lift ourselves from the position of being an accessory to the crime of Potsdam to our rightful place as members of the body of Christ? A statement which recently reached America from the church at Hannover says: "It is the church toward which all hope is directed now. The only general body which enjoys confidence is the church. People set their hopes on Christians within and without. Come over and help us." Shall that last hope be betrayed? American Christians will give the answer.

## Control of Barbiturates

REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have asked to have inserted as part of my remarks an article appearing in the American Weekly in the Hearst papers. It describes very vividly the great danger of the use of barbiturates, not only by high-school boys and girls who take these tablets innocently thinking it is just a stimulation, but there have been suicides, there have been shootings as a result of overdoses of

these drugs. Also, unfortunately, I am told there are nervous veterans who are taking them today to excess.

Anyone can go into a drug store and purchase these barbiturates, coal-tar derivatives. Sale of these drugs has increased enormously. I am introducing a bill which would limit their use to prescription only.

(The article referred to follows:)

SLAVES OF THE DEVIL'S CAPSULES

(By Samuel Hopkins Adams)

ARTICLE I

The lady is worried. She tries to sleep. She tosses about for a little while that seems longer, and then she opens a brown glass bottle and pours out one or two brilliant red, yellow, orange, blue, or green capsules. She swallows the dose and shortly thereafter the evil demon in the little capsule takes her over, body and soul.

The lady took the pills to put her to sleep. The devilish cunning of these sleeping pills, however, is that their first effect is to destroy the lady's remembrance that she has already taken a potent dose of poison. She forgets she has taken the pill and takes some more.

When they find her dead next morning—and they are finding them dead at the rate of 10 to 20 a day all over America—an autopsy and an inquest may decide from something she said during her waking hours that the lady is a suicide and not entitled to be buried in holy ground.

The drug thus widely used is a barbiturate, a sedative. Properly employed under expert supervision, it is a valuable agent in the practice of medicine. Indiscriminately thrown open to public use, it is a threat. Fifty thousand drug stores over the length and breadth of the Nation are dispensing the various forms of this subtle drug under restrictions so loose that they count for little in the protection of the ignorant public.

"America's opium," an experienced public health official terms the little "harmless" sleeping, pills the use of which in this country is reaching such ominous proportions.

"A national menace," adds a law enforcement officer.

They are a menace because it is so easy to buy them legally; almost as easy, illegally. Now glance at some of the results.

A car goes zigzagging from side to side of a Los Angeles thoroughfare. A woman with glazed and staring eyes sits beside the wheel. The car hits the curb and luckily stops before anyone is injured. "Drunk," say the police. But there is no liquor on the woman's breath. In her pocket is found a vial containing 96 sleeping tablets. That is the answer to her wild, half-conscious ride.

A Massachusetts woman buys 200 of these pills, murders her lover, and goes to jail after ineffectually poisoning herself.

A laboratory scientist in a mountain town dopes up on a form of the drug, robs his best friend, and terrorizes the streets with a loaded revolver.

A car full of high school boys and girls go out on a "Geronimo jag" (barbiturates taken with liquor) in a borrowed car, and, when the party is over, the car is a wreck, and the boys are crazed and fighting.

A once prosperous real estate man is admitted to a Chicago hospital, both legs rotted to the bone with ulcerous sores. He has been taking his drug in the form of self-administered hypodermic injections.

An 18-year-old Ohio boy becomes an addict and is arrested 6 times in 3 months for violence against his family while under the influence.

Juvenile courts in our cities note an increasing record of barbiturate drugs use among the boys and girls brought before them. Out of 200 delinquents questioned in one court, 7 percent confessed to indulgence in "goof balls."

A motion picture headliner of 10 years ago is a nervous wreck in a sanitarium, having formed a habit from taking "sleepers" for the very nervousness which they served only to fix upon her. Nearly 5 percent of all suicides, excluding self-destruction by gas, are attributed to these easily procured poisons. A popular movie actress finds the bedside pills too convenient a form of escape to resist and, in a fit of lovesick melancholia, takes a fatal dose.

A distinguished woman religious leader swallows her self-prescribed allowance, forgets it in the daze which it produces, repeats, and dies.

A young man, his imagination overstimulated by a mixture of drug and alcohol, confesses to a serious crime of which he is innocent.

Hospitals report increased admissions of returned veterans who seek relief from shattered nerves by drugging themselves, and of overstrained war workers who, trying to keep up to the demands of the job, found themselves with a habit fixed upon them.

Criminals stimulate themselves to committing their crimes by dosing themselves.

Former opium, morphine, and cocaine addicts are turning to these substitutes. A New York druggist is found to have built up a thriving trade exclusively among the Chinese.

The widening recourse to these preparations is proved by the United States Department of Commerce figures, showing an increase in 5 years from 4,500,000 to 2,500,000,000 grains. In other words, the total of doses taken every year has jumped to a grant total of 5,000,000,000, allowing half a grain to a dose. At last reports it was a $20,000,000 industry. Experts on the subject believe that the next fixures will nearly double this. Uncle Sam is on an unparalleled barbiturate binge.

Among some drug manufacturers, the incentive to push sales mountainously high is great, since the profit is large. Any company can perfect a new barbiturate by having its chemists slightly alter the molecular structure of a previously made barbiturate.

The new product then may be patented under a trade name, and the sale price of the product can be fixed by the maker.

Since the makers decide on their own prices, the limit is what the trade will bear; steadily rising sales are reflected in steadily rising returns.

Sleeping pills—barbiturates—made newspaper headlines last year when the famous evangelist, Sister Aimee Semple McPherson, founder of the Four-Square Gospel and leader of its thronged Los Angeles revivals, was found dying in an Oakland hotel room. Two physicians, summoned hastily and apparently acting with equal haste, gave heart attack as the cause of death.

This is a common error in barbiturate poisonings. How they happened to overlook a red capsule near the dying woman's cheek, and four others in the bed, has not been explained.

The authorities were more observant. An autopsy was performed and the death reported due to "undetermined causes." Analysis showed traces of a barbiturate. White mice, injected with secretions from the body, died in 4 hours.

At the inquiry, Dr. Rolf McPherson, the revivalist's son, testified that she had been accustomed to take the drug to calm her nerves after the excitement and emotional strain of a revival service. She had formed a habit, probably without realizing it. Certainly her personal physician knew nothing of it. He had never prescribed barbiturates for her, nor would he have done so without warning her of the danger consequent upon over-use. The container in which the drug came bore neither warning, stated dosage, or indication of the source as required by California law.

Suicide was suspected at first. But there is a more probable explanation. The barbiturates not only lull the nerves and stupefy the mind, they also impair the memory. It is logical to suppose that Sister Aimee, having dropped into a drugged sleep from her usual bedtime dose, half woke up some time in the night, dully conscious of nervousness; that, having no memory of the capsules already ingested, she instinctively reached for more, and that the move proved too much.

What are these barbiturates? All have a common base in barbituric acid, a derivative of coal tar. A German chemist, Emil Fischer, experimenting in 1903, transformed the inert barbituric acid into diethyl barbiturin, which he named veronal. Since then some 1,500 variants have been turned out of the chemical laboratories, of which 60 are in general use. Most familiar of these synthetics are phenobarbital, pentobarbital, nembutal, seconal, and amytal. In their original form they are an odorless, almost tasteless, white crystalline powder. Manufacturers, making up the various types for the trade, give them different colors—white pills and red, yellow, orange, blue, and green capsules. They look as harmless as so many sugar pills. Too often they reach the public with no sufficient indication that they are not as innocent as they look.

Properly administered, the barbiturates are of great value. As a sedative or hypnotic, they are a stand-by of medical practice. Dr. Louis Goodman and Dr. Alfred Gilman, in their exhaustive treatise on them in The Pharmacological Basis of Therapeutics, write:

"Any degree of depression from slight sedation to deep coma may be obtained with the barbiturates. The central depressant effects are employed to produce calmness, to induce sleep, to depress the motor cortex, and thus inhibit convulsions, and to cause partial or complete surgical anesthesia."

The medical profession, itself, cannot be wholly absolved for blame for the spread of these medicines. It is always easy to treat symptoms, rather than underlying causes, and too often the careless or overworked physician yields to the temptation.

Few pharmaceutical firms are as frank and conscientious as the nembutal manufacturer who issues this warning:

"Like all other barbiturates, nembutal may be habit-forming to persons of weak, unstable, or neurotic personality. For this reason, the physician should take steps to assure himself that the administration of the drug remains always under his control and supervision, and that the patient is prevented from believing that self-administration is safe or allowed."

Self-administration of the pills is obviously dangerous, since even physicians must be well grounded in the action of various barbiturates if they are to prescribe them effectively. Some pills are quick in action; others are delayed. The effects of some are brief; of others, much longer.

The University of Maryland Medical School is one institution which trains its students to understand the properties of the barbiturates. On the theory that some people react to these drugs differently from others, Dr. John C. Krantz, Jr., professor of pharmacology, advises his classes to experiment on themselves, having first tried out the brands most in use on himself. One morning a promising student failed to appear in class. His roommate reported for him:

"He's awake, but he can't get out of bed. Seems numb."

Dr. Krantz hurried over to see the youth. He was just recovering from what amounted to a minor paralysis affecting his whole muscular system. He is one of those who are allergic to the action of barbiturates.

Recovery was prompt. But the class had a first-hand illustration of one of the dangers inherent in these medicines.

For many years stringent laws have controlled such perilous and habit-forming

drugs as morphine, heroin, cocaine, hasheesh, and the like. The public is well instructed in the risks which their use involves. Traffic among addicts has been sharply cut down. Some victims have now turned to the less enslaving and destructive but still dangerous barbiturates.

Legislation is urgently needed classing these drugs with the narcotics and limiting their sale.

Without such safeguards, the public will lack necessary protection, and the record of barbiturate suicides, crime, and delinquency will continue to climb.

## Universal Military Training

EXTENSION OF REMARKS
OF
### HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 16, 1945*

Mr. BROOKS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me on universal military training, November 5, 1945, over radio stations WHN of New York and WOL of Washington:

The fighting is now over and the demobilization is proceeding at an unprecedented rate. This fact is meeting with the complete approval of our people; but time has come—is at hand at this very hour—to consider our postwar responsibilities and to decide upon our peacetime Military Establishment. What shall we have? The answer is universal military training for the young men of the Nation.

This program of universal military training has the approval and support of the military and naval leaders of the Nation. On Tuesday, the President of the United States publicly urged upon the people of this country the necessity of immediately adopting a program of universal military training. This recommendation of the Chief Executive was in line with the previous endorsements of our leaders after the last war that, included in our permanent Military Establishments, should be a program for the training of all our young men in military defense as they became 18 years of age. Such a program has been in the minds of our leaders from the very birth of this Republic. George Washington, for instance, recommended a program of universal military training as the best means of preventing war and of maintaining peace.

Those who have given these matters much thought believe that there would have been no Pearl Harbor disaster on that fatal December 7 morning in 1941 had we previously accepted and put into operation this fundamental measure of national defense. I do not believe that Japan would have dared to risk an attack had those gangsters of the Pacific known that our outpost defenses were backed by a well-organized and well-trained citizens' army of many millions of men who were ready and able to respond to an instant call to the colors. I am most certain that had this Nation, when it was attacked, been fully prepared to defend itself the war would have ended months and even years sooner, with a consequent saving of billions of dollars in money and perhaps hundreds of thousands of lives.

Anyone who reads the newspapers or listens to the radio must know that the world is in a troublesome mood today. Wars, riots, insurrections, and disorders are occurring daily in all parts of the globe. In such a world, respect comes from power and power comes from a well-trained civilian defense army. The very easiest way of preserving order and maintaining peace is by universal military training.

Such a program should be separate from the Regular Army. If it is to last one full year, the first 13 to 17 weeks of the training should be given over to the basic physical and field training; and the latter part of the period should be devoted to specialized and advance training of these young men. In the latter stage of the training the men should be selected for the type of work which they prefer and they should be sent to specialized schools for this purpose. For instance, a mechanic, machinist, technician, radioman, radarman, and artisan should be sent to schools which will train them along the line of their proposed life's work, with especial emphasis always being placed upon the military features of the education. In this manner the education which these young men receive as a part of their training will be invaluable to them for the rest of their lives and will serve to compensate many of them for the interruption of their schooling at this early age.

Between 800,000 and 900,000 of these young men may be trained each year. At the end of the training they are to be placed in a general civilian reserve and are to be called into active service only upon an act of the Congress and then only when war is at our very doorstep. Every young trainee should be encouraged to become a commissioned officer; and when the proper ones are selected they should be sent to an officers' candidate school or an ROTC unit.

We fought the last war because we were treacherously attacked by a hostile power and our people were killed by the thousands. We fought the war to drive brigands from the face of the earth and to make the world safe for decent people and self-respecting nations. For the purpose of maintaining global peace, the nations of the earth have since then organized the United Nations Organization; and we as a Nation are called upon to implement this organization and to make sure that it has the force and power to maintain world peace. As the most powerful and the richest nation, we must assume a major part of this responsibility. A well-organized and well-trained civilian army ready to respond instantly if our land is attacked will go far to prevent future wars and will be our best means of maintaining peace throughout the earth. There must be no World War III.

## Payments to Veterans During Labor Disputes

EXTENSION OF REMARKS
OF
### HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 26, 1945*

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Frank D. Scriven, national executive secretary of American Veterans of World War II:

The issue involving veterans of this war as a result of the Detroit strike is not to be construed as an issue between the veteran and the UAW-CIO union, nor between the veteran and the General Motors Corp. It is an issue affecting veterans of this war, who are now idle due to the strike, and the Veterans' Administration.

Under provisions of the GI bill of rights, chapter 8, section 800, an unemployed veteran is entitled to unemployment compensation and/or readjustment allowances within certain limitations provided in said bill, which deal with labor disputes. Great leeway is provided in determining the rights to payments to veterans in the event of a labor dispute which leads to a strike and consequent unemployment for both union and nonunion veterans. We, the American Veterans of World War II, protest the Veterans' Administration ruling which denies all veterans of World War II, protest the Veterans' the rights to those payments as prescribed by law and as set forth in the GI bill.

Veterans have been made idle by a labor-management dispute which, irrespective of its merits, is depriving them of their earning power. In the case of apprentice-employed veterans, who were receiving readjustment allowances, the strike has deprived them of their labor and the Veterans' Administration has deprived them of their readjustment payments.

Without taking sides in the strike issues, which have resulted in the present labor dispute, we, Amvets, representing many thousands of veterans of this war, protest to the Veterans' Administration and to the Michigan Unemployment Compensation Commission for denying veterans their rights under the law. We demand an immediate review of the ruling which has left many veterans and their families without adequate compensation. We demand that the Veterans' Administration reverse the aforementioned ruling, and so inform the Michigan Unemployment Compensation Commission, so that payments on applications already presented and the thousands which will be filed be made at once.

## Let Us Not Forget the Pilgrims

EXTENSION OF REMARKS
OF
### HON. RAYMOND E. WILLIS
OF INDIANA
IN THE SENATE OF THE UNITED STATES
*Monday, November 26 (legislative day of Monday, October 29), 1945*

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Let Us Not Forget the Pilgrims," delivered by me at the annual dinner of the Mayflower Society of the District of Columbia, held in Washington, D. C., on Friday evening, November 23, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET US NOT FORGET THE PILGRIMS

Governor Thatcher, Mrs. Doolittle, greetings to you and all in this gathering of loyal Americans. We have gathered tonight to make an annual payment on our unending debt to the Pilgrim Fathers. In all American history there is no saga more dramatic, none so filled with deeds of heroism and courage as those performed by that intrepid band of fourscore men and women. They braved the dangers of an uncharted ocean, of the stormy landing, of the wilderness and savages, of a strange country. They were in search, not of wealth or ease, but only of freedom. Indeed, there is no adventure in all history that compares with the noble purpose, the sacrifice, and the determination which attended their effort. This gallant band faced unknown hazards, untried foes, dangers of which they little dreamed. With scant protection, they

endured the hardships incident to a New England winter. They suffered from lack of food, lack of protection from the elements, and from disease which demanded the lives of half of the gallant band that first winter. Yet when spring came, and the *Mayflower* set out on its return journey, not a single one of those who were possessed of a great vision, turned back. The fleshpots of their former bondage had no attraction for them. They were in search of the holy grail of freedom of conscience and worship, leaving all else to the justice and benevolence of Providence.

We do ourselves a service in gathering tonight to reappraise the contribution of that brave group to the blessings which we enjoy in our present-day civilization, and perhaps to set ourselves aright on a course which alone will save us out of the confusion and discouragements which press upon us so heavily today.

Since the day when he first stood erect and started on that long march toward the goal of freedom, there have been many brilliant epochs in which men first lighted the torch of freedom, preserved it through storms and tribulations, nursed it when it flickered and all but died out. We have caught its ever-expanding gleam throughout the centuries. In our Anglo-Saxon history, the earliest battle for freedom was when the knights wrested from King John at Runnymede the recognition that the subjects of the king had personal and individual rights to be respected and safeguarded. The Magna Carta was the beginning of English law, and is the basis for the legal rights which we as citizens enjoy today. But, legal rights alone are not sufficient to maintain the progress of man on his progressive march. That which the Pilgrims brought across the sea was not alone the right of the protection of the individual from the injustices of a sovereign. They sought also the right of freedom of conscience and freedom of worship through which alone the individual rises to the dignity of a sovereign. They sought for him the right to expand his aspirations, to seek for the realization of his vision, and to preserve for himself these rights against the intrusion of any earthly authority.

If tonight I were to ask you to name America's greatest anniversary, I am sure you would quickly say that the Fourth of July is America's greatest holiday, as it celebrates the signing of the Declaration of Independence of this Nation from the authority of any other sovereignty anywhere in the world. I would not say a word to detract from the courage and bravery of those men who affixed their names to that great document, nor would I minimize its importance in the development of our Nation. But there was a former declaration which to me seems to be the real birthday of America and without which this country would not have come to its present high position among the nations of the world.

When the Pilgrim Fathers approached the end of their journey and the shores of their new home were in sight, they were confronted with the problem of definitely outlining the purpose of their expedition and the means for governing themselves as a civil body. Before they landed they assembled in the dimly lighted cabin of the *Mayflower* and wrote down and signed in solemn obligation the document which became known as the Mayflower Compact. We can well define that document as the declaration of dependence, for you will recall that it began with these words, "In the name of God, Amen," and then, "We whose names are underwritten, the loyal subjects of our dread Sovereign Lord, King James, having undertaken for the glory of God and the advancement of the Christian faith, and honor of our King and country, a voyage to plant the first colony in the northern parts of Virginia, do by these presents solemnly in the presence of God and one another, covenant and combine ourselves together into a civil body politic."

In making this declaration of dependence they expressed their conviction that all men are equal in the sight of God because they have a common Creator who knows no distinction between race, class, or temporal authority. With such a conviction the right to life, liberty, and the pursuit of happiness set forth in the Declaration of Independence, which followed nearly eightscore years later, was self-evident. In all sincerity I make this statement, and I believe few will dispute it, that the great height to which America has come today stems not so much from the Declaration of Independence signed at Philadelphia as it does from the declaration of dependence signed in the cabin of the *Mayflower*.

Freedom of conscience is a cell implanted in each human being which urges him to strive toward the pattern of his Maker. It urges him to accept justice and right as impelling forces of action. Freedom of conscience alone gives a man liberty. It helps him to know the truth, and in the conviction of truth he is free.

Our Pilgrim fathers found that freedom of conscience had its sublimest expression in freedom of worship, in which they had been restricted in the lands from which they came. It was in worship that they revived and made strong the sense of right within themselves. It was through worship that conscience was cleansed and became a safe guide to right conduct. We are neglecting this safeguard to freedom today. We have gone too far in accepting "freedom of worship" as meaning "freedom from worship." There can be no substitute purchased by money or ease or pleasure which takes the place of the need to preserve conscience through freedom of worship.

The Pilgrim fathers, as well as every individual who is motivated by a free working conscience, knows that liberty is not a "one-way street"; that liberty connotes a complete respect for the rights of others—that the freedom which he jealously holds for himself must be granted to every other human being, not only in our own Nation but in all the world. The source of confusion in the world and in our own Nation today is because we have set selfish rights as a nation and as individuals above those of common good. In these days of suspicion and fear and hate growing out of a great war, we do not accept for ourselves that high plane of human society established by the Pilgrims. Only insofar as we do accept it can we have permanent peace in the world.

We shall never have peace among the nations until we respect the rights of the smallest nation and hear their demands for freedom and justice as quickly and as fully as we accord those rights to the mighty powers of the world. Until we establish that principle in the world we might just as well make up our minds that wars and rumors of war will continue. America must set the example among the nations of the world in respecting the rights of every other nation and in the abandonment of hatred and suspicion toward other nations; yes, even toward those who have been our recent mortal foes.

This same reckless disregard of the equal rights of others is the disease germ of our domestic problems. I have not come to point the finger of blame at any special group.

It is well for everyone to search for himself, and for the group with which he is associated, how this evil may be eradicated. The United States is too rapidly breaking up into selfish groups seeking group advantage, denying privileges to others which they ask for themselves. We shall never have peace at home, in fact the whole stability of our national life will be in jeopardy, while we have this struggle of class against class, race against race, and creed against creed. Only when we free our consciences and set right and justice on the throne shall we prosper as a great nation.

We cannot long exist as a society when such groups are asserting the right to endanger the life and safety and welfare of the great body of American people. It is unthinkable, that in a land such as the Pilgrims envisoned, a body of striking longshoremen should delay the landing of soldiers anxious to get home to their loved ones in a land for whose protection they offered their lives. It is unthinkable that in such a land, the common services which have come to be a vital part of everyday necessity and safety, such as elevator service, street-car transportation, food distributing agencies, utilities which supply light and heat and telephones—all of which involve the lives of innocent men, women, and babies—should be interrupted while grievances of infinitely lesser importance are being debated by those who profit from their operation. When freedom of conscience has full play in America, the rights and welfare of the great body of American people will be the supreme objective of our efforts.

Public sentiment is rapidly finding its conscience in these trying days, and louder and louder is the demand growing that we establish agencies through which the rights of management and labor may be resolved without interruption of the productivity and services upon which the welfare and the safety of the country and its citizens depend.

There are other important freedoms which were brought to us by the Pilgrims through freedom of conscience. Important among them are freedom of thought and freedom of expression—in the press, in the pulpit, and on the floor of the Congress of the United States. The abuse of these freedoms by vicious and thoughtless persons is a great threat to our national safety.

In spite of these abuses we must maintain these freedoms. For as long as we can have freedom of conscience, freedom of the press and freedom of the Congress, we need never fear that this Nation will fall into a dictatorship of individuals or of a communistic group. It is a patriotic duty of every citizen to do his own thinking and make up his own mind on the pressing problems of the day. May I also suggest that you be sparing of hasty criticism of your Congress, for in it lies the protection of all free institutions.

When on April 30, 1789, George Washington was sworn in as the first President of the United States there was inaugurated a Government which continues today the oldest unchanged Government in the world. It is the Government of a Nation which has become the strongest among the nations of the world. It would seem like vain boasting to recount the greatness of the United States. Suffice it is to say that all the other nations of the world are looking to this Nation to save them out of their confusion and their economic distress. The portion of humility in us today must be very great in recalling this high position to which we have come.

More than ever it is important now that we keep firmly before us the source of our greatness. It doesn't serve us well in the days of our confusion to borrow from other nations ideas which have brought them to the brink of ruin. It won't serve us well to give too much of our substance to other nations beyond the humane obligation which rests upon all peoples to heal the wounds and assuage the suffering of the weak and innocent. No nation can stand secure until it recognizes the sovereignty and the rights of its individual citizens, and this message must be impressed with our contributions of physical relief. We will serve ourselves well only if we keep this Nation strong among the troubled nations of the world.

This Nation with all its vast resources and the marvelous discoveries of its scientists is

today facing opportunity far greater than it has experienced in any period of its history. There is no reason why the advancement of our standard of living in the next two decades should not exceed that made since the discovery of electricity. We shall go forward and realize this opportunity only if we hold fast to the vision of the Pilgrims and remember always the purpose for which they came to this land was not selfish gain, nor national greatness, but "for the glory of God, and advancement of the Christian faith" throughout the world.

Let us not forget the Pilgrims.

## Sentiments of a Great American, Herbert Hoover

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Friday, November 23, 1945*

Mr. WHITE. Mr. Speaker, in the last war I subscribed wholeheartedly to the principles for which we proposed to wage war, the 14 points enumerated by President Wilson.

In this war I fully subscribed to the principles of the so-called Atlantic Charter.

Now that we have won the war I want the solemn promises made to us, that we waged war to liberate the oppressed and bring the blessing of the "four freedoms" to all mankind, redeemed. I am sick and disheartened with the talk of retribution and vengeance and slavery now being waged on the helpless people of the so-called liberated countries.

I commend the sentiments expressed by a great American, a former President, in a college address which I have taken the liberty of condensing for the thoughtful consideration of my colleagues:

MORAL AND SPIRITUAL RECOVERY FROM WAR
(By Herbert Hoover)

We have ended a bloody and horrible era of history. It has been a war in which the enslavement, the starvation and killing of women, children, and civilian men have returned to the levels which we thought had gone by a thousand years ago.

Thousands of people are still being committed to concentration camps in eastern Europe without a semblance of justice or compassion. Under the name of reparations men are being seized, and prisoners are being worked under conditions reminiscent of Roman slavery.

We find hundreds of millions of human beings breathe less independence, less liberty, less freedom from fear than before we started on this crusade. Their successful rescue at that time was the justification of our first crusade. Can we honestly say that we have not surrendered these peoples on the altar of appeasement?

The immediate danger to the world is a sense of frustration in America at the failure of our crusade for freedom and our continued moral and spiritual losses from the war. For from frustration can come bitter isolationism.

We went into the war under the persuasion of such ideas as the "four freedoms" and the Atlantic Charter. This was to be our second and last crusade to free the world from domination, from despotism, from imperialism, from brutality, from fear. Our banners have always proclaimed the freedom and the rights of nations and of men.

Surely, if the new era upon which we enter is to be an era of progress it must rest upon the rebirth of truth and justice and tolerance. It must rest upon intellectual and spiritual freedom and upon a live public sensitiveness to wrong and a resentment of brutality. The redemption of mankind will depend upon those who can give intellectual, moral, and spiritual leadership in these immediate years.

And by leadership I do not speak of public life alone. We must have leadership in every branch of life from the shop foreman to the President. We must have leadership among the neighbors and in the home.

One of the riches of American life is the vast reservoir of leadership in the people. It is our educational system rooted in the whole people upon which we must depend to develop leaders.

To sum up, may I say that the colleges have a great obligation courageously to restore our moral and spiritual losses from the war, to renew our ideals of freedom, to regain our sensitiveness to wrong, and to provide the Nation with renewed supply of trained leadership. Unless we rebuild this new era on these foundations, it means the war has been lost. It means more. It means that civilization is lost. I am convinced that our educational institutions are equal to this—the greatest of tasks.

## Demobilization of the Armed Forces

EXTENSION OF REMARKS
OF
### HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
*Monday, November 26 (legislative day of Monday, October 29), 1945*

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address on the subject of demobilization of the armed forces, delivered by me on last Saturday evening over the facilities of radio station WTIC, in Hartford, Conn.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Two weeks ago over station WTIC I discussed the GI bill of rights, explaining the changes which had been made in this most important act for the benefit of veterans.

There are many Connecticut young men still in uniform who are not yet able to take advantage of this act. These men are scattered all over the world, many of them waiting for transports to bring them home. Some of them have many more than the points needed for discharge.

Some have written me, asking my assistance in getting home. The fathers, mothers, and wives of others have written me. They want their loved ones home for Christmas.

I can deeply sympathize with them. I understand fully their desire to have the fighting man back at home and in civilian clothes. For the most part the job of our draft Army is done. The Big War is over and we have won a splendid victory. These combat veterans feel that it is the turn of other men to take up the task of policing the conquered areas.

My attention was caught, and quite forcibly, by a letter which I received just the other day from a young man stationed at McCook, Nebr. I would like to read his letter to you. I quote:

"I am writing you as a counterpart of Paul Revere in an attempt to awaken both you and your fellow colleagues in Congress to a grave injustice. Certainly, if Congress had not been stalled by the Army, this could have been done before.

"Some time ago General Marshall set up a policy for the entire Army that stated men with 2 years' service would no longer be sent overseas. This served to lull Congress into not bringing up H. R. 4013. Now that everything has again quieted down, the Army has my own and four other similar groups on the ready for immediate shipment to Europe for Air Corps occupation groups. Conservatively, 60 percent of us have 2 years of service and have asked for overseas shipment while the war was on. Now I feel that our prime obligation is with our families. Personally, I am supporting my mother, brother, and wife. My wife is also with child, so that will make four dependents. It is fair for us to go overseas?

"Enough of the preliminaries," continues this soldier's letter. "Based on knowledge of what has been said above, I should like to know how you will vote on H. R. 4013 to discharge 2-year men?

"Also, we've been writing the Members to ask for an investigation into the needs for a B-29 group in Europe. What will you do about it?

"The above matter calls for immediate action as we are slated for New Year's in Germany.

"I shall appreciate an immediate reply to my letter. Thank you for your kind consideration."

Now, I can't blame this young man. His mind must continually be with his family, and especially with his wife. He has given up 2 or more years for his country, doing what was asked of him. He has a justifiable complaint, and I feel his case should be given consideration.

But I do not believe he alone should be singled out for assistance. It has been my policy from immediately after VJ-day that we should proceed with our demobilization plans on a democratic basis. In other words, it should not be brought about through political favoritism but on the basis of every man being treated on the same basis.

After all, through our Selective Service System, our men were drafted into the armed forces on that kind of a system. Deferments were granted, on the whole, impartially to those entitled to them. Of course, there were a few abuses of this, but I think they were the exception.

I felt very strongly that discharges should be granted on the same impartial basis, with consideration given to the needs of the man. For that reason I accepted the Army's point-score system as being inherently fair. The Navy's point system too I thought was an equitable method of making possible a speedy demobilization program.

Protests have been mounting over the past few weeks regarding the slowness of the entire plan. Here is another letter which I received recently, and again I quote:

"I am writing you as a constituent, Senator, being a resident of Greens Farms, and voting in the township of Westport. I know how busy you are, the enormous problems you have to face and the pressure put upon your time, so please don't bother to acknowledge this letter.

"Its purpose is to join the thousands of other mothers and fathers who are asking the same thing of Congress—that you keep up pressure on the Army and Navy to demobilize as rapidly as is humanly possible. I am an old Annapolis man myself and it is simply against human nature for a huge organization like the Army and the Navy to put itself out of business without pressure from on top—constant and increasing pressure.

"There may be reasons—I am still reading this letter—reasons for a great many things which the Army and Navy do that the average citizen does not know about, but my own particular case may give you two illustrations. These might be useful in putting on the proper pressure.

"First is the case of my oldest boy—he continues—who is 1 of 24 officers on a destroyer now stationed at Ulithi with 2 new officers coming out to join the ship. This is a destroyer and the peacetime complement of officers is 7.

"If this ship were off Japan or if it were clearing mines, etc., I could see some sense to holding these excess officers in the service, but this destroyer is doing none of these things—it is just lying at anchor in the harbor, acting as the headquarters ship for the commander of that particular squadron.

"The second illustration is my second son, aged 19, who had 6 months' combat experience in France as a private in the Infantry ending up at Pilsen, Czechoslovakia. He is now at Camp Swift, Tex. There is no particular reason for holding this boy—if needed he, and hundreds of thousands like him, could be brought back into service within the next year or so. But, unless he is let out soon, he will not get his college education. He had just finished high school when he entered service.

"Can anything be done for these 18-, 19-, and 20-year-old boys who ought to be getting on with their education at the earliest possible moment?"

This writer brings up a most pertinent point. During the war years hundreds of thousands of boys who would normally have been spending their time in college and in postgraduate schools training to be doctors, dentists, scientists, technologists, and trained men of the highest skills needed in our highly developed technological world were taken from the classrooms and laboratories and put into uniform on the drilling fields. Their deferred education is going to cause a serious deficit in skilled men in the very near future. We should be making every effort to get these men back to their textbooks and test tubes. The welfare of America demands it.

Because I have become impressed with the stories the thousands of letters I have received have told, I have written Secretary of War Patterson and Secretary of Navy Forrestal the following identical letters:

NOVEMBER 24, 1945.

Hon ROBERT P. PATTERSON,
*Secretary of War, War Department,*
*Washington, D. C.*

DEAR MR. SECRETARY: I have carefully refrained from issuing statements calling upon the Army and Navy to completely demobilize its forces to a point where the national security might be endangered.

It is the constitutional duty of the Congress to raise and maintain armies. Our agreement to provide funds for an army and navy is based upon the recommendations of the military for that number of men and amount of equipment which is necessary to effectuate that purpose.

It is not necessary to point out to you the feeling on the part of many of our good citizens that the demobilization process has not proceeded in a satisfactory manner. Frequent stories that appear in the press announcing changes in the point system serve only to further complicate an understanding of the problem.

Might I suggest to you the advisability of preparing a comprehensive statement concerning the minimum needs of the Army, the approximate allocations of the forces involved, the numbers of men who have already been released and returned to civilian life, and a redefinition in as exact terms as may be possible of those who it is intended to release within the next 3 months. Such an authoritative statement, based upon reasonable and defendable estimates, will in my opinion do much to satisfy the American people that demobilization and the return of their loved ones has not been unduly delayed.

You will appreciate that any such statement will, of course, be most critically examined—not only by the American people, but by the Members of Congress. I therefore urge upon you a most careful and well-considered report on this subject.

Sincerely yours,

BRIEN MCMAHON,
*United States Senator.*

That is the letter which I sent to Secretaries Patterson and Forrestal.

In writing that letter I was not trying to help one isolated Connecticut GI. I was trying to speed the demobilization of the approximately 200,000 Connecticut men still in uniform. I want all of them to share and to share alike in getting their discharges, just as they shared the privations and difficulties of war.

We Americans will forever be indebted to these brave men who fought for us on the far-flung battle fronts of this Second World War. It seems to me that all of us should be glad to do whatever is within our power to speed their return home.

I sincerely hope that what I and the other Members of Congress are trying to do in behalf of these gallant young men will be rewarded by a speed-up of the demobilization consistent with our national security.

I hope there will be no ships kept anchored in harbors in this country or abroad and that they will be used to their full efficiency for the transportation of our men back to America. I hope that every available warship will be put to work for the same purpose.

All of us know that every available inch of ship space was used to take men to foreign battle fronts when our country was endangered. We were glad that our leaders had the courage and the vision to utilize the shipping we had for the transport of men and supplies.

I feel that they should show the same kind of imagination to bring our men back home.

You may be assured that I will continue to do everything I can toward the end of getting the boys home and out of the armed services that can possibly be spared. I wish it were possible to have the residents of every home which boasts a service flag made happy by having their serviceman home for Christmas.

## Revival of Olympic Games

EXTENSION OF REMARKS
OF
### HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

*Monday, November 26 (legislative day of Monday, October 29), 1945*

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement signed by a group of students of Colby Junior College of New London, N. H., urging the revival of the Olympic games.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COLBY JUNIOR COLLEGE,
*New London, N. H., November 21, 1945.*

Senator STYLES BRIDGES,
*Washington, D. C.*

DEAR SENATOR BRIDGES: We are the members of the international relations class at Colby Junior College. In our studies we have learned of the Olympic games revival in 1896 and of the quadrennial recurrences of these games since.

We believe that such international activities are conducive to international understanding and good will. We believe also that such emotions and feelings are most important in the present postwar period. Therefore, we respectfully urge you to use your great influence to have the Olympic games revived, and, if possible, have the 1948 games held in the United States.

Thanking you for your interest in this matter, we are,

Very sincerely yours,

Mary Elizabeth Day, Peterborough, N. H.; Joan Curtis, Derry, N. H.; Leona Curley, Waterbury, Conn.; Emily Blunt, Passaic, N. J.; Elizabeth Bisset, Harrisburg, Pa.; Barbara Harrington, Wellesley Hills, Mass.; Jane Hatch, Worcester, Mass.; Helen Kaplan, Baltimore, Md.; Mary Rose Hennessy, Buffalo, N. Y.; Barbara Hunt, Wellesley Hills, Mass.; Elizabeth A. Joel, New York City, N. Y.; Lois Lippincott, Plainfield, N. J.; Miriam Towart, Bennington, Vt.; Elinor L. Thistle, Melrose, Mass.; Mary Lou Stover, Fall River, Mass.; Margaret Reynolds, Mansfield, Ohio; Marjorie Nayer, Portsmouth, N. H.; Lila Labovitz, Marblehead, Mass.; Patricia Whitby, Detroit, Mich.; Anne Walker, Montreal, Canada; Charlene Waugh, Whitman, Mass.; Lydia Klein, New York; Nancy Olcott, Waterbury, Conn.; Jean Goubert, Englewood, N. J.

## Production in the Automobile Industry

REMARKS
OF
### HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. JONKMAN. Mr. Speaker, the following is not a statement from the automobile industry, or the manufacturers' association, but from the Reuthers and Thomases of the CIO, as appearing in the New York Times of yesterday:

CONTENTIONS ON PRODUCTIVITY

The evidence of all the facts and figures demonstrates the mounting efficiency of the prewar auto industry. It was true that man-killing speed-up of the old days, before the union, was largely eliminated in 1937 and the years following. But continued technological advances and increased worker efficiency brought constantly higher man-hour productivity.

Productivity per worker increased sensationally in the years from 1919 to 1940. In the first postwar years output per worker-hour will increase even more rapidly. When Department of Commerce statisticians assumed only the prewar rate for this period, they were making the most conservative estimate that could be fitted to the facts.

Everything points to a far greater rise in productivity.

Hundreds of thousands of new, improved, and highly productive machine tools will be available to auto corporations.

General Motors is spending over $500,000,000 for new plants and for streamlined postwar efficiency in its old plants during the reconversion period. Other auto producers are following suit. This by itself should

bring the sharpest rise in efficiency the industry has ever known.

Wartime research, paid for at Government expense, has greatly increased the productive knowledge of auto corporations.

Mr. Speaker, here we have an admission by the Reuthers and the Thomases of the value of capital and its use by management to create technological advances. Here we have an admission that these elements have made a greater contribution to the war effort than labor leadership. Here we have an admission that they will make a greater contribution to the public in providing it with the comforts of life than labor leaders can ever hope for.

Certainly, this statement shows that labor needs capital just as much as if not more than capital needs labor, because capital can increase labor's output by furnishing the technologically improved machinery to increase productivity. Yet, notwithstanding all these admissions, certain labor leaders are seeking to slit the throats of capital and management. In doing this they are, according to the above admission, slitting the throats of honest labor and of the consumer public as well.

It is high time that these labor leaders, misleading the highest paid labor in industry, which is enjoying the highest, namely, wartime wages, and which is now offered a 10-percent increase, come to their senses and do their share toward furnishing the American people with the comforts of life by stopping all these ill-founded strikes.

It is time that we get our minds on facts and fundamentals instead of fallacies and votes.

## Tax Exemptions to International Organizations and Their Employees

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 26, 1945*

Mr. REED of New York. Mr. Speaker, I regret that I was not able to be present when our committee considered H. R. 4489, granting certain tax exemptions to international organizations and their employees.

I have always held to the view that residents of other countries working alongside of our citizens and living in this country should pay the same tax as our citizens. Under the bill, as I see it, if a resident of the United States is employed by one of these international organizations, he is freed from the Federal income tax. In many cases, this means he will be entirely freed of any income tax on such compensation, since the country of his origin does not ordinarily subject him to tax on his income earned within the United States. On the other hand, a citizen of the United States who goes to work for one of these organizations, will be subject to withholding and income tax on the compensation he receives from such an organization. This is a direct departure from our Federal income-tax law, which has always treated citizens and residents of this country alike as far as Federal income taxes are concerned. It seems to me that the resident should be exempt only to the extent that he pays an equivalent tax to the country of his origin.

I notice that the Canadians in providing for a United Nations Relief and Rehabilitation Administration were very careful to allow an exemption from their income tax for "Representatives, officials or other employees of the Administration, resident in Canada, other than persons who were ordinarily resident in Canada prior to their employment with the Administration." While I have some doubt as to whether we should exempt non-residents on their income received in this country from these organizations located here, I feel very strongly that we should not extend such an exemption to persons in this country who were residents at the time they were employed by such organizations.

Another feature, is that the organizations which are to be exempt from Federal income tax are not enumerated nor are their activities clearly defined. The bill amends section 116 (c) of the Internal Revenue Code, and as amended exempts these organizations not only on their income from investments in the United States, but also from any other source within the United States. The language is so broad that one of these organizations could engage in trading activities in competition with our own domestic corporations and be free of Federal income tax. I believe when any corporation whether owned by a national, state, or foreign government enters the market-place in competition with our own domestic corporations, it should pay the same tax on its trading income as our own corporations. From the broad language used in the bill, it might be possible for all the governments concerned to permit one of these organizations to engage in trading activities and be free of Federal tax on such income. I also note that the baggage and effects of alien officers and employees of international organizations, or their families, suites, and servants are made free of custom duties when imported in connection with the arrival of the owner. These are just a few of the many features of this bill, which require careful study.

## Statements by William Green and Philip Murray on the President's National Health Program

EXTENSION OF REMARKS

OF

### HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Monday, November 26 (legislative day of Monday, October 29), 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two statements—one issued by Mr. William Green, president of the American Federation of Labor, and the other by Mr. Philip Murray, president of the Congress of Industrial Organizations.

These statements pledge the support of both great labor organizations to the principles set forth in President Truman's special message proposing a five-point national health program and to the health bill, S. 1606, which I introduced on November 19 for myself and the Senator from Montana [Mr. MURRAY].

I urge all Senators to give Mr. Green's and Mr. Murray's statements their earnest study and consideration.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

[From the American Federation of Labor Weekly News Service of November 20, 1945]

PRESIDENT GIVES CONGRESS NEW NATIONAL HEALTH PLAN—ALL WORKERS AND DEPENDENTS TO BE COVERED BY HEALTH INSURANCE

WASHINGTON, D. C.—President Truman called upon Congress to enact a broad national health insurance program which would cover and protect all Americans who work for a living and their dependents.

His message was immediately hailed by A. F. of L. President William Green as embodying the principles which the federation has long espoused. Mr. Green called for universal support of legislation to carry out the President's plan.

This legislation was promptly introduced in Congress by Senators WAGNER and MURRAY and Representative DINGELL.
